FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 25, 1889.

VOL. XXXIII.—No. 1. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

CAN THE NUISANCE BE ABATED?

IN a report on the English sparrow recently issued by the Agricultural Department, are a number of recommendations looking toward the destruction of these birds and the checking their increase and spread. These recommendations naturally come under two heads; first, recommendations for legislation, and second, recommendations to the people. Under the head of legislation is advised the repeal of all laws protecting this species, the enactment of a law legalizing the killing of the bird and the destruction of its nest, eggs and young at all seasons of the year, the enactment of a law making it a misdemeanor to feed or shelter the sparrow or to interfere with those engaged in destroying it, the passage of a law protecting certain small predaceous birds which feed largely upon it, and of other laws providing for the appointment of duly authorized sparrow killers. The recommendation that to feed or shelter the sparrow be made a misdemeanor is one which will not appeal to public sympathy and cannot be enforced, and, therefore, is not to be commended; but the other suggestions are valuable. It is well said that in towns and cities, where the use of firearms and poison must be restricted to the hands of a few persons, the destruction of the sparrows should be intrusted to some public officer. In many towns this work would naturally fall within the field of work of those officers who have the charge of the public parks.

At the same time with the destruction of the sparrows, every effort should be made to foster and encourage our native birds, of which many species would return to live in our cities, could the birds which have usurped their rightful place be driven out. The subject of bounties is intelligently discussed, and it is very satisfactorily shown that this method of getting rid of the sparrows is exceedingly expensive and quite inefficient. The recommendations to the people are more important than those which concern legislation, though the two naturally go together. If the plague of sparrows is to be abated it must be by concerted action by the people. The suggestions cover the use of firearms, traps and poisons, and the destruction of nests and disturbance at roosting places. The sparrow is a very sagacious bird and speedily learns to avoid danger. Thus, while it may be impracticable to kill all the birds in a given locality, it is possible, by constantly harrassing them, to drive away those which have not been destroyed. Their wariness makes them a hard bird to trap, and experiments in poisoning them do not appear to have met with much success. The plan of disturbing them at night, while roosting, and the destruction of their nests and eggs, promise to do much to drive them away and to reduce their numbers. It is very evident that war can be most efficiently waged against the birds during the breeding season.

While many people appreciate that the presence of the house sparrow in such numbers in North America is a serious evil, but few, we fancy, understand that this bird has become an actual curse, and that it destroys millions of dollars' worth of property each year. The chief sufferer by this destruction is the farmer, the grain grower, the cultivator of small fruits and the truck gardener. It is to the agriculturist that this report especially appeals. He will be benefitted by a careful study of its contents, and if he looks into the subject, will appreciate the necessity of taking active steps to protect himself against the ravages of this bird.

The sparrow has obtained so firm a foothold in this country that it is a very grave question if it can be exterminated, but concerted action all over the United States and Canada would undoubtedly result in a considerable reduction in its numbers. The farmers can no more afford to suffer the sparrows to increase unmolested than a grain dealer could to permit his bins to be overrun with rats. They must protect themselves, if not now, then later when the numbers of the birds which plunder them shall have increased an hundred fold, and when the prospects for success in the eradication of the pest will have correspondingly diminished.

AMERICAN CLUBS IN CANADA.

THE rapidity with which desirable hunting and fishing territory in Canada is being taken up by clubs of sportsmen composed chiefly of Americans is not unnoted by the Canadians themselves; and there is growing up a strong feeling against the system of leasing these preserves to the associations from over the line. This feeling crops out in many ways; one encounters it everywhere in Canada, and expressions of it are current among Canadian visitors to the United States.

The ground of the complaint is this. There are vast tracts of good fishing and hunting territory which are the property of the Crown, and over which the Canadian sportsman has been in the past free to roam at will, without let or hindrance. If one now ventures upon these lakes and rivers and woodlands, he is confronted at every turn by a club warden or guardian, who warns him that he is trespassing on forbidden ground; and if he does not withdraw with becoming alacrity this guardian proceeds to put him under arrest. Thus the Canadians find that the waters where they once fished free are now held by clubs; the Government has given to these clubs exclusive privileges, and will defend the holders in maintaining these privileges. To be thus barred out is regarded as a hardship, and complaint is naturally indulged in against the whole system in general and the Americans in particular.

It is impossible not to feel some sympathy with those who make such complaints; and yet the more intelligent of those who feel themselves aggrieved do not hesitate to say that in spite of their personal hardship they approve the leasing system. It is beyond question that the game and fish are more efficiently protected in the preserves controlled by clubs than in the public domain. In many cases the individuals loudest in berating the American lease holders are persons who have in the past paid no regard to the game laws, and in effect their cause of dissatisfaction is that they cannot now pursue their lawless practice in safety as in former times.

It is all nonsense to talk of the clubs as encroaching upon the natural rights of poor people. As a matter of fact no such rights are molested. The clubs actually bring much money into the country; this finds its way into purses which otherwise would be empty. Equally unreasonable is it to entertain jealousy of the club members because they are Americans and not Canadians, for it is to be remembered that the Americans are invited by the Canadians themselves to put their money into leases, and the Canadian Government would lease its lands quite as readily to the Queen's own subjects as to foreigners, on the same terms. To carp at Americans for doing what Canadians have the privilege of doing themselves but refuse to do, is only to act the part of the dog in the manger.

PUTTING OUT THE FIRES.

FOREST fires constitute the most serious danger to which the National Park is exposed. As far back as we can remember such fires have raged in the Park each season, and have usually devastated great tracts of timber. Occasionally, during a wet season, such fires would spread but little, and would cause no serious injury to the forests, but at other times they might burn for months and leave great sections of the Park mere blackened wastes, which would disfigure the landscape for many years.

It is interesting to watch the methods of Captain Boutelle, the new superintendent of the Park, and to find displayed an amount of energy and decision which promises great things for the future of the Park.

As will be noticed in the letter from our special correspondent, printed elsewhere, when the announcement of the fire came, the whole command promptly started out and put the fire out. Captain Boutelle was dining when the fire was reported. He did not stop to finish his meal, but gave orders to have "boots and saddles" sounded at once, and in a few moments the troop was off. There was no sending out of scouts who should look at the fire, see whether it was much of a blaze or not, and then report. Captain Boutelle just went out and put the fire out. A delay of twelve or twenty-four hours would have permitted the conflagration to assume such proportions that it would have been beyond the control of any body of men.

Intelligence and promptness are certainly above all others the qualities needed in a superintendent of the National Park.

SNAP SHOTS.

THE Niagara Falls cranks are at it again. Last Sunday, the papers report, Carlin D. Graham and Walter Odell, a New York Central Railroad conductor, set afloat a barrel, in which was strapped a Newfoundland dog, and sent it over the Horseshoe Fall. If there is no statute by which the men who do these things can be jailed, the decent part of the community should see to it that the penal code is amended.

We give to-day another of the FOREST AND STREAM pattern and penetration tests made at our range at Claremont, New Jersey. It may be explained that in this series the tests will be made from time to time as guns are offered for the purpose; and it is not our intention to hold a tournament where many different arms shall be tested in competition. The testing apparatus has been improved, so that it is now practicable to put a gun through all stages of the trial at short order. The results obtained in these tests will supply a mass of valuable data.

We do not often record side-matches in which competitive anglers fish for a score; but there was a match of that kind at Budd's Lake, New Jersey, last week, which deserves to be noted because of its queer result. Two men, Jacob Allen and Capt. Johnson, fished for three and one-half hours for the championship; and the contest ended in a draw. Each had the same score in numbers, weight and varieties, namely, five pickerel, fifteen bass and four yellow perch.

The frequent rains in the Eastern States have materially affected the fishing, for the streams have been too high to give good sport, and the scores have been meagre. The muggy weather, too, has added unusual hardships to the pursuit of the July woodcock spectre; and the birds bagged in Jersey swamps have been secured only by heroic endurance.

The Kentucky Fish and Game Club, with headquarters at Louisville, has a membership of 340, in different parts of the State; and it will take in hand at the next Legislature a suitable game bill. Kentucky has no general law respecting fish, except one which forbids killing with explosives. There is certainly need of a revision in this respect.

The Sportsman Tourist.

GOOSE SHOOTING IN MANITOBA.

LAST fall, on deciding to take a western trip over the Canada Pacific R. R., a friend advised me to take a rifle and gun, as there was plenty of game at various points along the line, and subsequent experience proved there was opportunity to use them. At North Bay we reached the C. P. R., and after rolling along comfortably through a long stretch of wooded country came to the beautiful scenery of the Lake Superior region, where the road runs along the lake shore in many places, affording on the one hand views of rocky cliffs of distinct and brilliant colors, according to the rock formation, and on the other the wide expanse of blue water, dotted here and there with lovely islands not unlike the famous Thousand Islands of the St. Lawrence. The scenery is, however, of a bolder and grander order.

We reached Nepigon about noon, and an inquisitive passenger rushed about to inspect a tame fox, which created considerable amusement for the crowd by leaping playfully at our friend, who tumbled over backward in his haste to avoid the supposed dangerous beast.

Brook trout grow large in the Nepigon River. Some friends of mine fished there last August and caught several weighing from five to six pounds each. I am bound to believe it for I saw the fish.

We arrived at Port Arthur about 3 P. M., but found that we were an hour ahead of time according to the "Central" standard time, and must turn our watches back to 2, and then call that 14 o'clock, for we are now to use the twenty-four hour system, counting 1 P. M. as 13 o'clock and so on to 24 o'clock (midnight) A little troublesome at first, but when accustomed to it very convenient, especially in studying the time tables of those railroads that have adopted it. It would be a great boon to the traveling public if it were to become universal.

We are now about 1,000 miles from Montreal, one-third of the distance across the continent, and have passed from the first or Eastern Division to the Western Division, which extends to the Rocky Mountains; that part of the road from the mountains to the coast forming the Pacific Division. Fort William was a post of the Hudson's Bay Company more than a century ago; but now a mammoth grain elevator stands near the old fort, the fur house is turned into an engine room, and the trade in furs and pelts has changed to a thriving traffic in lumber, grain and coal. Here we leave Lake Superior and run through a rocky and timbered region until near Winnipeg, where the prairie soon establishes itself and remains a fixture for the next thousand miles.

At Winnipeg our attention was attracted to the finely-mounted heads of large game in Hine's taxidermist shop. Nearly all the larger game animals were represented by very handsome specimens. There were several heads each of both white and blacktail deer, elk, moose, and two noble caribou heads. Most of these came from the region not far removed from Winnipeg, while from the western plains of Assiniboia and Alberta were antelope and two grand heads of buffalo bulls, one of which was reported to have been killed a few weeks previous in the Saskatchewan River country, some distance north of the railroad. The Rockies and other western ranges of the Pacific slope contributed the bighorn sheep and white goats, the "billies" with long, venerable beards, the "nans" with no whiskers and smaller horns. A huge timber wolf of formidable appearance glared at us with his glass eye, and altogether there was so much game we were reminded of the darky and his ejaculation, "Golly, if I only had a gun!"

However interesting it was to examine these specimens, we were quite willing to board our train and leave the town for the country. On either side the level prairie extended as far as the eye could reach. Here and there the virgin sod had been broken by the plow, showing a black fertile soil, and frequently we passed immense fields of wheat, which had been cut and stacked ready for threshing. These grain stubbles are the favorite feeding grounds for grouse, both the sharp-tail and pinnated being well represented, and geese and brant of several varieties resort regula ly to such fields in the early morning and then again during the latter part of the afternoon.

We accepted the invitation of friends at Virden to stop for a few days, and when Ned remarked that he would like to shoot a goose and intimated that he would like company, I was soon ready to join him, and even though our trip should prove a veritable wild goose chase. When I found that we were to depend upon flight shooting alone, I must confess that I was a little skeptical as to our success, for I had learned to regard wild geese as abundantly able to keep out of range of the ordinary amateur shotgun. My doubt was not entirely removed when Ned's wife told him that she was tired of ducks and he need not bring any more home. So, evidently it was goose or nothing, and like the boy after the woodchuck, "we'd got to git him."

We started for some likely sloughs about ten miles away calculating to reach them in time for the evening flight. Our tough little pony took us along at a rapid trot over the rolling prairie, and then we slackened our pace as we descended the bluff, and reaching the valley of the Assiniboine, pass over a wide strip of level bottom land somewhat timbered, cross the river and soon begin to climb the steep bluff on the other side. On gaining the top, we look back and admire the beautiful view of the valley dotted here and there with single trees and clumps of timber, the river winding along, the bluff opposite in some places almost perpendicular, in others covered with autumn tinted foliage interspersed with evergreens sloping back to the broad prairie beyond. The sunshine was bright but not too warm. The clear, pure air so invigorating that it was a luxury to breathe.

Arriving at our destination, we stable the pony and start at once for the sloughs. One long one is found to be nearly dry, leaving it we proceed to another, and on the way are cheered by the strange calls of some huge cranes stalking about in an adjoining stubble, and at frequent intervals, flocks of ducks and geese are seen flying over.

On reaching the next slough we find it to be a large one with considerable water in it. Some scattering flocks are on the water, or resting on the exposed mud flats around the edge. We foolishly try to get nearer these latter, but the cover is thin, and they are well beyond it and rise quite out of range, so we console ourselves with the thought that we are not after ducks anyway, and wouldn't shoot any if we could, and moreover if we did, the geese might be alarmed at the report of our guns. Thus fortified against any disappointment at our failure to bag the ducks, we pulled ourselves out of the mud and gained the cover of a strong growth of rushes on the side of the slough nearest a stubble where we had observed many geese flying. We took our stations some distance from each other, so that any birds passing over midway between us would be within long range of either.

We waited some time, and I began to think all the ducks in Manitoba were gathering on that stubble. Flock after flock came flying as though coming our way, but attracted by the calls of those on the ground, circled around and settled. We could not see them, as they were not only a long distance away, but also beyond one of those long, lazy swells of land so characteristic of rolling prairie. Some cranes came flying along with slow, labored flight, and dropping down, added their music to the general clamor with which all fresh arrivals were greeted.

We thought it might be that the geese were bragging to the cranes of how on a certain occasion they saved Rome by their timely gabble, and the cranes retorted something about chestnuts, which had provoked a general row, or maybe they were holding a caucus to nominate candidates for the fall campaign. But the powwow gradually subsided, and presently a small flock was seen on the wing. Will they come to the water behind us? Yes, they are coming our way. We crouch lower, and hardly dare look again, for we think they will fly near us, but they passed by out of range. Yet we are glad to see them pitch into the water of our slough, for we feel sure that others will come.

And soon another flock is flying toward us, but they pass out of range, and we begin to wonder if we have selected the wrong stand. Presently Ned tries a double at a flock on his side, but they are too far away and flying pretty high. I accept a similar opportunity on my side and bang away with both barrels, but the geese sail right along unharmed. "They fly high," I call to Ned. "Yes," he replies, "but we must have 'em." It may be that he had in mind his wife's parting injunction to "bring home a goose, but no more ducks," for as the next flock came they passed between us, near enough to give him a good chance, which he improved by bringing down his goose in fine style. At the report of his gun the birds swerved a little toward me, and though they were so far away that I did not expect to reach them I could not resist firing one barrel, and was gratified to hear the responsive thud of another goose as he struck the mud stone dead.

I felt quite encouraged, and shouted to Ned, "Now, bring on your geese!" The geese, however, brought themselves on, flock after flock; but although we banged away several times, we got no more, yet e felt that sometimes the fault was with ourselves, as the birds seemed near enough.

As we tramp back through the long prairie grass and mire, in the deep mud of the long slough, we conclude that we have all the geese that we can conveniently carry. This feeling, however, does not prevent our planning to turn out early the next morning, and before sunrise we are on our way to the big stubble field again.

The wheat had been stacked ready for threshing, the stacks standing here and there over the field in bunches of four. I took my station at one of these stacks, and Ned went to another a short distance away.

The previous evening I had evidently fired at birds way out of range, and so I firmly resolved to risk no shots unless they were near. The result was, that I did not fire a shot that morning; but I afterward concluded that I had gone to the other extreme, for the morning was foggy, and consequently I erred in supposing that several flocks which sailed by my stand were too far away, when they really were within shooting distance.

The fog was so thick that I could not even see the stacks where Ned had taken his stand, but I could hear the report of his gun, and when he came up I saw that he was successful again, and this time had bagged a gray brant.

After breakfast we tramped to another slough covered with patches of reeds affording good cover. Here we found plenty of ducks, and as the bottom was hard, waded in, jump-shooting a few at first and getting other shots at those circling around near us. But after a while the ducks around us took wing and circled too far out. Ned, who had on wading pants, concealed himself in a favorable clump of reeds some distance from the shore, while I sauntered down the slough to a part where the ducks had not been disturbed, getting a few long shots myself on the way and giving Ned some fine shooting as the birds circled about his head.

While engaged in this pleasurable occupation of helping my neighbor, I spied a large flock of mallards ahead, and worked down carefully toward them. I was moving in rather thin cover closely watching the ducks when I suddenly caught sight of a flock of geese beyond the ducks, coming directly toward me. They were flying low, but they caught sight of me almost as soon as I did of them, and veered away. They were evidently about to alight, but changed their intention in a hurry, rose higher and kept on toward Ned. "There," I said to myself, "I'll bet that lucky chap will get a shot at those geese." And sure enough, they passed directly over him, and although they were flying quite high by the time they reached him, they were not out of reach of his little twenty gauge gun, and I was almost as pleased as he could have been, to see one of those big geese come tumbling down in response to his shot. It proved to be a Canada goose of the largest size, and Ned afterward told me it was comical to witness the efforts of his little spaniel tugging away at the big bird and trying to retrieve it.

The mallards had by this time taken alarm, so I kept on down the slough some distance further, and, on reaching some scrubby trees growing out of the high bank, a large bird, which I at first supposed was a marsh hawk, took wing just ahead of me. A second look convinced me that it was not a hawk, and I fired. The bird dropped at my shot, but immediately rose and was off again when I stopped him with my second barrel. I found that I had secured a handsome specimen of the Arctic variety of great horned owl. When I showed my prize to Ned he remarked that we could now have boiled owl as well as roast goose. I acknowledged that it took considerable shooting to kill my owl, and he might be a trifle tough, but probably not more so than his old gander. We finally agreed that we would not boil the owl, and Ned decided to present the gander to a friend who had a very large family.

One of the smaller geese fell to Ned's wife, and was served the next day in fine style, with all the embellishments and accompanying dishes, and my experience with that goose justifies me in saying that Ned's better half can roast a goose fully as well as he can shoot one.

On our way back to town, we met two friends going out. They came back the next day with four geese and a big white crane, besides a number of ducks. No decoys are used. The shooting is all flight shooting, such as I have described.

Judging from the number of geese that frequent this country I should suppose that with the aid of decoys, a large number might be obtained. But moderation can nowhere be better practiced than in shooting game. We do not seek to exterminate it or drive it away from its favorite haunts, and I am sure that a true sportsman's chief pleasure does not consist in taking all the life possible, or entering into competition with others to decide who can do the most killing.

I was informed by reliable parties that in localities further west very fine flight shooting might be had at not only ducks and geese, but swans, cranes and other varieties of waterfowl, and judging from what I saw of them from the car windows in passing, I do not doubt it. I was so favorably impressed, that I planned to stop over at one or two points on my return from the coast, but my stay was prolonged so that on my return I found the lakes and sloughs all frozen over and the main body of the birds had passed south.

I will in a future number try to give some account of a hunting excursion in the Cascade Mountains.

ROCHESTER, N. Y. C. H. K.

WITH SITTING BULL'S WARRIORS.

IN these days, when we hear much of the last of the buffalo, let me tell you and your readers of the last great buffalo hunt of the Sioux Indians. I was one of three or four white men who happened to be present at the great and, what must be to all there, a never-to-be-forgotten event.

On the 25th of October, 1883, about four hundred lodges of the Sioux left their camp at Standing Rock, on the Missouri River, for their great buffalo hunt on the Grand River plains, some two hundred miles to the westward. The runners had come in with the intelligence that Tatonkas were plentiful on the head of the Heart, the Cannon Ball and Grand rivers; so the hunt was called, soldiers elected, councils held, medicine made, and we were ready to start.

It was a grand sight that frosty October morning. Hundred of gaily-dressed Indians, mounted on their wiry little ponies, herds of pack animals, wagons, carts and long lines of *travois* loaded down with tepees and blankets; old squaws and young ones, men and children crowded the trails leading out upon the yellow plain. As was their custom, not a gun was allowed to be fired. The prairie chicken could sit and eat his buckberries without fear of the rifle's death-dealing crack; the antelope could gaze curiously from the many little ridges; his time was not yet; the straggling bull would start from some grassy hollow and lumber off, but no lead nor lance sought to stay his flight.

After six days' marching we could see the crest of Rainy Butte, but still some forty miles to the westward. One evening we had made our camp on the banks of a tributary of Heart River, and piles of buffalo chips were smoking before every lodge, when the lookout sentinel posted on the nearest hill signaled "Scouts coming." Then in a short time the four Sioux sent out in the morning came riding into camp, going first to the chief's lodge to report; and soon the crier was heard, his resounding yells reaching every part of the camp. It was the Indians' evening paper, and soon all knew the events of the day, including the scouts' report. That evening a grand council was held, and one hundred of the best riders and hunters were elected for the morrow's hunt as killers, for the scouts had reported a large herd of buffalo only four miles away.

It was a great sight that the sun shone upon the next morning. A hundred of the picked Sioux, mounted on their fleetest and fattest ponies, led by old Rain-in-the-face, of Black Hill and Big Horn fame, filed out on the broad prairie. Following these came the skinners and packers. The herd was soon located. The number might have been fifteen hundred or two thousand. Two of the hunters were sent around to get in the wind of the game, while the rest spread out to windward, carefully keeping out of sight of the buffalo. We had not long to wait. The animals soon scented the men, and away they went charging over the prairie, head to the wind, at a rate which soon brought them in sight of the waiting hunters. Seeing these they sought to turn, but too late. The yelling Sioux were around and among them. The sharp crack of the short Winchester and Sharp carbines, mingled with the wild, triumphant cries from the hunters, the incessant roar of hoofs, the clouds of yellow dust, bellowing bulls, snorting ponies, ridden by half-naked savages, made a scene for excitement the like of which it has never been my fortune to witness. The herd soon became rattled, turning this way and that; met on every side by their almost equally active foe, their leaders shot down or crippled, they commenced to run in a circle—"milling," as it is called. This was just what the Indians wanted. They now rode at the outside, sending their lead down into the backs of the flying animals, and often at such close range that the hair was singed by the powder blast. Hundreds fell, until the plain seemed to be one great slaughter yard. Breaking at last, the small remnant of the morning herd tried to seek safety in a wild dash for liberty. Straight away over the plain they went, stopping for nothing; and woe to the Indian or pony trying to stop or turn them. It was during the winding up of the chase that the daring riding of the Indians could be seen. Singling out a flying buffalo an Indian would give chase. Slowly the gap between pursued and pursuer would be closed. With head down, tongue out, and blazing eyes, the great shaggy brute swept along, taking the prairie as he found it. Close behind him came the fleet Indian pony and rider, one as eager as the other. No ground too rough, no hill too steep; across gulches, over ridges, down ravines, went the panting bull, but lead him where he would, the quick pounding hoofs be-

hind him kept drawing nearer and pressing closer, until at last, with a sudden burst of speed, the pony is alongside, the rifle drops, a flash, a sharp crack, and the chase is ended. The buffalo plunges to the ground, and with a few struggles he is dead. Elsewhere an Indian is seen running down a bunch of ten or twelve; sometimes it is hard to tell if he is riding his pony or one of the buffalo, so close are they; and the smoke from his rifle tells he is not idle. Now and then a great black mass drops and rolls before him almost under his pony's feet, but with a quick spring the wiry little animal clears the struggling brute and is away again running side by side with the others.

About 3 o'clock in the afternoon the chase was well over; thirteen hundred buffalo had fallen, and many others had escaped, but badly wounded. The prairie now was covered with men, women and children, pack animals, *travois* and wagon carts. Butchering was the order of the day, and by sundown nearly everything of the meat kind was at the main camp. Here a grand feast in celebration of the hunt was given; all night long the squaws were kept busy boiling and roasting, while the bucks told tales of their prowess in the field, sang songs or made speeches. Little did they think that it would be the last great buffalo hunt of their people. To the young ones of the tribe it will seem like a dream, or as if the doors of the happy hunting grounds had been opened to them then, and then after one glance at the exciting scenes so dear to their people, closed upon them forever. J. J. FULTON.

ADIRONDACK JOTTINGS.

PERHAPS the following paragraphs, wearing various hues and colors, are worth a place in among the mental archives of those who have found pleasure in handling the rod and gun. The facts and incidents are placed in paragraphs because they have no more connection with each other than Artemus Ward's lecture on "Babes in the Woods" had with its subject.

A good story has never been told in print of royal Reuben Wood, that genial friend to everybody, whose death was so widely mourned. He was a true son of good old Izaak Walton, an enthusiastic and successful angler, of course. One evening while in camp in the Adirondacks, he was challenged by a member of the party whose knowledge of angling was but slight. The conditions were that they should stand near each other by the side of a favorite pool, each casting into the pool during a period of fifteen minutes, the contest to be decided by count. Uncle Reube's eyes glistened as the details of the match were considered, and at the same time he set about "making up" a new cast of flies, that he might be able to do his best when the struggle came the following day. It was prepared with all his wonted skill, cunning and delicacy, and laying the new "cast" and his cigar aside he lay down to dream of how he would lure the dainty trout to his creel. At the appointed hour the contest began, with the usual judges and a referee. The challenger oft and repeatedly led beautiful trout to his score, but Mr. Wood was less fortunate. He was not successful in "striking" his "rises," and only now and then did he secure a fish. Late in the contest he exchanged the leader he had made up so carefully for one which had been much used, and then his luck began; but it was too late, for when the time for the contest expired he was badly beaten. The real reason of his failure was kept a secret for some time, but it finally became known that while Mr. Wood slept the challenger had filed the barbs from his hooks. In no other way could that noble-minded man have been beaten.

Yes, it is true that larger frogs swallow smaller frogs. I have been myself a witness to the process, and it is no less certain that black snakes swallow both frogs and trout, for I once found both in the same snake. When a turtle finds such a combination he should have the contentment of an alderman at the annual dinner.

Did you read the story of the frog that swallowed a bumble bee and the attack of cholera morbus that followed?

"Sim" Washburn is a well-known guide at Loon Lake in the Adirondacks. Like his father, he does not allow himself to "get left" in telling stories. It was his father who said he was once lost for forty-eight hours; that when he came into a clearing on the morning of the second day he met his brother, who called him by name. "Am" said he had been lost so badly that he didn't know his brother or his own name. But of "Sim:" He tells the story of a bear which he trapped, catching the animal by one hindfoot. The bear loosened the chain of the trap, and dragging the trap to a tree, crawled up the body thereof with his forefeet that he might place the free hindfoot upon the spring of the trap and open the jaws thereof. "But," said "Sim," "he wasn't heavy enough, and you could see in the bark of the tree where he put his toe nails in and pushed down to make himself heavier. In that way he opened the trap."

Saranac Lake guides will tell you that wires were laid from the Saranac Inn to some of the principal fishing resorts in the vicinity that ex-President Cleveland's luck might be telegraphed to an anxious world. This story is somewhat "fishy," nevertheless tourists often hear it.

Paul Smith now owns 15,000 acres of land and water surrounding his summer habitation, which he proposes to hold for a game and fish preserve for the guests of his house. One of his sons is the manager of the Foquet House at Plattsburgh, which Paul recently purchased. By the way, did you know that his real name is Apollo Smith? That he was for many years a guide and is now worth half a million or more dollars? He was known when a guide as "Pol" Smith, and the corruption has progressed until Paul is now his accepted name. Why not take one more step and prefix "Saint?" It would accord well with his lake, St. Regis.

Ex-Mayor Bookstaver, of Syracuse, has several times delivered a lecture, in which he takes the position that the brute creation is endowed with souls, and that if the spirit of man lives in the hereafter, so must the spirits of brutes. This is no new idea, to be sure, but he fortifies it with exceptionally strong proof, scriptural and otherwise. He relates wondrous instances of the intelligence of animals, even more surprising than that which is shown in this item which I found somewhere:

"I have a collie puppy, sprung from a breed noted for its remarkable intelligence, whom I have continually had to chastise for his persistence in selecting the best sofa for his afternoon nap. He apparently set his mind to reasoning over this and came to the right conclusion—that he was punished for the damage to the sofa cover. Accordingly the other day he rolled up the piece of carpet which has been set apart for his nightly accommodation in the servant's hall, and having carried it in his mouth to the drawing room, spread it out carefully on the forbidden sofa, where he was discovered sleeping the sleep of innocence, no doubt being quite satisfied that he had surmounted the only objection to his choice of a soft resting place."

Probably there are no more extended or prolific bass fishing grounds in this country than those stretching from Onondaga Lake, near Syracuse, to Ogdensburgh The river from Onondaga Lake to Oswego, where it empties into Lake Ontario, affords excellent sport. Along the shores of Lake Ontario there are many excellent resorts, while off Sackett's Harbor is Stoney Island, around which tons upon tons of large, gamy fish have been taken. And so down the St. Lawrence River there are many "bass bars," which yield abundantly to him who knows where they lie and has the art of capturing these fish. Many a three pounder has been taken, and not a few four-pounders have come to grief.

Syracuse has many expert anglers who visit all waters and tell big stories. Supreme Court Justices Kennedy and Vann are now on vacations in the Adirondacks, and County Judge Northrup is soon to go to St. John's. Rev. Dr. Lockwood will spend August and part of September in the great wilderness, and Bishop Ludden will go South on a hunting trip in the fall. Other men of Syracuse, who are hardly less prominent—among them the venerable ex-Judge Comstock—will soon flee to resorts which nature still adorns. Syracuse is most fortunately situated in relation to good water for anglers, and it has at least its full proportion of experts. Comparatively few of its rest and recreation seekers find their way to fashionable watering places, but seek the seclusion of much less pretentious and far more restful resorts, where neat flannel shirts and other clothing to match have not been ruled out by the mandate of fashion. D. H. B.

SYRACUSE, July.

THE NATIONAL PARK.

YELLOWSTONE NATIONAL PARK, July 18.—*Editor Forest and Stream:* We have had very hot and dry weather for the past three weeks. The forest and grass lands are in a very parched and inflammable condition. Many small fires have been extinguished by the soldiers patrolling the Park before they could do any damage. The few showers have helped matters a little, but not enough to have even checked a forest fire if it once got a start. But for the vigilance and prompt action of Capts. Boutelle and Bomus, with the men under their command, much damage would have been done to the forest in the Park. Capt. Boutelle's orders are that if a fire starts of any size beyond the control of one man, for everybody to drop whatever work they are doing and go immediately to the fire to assist in putting it out. A recent instance will illustrate how carefully the reservation is being protected from fire. A few minutes before 7 o'clock on the evening of the 13th inst. a telephone message was delivered to Capt. Boutelle, that there was a large fire in Hayden Valley, on Trout Creek. In twenty minutes the captain and every available man at Camp Sheridan were in the saddle and soon started on their night ride of forty miles to the scene of the fire. An escort wagon with five days' rations followed immediately. In the meantime every man except the cook had left the camp at the Lower Geyser Basin for the same point. The command reached the fire on the morning of the 14th and soon had it under control and extinguished before it had done any great amount of damage. If Capt. Boutelle had waited until morning before he started, he would have found the fire beyond his control; nothing but a heavy storm could have saved the vast body of timber between the Yellowstone and Madison rivers, as every day the fire would have been spread by the gales that begin to blow by 10 o'clock. The prevailing dry weather would have allowed the fire to burn for weeks. The Captain deserves great credit for his prompt action and untiring efforts in preserving the beautiful forest of the Park from destruction.

The travel to the Park is increasing rapidly. Tourists over the stage lines are arriving in parties from forty to sixty daily. From seven to fifteen teams with camping parties pass the Hot Springs every day. On the 14th inst. twelve teams belonging to American immigrants from the Black Hills, on their way to Oregon, started through the Park. After doing the wonders here they will continue their journey, leaving the Park at Riverside. Following the teams from Dakota was one from northern Iowa bound for the same State. They are well provided with everything necessary for their long drive and to settle in a new country.

On the 16th inst. the U. S. Geological Survey, Mr. Arnold Hague in charge, left the Springs for a permanent camp at the Yellowstone Lake. From there the parties will travel to their work on the east side of the Park.

Work on the wagon roads is progressing rapidly. The $50,000 that became available on the 1st of July is being expended as the law directs, most of it on the new road from the Upper Geyser Basin to the Yellowstone Lake; nearly 200 men and teams are employed.

The Hon. S. S. Cox is paying the Park a long visit and making himself thorough familiar with the reservation and its needs to make it what it is intended to be—a pleasure ground for the people of the United States. H.

"CARIBOU HUNTING" is a handsome water-color painting which comes to us from the Hamilton Powder Co., of Montreal, Canada. The scene is laid in a Canadian forest on a winter day. Two successful hunters are making their way to camp on snowshoes, and dragging after them the huge caribou that has fallen before their aim. The composition is admirable, and the picture is so evidently true to life that it deserves a high place among illustrations of woods sport. When one sees so many meretricious drawings of game and its pursuit, it is a pleasure to call attention to a decidedly good piece of work like this.

Natural History.

THE EARED SEALS.—I.

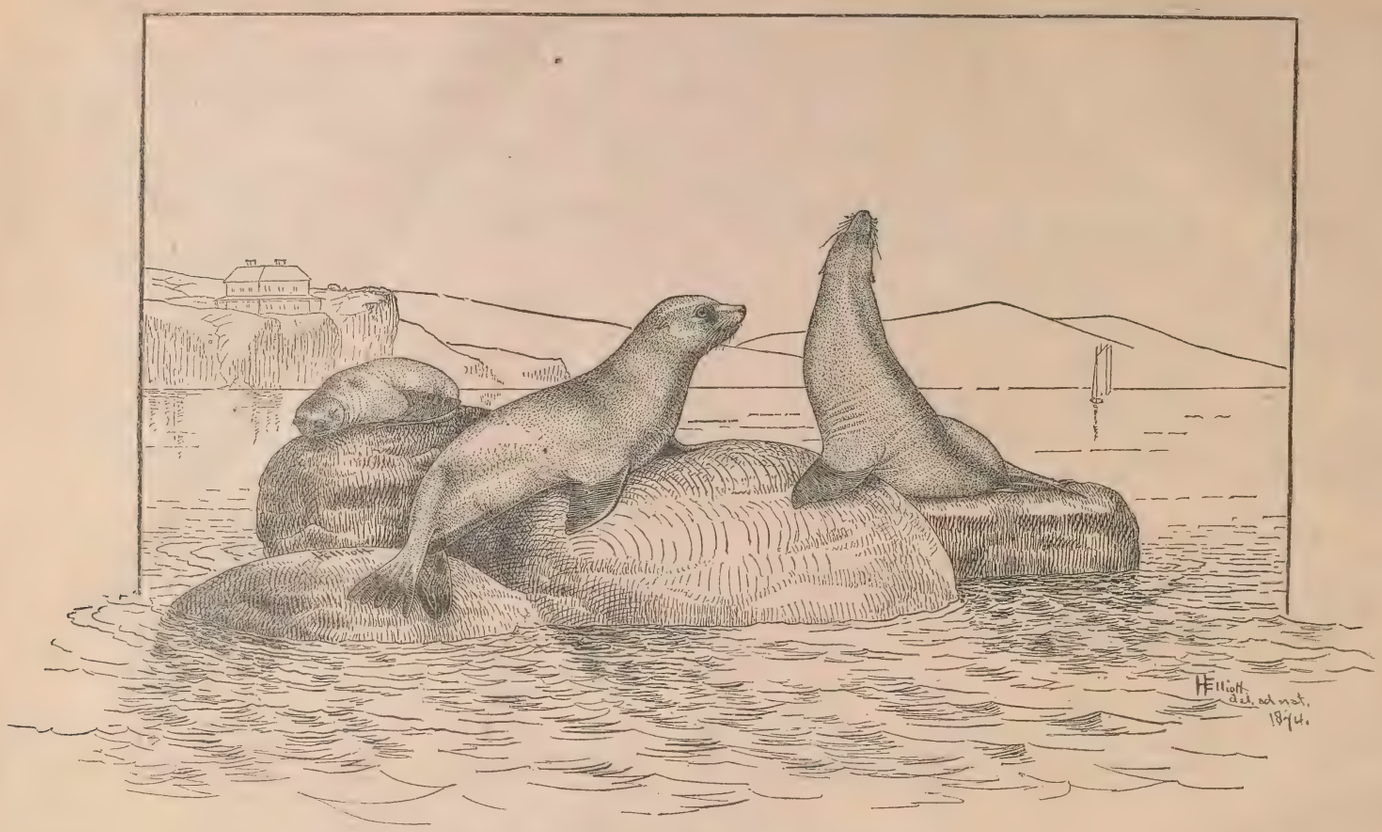
AS will be seen by our "List," published in the *Carnivora* of the present series of articles, we have in the United States fauna three species of eared seals, all belonging to the family *Otariidæ*, and each one placed in a separate genus.

But few of our animals have had a greater share of attention bestowed upon their natural history than the *Pinnipedia*, and they are well deserving of it. Prior to 1879 there existed a comparatively rich literature pertaining to the *Otariidæ*, but this was vastly increased when in 1880 and 1882, respectively, appeared the exhaustive works of Allen on the North American Pinnipeds and Elliott on the Seal Islands of Alaska. Both of these admirable monographs enter in great detail upon the life-histories, the economical aspects and our present knowledge of the sea lions and seals, and Allen especially has something to tell us about their osteology and general structure.

In the case of the eared seals now before us, the writer has largely drawn upon these well-known authorities for the information herein set forth, and the figures illustrating my remarks are all from the accurate pen of Mr. Elliott, being selected from his published sketches.

Before passing to the consideration of the Californian sea lion, it will be as well to remind the reader that seals and walruses are now universally considered by zoölogists to be true *Carnivora*, that in past ages have become, by the action of evolutionary laws, modified for an aquatic existence. So that now the water is their true element, and in it their movements are active and graceful, while on land both seals and walruses are extremely clumsy creatures. The eared seals and walruses are the higher types of the group in all particulars, while the more remotely related *Phocidæ* are the lowest and more generalized species. Professor Allen has said that "the pinnipeds present a high degree of cerebral development, and are easily domesticated under favorable conditions. They manifest strong social and parental affection, and defend their young with great persistency and courage. They are carnivorous (almost without exception), subsisting upon fishes, mollusks and crustaceans, of which they consume enormous quantities. The walruses and eared seals are polygamous, and the males greatly exceed the females in size. The ordinary or earless seals are commonly supposed to be monogamous, and there is generally little difference in the size of the sexes. The walruses and eared seals usually resort in large numbers to certain favorite breeding grounds, and during the season of reproduction leave the water and pass a considerable period upon land.

"The earless seals, on the other hand, with the exception of the sea elephants, do not so uniformly resort to particular breeding grounds on land, and leave the water only for very short intervals. They usually bring forth their young on the ice, most of the species being confined to the colder latitudes. Only one of the various species of the *Pinnipedia* appears to be strictly tropical, and very few of them range into tropical waters. As a group, the pinnipeds are distinctly characteristic of the arctic, antarctic and temperate portions of the globe, several of the genera being strictly arctic or subarctic in their distribution. The walruses are at present confined mainly within the arctic circle, and have no representatives south of the colder portions of the Northern Hemisphere. The *Otariidæ* and *Phocidæ*, on the other hand, are abundantly represented on both sides of the equator, as will be noticed more in detail later."



To these general observations of Allen I would add, that so far as the discovery of fossil pinnipeds is concerned, their remains are meager. The late miocene and pliocene strata in this country and Europe have afforded the most specimens, and some of these have been described by Van Beneden, but they throw scarcely any light upon the origin of seals in time, though the general affinity of these animals to the ancient bear type is recognized. And Flower says that "all the extinct forms at present known come within the definition of the existing families; and, though annectant forms between these occur, there are as yet no transitions to a more generalized type of mammal. Indeed, all those of which the characters are best known belong to the completely developed Phocine or Trichechine, not to the Otarine type."

To come now to the study of the Californian sea lion (*Zalophus californianus*), I will for an appreciation of its form and external appearance, simply invite the reader's attention to Mr. Elliott's superb and life-like sketch of the animal, herewith reproduced, through the generosity of the editor of FOREST AND STREAM.

First of all we must observe, that these eared seals are naturally classed in two groups, determined by the character of their pelage or coat. They are distinguished as the "hair seals" and the "fur seals" or respectively the "sea lions and the "sea bears." Now the hair seals have only a coarse, stiff coat of hair, without any underfur, while the fur seals yield that well-known and valued pelt the soft "sealskin" of commerce, it being the underfur of the species to which we allude. The Californian sea lion is a typical hair seal, and agreeing with its kind is characterized when full grown, by its brownish or yellowish coat of hair, which varies in length with the time of the year, and is notably darker in the young of this species. There is a wide range of variation in this particular, and the northern and southern types appear very different, even at the same season. Although the *Otariidæ* are found in the Arctic and Subarctic oceans upon both sides of the equator, they are, strange to say, entirely absent from the waters of the North Atlantic, a fact for which we have no satisfactory explanation.

So far as our explanation is concerned, the Californian sea lion is for the most part restricted to the coast of California, it never having been observed north of that, while southwardly its range has not been determined with precision.

In point of size the male California sea lion is decidedly larger than the female, the former attaining a total length of 9ft. or more, while the latter rarely attains to 7ft. Corresponding differences, as we might readily imagine, are to be found in the skeleton, whereas in the external characters the male and female resemble each other considerably.

THE CALIFORNIAN SEA LION.—AFTER ELLIOTT.

Copy life size, Plate 14, of the "Fishery Industries of the United States" (G. B. Goode). Sect. I., "Hist. of Aquatic Animals" Plates.

Passing next to the habits of these truly interesting animals, we find one of the best accounts of their behavior in captivity published in FOREST AND STREAM, by Mr. F. J. Thomson, in a contribution entitled "The Habits and Breeding of the Sea Lions in Captivity" (FOREST AND STREAM, Vol. XII., pp. 66, Feb. 23, 1879). That paper will well repay a second reading and obviate the necessity of my adding anything further on that part of the subject here.

One of the best descriptions of the habits of the sea lion is given by Capt. Scammon and quoted quite fully in Allen's Pinnipeds. The work to which I refer is entitled by Scammon a "Sketch of a Sealing Season upon Santa Barbara Island," and occurred in 1852. He states that "On approaching an island or point occupied by a numerous herd[of these sea lions] one first hears their long plaintive howlings, as if in distress, but when near them the sound becomes more varied and deafening. The old males roar so loudly as to drown the noise of the heaviest surf among the rocks and caverns, and the younger of both sexes, together with the 'clapmatches,' croak hoarsely or send forth sounds like bleating of sheep or the barking of dogs; in fact their tumultuous utterances are beyond description.*

"A rookery of matured animals presents a ferocious and defiant appearance; but usually at the approach of man they become alarmed and, if not opposed in their escape, roll, tumble, and sometimes make fearful leaps from high, precipitous rocks to hasten their flight. Like all the others of the seal tribe, they are gregarious, and gather in the largest numbers during the 'pupping' season, which varies in different latitudes. On the California coast it is from May to August, inclusive, and upon the shores of Alaska it is said to be from June to October, during which period the females bring forth their young, nurse them, associate with the valiant males, and both unite in the care of the little ones, keeping a wary guard, and teaching them, by their own parental actions, how to move over the broken, slimy, rock-bound shore, or upon the sandy, pebbly beaches, and to dive and gambol amid the surf and rolling ground swells. At first the pups manifest great aversion to the water, but soon, instinctively, become active and playful in the element; so by the time the season is over the juvenile creatures disappear with the greater portion of the old ones, only a few of the vast herd remaining at the favorite resorts throughout the year. During the pupping season, both males and females, so far as we could ascertain, take but little, if any, food, particularly the males, though the females have been observed to leave their charges and go off, apparently in search of subsistence, but they do not venture far from their young ones. That the sea lion can go without food for a long time is unquestionable. One of the superintendents of Woodward's Gardens informed me that in numerous instances they had received sea lions into the aquarium which did not eat a morsel of nourishment during a whole month, and appeared to suffer but little inconvenience from their long fast.

"As the time approaches for their annual assemblage, those returning or coming from abroad are seen near the shores, appearing wild and shy. Soon after, however, the females gather upon the beaches, cliffs or rocks, when the battles among the old males begin for the supreme control of the harems; these struggles often lasting for days, the fight being kept up until one or both become exhausted, but is renewed again when sufficiently recuperated for another attack; and, really, the attitude assumed and the passes made at each other equal the amplification of a professional fencer. The combat lasts until both become disabled or one is driven from the ground, or perhaps both become so reduced that a third party, fresh from his winter migration, drives them from the coveted charge. The vanquished animals then slink off to some retired spot as if disgraced. Nevertheless, at times, two or more will have charge of the same rookery; but in such instances frequent defiant growlings and petty battles occur. So far as we have observed upon the sea lions of the California coast, there is but little attachment manifested between the sexes; indeed, much of the Turkish nature is apparent, but the females show some affection for their offspring, yet, if alarmed when upon the land, they will instantly desert them and take to the water. The young cubs, on the other hand, are the most fractious and savage little creatures imaginable, especially if awakened from their nearly continuous sleeping; and frequently, when a mother reclines to nurse her single whelp, a swarm of others will perhaps contend for the same favor.

"To give a more detailed and extended account of the sea lions, we will relate a brief sketch of a sealing season on Santa Barbara Island. It was near the end of May, 1852, when we arrived, and soon after the rookeries of 'clapmatches,' which were scattered around the island, began to augment, and large numbers of huge males made their appearance, belching forth sharp, ugly howls, and leaping out of or darting through the water with surprising velocity, frequently diving outside the rollers, the next moment emerging from the crest of the foaming breakers, and waddling up the beach with head erect, or, with seeming effort, climbing some kelp-fringed rock, to doze in the scorching sunbeams, while others would lie sleeping or playing among the beds of seaweed, with their heads and outstretched limbs above the surface. But a few days elapsed before a general contention with the adult males began for the mastery of the different rookeries, and the victims of the bloody encounter were to be seen on all sides of the island, with torn lips or mutilated limbs and gashed sides, while now and then an unfortunate creature would be met with minus an eye or with the orb forced from its socket, and, together with other wounds, presenting a ghastly appearance. As the time of 'hauling-up' drew near, the island became one mass of animation; every beach, rock, and cliff, where a seal could find foothold, became its resting-place, while a countless herd of old males capped the summit, and the united clamorings of the vast assemblage could be heard, on a calm day, for miles at sea. The south side of the island is high and precipitous, with a projecting ledge hardly perceptible from the beach below, upon which an immense sea lion managed to climb, and there remained for several weeks—until the season was over. How he ascended, or in what manner he retired to the water, was a mystery to our numerous ship's crew, as he came and went in the night; for 'Old Grey,' as named by the sailors, was closely watched in his elevated position during the time the men were engaged at their work on shore.

"None but the adult males were captured, which was usually done by shooting them in the ear or near it; for a ball in any other part of the body had no more effect than it would in a grizzly bear. Occasionally, however, they are taken with the club and lance, only shooting a few of the masters of the herd. This is easily accomplished with an experienced crew, if there is sufficient ground back from the beach for the animals to retreat. During our stay an instance occurred which not only displayed the sagacity of the animals, but also their yielding dispositions when hard pressed in certain situations, as if naturally designed to be slain in numbers equal to the demands of their human pursuers. On the south of Santa Barbara Island was a plateau, elevated less than a hundred feet above the sea, stretching to the brink of a cliff that overhung the shore, and a narrow gorge leading up from the beach, through which the animals crowded to their favorite resting place. As the sun dipped behind the hills, fifty to a hundred males would congregate upon the spot, and there remain until the boats were lowered in the morning, when immediately the whole herd would quietly slip off into the sea and gambol about during the day, returning as they saw the boats again leave the island for the ship. Several unsuccessful attempts had been made to take them; but at last a fresh breeze commenced blowing directly from the shore, and prevented their scenting the hunters, who landed some distance from the rookery, then cautiously advanced, and suddenly yelling, and flourishing muskets, clubs and lances, rushed up within a few yards of them, while the pleading creatures, with lolling tongues and glaring eyes, were quite overcome with dismay, and remained nearly motionless. At last, two overgrown males broke through the line formed by the men, but they paid the penalty with their lives before reaching the water. A few moments passed, when all hands moved slowly toward the rookery, which as slowly retreated. This maneuver is termed 'turning them,' and, when once accomplished, the disheartened creatures appear to abandon all hope of escape, and resign themselves to their fate. The herd at this time numbered 75, which were soon dispatched, by shooting the largest ones, and clubbing and lancing the others, save one young sea lion which was spared to see whether he would make any resistance by being driven over the hills beyond. The poor creature only moved along through the prickly pears that covered the ground, when compelled by his cruel pursuers; and, at last, with an imploring look and writhing in pain, it held out its fin-like arms, which were pierced with thorns, in such a manner as to touch the sympathy of the barbarous sealers, who instantly put the sufferer out of its misery by a stroke of a heavy club. As soon as the animal is killed, the longest spires of its whiskers are pulled out, then it is skinned, and its coating of fat cut in sections from its body and transported to the vessel, where, after being 'minced,' the oil is extracted by boiling. The testes are taken out, and, with the selected spires of whiskers, find a market in China—the former being used medicinally and the latter for personal ornaments.

"At the close of the season—which lasts about three months on the California coast—a large majority of the great herds, both males and females, return to the sea, and roam in all directions in quest of food, as but few of them could find sustenance about the waters contiguous to the islands, or points on the mainland, which are their annual resorting places. They live upon fish, mollusks, crustaceans and seafowls; always with the addition of a few pebbles or smooth stones, some of which are a pound in weight.*

"Their principal feathery food, however, is the penguin in the southern hemisphere and the gulls in the northern; while the manner in which they decoy and catch the *Gaviota* of the Mexican and California coasts display no little degree of cunning. When in pursuit the animal

* Mr. Elliott, in referring to the differences between the Californian and Alaskan sea lions, calls attention to the dissimilarity of their voices. The Northern sea lion, he says, "never barks or howls like the animal at the Farallones or Santa Barbara. Young and old, both sexes, from one year and upward, have only a deep bass growl, and prolonged, steady roar; while at San Francisco sea lions break out incessantly with a 'honking' bark or howl and never roar." (Allen, N. A. Pinnipeds, pp. 305.)

* It is said that in captivity these animals will devour from forty to fifty pounds of fresh fish in the course of a single day.

dives deeply under water and swims some distance from where it disappeared; then, rising cautiously, it exposes the tip of its nose above the surface, at the same time giving it a rotary motion, like that of a water-bug at play. The unwary bird on the wing, seeing the object near by, alights to catch it, while the sea lion at the same moment settles beneath the waves, and at one bound with extended jaws seizes its screaming prey and instantly devours it.

"A few years ago great numbers of sea lions were taken along the coast of Upper and Lower California, and thousands of barrels of oil obtained. The number of seals slain exclusively for their oil would appear fabulous, when we realize the fact that it requires on an average, throughout the season, the blubber of three or four sea lions to produce a barrel of oil. Their thick, coarse-grained skins were not considered worth preparing for market in a country where manual labor was so highly valued. At the present time, however, they are valued for glue stock, and the seal hunters now realize more comparative profit from the hides than from the oil." But while the civilized sealers, plying their vocation along the seaboard of California and Mexico, destroy the *Lobo marino* for the product of its oil, skin, testes and whiskers, the simple Aleutians of the Alaska region derive from these animals many of their indispensable articles of domestic use."

Many other highly interesting accounts of these ponderous carnivores of the sea, with intensely engaging histories of their million hosts as they gather upon the naked islands of the North Pacific, have been published, but my space will admit of nothing further here, and in my next contribution I will pass to the consideration of Steller's sea lion and the northern fur seal.

R. W. SHUFELDT.

FROGS AS FISH EATERS.—The question of the fish-eating habits of frogs being agitated in your columns, I add a note. Some years ago I set up a fresh-water aquarium, and after duly stocking it with water plants, I put in some small fishes—minnows, shiners and sunfish—also a few tadpoles, all of which lived together in harmony for a while; but as the tadpoles grew larger, I removed all but one, which in due time parted with tail and gill and took upon him the form of a frog—a transformation interesting to observe and a true evolution, to be seen of all, requiring no fine-spun hypothesis or bold assumption to prove it. After this I began to miss my fishes, one by one, and charged the theft to the house cat. One day, however, I caught the solemn-looking batrachian in the act of swallowing a shiner, and concluded that the others had gone the same road. So, as an act of retributive justice, I employed the frog as a bait for black bass.—S. C. C.

WOODCOCK AND TELEGRAPH WIRE.—Towanda, Pa., July 1.—A woodcock was found last week in this place that had come in contact with the telegraph wire. It was picked up and care taken to nurse it, but it died twenty-four hours after being discovered. It was a young bird.—W. F. D.

Game Bag and Gun.

CHICAGO AND THE WEST.

MINEOLA CLUB, Fox Lake, Ill., July 13.—To-night the new Mineola club house was formally opened There were twenty-three vehicles waiting for the Wisconsin Central early train at Lake Villa, and each of these took away an average of a dozen passengers. The ride across country, six miles, was pleasant and hilarious, and it was still early evening when the carriages halted in front of the grand and now nearly completed structure, which represents the highest point of architectural elaborateness yet reached by any Chicago sportsmen's club. I do not believe there is in the whole country so large and perfect a building devoted to a similar purpose. Detailed mention of this club was made early in the series of Chicago club articles that appeared in FOREST AND STREAM last winter. The building was not then completed, and indeed there is a little painting and the like to be done yet; but the gas and water supplies were lately put in, the interior fully finished and furnished, the kitchens lavishly stocked, and all appointments made perfect for this, the opening night.

As the carriages drew up on the beach in front of the grand entrance, a band on the upper gallery struck up a lively air in welcome to the arriving guests. This was repeated when Capt. Hill's lake steamer discharged its many-colored cargo at the landing, and when the little yacht Ida Belle came in and gracefully folded her wings. The corridors and balconies began to fill up rapidly with a gay assemblage, in which shooting, fishing and tennis costumes mingled with the sober business garb of those who had not yet had time to get into their club clothes, and with the bright summer attire of the ladies.

The beautiful Mineola dining hall was soon the scene of as picturesque a spectacle as one would be apt to see outside of a fancy ball supper, and the generalship of Mr. C. H. Clark, who has divided his energies and left his Lakeside hotel to assume managership of the Mineola club house, sent everybody away smiling as only he can smile who has dined well and happily.

After supper the music continued, welcoming the big moon, which now swam stately up and cast a path of silver right down at the foot of Mineola stairs. Over this silver path stole boat after boat, bringing in guests from Howard's, the Lakeside, Fox Lake Club house, Lippincott's and Ingleside. Mineola was going to do herself credit to-night.

There was a bank of grass about fifty feet from shore, right in front of the club house, and it looked fishy, so as it grew dark I jointed a fly-rod and stole down to try a coachman. I managed to catch a sunfish and a croppy, and had the novel experience of fishing to the music of a full band—the most unique I ever knew, except when I fished for goldfish in an insane asylum. That was at Lexington, Ky. The goldfish were fifteen inches long, and lived in a pond which was surrounded by a high railing to keep the lunatics out. They locked me inside of this, with many unkind remarks about my needing locking up inside the main building; then they went away and left me, and for about an hour I was entirely happy; about as happy as I was to-night fly-fishing to music in front of Mineola. For those who never fished in that way, I may say that music is a great stimulus in fly-casting, and seems to go very naturally with it.

When the first boatload of guests arrived the music changed from brass to strings, and soon everybody "chased the glowing hours with flying feet." The is good dancing all over more than fifty yards of Mineola Club house. It is very openly and roomily built, and the wide galleries are an additional blessing. In galleries, parlors and corridors the gay and gala ball kept up until the moon's silver path slanted the other way, and one by one the white-winged boats went down it for the other shores, and Mineola, somewhat justly flushed with her first success, folded her hands early in the morning of the following day and sighed because she was happy.

There were present on Mineola opening night the following ladies and gentlemen: W. G. Webster, H. P. Wadhams, F. J. Magin and family, C. E. Deane, C. E. Clifton, H. Chapin, J. Watson, J. J. Silberhorn, T. Edwards, S. Wolf, Mrs. L. A. Daviess, W. L. B. Jenney, Robt. G. Dwen, J. G. Beazley, Miss Adelaide Leckie, Miss Katharine Leckie, B. G. Fisher and wife, A. Bournique, Miss Mae Bournique, W. C. Hough and wife, Fred. L. Champlin, Geo. K. Cole, Walter Cole, Mrs. C. E. Cole, Miss Cole, J. G. Dwen, J. F. Lutz, Miss Emerson, F. C. Sparling, J. O. Pierson, Geo. Warrington, Mrs. R. M. Fair and family, Mrs. A. De Graf, Miss Mae Faegersten, Mrs. Robt. Lindblon and family, J. C. McCord, J. T. McCord, A. R. Carman, L. M. Hamberger. From the Howard House: M. C. Lange, E. H. Manfield and wife, J. W. Hope, Saml. Kroth and wife, Geo. W. Rice, F. E. Hines, D. J. Hull and wife, H. D. Hull, Isaac Tower and wife, Dr. Bohr, Mrs. J. V. Forve, Miss Florence Forve, J. B. Bernhardt, L. A. Zells, J. H. Healy, J. Kelly, Chas. Harbaugh, Mr. Porter and wife, Mrs. J. L. Jennings and Henry Smith, of New York. From the Lakeside: L. L. Barth and wife, A. W. Adams, Dr. A. G. Goodman, Mrs. Follett, E. N. Hill and wife, Charles H. Symonds, J. H. McBride and wife, Mrs. P. L. Elder, J. R. Payson and wife, E. C. Towske and wife, Norman Fraser and wife, Fred Ludlow, Mrs. C. Ludlow, Mrs. Pierce, Miss Morse, W. Veitch, L. Krellow and wife, H. H. McLane, Wm. A. Hirsh, David L. Frank, Mrs. J. Blocki, Miss Jeannette Blocki, Miss Pauline Krauss, Arthur Stein, R. H. Baum, J. Magnus, G. A. Maclean and wife, Miss Edna Towske, Chas. R. Murray, C. S. Roberts, Robt. H. Aiken, Miss Flora Lane, Miss Sisson, R. O. Millar, G. A. Soden, Miss Katie Duffy, W. B. Hains and wife, Miss Emma Vehon, Miss Rose Goldstein, Miss Fanny Lehman, W. G. Twelty, W. H. Lane, T. D. O'Brien, W. M. White, H. F. Schmid, Mrs. J. Steele, J. L. Gould, A. F. Sherman, W. F. Hall, L. M. Hamburger, G. R. Erb, Jas. McNally, Jerome Merrill, E. P. Donnell, J. L. Jennings, H. L. Ward, M. Maypole and wife, Miss Florence Lendarker, Col. O. Lippincott and wife.

July 14.—To-day nature is repentant and weeping after her dissipation. Heavy rain and high wind have prevailed during the greater part of the day. Fox Lake is higher than it has been all season, and is washing over all the landings. The water is very rough, and the lake has not had a boat out for the greater part of the day. I took a duck boat and rowed over to Lippincott's this afternoon. The craft shipped a tubful of water, and I was heartily glad to get inshore. At 3 P. M. Ida Belle weighed anchor, and made a pretty course to the head of the lake, with all her crew on the windward rail and all sails double-reefed. Frolic did not go out. A little steamer showed her nose from over Ingleside way, but soon put back. It has grown calmer toward evening, and the sun shines fitfully.

To-day Mr. J. G. Dwen took me to the hill at whose foot Mineola Club lies, and showed me what is known to be the finest of the many Indian or mound-builders' mounds discovered on the bluffs about Fox Lake. A number of these mounds have been opened, always with most interesting results; but this particular mound, which lies on the highest point of the bluff, on the west side of the lake, has never been opened, although Mr. Dwen said he once had trouble to keep a certain party from digging down into it. The mound is perhaps 100ft. from base to base across, and is more sharply conical than these mounds usually are. It is nearly free from trees, and its shape is so perfect as to suggest it a recent mound. Mr. Dwen will soon open this mound, and wished the assistance of Dr. Velie, of the Academy of Sciences, or some other competent authority. It would take a day or so to run a channel through from the foot of this mound as it properly should be done. It is highly probable that something of interest will be found when this mound is opened, and if so, I shall be glad to report it, as I shall probably be there.

There is a quaint and ghastly ornament on the mantel in one of the Mineola smoking-rooms, in the shape of a skull and crossbones, elegantly mounted on a dark velvet panel inclosed in a heavy oak frame. Beneath is the inscription, "Mineola, Chief of the Pottawatomies. Presented by J. G. Dwen." This skull was found in a mound struck in excavating the sidehill for Mineola club house foundations. Mr. Dwen had it carefully cleaned and mounted as above described, and presented it to the club. The lower jaw of this skull was never found, but the skull itself seems perfect, and the upper teeth are magnificent. The color of the skull is dark yellow and unbleached. These exhumed Indian skulls are always of this color, and cannot be bleached. This sad reminder of some savage hunter who once doubtless parted the wild rice of these lakes as deftly, or looked out over the wide and pleasant waters as gladly on some bygone morning as do the modern hunters who by sharp contrast are gathered here to-day, bore no amulet or charm and carried no tablet by which he might be known. It is only fancy that calls him Mineola. Yet Mineola ranged these bluffs, and skimmed these waters early in this century, from 1830 to 1835, and his people, the Pottawatomies, were the only tribe which inhabited this lake region then. Since then it was Mineola Club, named for him, that brought these yellow bones to light, it seems no wild further fancy to say that this was Mineola. Now, then, may Mineola live long in this his modern tepee, and may he scare lagging hunters early to bed, and may he give them manly dreams and make them tireless in the chase as well as wise in council.

E. HOUGH.

THE OZARK MOUNTAINS.

I WAS brought up near the "divide" of this range in Missouri. The little stream in which I paddled, barefoot, and fished for chub, perch, catfish and an occasional bass, and along whose banks I circumvented the gray squirrel, fell away to the north, but a day's drive would take one to waters that found their way to White River and the South. It is quite natural, therefore, that I should feel an interest in those blessed old "blackjack" covered flint hills—it is a burlesque to call them mountains.

Your correspondent in the issue of July 1 knows what he is talking about. I have some little fear that the natives told him some unreliable "bar" stories. I never understood that bears were abundant in any section there except in the swamps of the Mississippi. Otherwise the information he got was reliable. The native's idea on the subject of quail shooting is none the less amusing to me now because it was the current one where I was raised. One reason of it was that the general sentiment was in favor of the rifle as opposed to the shotgun, even for turkeys, because the latter "made so much noise" and "took so much ammunition." Economy of ammunition, by the way, was a cardinal principle, inherited from the pioneer days, when powder and lead were hard to get. Another practice arising naturally from the use of the rifle and the desire to economize ammunition was that of holding your fire until you had a sure thing. Nobody shot on the wing, and many a running or snap shot was neglected that would fill the soul of the modern shooter with delight. I often think now of the majestic turkey gobblers I have seen rise and sail away, thrashing the brush and looking as big as a dodo, without even the smallest thought of shooting after they left the ground. Oh for such a chance now! I remember that once when a huge fellow flew almost into my face I banged at him, so to speak, in self-defense, but without touching a feather. That discouraged me. A result, however, of this careful shooting was an astonishingly large proportion of kills to the number of shots. When a squirrel rifle cracked you might take it for granted, about nine times out of ten, that there was a dead squirrel, with a bullet in his head at that, for they rarely shot in the body.

The ordinary way of hunting deer was by driving, a process familiar to your readers. So little is written about turkey shooting, however, that I venture to say a few more words about that royal sport. Our custom as boys was to hunt them in two ways. One was to hide and call the gobblers in the spring when they were mating. This most exciting and difficult game was finally stopped by the Legislature, who decided, and justly, perhaps, that it was bad for the preservation of turkeys to shoot them at that season. The other way was to hunt at night in the fall and winter, starting the flocks from their roosting places and getting usually a shot or two. Going back next morning we would hide in the bushes before daylight. Just at dawn the scattered flock would begin to assemble, calling softly to one another. If they were young and inexperienced it was easy work. But as the season advanced they became exceedingly wary, and he who got a shot had to be skilled in the business. I have hunted many different kinds of game, but the turkey (*Meleagris gallopavo*, for the Mexican variety is different and more striped) is of them all the most difficult to outwit. To approach him in the day time, when he is on his native heath and alert, is next to impossible. I know of only two ways in which it can be done. One is to confuse him by means of a little barking, fussy dog, a spaniel, for instance, at which he will fly up into a tree and sometimes give you a shot, and the other is to wrap yourself in a sheet when the woods are covered with snow and he doesn't want to fly anyhow, and thus approach him. Your "Old Man" from Virginia says he will sometimes lie to a dog, which is probable, though having never hunted him with a trained dog, I do not know. One thing ought to be added, and that is, that the meat of a young turkey from September to midwinter is just about as near perfection as one could ask. A very good account of the spring methods of shooting gobblers may be found in Mayer's "Sport with Gun and Rod."

I have wondered with your correspondent why there are no grouse in those hills. There certainly are not. There was a tradition of "pheasants" in my boyhood days, but I never saw one, and I think they were mostly further north. From what I can remember of the description they were probably ruffed grouse. Bob White is there in all his glory, and is usually called partridge.

AZTEC.

MEXICO, July 13.

A BIG-GUN.—James Waters, the recluse of Horse Island, near the mouth of the Detroit River, died a few days ago. He had lived the life of a Crusoe on the island for forty years, and little is known of him except that he came from England. His only companions at the time of his death were two dogs and forty cats. Among his personal effects was a wonderful fowling piece that was proved by a manufacturer's mark to have been made in England 200 years ago. It is called a pontoon gun, and was used by the hermit in the wholesale slaughter of waterfowl. The length of the gun is 11ft., its diameter at the muzzle 7¼in. and at the breech 5¼in. It has a flint lock, and 1lb. of powder and 3lbs. of shot constitute a charge. During the gunning season the recluse kept the gun mounted on a small flat-bottomed boat, which was covered with lake grass and boughs of trees. When a flock of geese or ducks settled near the island Mr. Waters would slowly propel his craft toward the unsuspecting fowls until they were within range of his gun. When he had everything in readiness to discharge the gun he would reverse the motion of the boat to break the force of the recoil, which was something terrific. It is said that he was often rendered unconscious for several minutes by the concussion. The same authority asserts that it was not an uncommon thing for him to bag fifty or sixty fowls with a single volley of his murderous weapon. The gun was sent to a son of the deceased living at Naples, Ill.—*Detroit Tribune, July 15.*

PATTERN AND PENETRATION TESTS.

THE COLT GUN.

THE trial in the FOREST AND STREAM Gun Test, which took place July 17, brought to the front a pair of Colt guns. They formed an attractive but not altogether an even running team. One of these arms was the property of Dr. A. E. Merrill, U. S. A. He had put the gun into the hands of a smith for a recess choke treatment, intending to make it so that ball as well as shot cartridges might be fired from it. The report on the boring, or rather, the measuring of the barrels after the boring, shows that the enlargement of the bore commences about 1½in. from the muzzle and is about .006 or .008 of an inch larger for about 2in. in the left-hand barrel. The enlargement of the right-hand barrel commences about ½in. from the muzzle and is about 3½in. long, and so far as can be judged from

COLT GUN (DR. MERRILL'S), 40YDS., RIGHT BARREL, 249 PELLETS.

the use of lead disks it is somewhat larger than the change in the left, about .02 of an inch. Putting the distances from the breech and the measurements taken of them into tabular form, the report shows:

Distance from Breech.	Diameter, inches. Right barrel.	Left barrel.
Breech	.815	.815
3.1	.732	.732
3.2	.746	.742
7.0	.736	.728
10.0	.736	.738
13.0	.734	.737
16.0	.733	.737
19.0	.731	.736
22.0	.728	.726
25.0	.727	.734
26.5	.726	.735
28.5	....	.731
Muzzle	.726	.726

When the gun reached the FOREST AND STREAM office

COLT GUN (DR. MERRILL'S), 40YDS., LEFT BARREL, 233 PELLETS.

for trial, a request was made on Gunsmith Dannefelser to prepare a series of charges. He loaded fifty cartridges with 3½drs. of dead shot powder and 1⅛oz. of No. 8 chilled Cincinnati shot. Bullet charges were also prepared, but upon their performances a separate report will be made. At the range Supt. Alfred Moss had a Colt arm also of 12-gauge, of which he is very proud, and with which he has had no end of sport. He was invited to shoot both weapons and did so, using the cartridges from the same batch. His weapon was of the regular full muzzle choke pattern, and in looks, finish and balance a very satisfactory arm.

The day was all that could be wished for such a test. The wind was a lazy 3-o'clock breeze, with hardly power enough to lift the bit of blue ribbon hung to guide the marksman in his aiming. The big roll of white paper, into which the shots pass to make their pattern, was set in motion; the penetration pads were dropped one after another into the slot behind, and the gun firing went on with great celerity. First the Merrill Colt made its record at 40yds., and this was promptly followed by the performance of the Moss Colt at the same range. Then back to 60yds. the more severe test was applied to the arms in the same order. There was not a single break or pause in the entire test. What the weather conditions were, a glance at the recorded meteorological observations will show. No better day for such work ought to be asked for by any gun man, and that they were doing their best, or very near it, there is no reason to doubt. So far as hitting power was concerned, as indicated on the penetration pads, the two arms were very nearly equal, and each barrel as well, but in pattern the difference was great enough to rouse the query whether after all the old form of choking, in order to make room for the solid-ball cartridge in use, was altogether an improvement to the Merrill arm. It certainly did not gain much advantage in its extra weight, and as for recoil, marksman Moss complained that the kick was much greater than in his own gun. Looking at the results by percentage it will be seen that but one barrel out of the four fired from got over 50 per cent. of the average load into a 30in. circle, while at a previously-struck circle the percentage was much lower.

In the shots fired for maximum patterns, irrespective of aim, the Moss gun showed itself a much better holder than its companion weapon. The table of the variation of centers between the points aimed at and the centers taken for best pattern show as follows:

MERRILL (COLT) GUN.

40 Yards. Right Barrel.	Left Barrel.	*60 Yards.* Right Barrel.	Left Barrel.
1.... 3 in.	2½in.	1... 9 in.	8 in.
2.... 7 in.	6 in.	2 ... 8½in.	9½in.
3. .. 5 in.	5½in.	3....10½in.	10 in.
Aver'ge.5 in.	4⅓in.	Aver'ge.9 in.	9 in.

MOSS (COLT) GUN.

1.... 2⅛in.	1⅛in.	1 ... 7 in.	10 in.
2.... 3½in.	3 in.	2.... 7⅛in.	9 in.
3 ... 4 in.	3½in.	3 ... 8½in.	6⅛in.
Aver'ge.3⅛in.	2⅓in.	Aver'ge.7⅓in.	8⅛in.

Without further talk of the test we leave the formal record of it to tell its own story. How the cartridges were loaded, how the guns were handled and how they behaved themselves are all told there in the dead accuracy

COLT GUN (SUPT. MOSS'S), 40YDS., RIGHT BARREL, 285 PELLETS.

of unyielding figures. Enough shots were fired to show that there were no flukes, and to make the averages real records of the doings of the respective arms. At some future day, when other Colt guns are tried, perhaps they will tell a different tale, and as soon as the Hartford Co. shall send on a weapon for trial the Colt may be expected to show quite a different gait along the range where the tests are conducted.

COLT GUN (SUPT. MOSS'S), 40YDS., LEFT BARREL, 316 PELLETS.

CLAREMONT, N. J., July 17, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Colt, Damascus steel barrels (Dr. Merrill's Gun). Cost, $—. No. of gun, 3,975. Weight, 8¼lbs. Length of barrels, 30in. Gauge, 12. Right barrel, recess choke. Left barrel, recess choke.
Weather—Clear. Direction of wind, 3 o'clock. Force of wind, 3 miles per hour. Thermometer, dry, 76°. Do., wet, 67°. Humidity, 63°. Barometer, 29.9in.
Charge, as given by holder of gun:

A 200YDS. DASH.—For some time past a bear has been strolling about the farms in Kempt Road, and during that time carried off four sheep. One day last week a son of Nat Comley's was down on his knees weeding turnips, when he heard an unusual sound, and on looking up says he "saw the best animal race they ever had in that part of Bonaventure." The race was between an immense bear and a two-year-old heifer, and the distance 200yds. The race was close throughout, but the heifer got a couple of yards start and kept that distance to the barn, where the bear was scared off. Next evening Mr. Comley sat at the edge of the woods, a short distance from the house, with a smooth-bore gun in his hand. He had to wait but a few minutes when bruin appeared. Mr. Comley is a good shot. The bear weighed 450lbs. The skin brought $22.—*Restigouche Pioneer, Campbellton, N. B., July 10.*

TUBULAR BULLETS.—Mr. A. Weed, of Tarrytown, N.Y., whose tubular bullets were described in these columns the other day, will be absent on a camping trip in Canada for six weeks, and his correspondents who may apply for specimen bullets will be obliged to await his return.

THE ARKANSAS GAME LAW.

SEDALIA, Mo., July 15.—*Editor Forest and Stream:* In a recent number of your paper I see an article from Mr. J. M. Rose setting forth the provisions of the Arkansas game law. Having had some experience with Arkansas game, I feel interested, and am glad to know that Mr. Rose is no less so. The law making the open season for deer begin in August looks a little bad, but I am sure it will not prove very detrimental, as the deer will be too poor for the Little Rock market, and a poor deer is about the meanest thing a person can eat; and it will not take a great many to supply the few farmers who will go out that hot weather to hunt them. But hurrah for that part of the law which prevents them being sent out of the State to market. This is one step in the right direction. I have seen a wagon load of deer shipped from one little station at one time, and at other times have seen the saddles and hides shipped and the forequarters thrown away, as they could not be sold at any price. I have seen quail trapped and netted and brought to this station by the score; there their heads were pinched and the birds shipped to Memphis by hundreds. There are thousands of quail in Arkansas, and the law should prevent their being netted. I don't think, however, there is any danger of them being exterminated; I am sure there is not if it is to be done with a gun, for they rarely ever shoot a quail. I glory in the Arkansas game law. If they would only include other game, such as turkey, duck and quail, it would be much better; but as it is they will do to imitate, and the example should be followed by other States. Arkansas is the first to start the ball on its correct course. I will say, to encourage Mr. Rose, that the Arkansas folks are the best people I ever saw to respect the law. L. S. E.

THE MISSOURI GAME OUTLOOK.—Sedalia, Mo., July 15.—We have the finest prospect for game in this part of the country known for years. I drove out about four miles from town yesterday and "Bob White" greeted me on every side. I have inquired from engineers running out of here and they say they see old ones continually. An engineer told me yesterday that some days he truly believes he sees five thousand on a run of forty miles between here and Warsaw. I am going to take a holiday about Oct. 20 and visit my brother, who is living on the farm in Calloway county. I received a letter from him a few days ago, a portion of which reads as follows: "I have never seen so many quail in my life as there are here now. I have seen several coveys of young birds, and there is a world of old ones. Be sure to come: you will have the finest sport you ever had in your life. Crops are promising; everything that can be asked, and people are prospering and feeling good."—L. S. E.

THE WORCESTER (MASS.) SPORTSMEN'S CLUB held its annual field day at Rutland last Tuesdaay.

Sea and River Fishing.

A STORY OF TROUT LUCK.

I SIT down to write a big trout story; a story in which I am interested only to the extent that my wife, who has been on many trouting trips with me, caught the next largest trout, and a friend who, by the way, had never before dipped a line in Maine waters, caught the largest. I brought up in the rear with a six-pounder. It was a very quiet little party that started from Boston, on the morning of the 24th of May, for a few days fishing on Richardson Lake. There were only three of us. Sickness kept back the others, who were to make up the party. Slowly we wended our way toward the lake by way of Andover, Maine. We had been told that the fishing was dull. The news was good. Always tell us that the fishing is poor, and we will bring out the big trout. We reached Camp Stewart without special incident, except that some of the hand baggage was one day behind, and of course the fishing rods, though a small amount of tackle happened to be at hand. We reached camp at 4 P. M. of Saturday. It did not take long to don the old clothes that are always ready in that camp, and with an improvised rod, ten handsome trout were ready to be served for supper. Col. H. M. Fitch, the third member of the party, considered this a rather remarkably feature of the trip, though he has fished in the Rocky Mountains and in many parts of the world, and he has now gone to Sitka, Alaska, with his fish rod in his trunk. But for those who know there are always trout to be had for the table there; that is enough. The next day was Sunday and the delayed fish rods did not arrive till night; hence one member of that party was saved from breaking the Sabbath—except with a cedar pole.

On Monday the rods were in hand and fishing began in earnest, that is when the weather permitted; the wind blew the most of the time during the middle of each day, and our fishing was put in at sunset and before 8 o'clock in the morning, at which time the lake was comparatively mild. Our success was good each day. A plenty of trout, all the way from ¼ to 3lbs., but up to Wednesday morning no large ones had been caught. With Chas. Cutting, of Andover, as guide, Mrs. M. went out that morning to see what could be done. They were absent from the camp about one hour, when they came rowing slowly back. The little boat touched the log wharf in front of the camp. The water had begun to be boisterous, and Madam is afraid of very rough water. She called to me to come down and help her out of the boat. Naturally lazy, I suggested that Cutting should assist her. But nothing would do but what I must go down to the boat. Mrs. M. had "caught a curious trout." She had "caught a little one." She paints trout pictures, and I calculated that she had caught a trout of fine coloring. Down I went to the wharf. There, in the bottom of the boat, lay a trout 24in. in length, with a weight of 7¼lbs. Madam had caught it all her own self. She had conquered it with that little lancewood rod of mine, only weighing about 9oz., and not even the tip was broken. The reel and line are as good specimens of tackle as the present age affords—the celebrated extension reel invented by Henry C. Litchfield, of Boston. Was she a happy woman? Ask Charles Cutting, the guide. It may be stated right here that the same Charles Cutting told Col. Fitch that he was more pleased to have Mrs. Moody take that trout than any other person in the world. The trout was hooked fully half an hour before it could be brought to the top of the water. Then when Mrs. Moody saw its size the force of her arms gave out, and Cutting had to take the rod for a minute or two, when the lady finally brought the fish to the net.

That evening I went out fishing. The wind had died away and the surface of the lake was a beautiful mirror. I had the same rod and tackle that had conquered the big trout in the morning. All of a sudden I had a strike that nearly took the rod from my hands. The reel sung out twenty feet more of line in an instant. Cutting remarked that "you have a big one." I was ready for him. The little rod proved all that I had ever expected of it. Scarcely an inch of line could I get. The trout sounded for the bottom and evidently found it. Then he sulked. I could not start him. The boat was slowly drifting toward the shore, where the snags were numerous and bad for a hooked trout to get among. Neither Cutting nor I had noticed the fact, so intent were we in watching that rod and line, till all at once a big snag, an ugly tree-top, was not fifty feet from the boat. I called Cutting's attention to the danger. "We must try and tow the trout out into clear water," he remarked, and took up his oars. I expected trouble, but curious enough the trout then made an attempt to go under the boat, and we succeeded in getting him into deep water, safe from snags. Again he begun the operation of sounding and running out line. At times the rod was bent up nearly double, till the reel was released and more line taken. But at last he was drawn exhausted to near the top of the water. He had been hooked twenty-five minutes by the watch when he was brought to the net, and he weighed plump six pounds. I was satisfied. I am satisfied to-day with my spring fishing trip. I had caught, up to that evening, nearly sixty trout, and had counted nor saved nothing under half a pound, except in cases where they were so badly hooked as to kill them. I had also caught nearly two-thirds of these trout with the fly, though it was very early for fly-fishing.

If one desires to see the eyes of a happy man, let them take Charles Cutting, as a guide, and hook a big trout. It is worth the trip to see. He has grown old in guiding, but the man who employs him gets trout, if there are any to be had. Col. Fitch and Madam came down to the wharf to congratulate me, as we came leisurely rowing in that evening. We told them that we had caught a little one—we had several little ones. You should have seen the expression on their faces when they saw that 6lb. fish. The Colonel's congratulations were hearty, but alas! there was a tone of sadness. His trout were all only fair sized. I had told him, at the outset of the trip, that the trout of the world were to be found in the waters he was to fish. We were to break up camp the next morning. We advised the Colonel to try the trout in the morning. His trunk was all packed the evening before and the little steamer would not come for us till 9 o'clock. Reluctantly he promised to do so. I was up early—half past four. There was Cutting at the wharf, with the bait—minnows—all caught. He was strapping his hands to keep them warm. The mercury, though it was May 31, was down to 44. Col. Fitch came down rather reluctantly. He had little confidence in any good luck for him that morning. He had broken his rod all to pieces on a 3lb. trout the day previous, but had saved the fish by means of the reel. I told him to take my rod: the one that had already killed the big trout. He was afraid to do so. "I fear that I shall break it," he remarked, "and I should want to embalm that rod if I were you." I told him that I did not fear his breaking it, and Cutting remarked that there was not the least danger, provided he handled it fairly well: for already it had bent double under the struggles of big trout. He took the rod and they paddled away. In about an hour and a half they came back. I saw by their motions that something was to pay. The Colonel shouted that he had "caught a little trout," which was again true. But that little trout story was played out with me. I ran down to the wharf, Madam followed. They were just coming up alongside. Could I believe my eyes? There was a trout 27in. in length, and full 9lbs. in weight. The Colonel caught my hands. A happier angler I never saw in all my experience of more than 30 years. His face was a study. He had made a record that he need never hope to be beat. The trout was one of the most perfect specimens of *Salmo fontinalis* I have ever seen. The vermillion spots were very numerous and the sheeny sparkle was a sight to behold. Best of all, the little rod was as perfect as when he had started out. It had stood the strain of that giant trout for nearly three-quarters of an hour, and to-day it is as perfect as when it was made. Not a tip has been broken. When any one attempts to tell a reader of the FOREST AND STREAM that there is no difference in rods, or that a cheap rod is as good as a fair-priced piece of workmanship just tell him that he does not know whereof he speaks. Mrs. Moody's trout is to be painted, and Chas. Cutting is to have the picture. Good reader, are there any trout in the Rangeleys? If you are preparing to say no; that big trout are scarce there, then I will tell you that I learned on my way in that the Stevens party, Mr. Shattuck and Mr. Smart, had taken a 7 and an 8-lbs. trout. Will Shaw, of the Andrews House, South Paris, Me., took a 9½lbs. trout above the Narrows a few days before we went in. His wife got a big landlocked salmon. A gentleman from Portland has taken a 9-pounder. Mrs. J. P. Whitney went out trolling only a few days before our visit. She had bet with some of their guests that she could take a bigger trout that day than any of them. After fishing a little over an hour she returned with a trout that more than tipped the scales at 8lbs. But a curious feature of this trout was that soon after it was weighed there came out of its mouth a sucker that weighed over a pound. These great trout swallow fish nearly as large as themselves.

W. K. MOODY.

MAINE TROUT.

THE fishing season is not entirely over, so far as Boston boys are concerned. It will do to call them boys, for they have not lost their boyhood love for the laughing trout stream and the quiet forest lake, though it is of grown up merchants and the masters of commerce we speak. With them the outing on the lake and stream is one of the bright spots in the year's life, and every year it brings forth new delights. Mr. R. D. Richardson, of the grain firm of Richardson & Co., will start this week for his annual trouting on the Lake Superior waters. It sounds odd to hear of Lake Superior for trout—odd to the Boston sportsmen, since he usually finds his fishing to the North, or more commonly in the East—but nevertheless it is plain that Mr. Richardson has found a spot that almost any of the Boston boys would delight to visit with rod and reel. Richardson & Co. are also proprietors of the Port Huron, Sarnia and Duluth steamboats, and this is probably the strongest reason why Mr. Richardson came to seek his trouting home so far away. He and his brothers own a steam launch, outside of their grain steamers, and then pack up rods and lines, with all the paraphernalia for a couple of weeks' fishing. They take a good cook on the craft, which is by the way over 100ft. in length, and very seaworthy, and they live on board of her. They betake themselves to Jackfish Bay, which is about the extreme northmost point of that great inland sea, Lake Superior. Here they are pretty well up in the lands of the Dominion, and pretty well north, too. The season is not very early up there, neither is the growth of timber as luxuriant as it is a few hundred miles further south. They go to Jackfish Bay with the steamer, and as far up the river which empties into the bay as the state of the stream will permit. Sometimes they find good fishing for trout and whitefish on the lake and in the streams that fall from the stunted north woods into the lake, but usually they make excursions up these rivers and into ponds and lakes a short distance away. Here they have the fishing all to themselves. There are no inhabitants, or only half-breeds and Indians, who go through to Hudson's Bay from this point. By the way, it is not many miles up into the highlands from this part of Lake Superior before one finds the headlands to have turned and the waters to be running toward Hudson's Bay. Mr. Richardson's party make one or two very pleasant excursions in these wilds. They strike off from Jackfish Bay an hour or two up a little stream till they cross a pond in a boat that their guides have to take in for the purpose. Then they take another tramp through the woods a half hour, till another pond is reached. This pond they go around, and then up a rough carry, and over the rise till the water sheds the other way. Then they go down a sharp descent, and they are at Mountain Lake, a lake several miles long, hidden in the virgin wilderness, and seldom visited by other sportsmen. Indians and half-breeds fish and hunt there on their way to and from Hudson's Bay. On this lake the fishing is sometimes excellent, but the Richardson party usually goes directly to the outlet, which, by the way, is into Lake Superior, but too steep and woody, rough and roundabout to follow up from the great lake itself. The outlet falls several hundred feet in a half mile from Mountain Lake, and there are several trout pools. These pools are the delight of Mr. Richardson, and to talk with him about testing his fly leaders to a strain of six and eight ponds would make one believe that there are large trout in those very pools. He says that they get all the trout they want. They get trout on the fly that weigh four and five pounds. They get doubles and trebles at a cast. The design of the party is some season to provide themselves with guides, tents and provisions and follow the streams down to Hudson's Bay. As it is, Mountain Lake is about as far north as Manitoba, and it is into the north woods, where one need not fear intrusion. Who would not like a trouting home up there?

SPECIAL.

CAMPS OF THE KINGFISHERS.—II.

ECHO LAKE, ONTARIO, CANADA.

ANEBISH or Encampment Island, about half-way between Point Detour and the Sault, is a vicinity noted, the Captain said, for the very fine bass fishing at the rapids, later in the season. The river here has three channels, one flowing into the north passage on the Canada side, one between St. Joseph and Anebish Islands and one between Anebish and the mainland on the Michigan side, each with its rapids designated respectively East, Middle and West Anebish Rapids, shortened by the natives and lake-going people into 'Nebish Rapids. The Middle Rapids, at the head of Anebish Island, over which nearly all the Lake Superior traffic passes, is not a great hindrance to navigation.

Had it been September we would have made our camp right there on 'Nebish Island, for heart of angler could wish no "fishier" looking water, clear and blue as it came from the great lake above, nor for a more restful picture for the eye as it took in at a sweeping glance the beauties of Anebish Island to the left, the foot of Sugar Island in plain view a short distance up the river, and the high wooded shore of Canada and the upper end of St. Joseph Island on the right, to say nothing of some tiny wooded rocky islets up near the head of St. Joseph that seemed placed there for the especial purpose of involving the beholders in the hopeless effort of making out which was the "sweetest" and loveliest of the lot. But it was useless to waste time in longing for a closer acquaintance with them; we were bound for Echo Lake, the unknown, whose waters were yet as a sealed book to us.

On the way up we had questioned the Captain about the lake (steamer captains are supposed to know everything, but frequently don't), but he knew little in regard to it. He had heard it was a good region for trout, that it was a small lake not over a mile long, but he had never heard of any one disturbing its waters for bass.

At the landing at Anebish Island a young, bright-looking fellow came aboard, whom the Captain addressed as "Ben," and he was at once turned over to us as one likely to give all the desired information about the lake we were seeking. Yes, Ben had be(e)n there. He said the lake was two or three miles back from the river in the mountains; was a mile long, not over a mile and a half and maybe a half mile wide. Near the head was a fine camping place, with a stream near by that was full of good trout; but as to bass, he had never heard of any one taking them out of the lake, but supposed there were plenty in it, and so on.

Fine trout fishing right "adjacent to the camp" was "good enough for the Joneses," and we were correspondingly elated at the prospect of appeasing the cravings of our "trout tooth," which had become somewhat bothersome from a year's idleness. Ben was voted a "bully feller," and was undoubtedly a young man of good parts; bright and chock full of information for anglers; but it turned out (as is usual in such cases) that he had never been to Echo Lake, even mentally, and knew, if possible, less about it than we did, and we knew nothing.

Ben also knew everybody at the Sault, and would come around to the hotel after supper and put us in the way of hiring good boats for the trip to the lake, etc., etc. After supper Ben didn't show up, nor have we seen him since; and I may safely assert that we have lost faith in Ben and his ilk, and have come to the conclusion that the only way to get at the exact location and dimensions of a new lake is to ask some one about it who has never been there—and then hunt it up ourselves.

After leaving the rapids, a matter of four miles, we entered a very beautiful sheet of water, Great Lake George, another widening out of the river, nine miles in length by four and five wide.

As we neared the head of this lake Ben pointed past the foot of a low, green-clad island, across a wide rush-grown bay to a gap in the Canada hills, where he said was the mouth of Echo River, the outlet of Echo Lake, and this, which was corroborated by the Captain and the jolly mate, proved to be the only reliable scrap of information gleaned from him.

Less than a mile further on, we entered the river proper, with Squirrel Island on one side and Church's Landing, or Churchville on the other, neither more than a good stone's throw from the deck of the steamer.

Church's Landing is a small settlement on Sugar Island, which is 25 miles in length, on the American side of the river.

Just above the head of Squirrel Island a sharp bend in the river to the west shuts out the view of the broad waters of Lake George, and as the steamer swung into the channel over against the Canada shore, we passed Cunningham's Landing, and a mile or more further up Garden River on the same side.

This is quite a pretentious but sleepy-looking little Canadian village, with a post-office, as some of our party afterward learned by ordering their mail forwarded there from the Sault, which, as far as we have found out up to date is still in process of forwarding. The mail facilities between the two places seem to be somewhat out of gear, although the distance is only about 10 miles as the crow flies.

Garden River takes it name from an insignificant little "crick" flowing into the St. Mary's River a short distance below, our attention being called to it by Ben as we passed the mouth of it, as a great trout stream up near the headwaters somewhere in the vicinity of Echo Lake, but after our experience with Ben we are firmly of the opinion that there are no fish in it better than white suckers and "stone rollers."

The scenery along the river from Garden River up is of entrancing beauty, and we enjoyed it so thoroughly that we were in sight of the falls long before we were ready to turn from the other wonders of this wondrous river. From the deck of the steamer, as we approached the town, we could see a tumbling, roaring, white-capped mass of water rushing from shore to shore, lashed into spray and foam as it tossed and whirled over its rocky bed, a restless, resistless, ever-rushing torrent—the combined volume of the thousand streams and brooks feeding the great lake above, to find temporary rest at the foot of the rapids in the wide, deep basin reaching in unbroken expanse between the two towns, the American and Canadian Sault de Ste. Marie.

It is a masterpiece of nature's handiwork worth a long journey to behold, a sight not soon to be forgotten; but now we had little time to devote to it, for the steamer was at the dock and all was hurry and bustle to get the calamities ashore and our arrangements made for the night.

The calamities were stored in a warehouse a few yards away, which is also the custom house of the port, to be under lock and key for the night, and soon after we were under the protecting "fin" of mine host H. B. Smith, of the Chippewa House, a block from the river, distracting him with questions about the country, the fishing in the region round about, and especially about Echo Lake. He had heard of the lake, but could give us no information about it or the bass fishing to be had in it; didn't know anything about bass or bass fishing, but was "way up on trout:" in fact, every one we talked with knew nothing about bass, but they all knew trout; everybody knew trout, fished for trout, talked trout, ate trout, when they could get 'em, and could tell us where to find them, big and little, by the bar'l, but bass was an unknown quantity, and had to take a back seat where trout was king. We began to feel that our piscatorial education had received a violent backset, and were on the verge of feeling sorry that we had come so far after a little sport with such an insignificant fish as the black bass when there were so many lordly trout "layin'" round loose in the streams waiting to be yanked out.

"Take a Mackinaw boat," said one, "and go around Whitefish Point and fish the streams along the south shore of Lake Superior for 40 or 50 miles, and you can can catch hundreds and hundreds of 'em; fish the streams along the north shore 60 or 80 miles above, and you can catch thousands of 'em."

But nobody fished for bass. They just talked trout to us till we felt dry and spotted, and old Sam moved the Jedge to unusual hilarity the next morning by telling him that "during the night he had dreamed he was a 'speckled beauty'" (Sam's a trifle speckled when in good condition), and in making a pass at a June bug hovering over the brook in which he was disporting himself, he kicked the covers off the bed and the wind out of his partner, Charley, at the same flirt, and didn't get the bug after all. "A clear case of 'bugs,'" Charley said, brought on by mixing too much "Soo" water with his festivities the previous evening at the Chippewa House bar. Some time after supper, when we had given up our steamer acquaintance, Ben, an old guide and "land looker," a Capt. J., whom Capt. Barker had promised to send around, dropped in to fill us up with information about the country and the fishing and the lay of Echo Lake. Capt. J. was a trifle off color, having several dashes of aboriginal blood in his veins, but he was withal a clever gentleman, well informed, a good talker, and thoroughly acquainted with all that northern region, for he had been a land looker and guide from away back, and had camped and fished for trout and hunted and looked up pine lands on half the northern peninsula of Michigan and a goodly strip of Canada for years past. He told us all about Echo Lake (and it turned out to be in the main correct), how to get there, and said there was one very small stream coming in near the head of it, in which we might find a few trout, but he knew nothing about our fish, the bass.

Then he launched out and told us of a score or more of trout streams till we felt bad again that we had been brought up as plain bass fishers, and when he wound up the first chapter of his discourse with "Yes, gentlemen, the country is full of 'em, actually full of 'em," our "trout tooth" gave a mighty yearn for a chance at a dozen or two of 'em, albeit there were none on the table for supper or breakfast.

He referred us also to a Mr. Everett, who had some very good small boats to hire, and advised us to hire a tug to take us and our baggage and small boats to the camp, which we decided to do, as the three boats would not carry us and our outfit at one trip.

In the morning we would see a Mr. P. M. Church, a hardware merchant, and hire his steam tug Pioneer, which was the only one in the harbor that had a smoke-stack with a "jint" in itby which it could be lowered in order to pass under the bridge near the mouth of Echo River.

All this talk took place in presence of the dispenser of beverages attached to the Chippewa House, and as the captain had a habit of saying, "Don't mind if I do," and "Same as before," in answer to certain questions propounded him by our boys and the dispenser, by the time the pow-wow was over some of our boys were chock full of "information" and the captain even fuller of "same as before," and with all his attainments as a pine-looker couldn't have told the difference between a Norway pine and a squaw vine.

But he evidently got home all right, for he turned up next morning before breakfast fresh as a morning glory, albeit with his hearing a trifle impaired it seemed, for when asked by old Sam, "How did you rest last night, Captain?" he replied, as he nodded to the dispenser, "Same as before, with a little bitters," and then he talked some more trout, and told us of a few more streams that had escaped his memory the night before.

From all accounts we made up our minds that it was somewhat of a region for trout.

He told us also that we could hire the cook of the Pioneer, Louis Lesarge, a wiry little Indian, to go with us to camp, as it would be the last trip the Pioneer would make anywhere for a few weeks, and Louis was a good camp cook, etc.

Captain J—n was a walking edition of general information, complete in one volume.

We found Mr. Everett and hired his three boats at $2 a day for the three, and then waited an hour or more for Mr. Church to arrive at his store, chafing with impatience at the waste of valuable time. The price for the tug was $20 a day, but as she had a half day's work to do in towing a couple of loaded lumber scows down to a sawmill just above Church's Landing—right on our way—we could put the small boats and our calamities on one of the scows and go that far without charge, then the tug was at our service for the remainder of the day for $10. The bargain was made, and we were to pay the master of the tug, Capt. Dave Tate, at the end of the service.

Then Capt. Dave had to go to the Custom House and go through a farce of red tape to get permission to take his boat into a Canada pond. First, the name of his vessel and her tonnage, name of master, number of crew, destination, and nature of cargo to be carried. This matter of cargo called for a few more yards of red tape in the shape of another set of blanks, that brought the writer in speaking contact with the grizzled but good-natured Customs official.

The first blank space in this document was filled in with my baptismal and other appellation. Where from? The number in the party? Where we were going? What we were going to do? And what we had along with us to do it with?

Old Grizzly asked a few more not very "sarchin'" questions—just to kill time, as we supposed—and we finally agreed on a simple "fishing and camping outfit," and the tape trade on that side of the river was at an end.

When the blanks had all been filled in, to the pleasement of our grizzled friend, and duly copied into a big book, a handful of them were handed to Capt. Dave, who then had to cross the river with them to the Custom House on the Canada side to get a "permit" to enter Canadian waters with his tug, another delay that caused us a violent attack of "annexation fever" right there, which was only relieved by prompt measures in the shape of some "plain an' ornamental, but vigorous oratory," after we were out of ear-shot of Old Grizzly. Capt. Dave took his departure across the river in one of the little ferry tugs plying between the two Soos every twenty minutes or so, to be gone a couple of hours, as it proved, and Sam and I to relieve the pressure, walked up to have a look at the locks and rapids, and as a matter of interest to the readers of FOREST AND STREAM a brief mention of these great locks may not be out of place.

The old locks nearest the river are two in number and are each 350ft. in length by 70ft. in width, now seldom used except in a rush.

The figures for the new lock were kindly furnished by Mr. M. Lynch, the superintendent in charge, and I quote from his letter:

"The dimensions as given are taken from the records of this office, and you can rely on them as being correct. The chamber of the new lock is 515ft. between hollow quoins, 80ft. wide, narrowed to 60ft. at the gates. The depth is 39½ft., capacity 1,500.000cu.ft., lift 18ft., depth on the miter sill 17ft. A guard gate is placed at each end of the chamber, making the total length of the walls 717ft. The water is let into the lock from two culverts under the floor. These culverts extend from a well above the upper gates to another well below the lower gates, each culvert being 8ft. square. There are 34,207cu.yds. of masonry, in the construction of which about 35,000 barrels of cement were used, every barrel of which was tested before it was taken on the wall. The weight of one leaf of the upper gates is 40 tons, one leaf of the lower gates 76 tons."

The rapids have a fall of 17½ft., and are 1,500yds. in length. At a point opposite the locks the river is 733yds. wide, while at the widest part of the basin, below the rapids and between the two towns, it has a width of 1,280yds.

When he had looked over the new and old locks to our satisfaction, we walked down to the water's edge a few yards away to get a better view of the rapids, and to see if there were any Indians out in the river "scooping" for whitefish.

Sure enough! there, 100yds. out and down near the foot of the rapids in very swift, broken water, were a couple of the copper-colored, huckleberry-gathering fiends in a birch canoe, one kneeling in the stern holding the frail craft perfectly motionless in the current with a pole braced against the bottom of the river, and the other standing in the bow with net in hand gazing intently into the swiftly rushing water. At least that was the situation as we made it out from the shore, but if that Indian was holding the canoe in the rapid current with no other aid than the pole, it was an exhibition of marvelous skill that can certainly be acquired only by long practice.

We watched far some time without seeing a motion from either occupant of the birch, when suddenly Mr. Lo, in the bow, made a dive and a down stream scoop with his long-handled, overgrown landing net, but it came up dripping and empty, and he resumed his cigar-sign attitude, with the difference, however, that the glance of his eye had a downward slant into the water instead of the vacant gaze into empty space affected by the wooden warriors standing guard in front of tobacco stores.

"Water haul," said old Sam, with a dry rasp in his voice, "could do that well myself with a pitchfork." A few minutes of motionless gazing into the water and Mister Lo made another quick swoop with the net with the same result as before, and then the canoe dropped back with the current a few yards and came to a stand-still again. A short period of waiting and again the net was plunged into the swift current, and as it came out we could see a gleam of white and pearl through the meshes, struggling and flopping as it was swung over the canoe, and when the Indian had released the fish and resumed his watch for another victim, we walked back over the locks and down to the dock, where the Pioneer with her tow had been brought up from her slip below, to await the coming of Captain Dave, well satisfied that our trip of over 700 miles had not been in vain. We had seen a broken-spirited child of the forest, a frayed remnant of the once powerful Chippewas, scoop a luckless whitefish out of the rushing waters of the rapids with a long-handled net—a feat Sam said "he could perform himself if the fish would keep still till he got the net well around it." But in truth the great locks, the beautiful river, and the wonderful rapids amply repaid us for the trip.

Captain Dave had not yet returned, but we pulled the boats up on one of the loaded scows, put our camp chests and luggage aboard (we came near overlooking a big box of side meat, potatoes, butter, eggs, flour, etc., that Knots and Charley had bought up town), and waited nearly another hour for him.

He came at last when our patience was about exhausted, and judging by a snap of his eyes and a whiff of his breath he had evidently met with some of his Canadian friends across the river, and had been "tamperin' diligently with the flowin' bowl."

Another half hour was trifled away in a trip up town, and at last he came aboard and we were off down the beautiful river and to Echo Lake, with a good store of provisions, fluid and solid, good boats and a good cook—we had hired Louis—and our spirits rose to the bubbling over point at the prospect of soon being established in a good camp.

Although old enough to have outgrown a tendency to indulge in youthful capers, the "boy" that was left in old Sam and the writer got the upper hand, and I chronicle the "episode" without comment that there on

the top of a lumber pile, when a couple of miles down the river, we relieved the tension on our good feelings struggling for a vent in a brief but highly artistic sandhill crane dance, greatly to the amusement of the other boys and a couple of Indian passengers for Church's Landing, who occupied reserved seats on the camp chests.

"Go it, Hickory," shouted old Knots. "Sail in, Snakeroot," screamed Charley, "that off leg o' yourn needs a little ile in the pastern jint, but I'll bet on old Kentuck." "Hump yourself, James Mackerel, or you'll get left," from the Jedge, and similar fragments of encouragement and shouts of laughter, even the stoical Indians joining in the hilarity, filled the air till old Snakeroot, exhausted and the sweat streaming from his face, wound up the festivities with a prolonged Kentucky whoo-oo-p, that moved our Indian auditors to manifest their approval of the performance by a violent outburst of merriment and sundry nudges and grunts of satisfaction that we failed to appreciate for lack of an interpreter. But we had our dance of rejoicing a little too early in the day.

It was after 1 o'clock in the afternoon when we rounded in at the saw-mill dock to leave the scow, but we would still have plenty of time to reach our camping place long before sundown and get the tents up before nightfall. We went forward to see the Captain about getting our baggage on the tug and securing the small boats to tow astern, but he was nowhere to be seen. Our cook was in the wheel house, but came out on the deck looking sour and morose without saying a word, and directly Captain Dave emerged from the engine room, blear-eyed and with his throat and face scratched and bleeding and bunged up, looking as if he had been interviewing a sausage machine.

Without looking to the right or to the left, or uttering even a grunt, he staggered into the wheelhouse, took his little ship's compass from the box, a book—his account book perhaps—and his charts, bundled them awkwardly under his arms, got ashore with some difficulty, and still without a glance at us, a word or a grunt, zigzagged off across the common and disappeared in the woods a couple of hundred yards away, "permit" and all, chuck full of "Dominion pine top," and "United States tangle leg," and "drunker'n a biled owl." Then Louis told us the Captain had come aboard at the Sault with a couple of bottles of whisky in his pockets besides the load inside, and when down the river a few miles had called him to the wheel and gone into the engine room, where he soon after got into a fight with the engineer, a big, powerful man, and from the general appearance of Capt. David Tate when he left the boat the engineer must have mistaken him for a bunch of waste and used him to mop up the floor of the engine room to give it a tidy look for the next day, Sunday.

As Louis finished his tale of the skirmish, told in very good American, the engineer came ashore and laid us out flat with, "Well boys, I'm sorry for you, but I guess you're in a fix. I can't take you any further, for it's a $50 fine to move a boat without the master, and I don't feel like paying it, even to get you to your camp. Capt. Tate's got the devil in him and gone home, he lives over in the woods a mile or so back and it looks like you're left." We began to see it in the same light.

After some further talk of a decidedly sulphurous nature, in which we held up our end in a creditable manner, the engineer said that the only thing left for him was to put out the fires, leave the boat in charge of the mill men and go back to town and report the case to the owner, Mr. Church, and as a tow was just then coming up Lake George two or three miles away, he asked that one of us take a smallboat and go out in the stream with him when they went by and he would get aboard. I went out with him, and as the great propeller went by, towing three big, deeply-laden schooners, the captain was hailed and nodded permission to get aboard, and as the last of the tow went rushing past, a line was thrown us by a sailor, and as we swung alongside the engineer went up and inboard, and I pulled back to the boys, who sat around on the camp chests with long faces, dazed and crushed by this unlooked-for calamity.

There we were, in a category this time of somewhat alarming dimensions, and no visible way out of it.

"Shipwrecked, b'gosh," said Snakeroot, with a visage as long as a bass rod, "an' 700 miles from home. Con*found* (this was Sam's strongest form of profanity) a drunken half-breed, anyhow; you can't trust 'em with a drop o' the critter no more 'n you can a nigger in a watermelon patch."

The situation was certainly annoying, but it would not do to sit down and wait for something to turn up.

"Where are we now, Old Hickory?" asked Knots, puffing in a vague sort of way at his pipe.

"What'll we do now, James Mackerel?" from the Jedge, as he squirted a half gill of tobacco juice in the water, to watch a half score of small sunfish rush to the surface in a wrangle for an instant over the supposed morsel and then back away in disgust.

What's to become of us all now, Old Calamity?" huskily from Snakeroot, and Charley said, "Think fast, and let's get out of here," which was more practical.

It was decided to load the boats and start for Echo Lake at once, leaving one man to look after the luggage till we came back, if it was midnight, and the other two boats were slid in the water from the scow and the work of loading about to begin, when Louis, who had been a silent spectator, said, "Boys, if you'll listen a minute, I think I can help you out of the scrape, for I'm goin' to stick to you and see you through, after the way you have been treated." We were ready to catch at any kind of a straw, and waited to hear what he had to propose. "I know a couple of Indian boys," he went on, up around the bend at Cunningham's Landing, that own a good big Mackinaw boat with two sails and a jib, and if one of you will go with me in one of the boats I'm sure I can get them to take you to Echo Lake, and the boat will carry you all and everything you've got and tow the boats behind."

In ten minutes the little fellow and the Jedge were out of sight around the bend, and we walked around and waited, and watched the big saw cleave its way through a log at the roofless mill a few yards back from the river, made a few "general remarks" about Captain Tate meantime, and wished—at least one of us did—that there was not a solitary drop of "cussed licker, fermented or otherwise, on the face of this livin' airth."

At the end of nearly an hour, which seemed three, we saw a boat come around the bend with a sail set, but not till it was within a few hundred yards did we make out the occupant to be the Jedge, and alone. "Another backset," said old Sam, but we would know when the Jedge arrived.

This, the larger of the three boats, had a centerboard, and the mast and sail having been left in, the Jedge was playing sailor, and just now, as he went by well over toward Squirrel Island, was trying to lower the sail, but something had fouled and it stubbornly refused to come down. Every minute or so the wind heeled the little craft over till our hearts were in our mouths, and becoming vexed at the Jedge's awkward efforts to lower the sail and yet more alarmed lest he capsize and drown before our eyes I took the smaller boat and started after him, now well down toward Church's Landing, but when two-thirds of the distance between us had been gone over the sail came down and I pulled back to the dock "mad as a nest o' hornets," but thankful the "episode," as Sam called it, had no more serious termination. When he came ashore and received a good scoring for the scare he had given us, he eased our minds with the information that "Louis and two more Injuns would soon be here with the Mackinaw."

Another half hour of impatient waiting brought the boat, and after the briefest kind of a pow-wow, in which Louis acted as interpreter, Tom, the elder of the two Chippewa brothers, agreed to take us to Echo Lake for $5. Without parley, for the charge was reasonable, the calamities were put aboard and then we waited some more while Louis made a trip down to his house at Church's Landing, where he lived with his family, after his "turkey." (In lumberman's parlance his turkey is his blankets, clothing and other "household effects" strapped or tied into a compact bundle readily carried.)

KINGFISHER.

[TO BE CONTINUED.]

A PENNSYLVANIA WARDEN'S WORK.—Fish Warden Hague is the first of all such officials in this State to hand in his annual report to the Fish Commissioners. It being his first makes it an interesting document, inasmuch as it contains an account of prosecution and conviction of 36 persons in this section for unlawful fishing and names the reason for the arrest of each. This information gives the public a better idea of what constitutes illegal fishing than even the production of the fish laws. Warden Hague was appointed last June, and has accomplished in that time more than all of his colleagues in the State combined, as not one of them has up to date brought about a prosecution and conviction in his district. The following are the names and cause of arrest: B. Lazarous, County Detective of Beaver county and Chief of Police of Rochester, was caught violating the law in seining in company with Thos. B. Lukens, Jacob Stahl and George B. Hoyt, foreman of the Phœnix Glass Works of Phillipsburg, below the dam at Bridgewater, Beaver county. Geo. Brockett, Jas. McCall, Wm. Schade, Chas. Rodgers, John Sweeney and Frank Ellis violated the law with dip nets at Dam No. 1, Monongahela River. David Grounds, Matt Lewis, Jos. Carothers, John Ford, John Metz, Herman Hartner, H. C. Stevens, Chas. Hadrington, for violating the law with rod and line out of season at Cork's Run. Henry Dilly, Samuel Webster, Samuel Mackey, Michael Ryan, Herman Schweitzer, M. Hellring, Ed. Laughlin and Frank Schidle, alias Frank Nick, prosecuted for fishing on Sunday. Daniel Mackey, for catching bass under 6in. Wm. Mulcahey, Jas. Fleming, E. Laughlin, Frankie Schidle and Peter Bailey, for out-line fishing. Ed. Laughlin and Franklin Schidle, for gill net fishing. Col. Jos. Reed, of Beaver county, for possessing a hoop net, and Jos. M. Reed, Jr., of Beaver county for catching bass and salmon out of season.

EUTOPIA AND TROUT LAKE CLUB.—The territory of the Eutopia and Trout Lake Fish and Game Association, at St. George, New Brunswick, has recently been visited by one of the members, Dr. B. F. Vosburgh, of this city, who writes to the secretary as follows: "I can assure the members that we have secured most desirable property and privileges in St. George. The scenery is magnificent, the air dry and bracing and the fishing I believe to be equal to any obtainable in Canada. My visit was not for purposes of fishing, but to investigate the property and desirability of the club house site. I am pleased beyond measure with the lakes and streams to which we obtain access and fishing privileges. In several of the same we have exclusive rights. I was surprised at my success in fishing, having taken thirty-seven fine trout in about two hours. This for July, considered the poor month for trout fishing in New Brunswick, was to me a satisfactory performance. I am familiar with the lake region of New York and other trouting territories, and can truthfully say that St. George is beyond comparison; superior to any place I know of for magnificent scenery, invigorating atmosphere and climate, ease of accessibility and abundance of fish; consisting of brook, lake trout and landlocked salmon. I am informed that deer are abundant and near at hand. Partridges are plentiful; I saw a covey of half-grown ones near the site of the club house, as well as several pairs of black ducks. I am enthusiastic over the place, and am positive the members of the club will not be disappointed when they visit their property, in obtaining sport and game, such as I believe is rarely obtainable in so short a distance from New York." The club has a membership of thirty-seven, and the secretary is Mr. J. McGrath, of 120 Broadway, this city.

TAUNTON, Mass.—I have been trouting in Massachusetts but twice this year, so I have tried for the large ones. First day I got nine beauties, averaging about 9oz. They were all gamy fish, and I caught nearly all on the finest hook I could buy, with May flies (natural) for bait. Fourth of July I went six miles out of this city and in three hours' fishing caught eight trout and three pickerel. The pickerel were small brook pickerel. But the eight trout weighed over 4½lbs. The largest weighed 17oz. and three others weighed ½lb. each. I enjoyed the day very much, and spent some time looking for woodcock signs. They are very plenty, as are those of partridges. One old hen sat on the railroad track with a brood of a dozen or more chickens large enough to fly. Dr. Chas. Atwood brought in a creel of fifty trout last week, all of a size, and would average about ½lb. Whillenton Junction is high hook this year with a 2lbs. 7oz. trout.—COHANNET.

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st., Boston, or 199 Fulton st., N. Y.—*Adv.*

INDIANA BASS.—Camden, Ind., July 14.—Fishing with the fly may have been a lost art or it may never have been at all, but it is now the wonder of this vicinity. My friend and companion, Hon. Charles E. Scholl, having seen me cast the fly while outing, quickly saw its advantages and delights and secured a fly-caster's outfit. Now his Furguson lights like the snowflake full 50ft. distant. Last Wednesday we brought to creel an even dozen of as beautiful small-mouths as were ever taken from the stream. Having learned to tie flies from Thadeus Norris's descriptions published long ago in FOREST AND STREAM, I taught Dr. Scholl, and we use none other but our own make. Our surest killers are yellow or old-gold bodies, with brown hackles, stiff and bristling along body, with heavy hackle at head, red tag, red black and brown wings or red and white, all cut or bunched, tail yellow and red, We dye our own feathers and use only such material as we can get here except gut and sprout hooks.—J. P. H.

PROVIDENCE, R. I.—Three young men left this city one morning the last of April and brought back fifteen handsome trout. They averaged ¼lb. each, the largest not over ½lb. One week later one of the young men took me to the same brook after a shower, and we caught twenty, the largest weighed ½lb. These trout were very even in length and resembled salt-water fish, very light color and bright spotted. The brooks in this State were stocked with trout fry a year or so back, and it is very noticeable in the size of the fish caught. They are nearly all of a size. I have noticed a great many woodcock borings while following the trout brooks, and I should judge these birds would be quite plenty this summer.—COHANNET.

LONG ISLAND FLOUNDERS. — Thirty flounders were caught by one party of fishermen in the Great South Bay, at Sayville, Long Island, last Saturday. This catch was an unusual one in season and in score.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 7 to 11.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickerman, Secretary.
Sept. 9 to 13.—Dog show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary.
Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.
Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary.
Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Club, Toledo, O. T. B. Lee, Secretary.
Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. Greville Harrison, Secretary.
Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y.
Oct. 7 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.
Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.
March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.
Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.
Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.
Oct. 21.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

BLACK AND TAN SETTER STAKE.

DR. MEYER sends for publication the following appeal to owners of black and tan setters:

The Central Field Trials Club has offered a special stake of $100 for black and tan setters, providing there are ten entries or eight starters. The black and tan setters to be drawn together, the winner to take the stake, and then to be drawn as his position indicates from the number of heats he has won with the English setters. This is an opportunity to bring the black and tan setters to the front and give them the position they deserve. Besides winning the black and tan setter special stake, the winner has an opportunity to compete for the regular setter stake. If the owners of black and tan setters feel disposed to add to the stake by private subscription, the stake might be increased in that way to, say, $250. I will personally give $25 toward it. I hope you have a dog that you will enter. Please let me hear from you at an early date. JOHN H. MEYER.

159 WEST THIRTY-FOURTH STREET, New York.

THE ENGLISH MASTIFFS TURK AND BIG BEN.—*Editor Forest and Stream.* Some months since I wrote you on mastiffs, and remarked that Mr. Nichols was really the breeder of the famous champion Turk, as he bred Hilda to King and sold her to Miss Aglionby in whelp. By a letter from Mr. Nichols I learn that I was mistaken in the somewhat non-essential point of Mr. Nichols having sold the bitch in whelp. He sold her to Miss Aglionby on the condition that the bitch be bred to King, and he have second choice of pups, which choice was Turk. For all practical purposes, I was right in my original statement, although not correct as to all details. I was very, very far wrong, however, in my statement that there was ground for suspecting that Hercules and not Turk was the sire of Big Ben. This suspicion was based on both dogs being in Mr. Nichols's kennels at the same time, with various minor matters, but Mr. Nichols cuts the ground from under me by saying that he did not buy Hercules until after Big Ben was whelped, so an "accident" could not have happened in that matter, and I am glad that another suspicion as to a pedigree is so effectually laid at rest.—W. WADE (Hulton, Pa., July 15).

DOG LICENSE LAWS.

[*Continued from page 495.*]

WE continue below the publication of our reports on the laws relating to dogs in towns, and the methods adopted to reduce the number of vagrant curs. The information has been secured by correspondence with the mayors or presiding officers of the several places named, and the reports were all made in 1888:

Dakota.

Fargo.—The tax on dogs in the city of Fargo is $1 each. Unlicensed dogs are destroyed. This year there were taxes collected on 324 dogs, and about thirty killed.—SETH NEWMAN, Mayor.

Grand Forks.—The tax on dogs is $2 per annum, and on bitches $5. Licensed dogs wear a tag issued by chief of police when license is issued. Unlicensed dogs are impounded and kept in custody twenty-four hours, and if no one owns them and the tax is not paid they are shot. Last year about ninety-nine dogs were destroyed. In 1888 up to the present time 119 stray dogs have been destroyed.—ALEX. GRIGGS, Mayor.

Colorado.

Pueblo.—The license on dogs is $1.75 a head. All unlicensed dogs are impounded and destroyed.—A. ROYAL, Mayor.

Denver.—The tax on dogs in this city is: males $2, females $5. Unlicensed and stray dogs are impounded and destroyed. During the current year 1,360 males and eighty-eight females were licensed. Dogs are only impounded during the summer months. They are kept five days, advertised, put up at auction, and those unsold chloroformed.—E. S. CHAPMAN, Private Secretary.

Kansas.

Lawrence.—A special ordinance of this city provides for the imposition of a tax of $2 for each dog and $5 for each bitch, and for prosecution for misdemeanor for any violation of said ordinance. Dogs caught without collars and license tags within the limits of the city are killed and buried under the direction of the city marshal.—A. G. HONNOLD, City Clerk.

Kansas City.—Tax imposed on males $1, on females $2. We have no dog pound. We have issued this year 2,100 licenses so far (Sept. 24) since the 1st of June. The laws of Kansas prevent the destruction of dogs by the city authorities without consent of the owner. We arrest the owner or harborer of an unlicensed dog, and the defendant is tried before the police court, and if we can show that he is guilty he is fined, and then compelled to at once take out his license or suffer the penalty of another fine.—C. S. GRIFFIN, License Inspector.

Parsons.—The license tax is $1 per year for male dogs and $3 for females. The stray dogs and unlicensed ones are impounded, kept for 3 days, and if not redeemed in that time they are killed. Last year we paid the dog catcher 50 cents per dog for every dog he killed, and he killed 154.—MARY S. OUTLAND, City Clerk.

Abilene.—We charge $1.75 on dogs and $3.25 on bitches, and when tax is not paid I simply take the dog, shoot him and plant him. They pay me 50 cents.—W. J. KIRKWOOD, City Marshal.

Topeka.—Our dog tax is $2 for males and $5 for females. If the license is not paid we arrest the owner or harborer and fine him $5 besides the tax. Any stray dog that we can find no owner for, or no one who harbors him, is killed. We have an ordinance that allows us to impound the dogs and destroy them, but we found it much more effective to take the man who harbors and fine him than to fool with the dog.—D. C. METSKER, Mayor.

Leavenworth.—The tax on dogs in this city is males $2 and females $3. Unlicensed and stray dogs are shot. 473 were destroyed this year and 1,100 paid license.—W. W. ROBERTS, Chief of Police.

Wisconsin.

Racine.—Our license on dogs is males $2 per year, females $5. Unlicensed dogs are shot, and they are then buried.—L. H. COLEMAN, City Clerk.

Milwaukee.—The city imposes a license fee of $2 per year on each dog. Whenever there is a person who has a dog in his or her possession without a license, the party is brought before the court and a fine imposed upon them. Dogs are not impounded nor killed. Their offenses are visited on their owners.—F. PARINGER.

Fond du Lac.—We have no license for dogs and no pound. At a certain time our ordinances require the dogs to be muzzled, and if not complied to they are shot by the police if found, and all dead dogs we have buried, and we do not keep any records.—ALEX. MCDONALD.

Oshkosh.—The Mayor of Oshkosh reports that the license on dogs in that city is $2, and on bitches $3. Stray dogs are shot on sight, and their remains profitably utilized.

Waukesha.—We have no dog tax or dog pound.—F. A. MERRILL, President.

Nebraska.

Hastings.—In theory at least we tax dogs $1, and bitches $3 each. In default of this annual payment the animal is dispatched or removed from the jurisdiction of the city. The body is then buried in the earth to avoid offense. We have no dog pound in the sense you comprehend it, and I am unable to more than approximate the revenue derived from taxation without consulting the records especially. I would place the amount at $200 per annum. Population of city 15,000.—A. D. YOCUM, Mayor.

Fremont.—License on dog $1 each per annum. Manner of disposing of unlicensed and stray dogs is to shoot them on the spot, and carcass consigned to earth. About 400 consigned, but if any encouragement would gladly increase the number.—B. F. STOUFFER, Mayor.

Omaha.—Our city imposes a dog tax of $1 per annum. We have no regular method of disposing of unlicensed dogs except to authorize the policemen to shoot them, when they are taken by the garbage master and disposed of to the refining and rendering companies, or thrown into the Missouri River.—W. J. BROATCH, Mayor.

Lincoln.—The license tax on dogs in this city is $2 per year. Our treatment of untaxed dogs, or rather those whose owners do not pay license for them, is to let them live, move and have their being, except perhaps when some scare of hydrophobia is prevailing, when a few unmuzzled curs are shot. They are not impounded and rarely ever shot. Since I have been mayor I have made no war upon the dogs. I will never order a dog killed because the owner refuses to pay his tax, unless the dog be vicious, or mad, or dangerous.—A. J. SAWYER, Mayor.

Arizona.

Tucson.—Our city license on male dogs is $2, on female $4. Unlicensed strays are caught and impounded by pound master, and if not reclaimed within two days they are destroyed. There have been about 500 caught and killed this year; very few were redeemed.—W. E. STEVENS, Mayor.

Montana.

Helena.—The tax on dogs in this city is $2 for males and $4 for females. Stray dogs are impounded and killed after three days. No use is made of their remains.—A. C. BOTKIN, City Attorney.

Oregon.

Portland.—The dog license is, males $1.50, females $3 per annum. Unlicensed and stray dogs are impounded and after a certain time killed and buried. License fees collected in 1887, $424.50.—VAN B. DELASHMUTT, Mayor.

Washington.

Tacoma.—The Mayor of Tacoma reports that the license fee in that city is $1 for males and $2 for females, and that unlicensed and stray dogs are impounded and then dumped in the bay.

Seattle.—The license fee for dogs is $1 per year, for bitches $2.50. Unlicensed dogs are impounded and destroyed.—W. R. FORREST, Clerk.

New Mexico.

Albuquerque.—Our tax on dogs is $1 and on bitches $3 per year. Unlicensed dogs are killed and buried.—A. E. WALKER, Mayor.

Wyoming.

Cheyenne.—We license about 100 dogs yearly: $3 for dogs and $5 for bitches. We try to impound all unlicensed dogs, and kill them by using poison after holding them four days. Should owner of dog care to get one out of pound he pays license and $1 pound fees. Cannot say how many we kill yearly, about 150.—WM. R. SCHNITGER, City Marshal.

Utah.

Ogden City.—We charge $3 per year, and destroy all not licensed.—D. ECCLES, Mayor.

Arkansas.

Hot Springs.—The annual tax on male dogs is $1 and on bitches $2. The amount collected for dog tax was $547.50, and the expense incurred $118.35, leaving net $429.15. All unlicensed dogs are impounded and killed within forty-eight hours if not redeemed by payment of license fee, fine of $5 and pound fee of $2. Number of killed about 400.—M. MCKEOGH, City Clerk.

Pine Bluff.—Dogs are taxed $1, bitches $3. Unlicensed dogs are impounded and destroyed.—H. KING WHITE, Mayor.

Little Rock.—The city tax on dogs is $1.50, and $2.50 on bitches. Dogs found at large without a license tag are impounded, and when there is a sufficient number they are shot. Up to present date there have been 400 dogs impounded, of which there have been killed 376.—FRANK BOTSFORD, Chief of Police.

Fort Smith.—The tax in this city is $1 a year. Unlicensed dogs are impounded and destroyed. About 150 were impounded and destroyed this year.

Mississippi.

Natchez.—Our city has a tax of $1.25 per dog. We get rid of the miserable curs by giving them strychnine. The city has a pound, and it is strictly kept by our city marshal. The dogs are afterward taken to the river and given to its mighty stream.—THOS. R. QUARTERMAN, City Clerk.

Missouri.

Moberly.—We impose a tax of $1 per year on males and $3 per year on females. The marshal is instructed to kill dogs found running at large after notice to pay tax has been served.—R. R HAYNES, Mayor

St. Joseph.—Our license is on dogs $1, bitches $2, with a fee of 25 cents on each license issued. Unlicensed and stray dogs are impounded for 48 hours, and if not redeemed are killed by drowning, unless valuable, when they are kept for 48 hours longer and sold for what they will bring.—PURD B. WRIGHT, City Clerk.

Jefferson City.—The license tax is $1. Unlicensed and stray dogs impounded three days, and if not redeemed taken to the river and shot. The number destroyed this season is 70.—GEO. N. WINSTON, City Clerk.

Hannibal.—Our city dog tax is $1 for first and $2 for each additional dog owned by one person. We impound, and if not redeemed in a certain time they are shot. Our dog law is not strictly enforced, but is held for emergencies and somewhat of a restraint against an over supply. A strict enforcement of any arbitrary dog law would be very obnoxious, except under exceptional contingencies.—J. B. BROWN, Mayor.

Columbia.—Our license is $1. Dogs not licensed by 1st of May are impounded and advertised, and at the expiration of three days, if not claimed, are killed and removed out of town and buried. We have collected on about 150 and killed about 50 this year.—W. I. ROBERTS, Marshal.

Sedalia.—The license fee is $1. Unlicensed and stray dogs are shot. 350 license checks sold this year.—W. D. ILGENFRITZ, Acting Mayor.

Kansas City.—The license fee is, males $1; females $3, license tag 25 cents additional. Unlicensed or stray dogs are impounded and drowned. Number of dogs drowned from Jan. 1 to Sept. 21, 1888, 896.—W. O. HUCKETT, Sec'y.

St. Louis.—The dog tax is $3. Neglect to pay the tax is punishable as a misdemeanor. Dogs caught at large without collars and registered tags, and without muzzles when the Board of Health orders that they be worn, are sent to the pound, and may be redeemed by a payment of $3 in addition to the license fee, if due, and 50 cents to the dog-catcher; but if in the opinion of the marshal it is not safe to impound a stray dog, he may shoot him. Dogs impounded and not redeemed within three days are slain.—M. A. FANNING, Secretary.

Kentucky.

Covington.—We have no pound. Our ordinances impose a license of $1 a year on each dog with a fee of 25 cents for small brass tag to be worn upon the collar, but the license is of little effect and is not enforced, consequently we have a large population of useless curs. The only check upon their increase is an annual slaughter during two or three months of those found running at large unmuzzled. The mayor, by direction of the Council, issues a proclamation that all unmuzzled dogs found on the street for sixty or ninety days shall be destroyed, and the officers usually get away with 300 or 400 in that way.—R. A. ATHEY, Mayor.

Newport.—The license for dogs is $1, and bitches $2 per year. Persons refusing to pay license are liable to arrest and shall be fined not less than $5 nor more than $10. We have no pound.—M. J. COSTIGAN, City Clerk.

Owensboro.—Our tax on dogs is $2. We have no pound for stray dogs. We kill them.—J. LEE, Mayor.

Paducah.—We don't license dogs. It is against our laws for dogs to run at large unless they are muzzled. In the summer months I hire a dog killer and have all killed that I can. Sometimes we shoot them, sometimes we poison them—anything to kill them.—CHAS. REED, Mayor.

Texas.

Houston.—Tax is $2 on males and $4 on females. They are killed by shooting or poisoning. They are not impounded. No account of the number killed is kept.—EDITOR EVENING TIMES.

Denison.—The Mayor reports that the license fee on dogs in that city is $1 and on bitches $2. Unlicensed dogs are impounded and destroyed.

El Paso.—We collect $2.50 on male and $5 on female dogs per year. We have to this date collected $100. We impound dogs for three days; if they are not called for and license tax with 50 cents pound fees paid, they are killed.—O. B. BEALL, City Clerk.

Sherman.—No tax is levied on dogs. From June 1 to Oct. 1 all dogs allowed to roam at large without muzzles are destroyed.—J. P. GEREN, Mayor.

Fort Worth.—The tax on dogs is $2.50 per annum. Stray dogs are impounded and killed if not claimed in 24 hours. This year the law was not enforced in consequence of higher courts declaring it illegal and unconstitutional in Texas.—H. S. BROILES, Mayor.

Galveston.—There is an annual license tax on dogs of $1. Only those who have valuable dogs get license. Have discontinued impounding, Police carry poisoned meat to give stray dogs on the street.—WM. SELKIRK, Auditor.

Austin.—There is no tax. When dogs get too numerous, dogs are not impounded, but officers are instructed to see that when a piece of poisoned meat is left down the dog gets it, otherwise they must take it up. There have been about 1,200 dogs destroyed during the present year last past.—JAMES E. LUCY, City Marshal.

HUSKIES AT LAKE ST. JOHN.

MR. CHAS. HALLOCK, writing from the Lake St. John country, 200 miles north of Quebec, which is now the center of attraction for anglers from both sides of the international line, says: "In all my wanderings in Labrador and the British Northwest, I have never happened upon such a pure strain of huskies [see FOREST AND STREAM, page 230, Oct. 11, 1888,] as I have found at the Montaignu's Indian Mission at Point Bleue. While I was at Hotel Roberval, those two redoubtable voyageurs and half-breeds, the brothers Patrick and Prosper Cleary, who have made the trip to James Bay via Lake Mistassini several times, came down from the Point with two lovely pups of a maltese color about two months old. Their ears were already sharp and erect, and their tails had begun to curl and brush. A perfect pair of dark olive-rimmed spectacles curved above the eyes, and the gentleness combined with their brightness to win favor at once. They were beauties. The pair were offered to some members of the Springfield (Mass.) Club for ten dollars, but only one was accepted at the price. It was worth fifty! The other went back to its dam at the Mission. And all the time, though conceding the bargain, I was hoping it would be declined, for I never yet knew these dogs to survive the hot summer of the unwonted lower latitudes. It would be a sin to take them south to die. You remember, when 'Esquimaux Joe' came back with Arctic explorer Hall, he brought two magnificent full-grown huskies, which managed to live through the succeeding winter, but they succumbed with the advent of hot weather, and Joe himself never got acclimated, but died prematurely. A day or two afterward I drove up to the Point in manager B. A. Scott's rig and saw the old dam. There was never a finer dog bred to travel. She has done her sixty miles a day to come to and travel. In color she was like a pure-blood jenny, such as win blue ribbons at Kentucky stock fairs, while she was wholly without that viciousness which is peculiar to the regulation draft dog of northern regions.

"Talk of mean curs, there is nothing in nature so 'ornary' and low down as the Labrador mongrel, which is employed to haul wood and do chores along the North Atlantic coast, from Belle Isle Strait up. He is a composite of the worst traits. Even the Moravian missionaries have not been able to modify his vices. They are refractory in harness and quarrelsome among themselves. Their drivers often have to stun them to make them work. The big ones are kept hampered with heavy wooden clogs fastened to their necks, so that the weaker dogs may have a chance for their lives. I remember once to have seen a gang of twenty or more go over the face of a steep rock bluff in the hight of a scrimmage. Those which were not crippled by the fall continued the fight. They seemed to enjoy it. Perhaps their ancestors came from Donnybrook or Tipperary. When engaged in melees they never give tongue. It is always a silent game; first, a wild rush and scamper something like a fox hunt, only that every dog takes his turn at playing fox, and then a plunge, a halt and a surge, with an inextricable confusion of dark, lithe bodies, and a ceaseless swish of restless, bushy tails. An old-fashioned football game on a college campus is something like it. So persistent is the play that perfect quiet reigns, a quiet so absolute that the spectator might think it peace, were it not that when the ganglion opens out every dog looks as if he had a red flannel pad tied around him. Of course, pluck, tenacity and endurance are essential qualities to these burly creatures, which in their slavish service to man are expected to do their forty miles per day with loaded sledges on a single frozen fish for breakfast; but one cannot help wonder why they are not more tractable while yet so useful.

"I once watched a scrimmage of this sort which occurred just after a fresh fall of snow, and when the convention finally adjourned there was a large oval discoloration at the place, as if a barrel of mixed paints had bursted. It was an essentially chewed up community.

"My own impression is that the true husky type is better preserved right here among the Montaignais of the Lake St. John region, and among the Nascaupies beyond Lake Mistassini, than in any other part of the continent, east or west, unless I except the Mackenzie River district. The coast dogs are no good, either in Labrador or Alaska, while the once reputable canines of the interior Selkirk settlement at Lake Winnipeg are sadly degenerated. Five years ago I ranged the latter section of country all over to get a team for my frontier exhibit at the New Orleans Exposition, but failed to find a perfect dog that could be bought for money.

THE VANDALIA'S LOST DOG.—There is a small dog along the city front that feels just about as disconsolate as small dogs are supposed to feel when they have done anything out of the way. This little dog, however, is rather a hero, having survived the wreck of the Vandalia at Samoa and returned with his shipmates on the Rockton to Mare Island, where he was adopted by the crew of the Adams. Having been boss of the Vandalia, this little dog, who goes by the euphonious name of Nig, thought that he should hold the same position on the Adams, and when it was disputed by Lieutenant Winslow's setter, Nig became indignant and whipped the Lieutenant's dog so badly that for some time his life was despaired of. This was a horrible indignity for the quarterdeck to sustain at the hands of a forecastle dog, and Lieutenant Winslow ordered the sailors to throw Nig overboard as a dishonorably discharged dog. This was something the Jack tars could not think of doing, and as they could not keep their pet aboard, and had no means of getting him back to Mare Island, as the Adams was about to go to sea, they brought Nig ashore and turned him over to the Vandalia sailors, who were waiting along the water front for their back pay and bag money. Getting a dishonorable discharge after four years' service in the Navy was pretty tough on Nig, and Thursday night he managed to get full. Yesterday he was sick and felt pretty bad, and as he had never been ashore before he did not know how to act. The number of people and the number of dogs nearly drove him crazy, and he lay down on the sidewalk and moaned. The dog felt so bad ashore that the Vandalia sailors are going to try to get him back into the service in some way, and they think that after his gallant service in Samoa they will be able to have Lieutenant Winslow's dishonorable discharge set aside, and Nig restored to his former proud position on one of Uncle Sam's war ships.—*San Francisco Chronicle.*

OLYMPIA DOG SHOW.

THE thirty-third show of the English Kennel Club was held at Olympia, South Kensington, July 9 to 12. There were 1,472 entries. The London *Field* says: "The collection of dogs was pretty much the same as during the last two or three years; if not better in quality certainly no worse. * * Mastiffs were present in great force, the open dog class being especially good. Puppies were also excellent. * * The collection of St. Bernards were by no means a representative one. * * The open classes for Great Danes were disappointing. * * Deerhounds were another poor display. * * A lot of excellent greyhounds were shown. * * Pointers were generally understood to be quite a disappointment. * * Woolton Game second again in large-sized bitches, and this is no doubt the last we shall see of her in this country, either at field trials or elsewhere, for acting for Mr. Hitchcock, of New York, she was claimed by Spratts Patent at her catalogue price of £150, and cannot be considered dear at the money. * * The bitches under 50lbs. formed the best lot of pointers in show. * * The English setters were better in quality and numbers than the pointers. * * The bitch class was one of the best ever taken into the ring. * * There were no great particular stars among the black and tan setters. * * Irish setters in the open dog class were fairly strong. * * Retrievers were no more than fair. * * The congregation of beagles was an unusually strong one, Mr. Nutt sending seven and a half couples of little beauties, of which four couple were hard-haired, miniature otter hounds almost, and one of the features of the exhibition, for they were shown together off the benches in a kennel of their own. The lot are of uniform size, about 13 inches, and are well grown, hound-marked, with excellent legs and feet. So good were the rough ones that the judge gave them a special first prize that went to Crafty, a little hound with a pin wire coat and the bone and substance of a miniature cart horse. * * The spaniel classification was bad, and entries did not come up to expectation. * * There was a little interest centered in the collies, because it was said Dublin Scot had improved so much since his sojourn in America that he was likely to beat all the champions in this country, so his spirited owner sent him over. However, we failed to find any improvement in him; he was well shown, but his expression, never good, is a little worse than ever, and though Caractacus was looking less fit than we ever saw him, he beat the Stars and Stripes' favorite very easily indeed. * * There was a great display of old English sheepdogs, including many of different types. * * In fox-terriers Vesuvienne was beaten in the challenge class by her kennel companion Venio. At first glance he is not a taking dog, but will stand pulling to pieces; and about the only faults to be found with him are his not very nice ears and some little amount of fullness in cheek; his coat is perfect, he is built on working lines, his jaw is powerful, and limbs first-class. Of course the ears and faulty cheeks detract from his expression, so we fancy the bitch should have beaten him. * * There was an excellent entry of Irish terriers. The other terrier classes were not above the average. * * In pugs Bessie (Dr. M. H. Cryer's), the third prize bitch, appears to have been successful at American shows; she possesses as much or more character as any benched around her here, and her eyes are very good indeed, so are her skull and size, she falls away too much in front of her eyes; were her muzzle squarer she would be equal to our best. * * The ladies had, as usual, an excellent display of toy terriers, toy spaniels and fancy dogs. * * The Blenheim spaniels were about the best lot of pet dogs in the hall, being both numerous and good in quality."

LONDON DOG SHOW.

THE prize list of the London Kennel Club dog show, to be held during the Provincial Fair at London, Ont., Sept. 10 to 13, will be out in a few days.

There are challenge classes for mastiffs, St. Bernards, pointers, English, Irish and Gordon setters, collies and spaniels and separate classes for English and American foxhounds.

The prizes are $10, $5 and diploma in the majority of classes, and $7, $3, and diploma in the remainder. Kennel prizes in cash for four or more in the following breeds: St. Bernards, foxhounds, collies, spaniels, fox-terriers, English, Irish and Gordon setters, besides a large number of specials.

The show will be under the management of Mr. C. A. Stone, who managed the last show so successfully; he has also been appointed secretary. Premium lists mailed to any address by applying to him, 421 Richmond street, London, Ont. The judges will be announced shortly.

DOG TALK.

THE following tale comes to us through the *Stock-Keeper*: "The other day the people who attended the weekly market in a certain French town were surprised to see a peasant woman who was offering for sale a horse, which was tariffed at 4s. The same woman was selling a dog for which she demanded £20. They thought she must be mad, and they told her so. 'Be that as it may,' she said, 'the man who wants the horse at 4s. must first take the dog at £20.' A purchaser eventually secured the two, and afterward would have the explanation. It transpired that the deceased husband of the artful peasant woman had chargod her in his will to sell his dog and his horse. The price of the dog was to be hers, and that of the horse she was to pay over to his family. This reads like an Ollendorffian excerpt, but it is not. It took place at Coutances, in the north of France, last week."

As will be seen in the notes on the Olympia dog show, Mr. F. R. Hitchcock has purchased the pointer bitch Woolton Game. He has been very fortunate in securing so good a bitch. She was owned by the well-known pointer breeder Mr. George Pilkington, and has a capital record both in the field and on the bench. She is two and a half years old and will undoubtedly prove to be one of the most valuable of her breed ever imported to this country.

We clip the following from the *Scottish Fancier*: "The *Saturday Review* says Scotland is free from rabies. This is true, but we have a few gangrel bodies that gang periodically daft. When we see the symptoms beginning we send them south to London, and they are at once taken on the staff of a dog paper—hence the stuff we read about hydrophobia at this season."

By order of Council all dogs in London, Eng., and in the Metropolitan Police District, which extends for some fifteen miles around London, are to be muzzled when in public places from Aug. 1 until Jan 1, 1890, for the purpose of exterminating rabies. This order does not apply to dogs while being used for sporting purposes.

The London *Field*, speaking of setters, says: "Although two or three of our best animals have recently been sent to America, others remain which are quite good enough to take the place of the expatriated ones." This is, at least, encouraging to Americans who are seeking world beaters, whatever the English judges may think of it.

Danbury will hold its annual dog show Oct. 7 to 12. As was stated in our report of the show last year, the premiums will be greatly increased this year, and it is expected that many valuable specials will be offered, the show will be held under A. K. C. rules.

We hear that Mr. S. W. Skinner, Jr., of Auburndale, O., has purchased from Mr. M. R. Hood Wright, Newton Hall, Eng., the deerhound bitch Brora, winner of first in the challenge class at the recent Olympia show.

It has been decided to offer $1,200 in premiums at the Toronto dog show. This show is held the week following London and Ottawa, and will undoubtedly be well supported.

Fourteen English foxhounds arrived on the Denmark last Monday, consigned to the Rockaway Hunt Club, Cedar hurst, L. I.

IMPORTING DOGS.—New York, July 16.—*Editor Forest and Stream:* If Mr. W. Wade had consulted some practical custom house broker before writing the letter which appears over his signature in your issue of the 11th inst., he would have saved himself a considerable amount of writing material, and his mind and conscience would have been relieved from the strain which they at present appear to labor under. There is no "confusion" whatever in regard to the importing of dogs for breeding purposes, Mr. Wade's assertion to the contrary notwithstanding. The law of 1883 reads as follows: "Animals specially imported for breeding purposes shall be admitted free upon proof thereof satisfactory to the Secretary of the Treasury, and under such regulations as he may prescribe." And in a circular letter dated May 17, 1883, the Secretary of the Treasury has prescribed regulations for carrying out the beforementioned law, which are so simple that any person of the slightest intelligence can understand them. The law does not require that the animals shall be imported solely for breeding purposes, but it does require that they shall be imported specially for breeding purposes, or in other words, the law requires that the leading purpose shall be that of breeding. Dogs or other animals, valuable mainly for their breeding qualities, are not excluded from free entry merely because they are intended for sale. Mr. Wade can import dogs and dispose of them immediately after landing, either by sale or gift, and he will violate no law at present on the statute books of Uncle Sam. He must simply furnish satisfactory proof to the custom authorities that his dogs are of superior breed and calculated to improve the stock of the country.—E. B. GOLDSMITH.

RED FOX PACK.—Hickory Valley, Tenn., July 16.—*Editor Forest and Stream:* Having selected quite a good pack of foxhounds for the purpose of breeding and running in the trials for foxhounds, I claim the name of J. M. Avent Red Fox Pack for my pack. The principal part of this pack are from dogs that I have been running after red foxes for the last fifteen years, and have great confidence in their ability as red fox dogs. I am very anxious to see fox hunting clubs organized in many different States, so that I will have a good opportunity to thoroughly test dogs of my breeding under good competent judges after red foxes, against the best from the many noted packs in America. The following is a full list of my pack: Fox III. and Jennie, dog and bitch, 7 years (Fox II.—Norah); Mink and Music, dog and bitch, 3 years (Red Mink—Fan); Fox's Rock and Nellie, dog and bitch, 2 years (Fox III.—Jennie); Flora, bitch, 1 year (Fox III.—Walker's bitch); Cripple, Fannie and Fairy, dog and two bitches, 10 months (Fox III.—Jennie); two dogs 9 months (Sport—Music); one dog 1 year, Cook strain; litter 3 months (Fox III.—Music); two dogs 2½ months (Mink—Jennie), all black and tan. Flash, black, white and tan bitch, 3 years (Bran—Fly); one bitch, black, white and tan 5 months (Walker's dog and bitch); Mallis, red bitch, 3 years from Mr. Spear's pack, and Cleveland, red dog, 4 years (Kinnie's Mink—Kinnie's bitch).—J. M. AVENT.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Spider. By Blue Ridge Beagle Kennels, Denver, S. C., for black, white and tan beagle bitch, whelped Feb. 23, 1889, by Thom (A.K.R. 6777) out of Dinah (Thom—Lucy Hinton).

Spite and Spot. By Blue Ridge Beagle Kennels, Denver, S. C., for white, black and tan beagle dog and bitch, whelped Feb. 23, 1889, by Thom (A.K.R. 6777) out of Dinah (Thom—Lucy Hinton).

Rowena. By Warner & Hamilton, Canaan Four Corners, N.Y., for black, white and tan collie bitch, whelped July 13, 1888, by Clipper (A.K.R. 2529) out of Nellie McGregor (champion Rex—June).

J. M. Avent Red Fox Pack. By J. M. Avent, Hickory Valley, Tenn., for his pack of foxhounds.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Rhea—Grindel. Ernst Platz's (Bridesburg, Pa.) St. Bernard bitch Rhea (A.K.R. 5086) to H. Rowland's imported Grindel, July 4.

Pearl Noble—Foreman. N. Wallace's (Farmington, Conn.) English setter bitch Pearl Noble (Count Noble—Jennie III.) to C. F. Crawford's champion Foreman (Dashing Monarch—Fairy II.), July 4.

Forest Dora—Count Howard. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Forest Dora (A.K.R. 500) to F. Windholz's Count Howard (Sir Alister—Mena), July 1.

Molly—Tim. Chas. H. Mason's (New York) Irish setter bitch Molly (Hugh Roe—Sophie) to Max Wenzel's Tim (Biz—Hazel), June —.

Kit—Tim. Mr. Randolph's (Berkley Heights, N. J.) Irish setter bitch Kit (Kildare II.—Snipe) to Max Wenzel's Tim (Biz—Hazel), July 16.

Ruby Glencho—Tim. L. A. Van Zandt's (Yonkers, N. Y.) Irish setter bitch Ruby Glencho (Glencho—Tara) to Max Wenzel's Tim (Biz—Hazel), July 12.

Lulu III.—Tim. J. J. Scanlan's (Fall River, Mass.) Irish setter bitch Lulu III. (Glencho—Lulu II.) to Max Wenzel's Tim (Biz—Hazel), June 30.

May—Chief. F. L. Morrell's (Mamaroneck, N. Y.) Irish setter bitch May (Berkley—Mag) to Max Wenzel's Chief (Berkley—Duck), June 30.

Lady Abbot—Glencairn. Oldham & Willey's (Salmon Falls, N. H., and Mamaroneck, N. Y.) field spaniel bitch Lady Abbot (champion Black Prince—champion Newton Abbot Lady) to their Glencairn (Bracken—Belle), April 24.

Hillside Linden—Mixture. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Linden (Belgrave Sequence—Linden Nettle) to their Mixture (Spice—Fairy III.), July 15.

Princess—Raby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Princess (Venetian—Lorette) to their Raby Mixer (Raby Mixture—Richmond Olivebud), July 16.

Tennis—Reckoner. Wm. T. McAlees's (Philadelphia, Pa.) fox-terrier bitch Tennis (Raby Mixer—Temptation) to Hillside Kennels' Reckoner (Regent—Nita), July 17.

Dusky Daze—Dusky Trap. W. S. Applegate's (New Albany, Ind.) fox-terrier bitch Dusky Daze (Dusky Trap—Daze) to A. Belmont, Jr.'s, Dusky Trap (Dusky Splinter—Spider), May 21.

Richmond Myrtle—Blenton Rubicon. W. S. Applegate's (New Albany, Ind.) fox-terrier bitch Richmond Myrtle (Raby Tyrant—Richmond Olive) to A. Belmont, Jr.'s, Blenton Rubicon (Regent—Rachel), July 3.

Spunky—Toons Royal. F. W. Souther's (Melrose, Mass.) Yorkshire terrier bitch Spunky (Corney's Ben— ——) to Chas. N. Symonds's Toons Royal (champion Dreadnaught—Hamilton's Filis), July 13.

Daisy—Toons Royal. Chas N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Daisy (Roy—Bess) to his Toons Royal (champion Dreadnaught—Hamilton's Filis), July 7.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Fly. D. E. Peters's (North Baltimore, O.) foxhound bitch Fly (Uhlery's Sport—Burgoon's Fanny), July 14, nine (eight dogs), by H. E. Cook's Brave.

Jennie III. N. Wallace's (Farmington, Conn.) English setter bitch Jennie III. (champion Foreman—Tallman's Jennie), July 7, seven (four dogs), by B. F. Wilson's Count Noble (Count Windham—Nora).

Bonny. Max Wenzel's (Hoboken, N. J.) Irish setter bitch Bonny (Tim—Nora V.), June 29, nine (three dogs), by his Chief (Berkley—Duck).

Dora. Ed. P. Kremer's (Lebanon, Pa.) Irish setter bitch Dora (Chief—Doe), July 3, ten (eight dogs), by Max Wenzel's Tim (Biz—Hazel).

Lady Abbot. Oldham & Willey's (Salmon Falls, N. H., and Mamaroneck, N. Y.) field spaniel bitch Lady Abbot (champion Black Prince—champion Newton Abbot Lady), June 26, four (three dogs), by their Glencairn (Bracken—Belle).

Cracovienne. J. A. Hoffar's (Washington, D. C.) fox-terrier bitch Cracovienne (Resolute—Fandango), July 15, four (three dogs), by his Belvoir Trap (champion Mixture—champion Thistle).

Jaunty. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Jaunty (Joker—Torment), July 12, two (one dog), by their Raby Mixer (Raby Mixture—Richmond Olivebud).

Bradford Lill. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Bradford Lill (Tickle-'em—Judy), June 22, three (one dog), by his Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Prince Charlie and Gillivan. Silver fawn pug dogs, whelped May 23, 1889, by Kash out of Lady Thora, by Eberhart Pug Kennels, Cincinnati, O., to Thos. Preiten, Parkersburg, W. Va.

Duke of Montrose. Silver fawn pug dog, whelped May 23, 1889, by Kash out of Lady Thora, by Eberhart Pug Kennels, Cincinnati, O., to H. H. Redford, Parkersburg, W. Va.

Donna Juanita. Black, white and tan English setter bitch, whelped May 3, 1888, by Rockingham or Prince Foreman out of Donna (A.K.R 5792), by Rosecroft Kennels, Birmingham, Conn., to Jas. W. Wood, Poughkeepsie, N. Y.

Clara. Black and tan Gordon setter bitch, whelped April 25, 1889, by champion Royal Duke out of Jennie II., by Louis Parisette, Jr., Brooklyn, N. Y., to Jos. Schwartzenberger, Hicksville, L. I.

DEATHS.

Miss Newton Obo. Black field spaniel bitch, whelped June 1, 1886 (Young Obo—Newton Abbot Lady), owned by Oldham & Willey, Mamaroneck, N. Y., and Salmon Falls, N. H., July 15, in parturition.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

G. H. T., Mohawk, N. Y.—I have a fine Irish setter pup, eight months old, which I think has a touch of the mange. I would like you to tell me just what to do as he is very valuable to me. ANS. Give 3 compound cathartic pills in one dose. They can be concealed in a morsel of meat. Give 5 grains of quinine in pill form every morning and 4 drops of Fowler's solution every evening in food. If the eruption is bad use the following ointment once daily:

℞ Amyli	℥ i
Ung. zinc oxid	℥ i
Vascline	℥ ss

Mix. Sig. External.

Rifle and Trap Shooting

RANGE AND GALLERY.

OUR TEAM ABROAD.

[*From Our Special Correspondent.*]

WIMBLEDON CAMP, July 8.—The series of matches for which the Massachusetts rifle team crossed the Atlantic, to contest with the English Volunteers, ended with the victory over the South London Rifle Club at Nunhead range on Friday, July 5, a series of successes quite unparalleled, and with a majority of points in each case that calls for an explanation. An unbiased study of the series of contests, considering that the accuracy of the rifles are equal, leads to the conclusion that the secret of the success of the Massachusetts team consists in the perfection of their coaching system; this, with the advantage of the quickly adjustable sight on the Springfield, helped the Americans to pile up totals far beyond the capacity of the English marksmen with their Martinis; shooting over a bar for a rear sight, with vertical lines of white paint put on with a brush or pencil for wind allowances. The Massachusetts men could so quickly return from two points of windage to a shot on the true zero for wind allowance, or graduations of one-quarter or half of a point; it was impossible for the Englishmen to stop and paint new lines on their sliding bar between shots, and their mistaken allowances for wind in the varying currents that were always present in all of the matches proved their downfall, this is the kernel in a nutshell, from a rifleman's point of view

First and only practice of the team at Nunhead Range, July 1:

	332	320	291	943

It will be seen from the above by a close scrutiny of the scores, the varying conditions of each individual not forty-eight hours off the deck of an ocean steamer, some having a fine show at the first range only to get demoralized at the longer distances.

Ten guineas was donated by a prominent member of the South London Rifle Club for a prize to be competed for by members of the Massachusetts team. It was decided to divide the money into five prizes: first $15, second $12,50, third $10, fourth $7.50, fifth $5, and compete for it at the 200yds. range. Thus it would not interfere with the coaching instructions of the team at the longer ranges. The winners of the prizes were respectively: Maj. Hinman first, score 31; Sergt. Bull second, score 30; Private Farrow third, score 30; Lieut. Bumstead fourth, score 30; Lieut. Hussey fifth, score 30. Immediately the above scores were finished a nice lunch was enjoyed by both teams. This seemed to have a very beneficial effect on the Americans, who proceeded at once to do the handsome for the team of the Honorable Artillery Company in real Massachusetts style.

Nunhead Range, July 5:

Massachusetts Team.

Sergt Merrill	520	86⅔	Sergt Johnston	469	78⅛

The Wimbledon meeting opened in a drizzle of rain, still the plucky marksmen were on hand dressed in all sorts of waterproofs with which to shed the falling drops. The American team arrived Saturday evening at 5:30, and having a camp or double row of tents to themselves were soon safely housed. Sunday was enjoyed by a majority of the team by a visit to London, then up the Thames by train and boat, dining at Henley, then a visit to Maidenhead, all under the kind care and protection of the Honorable Artillery Company of London. The competitions entered into by the Americans in camp on Monday were the Alexandra, at 500 and 600yds., the Graphic and Robin Hood at 200yds., all with the Martini-Henry. The team men were given a very slim chance to get elevations or test the rifles loaned them, 7 shots at 200yds. and 500yds. being all the experience allowed them, and this was on Saturday at a strange range before coming to Wimbledon; thus it will be seen that their chances for fine scoring were very slim indeed.

In the Alexandra 7 shots at 500 and 600yds. Maj. Hinman was in the prize list with a total of 60, 33 at 500 and 27 at 600yds. Private Farrow would also have come in but for a ruling against one of his shots. A 3 and 5 were shown on the dummy in response to the fourth shot; the marksman claimed the highest, but only the lowest was scored, and all amount of protest as well as an appeal to the Council was of no avail, thus this shooter's chances were ruined, because some other unfortunate accidentally shot on this target at the same moment. Sergt. Doyle was obliged to go into the match without having fired but two shots out of the Martini placed in his hands; these were at pool, and owing to the crowded state at the firing points of the pool targets, it was impossible to fire any shots, except by getting in line and waiting for 25 or 30 men to shoot two shots each. It should be remembered that with 2,300 marksmen anxious to get pool shots, and but 5 pool targets open, many that are squadded to shoot their matches early must necessarily be crowded out. This taking up of the Martini rifle by the members of the team seems in a certain sense to be a mistake; it lowers in the eyes of the Englishmen the high regard now placed on the skill of the Americans; it will give to the Englishmen in the coming team matches renewed confidence, and as the new conditions proposed, it will allow them to shoot in their favorite positions at 200yds. range. Their line of reasoning is that if only one of the American team can get in the prize list of the Alexandra, which has a row of 325 prizes, the Massachusetts men cannot be such wonderful shots after all. This has been overheard in quite few instances.

The Springfield musket with the Buffington sight has been excluded from competing in any of the matches where military sights or rifles are allowed. Considerable pressure was brought by many prominent English marksman on the Council that they should, as a matter of international courtesy, allow the Springfield musket and Buffington sight, as used by the United States Government, to be shot by the American team in the matches at Wimbledon especially devoted to the experimental military rifles. This would simply include matches wherein the English marksmen use their M. B. L. rifles, which are equipped with wind gauges and spirit levels, this latter very desirable feature the Springfield musket does not possess.

At a rifle meeting in June, at Dunball, 100 of the leading shots of the north of England signed a memorial to the Council of the English National Rifle Association "to permit the Americans to use their regulation Springfield rifles in M. B. L. competition at Wimbledon." The Council refused to allow the Massachusetts men this privilege. Thereupon the Scottish Rifle Association prepared and sent to the English N. R. A. the following:

"To the Council of the National Rifle Association: We, the undersigned members of the Council of the Scottish Rifle Association, respectfully draw your attention to the memorial which has been signed by the competitors at the Darnley prize meeting, as to permitting the Americans to use their regulation Springfield rifles in M. B. L. competition at Wimbledon, in the terms of which we heartily concur."

This was signed by James Merry, Col., 3d Lanark, Vice-Chairman; J. N. Smith, Col., 1st L. R. V., Vice-Chairman; William Thorburn, Major, Captain Scottish Twenty; William Blackwood, Capt., 21 Midlothian; John Lennox, Capt., Galloway R. V.; A. R. King, Col., 36 (Renfrew) V. B. A. and S. Highs; A. Mein, Col., 4th V. B. Cameronians; Harington Stuart, Col., 2d V. B. Cameronians.

Therefore the Council of the Scottish Rifle Association "heartily concur" in the protest of a hundred of the leading shots in North that the action of the N. R. A. Council, in this particular matter, is a breach of international courtesy on their part.

To still further show the interest taken by the English Volunteers in this visit, and their desire to show the Americans every courtesy, the following is an extract from a letter written by Mr. Lowe, S. M., which was printed in the London *Times*:

"I submit that the regulation arm of every foreign nation should, as a matter of course, and as a matter of international courtesy, be admitted in the category of experimental military rifles at Wimbledon. Certainly competitors with Metford, Rigby, and Fraser M. B. L. rifles have nothing to fear in competing against the Springfield with its lighter cartridge and inferior shooting power. The sliding and screw sights are simply two different mechanical means of arriving at the same result—a distinction without a difference."

It will be seen that both the English and American rifles are supplied with a wind gauge sight, but because the American does not slide exactly in the same manner as the English one it must be ruled out of all the matches. The fact is, there is but one match on the programme in which the Massachusetts men would care to use their muskets, this is the Steward, 7 shots at 200yds., standing position, M. B. L. rifles allowed, all the other matches devoted to this English M. B. L. with spirit level attachments, is at the distances of 800, 900 and 1,000yds., at which ranges it is well known the 70grs. of powder in the Springfield cartridge cannot successfully compete with the 90 and 100grs. in the English cartridges.

As a last resort, certain of the Massachusetts men took to the Wimbledon committee a Springfield musket with the buckhorn sight of 1879 attached, instead of the Buffington sight, with a desire to use the same in the M. B. L. match at 200yds. The rifle with this sight was finally passed, and it now remains to be seen what can be done with the Springfield at 200yds. against the English M. B. L. with its spirit level and wind gauge on the bar of the rear sight. The Alfred match, consisting of 7 shots at 200yds. with the Martini-Henry, was entered by eight of the team. At the finish four were found to be in the list of prize winners: Sergt. Johnston, score 32, wins £5; Corp. Huddleston, score 31, wins £3; Major Hinman, score 31, wins £3; Sergt. Bull, score 30, wins £2. This is the best showing yet made by the team with the English military rifle.

The Windmill match, which consists of 7 shots at 200 and 500yds., will be finished to-morrow. Eight of the team are entered.

F. ARROW.

LONDON, July 16.—The Duke of Cambridge to-day inspected the Canadians who are taking part in the rifle matches at Wimbledon. He congratulated them upon their loyalty, which led them to take part in successive contests at Wimbledon.

After inspecting the Canadian marksmen the Duke of Cambridge visited the American camp, where he was received by Lieut. Newton, Major Marion and Private Farrow. Private Farrow showed him the action of the Springfield rifle, in which he was much interested. The Duke said he would urge the Council to arrange a match between the Americans and a select team of British marksmen, but it fell through and all the talk at Wimbledon was about this falling through of the match between Massachusetts and the North London Rifle Club teams, which was to have been shot on Saturday. The London Club raised a difficulty because the Americans were so well treated in the matter of conditions.

Private Farrow took a minor prize in the Albert contest.

The winner of the Queen's Prize in the rifle shooting at Wimbledon was Private Reid, of the First Lanarkshire Regiment, who made a score of 281. Reid's victory delighted the Scotch riflemen, who invited the Americans to their camp to join in the rejoicing.

LONDON, July 17.—At Wimbledon to-day, notwithstanding a heavy storm of rain, hail and thunder, the Massachusetts riflemen showed the style of their skirmish drill. The whole camp assembled to witness the maneuvers. The members of the team were drawn up in a line 600yds. from the target. They then advanced, halting at intervals of fifteen seconds, until they were within 150yds. of the target. The firing resulted as follows: Huddleston out of 47 hits scored 191; Doyle, 52 hits, 166; Hinman, 33 hits, 123; Hussey, 31 hits, 114; Sergeant Bull, 20 hits, 98; Johnston, 22 hits, 76; Private Bull, 22 hits, 73; Farnsworth, 25 hits, 73; Edes, 23 hits, 72, and Bumstead, 20 hits, 50. Ten halts were made. The rapidity of the fire and the accuracy of the shots excited the cheers of the spectators.

The Rajah of Kolapore's Imperial Challenge Cup was won by the Canadian team. The score of the Canadians was 657 and that of the British riflemen 684. The Canadians also won the Colonial prize of £80, awarded to the team, exclusive of the home team, which makes the highest aggregate score in the competition for the Kolapore cup.

[Canada has now won the cup five times—viz., in 1872, 1875, 1881, 1884 and 1889, and the Colonial prize twice—viz., in 1886 and in 1889. The cup has been competed for since 1871, and has on all other occasions been won by the mother country.]

LONDON, July 18.—The match for the Elcho challenge shield was shot at Wimbledon to-day and was won by the Irish team, which made a score of 1,689. The English team scored 1,684, and the Scotch team 1,626.

LONDON, July 19.—The Massachusetts rifle team took part in the shooting for minor prizes in the Stewards' contest at Wimbledon to-day. The conditions were seven shots each at 200 yards. Following are the scores of the winners: Farrow 33, Sergeant Bull, Doyle and Hinman, 32 each, and Johnston, Merrill and Bumstead, 31 each. Mr. Lincoln, the United States Minister, visited the camp of the Massachusetts riflemen, at Wimbledon, Thursday, and had a hearty reception. The American team afterward visited the Crystal Palace.

LONDON, July 20.—The American riflemen have gone to Paris. They have won altogether something like 30 prizes in individual matches, and will take home double sets of sleevebuttons, indicative of victories.

SPRINGFIELD, Mass., July 20.—The suggestion that this city welcome home the successful Massachusetts marksmen, in which there is so large a representation, with a banquet and reception, has met with favor. It is proposed that the victorious team be persuaded to stop over in the city on their way to Boston. After a parade and reception, militia and shooting organizations can join in giving a banquet to the men who have won honors abroad. While the last week's experience at Wimbledon has not been as favorable to the Massachusetts marksmen, they have won all the matches they went to win. They had a hope that the national association would relent and allow the Springfield rifle in the individual contests at Wimbledon. Thus they took no special practice with the Martini-Henry rifle.

BOSTON, July 20.—The regular weekly shoot of the Massachusetts Rifle Association was held to-day, and a large number of riflemen were present, including many militiamen. The shooting conditions were good, there being a light wind from 2 to 10 o'clock. Mr. Frye won the champion gold medal, and Mr. Munroe won the gold medal in the 20-shot rest match. Mr. Frye also won the silver membership badge. Next Wednesday the trap-shooters of the Association will hold their prize match and sweep shoot. Following are the scores made to-day:

Twenty-shot Rest Match.

J R Munroe	11 9 12 10 11 12 12 12 11 12 12 10 9 9 12 12 11 11 11 9	9—218

B J Robertson	92	95	99—276
B Copeland	82	82	90—254

Summary:

St. Louis.		Cincinnati.	
July 2	525	July 2	518
July 9	495	July 9	543
July 16	500	July 16	530
	1,520		1,691

NIAGARA FALLS, July 20.—The annual rifle competitions of the Division of the Atlantic and Department of the East, comprising that portion of the United States Army in the country east of the Mississippi River, will be held at Fort Niagara, N. Y., commencing on Aug. 28, and continuing for a week or ten days. Major W. F. Randolph, of the Third Artillery, will supervise the competition, and post commanders have been ordered to report to him before Aug. 12 the names of enlisted men who have been selected to compete for places on the department and division teams. Old Fort Niagara, where the shoot will take place, has attached to it a military reservation of about 300 acres, and is large enough to accommodate a battery of light artillery and a regiment of infantry. The range is the best in the United States, and can be used to equal advantage for either rifle or artillery practice. The regular army competition is held alternate years, this being the off year. In place of it there will be a competition of distinguished marksmen on Bellevue range, near Omaha, beginning Aug. 27. Major Guy V. Henry, of the Ninth Cavalry, will have charge. Cavalry competitions for revolver and carbine practice will be held as follows: Bellevue, Neb., Aug. 12; Fort Leavenworth, Kan., Aug. 26; Fort Wingate, N. M., Aug. 26.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

July 31.—South Side Gun Club, at Newark, N. J. W. R. Hobart, Secretary.

July 31, Aug. 1 and 2.—Dakota Sportsmen's Association, at Aberdeen, Dakota.

July 31 to Aug. 2.—Dakota Territorial Sportsman's Association Tournament, Aberdeen, Dak. C. Sam Vroom, Secretary.

Aug. 7, 8, 9.—Forester Gun Club Tournament, Davenport, Ia. For particulars address J. W. Howard, Davenport.

Aug. 7, 8 and 9.—Forester Gun Club Shoot, at Davenport, Iowa.

Aug. 8.—West End Social Gun Club, of Pittsburgh, Inanimate Target Tournament, Williams Grove, Cambria county, Pa. James Worden, Secretary.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 13, 14, 15, 16 and 17.—Tournament at Leadville, Col.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati; $1,000 guaranteed.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

WORCESTER, Mass., July 19.—The classification series of contests, at Coal Mine Brook Range, under the auspices of the Worcester Sportsman's Club, were continued this week. In the class score each man had a possible 30 birds, and in prize score a possible 10 birds:

Class A. Class Sc'e.	Prize Sc'e.	Class A. Class Sc'e.	Prize Sc'e.

FLORENCE, Mass., July 16.—Norwood Gun Club, match at 25 Keystones, American Shooting Association rules:

D Gaylor	1111110001111110001111—20
T Cartwright	1111100111011111110001110—19
H H Chilson	1111111100111010000111—18
F W Twiss	1101110111000110101010111—16
E L Abercrombie	1111000000111111130011—15
Z Foster	1111110000011000110101011—13
E Feiker	0000111010100110101010100—12

Five pairs Keystones:

L Gaylor	1101001111—7	H H Chilson	1010011110—6
F Muttleman	1100101110—6	T T Cartwright	1001001100—4

Twenty birds at 25yds. rise:

T T Cartwright	10110111011011010—14

Practice shoot:

H H Chilson	1111111000000001111000011011011000 0001111011011000011000010100001001—39
Abercrombie	0000111111111000101001000011010110—19
F W Twiss	1111000000110031110010111101011—16
Cartwright	1101111101010101001010110—15
Maynard	0100010100011101010110— 9
L Watling	1100011101— 6

Mr. Chilson used a 16 and 18-gauge and stood 18yds. with both, which accounts somewhat for the poor runs he made. He made a run of twelve straight, which is the largest yet made by any member of the club. Mr. Gaylor's score is the best yet made out of 25 by any member of the club, and the shooting of Cartwright at 25yds. was fine. The club expect to have a new club house up by the next shooting day, and will hold a tournament of two days in the near future.—KOSMOS.

NEWARK, N. J., July 18.—The regular monthly shoot of the Essex Gun Club was held to-day at Marion, with a fair attendance for the season, and some good scores were made. The birds were a good lot, as all birds are when Heritage has charge. Two sweepstakes of 4 birds each were shot previous to regular shoot, in which 7 members took part, with a score of 47 kills out of 52. The club recently elected a new member from the Hedden family, Mr. A. E. Hedden, a young man who promises to make it 100 in the shade for the "vets," killing 18 straight and using second barrel but four times. Another feature of the shoot, and one that created some surprise and much comment, was the use of a "featherweight" gun, made by Francotte and weighing 5¼lbs., by O. von Lengerke, who killed 9 out of 10 at 30yds. rise. These guns are becoming popular, and in the hands of practical men do excellent work. The diamond badge for the month was carried off by Frank Class, while the other prizes went to C. M. Hedden, Class A; A. E. Hedden and Wm. Hughes, Class B, and Henry Babbage, Class C. Score of regular shoot:

O von Lengerke (30)	2121201211— 9	Freche (28)	1110120112—8
Class (30)	1111111111—10	Babbage (26)	2121111110—9
C M Hedden (30)	1121211111—10	Morris (26)	1110121120—8
A E Hedden (28)	1111121121—10	Wrightson (26)	0102111101—7
Hughes (28)	1112211112—10	S S Hedden (26)	1111110101—8
Leddy (28)	1210221111— 9	Freeman (26)	1111111001—8

Killed 106 out of 120; average, 88⅓ per cent.—FORD.

MR. AL. BANDLE announces his fifth annual tournament to take place at Cincinnati, O., on Sept. 24, 25, 26 and 27. One thousand dollars in cash is guaranteed and all surplus money to shooters making the best averages; no pro rata.

MINNEAPOLIS, Minn.—The monthly sweepstakes tournament of the Minneapolis Gun Club, held Thursday, July 18, only a fair number of shooters were present, as a good many were attending the Crookston tournament. All of our monthly tournaments this year have been held under disadvantages, with a high wind or rain prevailing, but this last proved an exception, as the weather was warm and pleasant. On Thursday, Aug. 15, our shooting season for the year will close, when all ties for badges will be shot off. A programme of sweepstakes will be issued and prizes for best averages will be given.

No. 1, at 10 singles, entrance $1: Ensign 8, Block 9, Marshall 6, Osmer 10, Fox 7, Dalton 7, Lawrence 6, Cutter 9. Osmer first, ties on 9 divided second, Ensign third, Fox and Dalton fourth.

No 2, at 6 singles and 2 pairs, entrance $1: Ensign 7, Block 8, Marshall 4, Fox 8, Osmer 9, Lawrence 6, Dalton 9, Cutter 8. Osmer and Dalton first, Block, Fox and Cutter second, Ensign third. Lawrence fourth.

No. 3, at 15 singles, entrance $1.50: Ensign 9, Block 14, Marshall 9, Osmer 11, Fox 9, Dalton 11, Cutter 10, Lawrence 12. Block first, Lawrence second, Osmer and Dalton third, Cutter fourth.

No. 4, at 4 singles and 3 pairs, entrance $1: Block 8, Lawrence 5, Dalton 8, Fox 9, Cutter 6, Marshall 6, Osmer 7, Ensign 7. Fox first, Block and Dalton second, Ensign third, Cutter and Marshall fourth.

No. 5, at 10 singles, entrance $1: Cutter 7, Marshall 6, Lawrence 9, Dalton 10, Fox 7, Ensign 7, Osmer 7, Block 9. Dalton first, Block and Lawrence second, Ensign third on shoot-off, Marshall fourth.

No. 6, club badge shoot, at 10 singles and 5 pairs, entrance $2:

*Block	1111111111	10 10 10 11 11	—16
Osmer	1111100110	11 10 10 10 11	—14

CHICAGO, Ill., July 18.—Following are the scores of two individual matches shot at Mak-saw-ba grounds, July 14. Mr. Mussey's score of 96 out of 100 is certainly noteworthy. There was $100 up on this match. The score: Match No. 1, at 100 live birds:

W P Mussey.....12112121111111121111222121211112211121122112121212
2121111110121111111110012021121121122112221111 —96
G W Randall.....11221112121021212102121122112212111111121
2212121112111211120121012111230122110.0021111110—90

Match No. 2, 25 live birds, 30yds., $25 a side:

J P Hayde.....0110212121100020212110000—15
C S Wilcox.....2102121101111122112021221—21

Mr. Wilcox allowed Mr. Hayde 4 birds, and beat him out 2 birds notwithstanding.

Below are totals of Mak-saw-ba club shoot, June 30, for the suit of hunting clothes offered by Mr. W. L. Shepard, of the Cumberland Club. This was the first shoot of the three for the hunting clothes. The score at 15 live birds, 30yds, was:

Organ	13	Holden	10
Sheperd	11	Hardy Richardson	13
Mussey	15	Pfeffer	14
Dick	12	Stephens	10
Wilcox	13	Hayde	11
Watson	14	Murdough	5
Leiter	12	Read	8
Randall	12	Goodman	9
Waldron	8	Van Vlimigen	4

E. H.

ST. LOUIS, Mo., July 14.—The Riverside Gun Club held their regular medal shoot to-day. The attendance was good and some fair scores were made; 20 bluerocks, walk-around system:

Pohlman	1101111111101111101—17	Haggerty	1111111011111111111—19
Bright	0100111111111101110—15	Silzer	0100101111011111000—11

Kling	1011011111101111—15	Sprick	1111110100111100110—14

Mr. Haggerty first medal, Mr. W. Pohlman second medal, Mr. Horstman third medal.—T. M.

HARRISBURG, Pa., July 27.—The regular monthly shoot of the West End Social Gun Club came off at the stock yard grounds July 11, and was won by Mr. C. E. H. Brelsford on the tie shoot-off, he shooting in very good form and killing his birds very clean. The birds were a lively lot and gave the boys the go by sometimes unexpectedly. Match for gold medal, 12 live birds, 2 ground traps, 21yds., old Long Island rules:

H B Shoop	1101001011—6	Schultz	1111011111—8
Brensinger	1011100101—6	Miller	1111011111—9
Ginther	0111001010—5	McKee	1111111101—9
H Bach	0101111111—8	Sellers	000110w.
Marshall	1011111110—8	Whiteman	1111011010—7
Brelsford	1011111111—9		

Ties on 9 birds, 21yds., Belsford 5, Miller 2, McKee 3. The club will give a tournament on August 8; inanimate targets, at Williams Grove, Pa. Everybody invited. For particulars address James Worden, Sec'y.—M. H. B.

NEW YORK, N. Y., July 17.—Emerald Gun Club regular club shoot at Sea View Park, New Dorp, S. I., 10 live birds, 5 ground traps, 80yds. boundary. Emerald Gun Club rules, 3 prizes:

Dr Hudson (30yds).	1022011110— 7	P J Keenan (25)	1011111101— 8
F Shrader (30)	0212020001— 5	J Measel, Jr (30)	1110001111— 7
L O Gehering (30)	2110010211— 7	J McConnell (21)	0010000110— 3
N Measel (30)	1111200000— 5	G Nowark (25)	1111112000— 7
T J Crystal (25)	0111120011— 7	M W Murphy (25)	0112111001— 7
J Howard (21)	0001200101— 4	T P MacKenna (25)	1121212111—10
P Butz (30)	0012000101— 4	Col J H Voss (32)	1020111111— 8
H Rubino (25)	2010201100— 5	S McMahon (25)	1101120122— 8
C Grainger (30)	2202101210— 7	Dr Leveredge (25)	1121111112—10
J Bade (25)	0011110111— 7	T Cody (30)	2021102201— 7

Col. J. H. Voss wins first prize, killing 8 birds at 32yds. Ties on 10 for second, 25yds., miss and out: T. P. MacKenna 0, Dr. Liveredge 1, and won second for the first time. J. Howard third. Referee, Nicholas Measel; scorer, P. J. Keenan.—T. P. MACKENNA Rec. Sec.

TOWANDA, Pa., July 20.—At a tournament of the Towanda Rod and Gun Club, held July 4, a Championship County Badge was shot for, the winner to hold same against all comers for one year, subject to a challenge on thirty days' notice from any shooter resident of the county. The winner was W. K. Park, of Athens, Pa., a good shot and honorable sportsman. In the same village with Park resides E. W. Davies, a keen sportsman and fine trap shot. He has probably bagged more woodcock than any other resident of the county of his age, it being his favorite game bird. Davies thought he would like to wear the badge a short time at least and challenged Park for a shoot, which took place on the Waverly Gun Club grounds, at Waverly, N. J., 3 traps, known angles, bluerock targets, American Association rules. 25 birds. Through the kindness of Mr. Park three of his former opponents of this place were allowed to shoot for the badge at the same time and place, and "do him up" if they could. A few sweepstake shoots were indulged in after the regular match. Entrance 25 cents. Some of the ties divided, others shot off. Following are the scores, championship match:

W K Park	1111011011111011111011—21
E W Davies	1101011000101101100111100—13
A V Rittenbury	0100011101111010101011010—15
W F Dittrich	0011101110101110110110110—16
J W Snider	1011111001010110111011100—17

First match:

Park	111100—4	Dittrich	011011—4
Snyder	011111—5	Thatcher	011010—3
Rittenbury	101111—5	Davies	111111—6

Second match:

Park	101011—4	Thatcher	111011—5
Snyder	101111—5	Davies	101010—3
Dittrich	110100—3	Lang	011010—3
Kittenbury	111010—4		

Third match, doubles:

Park	10 01 10—3	Dittrich	10 10 11—4
Snyder	10 11 01—4	Thatcher	01 10 11—4
Rittenbury	11 10 11—5	Davies	11 10 00—3

Fourth match:

Park	11111—5	Rittenbury	11010—3
Snyder	01110—3	Dittrich	11000—2
Davies	01110—3	W. F. DITTRICH.	

CLEVELAND, O., July 19.—The badge shoot of the East End Gun Club to-day brought out a large number of shooters, and some good scores were made in spite of the strong wind blowing across the range. Twenty-five birds at 18yds. were shot. Sheldon and North tied for the first badge, the former finally winning it after a hard contest in the shoot off. Wherry won the second badge. The score:

*Visitors.

The Cleveland Gun Club has accepted the challenge of the East End Club for a series of three matches, and they will be shot July 25, Aug. 22, and Sept. 26. The Clevelands requested that the American Shooting Association rules should govern instead of Chamberlin rules, and the East Ends have conceded the point. The shooting will be over three traps.

CORRY, Pa., July 18.—Willie Low and Blyde still hold the medals, although shooting at 20 and 22yds. rise, and their 24 and 23 out of a possible 25 cannot well be beaten at that distance. Following are the scores in detail at keystone rules, Keystone rules:

Willie Lew	1111111111111111111101111—24
Blydenburg	1111111111011111111111111—23

EATON, N. Y., July 20.—Eaton Sportsmen's Club shoot. Match at 9 kingbirds, 3 traps, 18yds. rise, shot under National rules:

Richardson	111010110—6	Cole	111111010—7
Peet	111101111—8	Briggs	111011111—8
Fryer	001110103—4	Curtis	011010100—4

Match at 15 kingbirds, 3 traps, 18yds. rise, shot under National rules, for a badge:

Richardson	111001011001100— 8	Briggs	100000011111111— 9
Peet	111111111111111—15	Short	010000000100001— 3
Fryer	001110111111111—14	Curtis	110111011111011—12
Cole	111101011010010—10		

WASHINGTON HEIGHTS CLUB.—New York, July 20.—A pigeon shooting match took place this afternoon on the grounds of the Washington Heights Gun Club, at 167th street, near Tenth avenue, for a purse of $500, the winner taking $300, second $150, third man $50 and the fourth contestant paying all expenses. The competitors were C. H. Preyer, Dr. A. B. Amabile, M. Fortunato and C. R. Terwilliger. The conditions were 21yds. rise, both barrels, at 20 birds, and Preyer easily secured the first prize by killing 17 out of 20 birds. Terwilliger came next with only seven misses, and Dr. Amabile was unfortunate enough to earn the distinction of defraying the day's expenses by missing 15 out of 20. The score was as follows:

Preyer	0101111011111111111—17
Terwilliger	0111111101101010100—13
Fortunato	1001110001110000100— 9
Amabile	0000000100000101010— 5

After the match an open sweepstakes was shot for, with the following result: Terwiliger 4, Preyer 3, Fortunato 3, Male 3 and Gutterding 0. The tie for second money was shot off at one bird each and resulted in favor of Mr. Preyer.

COAHOMA GUN CLUB.—The brotherhood of sportsmen of Clarksdale, Miss., have organized a club with the style and title of the Coahoma Gun Club with the following roster: T. G. Dabney, President; J. R. Coat, Secretary and Treasurer; J. P. Riley, W. C. Deavors, A. B. Carruther, Frank McCroy, W. P. Wildberger, R. H. Wildberger, A. M. Littlejohn, M. M. Daily, J. W. Cutrer, E. R. Kilpatrick, P. A. Dolan, A. Kirstine, Walter Clark, N. L. Leaval, W. A. Todd. The objects of the above organization are those common to similar ones elsewhere, including the promotion of the preservation of game. We hope to send FOREST AND STREAM some good scores on bluebirds, etc.—T. G. DABNEY, President.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

WELLINGTON, Mass., July 20.—There was a fair attendance at the grounds of the Wellington Club to-day, and some good scores were made in the silver pitcher match. In this match, at eight clay pigeons and seven bluerocks, Chase won with a clean score of 15. The other scores were: Melcher 13, Savage and Roxton 12, Moore, Snow and Schaefer 11, Sanborn 10, Bradstreet, Stone, Pomphrey and Baxter 9.

In the Merchandise Badge match, Roxton, Bradstreet, Warren, Melcher and Snow tied with 13 each. The other scores were: Nichols, Savage and Field 12, Chase, Schaefer and Savage 11, Pomphrey and Sanborn 10, Stone 9.

The winners of the sweepstakes matches follow:

First event, seven bluerocks—Chase and Roxton 7, Melcher, Snow and Schaefer 6, Sanborn and Savage 5, Bradstreet and Pomphrey 4. Second event, eight clay pigeons—Chase 8, Melcher, Moore and Savage 7, Field 6, Sanborn and Snow 5. Third event, six clay pigeons—Sanborn, Field and Pomphrey 6, Bradstreet, Cowee, Snow and Roxton 4, Moore, Schaefer and Baxter 4, Stone and Savage 3. Fourth event, five clay pigeons—Roxton, Bradstreet and Cowee 5, Warren, Field and Nichols 4, Schaefer and Sanborn 3, Baxter 2. Fifth event, five clay pigeons—Warren, Savage and Melcher 5, Bradstreet, Cowee, Baxter and Snow 4, Schaefer 3, Stone 2. Sixth event, six bluerocks—Roxton 6, Bradstreet 5, Chase, Field and Nichols 4, Warren and Savage 3. Seventh event, five pairs bluerocks—Schaefer 9, Bradstreet, Field and Nichols 8, Snow and Chase 7. Eighth event, five clay pigeons—Roxton and Snow 5, Baxter 4, Moore 2. Ninth event, six bluerocks—Sanborn 6, Field and Schaefer 5, Pomphrey 4. Tenth event, ten clay pigeons—Schaefer, Baxter and Field 9, Pomphrey and Moore 8, Sanborn, Warren, Nichols and Melcher 7. Eleventh event, six bluerocks—Bradstreet, Field and Schaefer 6, Roxford, Sanborn and Moore 5. Stone, Baxter, Nichols and Savage 4.

CINCINNATI, July 20.—Al Bandle, who is matched to shoot J. L. Winston a 100 live-bird match at St. Louis, Wednesday, July 24, will leave with a delegation of local shooters to-morrow night. He will stop at Belleville, Ill., the guest of the gun club there, and on Tuesday will shoot at 100 live birds in practice for his big event. The betting on the result, which was even two weeks ago, has now turned to odds in favor of Bandle, this owing, perhaps, to the latter's fine shooting in practice the last two weeks. The shot will take place at the Compton Avenue Ball Park, and will be at 100 single live pigeons, under London Gun Club rules, 31yds. rise, birds to be sprung from 5 ground traps, and the stake to be $250 a side and expenses. The confidence Cincinnati shooters lay in Bandle, their champion, will make the aggregate Cincinnati money number in the thousands. Mr. Edwin Taylor, an old-timer and experienced live-bird shot, will coach and look out for Bandle's interest on the occasion, and steer him on the way to victory and the mighty dollars of the hungry St. Louis pigeon-shooters. Bandle has a hard race before him, but he has had harder ones and won them, and all the boys here think a victory for him certain.

SOUTH SIDE GUN CLUB.—At the regular semi-annual meeting of the South Side Gun Club, of Newark, N. J., the following gentlemen were elected members of the governing committee: J. R. Burnett, Oswald von Lengerke, Asa Whitehead, I. H. Terrill and W. R. Hobart. The committee elected J. R. Burnette president and W. R. Hobart secretary and treasurer. Members on roll 58. The third shoot of the club will be held on Wednesday, July 31, beginning at 10 o'clock A. M. The programme consists of 10 events as follows: 10 clays, 5 pairs clays, 10 hats, 5 pairs hats, 15 bluerocks, 5 pairs bluerocks, 10 bluerocks, 20 bluerocks, 10 clays, 10 clays. The shooting will be under club rules, and prizes will be divided into 40, 30, 20 and 10 per cent. of the sweepstakes. Shooting will go on rain or shine. An invitation is extended to sportsmen generally.

BROOKLYN, July 19.—The New York German Gun Club, the majority of whom reside in Brooklyn, combine their shooting with a good social time. To-day the members held their mid-summer shoot at Dexter's Park, Jamaica Plank Road. Seventeen went to the traps to shoot for the gold medal of the club; conditions, 10 birds each, club handicap. F. Pfaender, 30yds. rise, killed all his birds and won the badge. G. Boesenecker 7, H. Sauter 8, J. Schlicht 8, H. Greiner 3, F. Frazer 4, G. Goeritz 9, J. Lucas 8, P. Hassinger 9, P. Garms, Jr., 9, H. Bonden 7, P. Garms, Sr., 6, J. Corwein 5, Dr. Cantrell 5, H. Dannefelser 9, P. Klein 7, F. Praender 10, J. Haff 7. Referee, Capt. H. Sauter.

Answers to Correspondents.

☞No Notice Taken of Anonymous Correspondents.

C. B. S., Elmira, N. Y.—For seasons see our game columns.

T. P. F. AYLMER.—If not too bad, a wire scratch brush will remedy it.

STAMFORD (CONN.) ROD AND GUN CLUB.—We have a letter for the president of this club.

G. C. B., New York.—We know of no yacht with such a name about New York or Boston.

P. J. F.—For codfish use stout line, small cod hook, heavy sinker, and bait with clam, soft crab or menhaden.

W. J. S.—In our Trajectory Tests, the .40-60-210 Winchester gave for 200yds. range a trajectory of 1.151in. at 100yds. No Winchester .38 was tried, but a Marlin .38-55-255 gave for the same distance 11.617in.; a Remington-Hepburn .38-50-320 gave 12.408in.; a Bullard .38-45-190 gave 12.691in.; and a Stevens .38-40-145 gave 13.588in. See full report of Trajectory Test, price 50 cents.

J. D. B., Roselle, N. J.—1. Is it against the law to catch trout and pickerel in Maine during September and October? 2. Is it against the law to shoot deer, caribou, moose and partridges during September and October? Ans. 1. The Maine trout season will close Sept. 30, except in St. Croix River and tributaries and in Kennebec county, where it will close on Sept. 14, and in Misery and Saccatieu, emptying into Moosehead Lake, Sept. 9. No law on pickerel. 2. Season for moose, deer and caribou will open Oct. 1. Partridge shooting Sept. 1 to Nov. 30 inclusive.

A. J.—The Creedmoor targets are divided into three classes of the following sizes: 1. Third class, to be used at all distances up to and including 300yds., target 4×6ft.; bullseye 8in. in diameter, center 26in., inner 46in., outer remainder of target. 2. Second class, to be used at all distances over 300 to and including 600yds., target 6×6ft.; bullseye 22in. in diameter, center 38in., inner 54in., outer remainder of target. Third class, to be used at all distances over 600yds., target 6×12ft.; bullseye 36in., center 54in., inner, square, 6×6ft., outer remainder of target. Bullseye counts 5, center 4, inner 3, outer 2.

E. A. B.—Will you please inform me whether it is necessary for a person shooting in the State of New Jersey to belong to a shooting club or game association of that State? Ans. The New Jersey law requires that non-residents of the State shall not fish and shoot "without complying with the by-laws of the game protective societies, organized, or to be organized, under the laws of this State;" and a penalty of $50 is provided. This is interpreted by the societies to mean that a non-resident must before fishing or shooting become a member of one of the societies, and take out a certificate to that effect; and persons have been arrested for not doing this; and they have paid their fines on the principle that it was cheaper to pay than to fight.

M. M., Ripley, O.—My pug dog was bred by Mr. John Green, of Liverpool, Eng., and is registered in the A. K. R. No. 5756. My pug bitch Vixen (A.K.R. 3958) was bred by Geo. Gillivan, West Jefferson, O.; sire, champion Bradford Ruby; dam, Flossy (A.K.R. 2250). Now, the secretary of the American Kennel Club refuses to register pups from this pair. He also refuses to register my dog Christy and bitch Vixen, although the sire and dam are registered in the A.K.C.S.B., which, according to their first condition, entitles her to registry. My dog being imported, his sire and dam would not be registered in the A.K.C.S.B., as per Condition First. But I furnished him the pedigree as given me when I bought him, extending back three generations in England, as per Condition Second. Are they not entitled to registry? Ans. Vixen is eligible, as her sire is already registered, No. 4970, and her dam also, No. 4450. If, as you state, you have furnished the pedigree of Christy for three generations, he is also eligible.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

7. Brooklyn, Annual, postponed.

THE ATLANTIC DIVISION MEET, JULY 13-22.

THE second annual meet of the Atlantic Division was held last week at the mouth of Cheesequake Creek, on Raritan Bay, in New Jersey, the camp beginning on Saturday and continuing through the following week. Last year, the first of the new division, no permanent camp was made, a cruising meet being substituted, but this season it was decided to spend the whole time in camp. Cheesequake Creek was selected on account of its central and easily accessible position, between New York and Philadelphia and on the line of the leading railways. The camp site was located along the side of a high sandy bluff, the tents of the Brooklyn, Ianthe and Arlington clubs being pitched on the plateau at the top, the other tents about the slope and foot, and the canoes and shore tents along the beach, a stretch of clean yellow sand and gravel running for miles in either direction. The beach shelves so gradually that at low water a man can walk out over an eighth of a mile, but no trouble was experienced in laying out a very good triangular course for sailing and a straight course along the shore for paddling. The view from the bluff was very fine, Perth Amboy perched on a hill a couple of miles away on the west, the green hills and picturesque shores of Staten Island to the north, and further away the Lower Bay and Coney Island; while the races could be viewed to perfection.

The camp was formally opened on July 13, by Rear-Com. L. B. Palmer, of the Ianthe C. C., in the absence of the vice-commodore, and during the day canoeists came in from all points, a small steamer being secured to run between Perth Amboy and the camp each day. A number of canoeists from New York and Brooklyn pitched their tents and came from the city every night, returning to business in the morning. Among the clubs represented were the Arlington, Brooklyn, Bayonne, Hoboken, Ianthe, Crescent, a new club lately organized at Greenville, on Newark Bay, Knickerbocker, New York, Paterson, Red Dragon, Perth Amboy, Hartford and Yonkers. The first part of the week was spent in sailing and preparing for the races which took place on Friday and Saturday, under the direction of Messrs. Schuyler and Quick, the regatta committee. On Friday Ex-Vice-Com. Stanton reached camp in his cutter Vandal, but was obliged to anchor well off shore, the yacht drawing 6ft. On Saturday he dressed ship in honor of the occasion. Mr. Vaux sailed down in his canoe yawl Penguin, while Mr. Cox, of Newark, came in a curious canoe cutter, a craft of canoe build, but with an overhang aft and drawing over 2ft. A number of sneakboxes and a St. Lawrence skiff made up the list of unclassified boats. Among the new boats were the Atom, Mr. Vaux's handsome Everson racer, Rear-Com. Palmer's new Rushton, Cigarette, a handsome new boat by Wignall, of Philadelphia, modelled after the Fly, and Siren, a very nice specimen of amateur boat building by Mr. O. F. Coe.

The races were held on Friday and Saturday, the weather being fair and a good breeze blowing on each day. The unlimited sailing was the most exciting of all, the three rounds being very closely contested by Messrs. Forrest and Vaux. There were ten starters, the course being 4½ miles, the wind fresh N.W. and the tide a strong ebb offshore by the outer buoy. Mr. Vaux fouled the flag as he started, coming to the line a little too soon and recrossing, being last over except Mr. Palmer, who was very late in getting away. Dimple led at the start, a free reach, but Atom worked up through the fleet and nearly caught the leader in the windward work on the second leg, leading Dimple on the run in. They came for the buoy at the end of the second round with Atom a length ahead, but outside, and as she was compelled to give room at the buoy Dimple cut in ahead of her, making a neat jibe and taking the lead on the last round. On the third round Atom was very close to Dimple, but failed to catch her. Ianthe started so far in the rear that she was not in with the others. She carried 135ft. of sail, much more than any other. Nenemooska sailed a good race, finishing third. The special cruising race was won by Mr. Cox in a Canadian canoe fitted for sailing, with decks and centerboard. As usual, the large craft and unclassified canoes did not enter, only three starting. The hurry-scurry race was a novelty, all the contestants wading out to the canoes after a foot race on the beach, there not being depth enough to make it necessary to swim. On Saturday afternoon Mr. J. L. Kearney, of Perth Amboy, sailed over with a boatload of pretty girls and all the materials for a clambake, which was held on the beach after the races.

In the evening the annual meeting was held about the campfire, with Vice-Com. Stephens presiding. The division officers were elected for the following year as follows: Vice-Com., M. V. Brokaw, Brooklyn C. C.; Rear Com., Irving V. Dorland, Arlington C. C.; Purser, W. R. Haviland, Yonkers C. C. Executive Committee, Messrs. Henry La Motte, of Philadelphia, and F. W. Kitchell, of Perth Amboy. A resolution to the Executive Committee recommending that the number of members necessary to the establishment of a new division be reduced from 100 to 50 was introduced by Mr. R. J. Wilkin and carried. The prizes were presented by the chairman of the Regatta Committee, Mr. Schuyler. Some very good music was furnished by a quartette from the Yonkers C. C. and the rest of the evening was spent very pleasantly over some big watermelons. On Sunday a number of the canoeists started to cruise home and the meet was practically concluded. It was in every way a success and promises well for a large A. C. A. meet in the division next year. The full summary of the races is as follows:

Event 1. Paddling, Class I.—One and one-third miles:

Scout	B. Palmer	Ianthe	2
Sybil	O. T. Conner	Ianthe	6
Atom	W. L. Dudley	Washington	5
Baby Essex	G. L. Metze	Hoboken	7
Minx	W. R. Burling	Ianthe	1
Valesca	H. M. Kreamer	Red Dragon	3
Dimple No. 3	Geo. C. Forrest	Hartford	
Wind	Geo. Douglass	Ianthe	4

Event 2. Paddling, Classes II. and III.—One mile:

Brunonia	C. D. Cooke	Paterson	5
Sybil	W. R. Burling	Ianthe	1
Atom	W. L. Dudley	Washington	3
Valesca	H. M. Kreamer	Red Dragon	4
Thetis	D. M. Bond	Red Dragon	2
Wind	W. F. Marvin	Ianthe	6

Event 4. Tandem Paddling—One mile:

Valesca	Kreamer and Bond	Red Dragon	1
Anita	Stewart and Conner	Ianthe	2
Naiad	Place and Dorland	Arlington	3

Event 3. Paddling, Class IV.—One mile:

Dimple No. 3	Geo. C. Forrest	Hartford	4
Sybil	O. F. Coe	Crescent	3
Valesca	H. M. Kreamer	Red Dragon	1
Thetis	D. M. Bond	Red Dragon	2
Anita	O. T. Conner	Ianthe	5
Nenemooska	Geo. P. Douglass	Ianthe	Did not finish.

Event 5. Paddling Upset:

Anita	H. S. Farmer	Ianthe	1
Thetis	D. M. Bond	Red Dragon	2
Turtle	F. Place, Jr.	Arlington	5
Thetis	D. M. Bond	Red Dragon	
Valesca	H. M. Kreamer	Red Dragon	3
Atom	W. L. Dudley	Washington	
Nenemooska	G. L. Douglass	Ianthe	1
Anita	H. S. Farmer	Ianthe	4

Event 1. Sailing, Unlimited—Four and a half miles. Time 1.10¼:

Sweetheart	Geo. O. Totten, Jr.	Unattached	
Naiad	G. W. Cox	Newark	
Cigarette	F. W. Noyes	Red Dragon	
Atom	C. B. Vaux	New York	2
Ianthe	L. B. Palmer	Ianthe	
Sybil	O. T. Coe	Crescent	
Dimple No. 3	G. C. Forrest	Hartford	1
Lasata	G. L. Metze	Hoboken	
Sea Fox	J. Warnecke	Hoboken	
Nenemooska	G. P. Douglass	Ianthe	3

Event 2. Cruising Special—Three miles:

Ignaw	F. Place, Jr.	Arlington	Upset.
Sweetheart	Geo. O. Totten, Jr.	Unattached	2
Lasata	G. L. Metze	Hoboken	
Sea Fox	J. Warnecke	Hoboken	
Cynesca	R. Hart	Ianthe	Upset.
Anita	H. S. Farmer	Ianthe	
Naiad	G. L. Cox	Newark	1
Thetis	D. M. Bond	Red Dragon	3

Event 3. Sailing Upset:

Dimple No. 3	G. C. Forrest	Hartford	1
Nenemooska	Geo. P. Douglass	Ianthe	2
Sea Fox	J. Warnecke	Hoboken	4
Atom	C. B. Vaux	New York	3

Event 4, Sailing Maneuvering:

Nenemooska	Geo. P. Douglass	Ianthe	6
Brunonia	C. D. Cooke	Paterson	3
Cigarette	F. W. Noyes	Red Dragon	2
Dimple No. 3	Geo. C. Forrest	Hartford	5
Ianthe	L. B. Palmer	Ianthe	4
Atom	C. B. Vaux	New York	1

Event 5. Sailing Unclassified—Three miles:

May	E. B. Weed	Triton	
Anna	T. W. Peterson	Raritan	2
Tadpole	H. S. Farmer	Ianthe	1

Event 6. Combined Sailing and Paddling—Three miles:

Nenemooska	Geo. P. Douglass	Ianthe	1
Cigarette	F. W. Noyes	Red Dragon	2
Dimple No. 3	Geo. C. Forrest	Hartford	4
Ianthe	L. B. Palmer	Ianthe	3

PEQUOT CANOE ASSOCIATION.

THE third annual meet will be held at the summer quarters of the P. C. A., at Rogers Island, Stony Creek, Conn., 15 miles east of New Haven, from July 31 to Aug. 10. The programme is as follows:

Wednesday, July 31.—Making camp and getting settled.

Thursday, Friday and Saturday.—Short cruises to neighboring islands and mainland.

Sunday.—Services at 10:30 A.M. by the Chaplain, Rev. A. N. Lewis, rector of Memorial Church of the Holy Trinity, Westport.

Monday.—10 A.M. Paddling race, canoes, 1 mile, open race. 11 A.M. Yacht race, by classes, from stakeboat off club house, round Branford Beacon and return, open race, Herreshoff time allowance. 2:30 P.M. Sailing canoes, unlimited sail, open race, course from stakeboat off club house, round Inner Reef Buoy and return. 4 P.M. Tug of war, canoes, open race.

Tuesday.—10 A.M. Tandem paddling race, canoes, 1 mile, open race. 11 A.M. Yacht race, by classes, for members only. Course, from stakeboat off clubhouse, around Branford Beacon and return. Seawanhaka allowances. 2:30 P.M. Sailing canoes. Sail limited to 75sq. ft., open race, course from stakeboat off club house, round Inner Reef Buoy and return. 4 P.M. Upset race, canoes, open race.

Wednesday.—10 A.M. Launch race, classes 2 and 3. Course from stakeboat off club house, round Branford Beacon and return. Postponed races at any time during the day. 5 P.M, tournament, canoes, open to all.

Thursday, Friday and Saturday.—Short cruises and camp life. Camp-fire every evening during the week.

Class A, cabin sloops, 20ft. l.w.l. and over. Class B, cabin sloops, under 20ft. l.w.l. Class C, open sloops, 20ft. l.w.l. and over. Class D, open sloops, under 20ft. l.w.l. Class E, catboats, 20ft. l.w.l. and over. Class F, catboats, under 20ft. l.w.l. Class G, yawls, 20ft. l.w.l. and over. Class H, yawls, under 20ft. l.w.l. Class K, sharpies, 20ft. l.w.l. and over. Class L, sharpies, under 20ft. l.w.l. Class M, sailing canoes, over A.C.A. limits. Class N, sailing canoes, within A.C A. limits. Class O, paddling canoes, over A.C.A. limits. Class P, paddling canoes, within A.C.A. limits. Class 2, steam launches. Class 3, Naphtha launches.

Each boat competing in races must be manned and handled by the owner or some amateur.

For crew, one man may be carried for every 4ft. of loadline.

Shifting ballast will be allowed only in classes C and D.

No prizes will be awarded in any class unless more than one boat starts.

Programme for Cruise.—Starting from the Thimbles after the close of the meet. Monday, Aug. 12, Saybrook; Tuesday, New London; Wednesday, Greenport; Thursday, Sag Harbor; Friday, Thimble Islands; Saturday, disband.

A general invitation is extended to canoeists and cruisers to join in this cruise.

The committee includes Messrs. W. W. Cornwell, W. A. Borden and F. P. Lewis.

CORINTHIAN MOSQUITO FLEET.—The following order for the squadron cruise has been issued by Com. Smith: The Corinthian Mosquito Fleet will rendezvous in Echo Bay, New Rochelle, on Saturday morning, July 27, for its first annual cruise. The start will be at 9 o'clock, attention being called by a gun from flagship Hyacinth. The run will be to the Dorion House, Norwalk Harbor, starboard hand on entering; distance twenty miles. In the event of the weather proving against making this port, the fleet will then run to Indian Harbor Hotel, Greenwich, Sunday the fleet will start at 9:30 A. M., without gun. If the weather be favorable, the run will be made to George Hotel, Black Rock. Distance from Dorion House, eleven miles. Monday, the start will be at 8:30 A. M., from a one gun salute from flagship. The run will be to Thimble Islands. If the weather should prevent, after starting, the leading boat will, if possible, make port at Branford Point, three miles east of New Haven Light, and the fleet will follow. A prize will be given on each day's run, to the boat reaching port first (excepting Sunday's run). Dr. F. M. Wilson will present a prize to the boat judged to be the best all-around cruiser, to be rated thus: Safety 30, comfort 30, speed 20, beauty 20; total, 100. At the Thimble Island further information will be given as to cruise. It is desirous that the members make an effort to assemble on this occasion, as it promises much sport and pleasure. The new club book, just issued, contains a list of forty-five members, and a fleet of thirty boats.

A. C. A. MEMBERSHIP.—Atlantic Division: W. H. H. Warner, Brooklyn; W. J. Wright, Yonkers. N. Y. Northern Division: John H. Buchanan, Charles Turnbull, and W. J. Milliam, of Galt; G. P. Benson and F. G. Hamilton, of Cardinal, and Capt. H. B. Mackey, Kingston.

YONKERS C. C.—The annual regatta of the Yonkers C. C. will be held on Saturday, there being the usual programme of races under A. C. A. rules. The races will begin at 2:30 P. M.

Stranger—"I say, Johnnie, is it against the laws to catch fish in that pond?" Johnnie—"Yes, sir." "But there's a police officer fishing there now. He wouldn't do so if it was against the law." "Well, it may not be against the State law to catch fish in that pond, but it's against the laws of nature, for there isn't a blessed fish in it."—*Yonkers Statesman*

A BUSY BOSTON MAN writes: I never take up a copy of FOREST AND STREAM without wanting to ask questions or make comments on a half dozen points in it; but I am so busy these things do not get written. Actually your paper gives me more unalloyed delight and rest and escape from care than all the others that I take.—A.

Yachting.

FIXTURES.

JULY.

25. Miramichi, Miller and Call Cups.
27. Corinthian, Marblehead.
27. Beverly, Mon. Beach, 2d Buz. Bay.
27. Monatiquot, Club, Ft. Point.
27. Buffalo, Sweep, to Point Colburn.
27. Cape Cod.
27. Hamilton, 25ft. Class.
27. Quaker City Cor., Riverton.
27. R. Can., 20ft. Class, Toronto.
29. Detroit, 2d Pennant.
31. Pleon, Open.
31. Hull, Ladies' Day.
31. Cedar Point.

AUGUST.

3. Quincy, Open Race.
3. Buffalo, Club, Buffalo.
3. Sippican, Club, Marion.
3. Beverly, Marbleh'd, 1st Cup.
3. Lynn, Club, Lynn.
3. Cape Cod.
3. West Lynn, 1st Cham., Lynn
3. New Haven, Annual Cruise.
3. So. Boston, Mass., 2d Pen., City Point.
5. American, 3d Cham.
5. Dorchester, Open, Club.
5. Rhode Island, Club Cruise.
7. Pleon, 2d Cham.
7. New York, Cruise, Rendezvous New London.
8. Great Head, Moonlight Sail.
8. Miramichi, Vice-Com. Stewart's Pennant.
10. Lynn, Ladies' Day, Lynn.
10. Corinthian, Marblehead.
10. Monatiquot, 2d Cham., Ft. Pt.
10. Buffalo, Annual Cruise.
10. Hull, 2d Cham.
10. Cape Cod.
13. Detroit.
15. L. Y. R. A., Rochester.
16. Monatiquot, Ladies' Day, Fort Point.
16. Great Head, Cham. Sail off.
16-31. Quaker City, Cruise, Chesapeake Bay.
17. Great Head, Open.
17. Quincy, Ladies' Day.
17. Beverly, Marbleh'd, 3d Cham
17. Hull, Special Outside Race, 30 and 40ft.
17. American, Around Plum Island, go as you please.
17. Chelsea, Ladies' Day.
17. So. Boston, Mass., Pen. Sail off, City Point.
19. American, Open.
19. Detroit, 3d Pennant.
19. L. Y. R. A., Hamilton.
21. Pleon, 3d Cham.
21. L. Y. R. A., Toronto.
24. Lynn, Excursion, Lynn.
24. Beverly, Mon. Beach, 3d Open.
24. Larchmont, Oyster Boats.
24. Corinthian, Marblehead.
24. Hamilton, 20, 25, 30 and 35ft. Class, Whitewings Cup.
24. R. Can., Skiff Class, Toronto.
26. L. Y. R. A., Belleville.
26. Rhode Island, Open.
28. Pleon, Sail off.
29. L. Y. R. A., Oswego.
29. Cedar Point.
31. Beverly, Marbleh'd, 1st Open
31. Sippican, Club, Marion.
31. Hull, Cham. Sail-Off.
31. Quincy, 3d, Cham.
31. Chelsea, Club.
31. West Lynn, 2d Cham., Lynn.
31. So. Boston, Mass., Cham. Sail off, City Point.
31. R. Can., 20ft. Class, Toronto.

SEPTEMBER.

3. Lynn, Open, Lynn.
3. Beverly, Mon. Beach, 3d Open
3. Corinthian, Marblehead.

28. Lynn, Club, Lynn.
28. Buffalo, Club, Buffalo.
28. West Lynn, Sweeps, Lynn.
29. Detroit.
30. Quaker City, Review and Cruise.
21. R. Can., Cruising, Toronto.
26. Cedar Point.

THE YACHT RACE.

BY K. H.

A RATTLING breeze from out the west
Stretches like drumheads ev'ry sail,
Each wave beats like a muffled flail
Upon the glist'ning hulls that breast
The endless droves of tossing manes
Hurrying across the wind-swayed plains.

Haul taut each sheet until it sings
Like chords of an Æolian harp;
Now see the long bows, clean and sharp,
Rush forward, sped by tireless wings
That cleave their way into the wind
While long waves stretch away behind.

What grander sense of power than this
To feel the sea's strong shoulder pressed
Against the helm, as though 'twould wrest,
It from thy grasp; while salt sprays kiss
The wings that glance across the swells
And scuppers foam like boiling wells.

Ten miles to windward, cross and cross
The white fleet beats toward the mark,
While hemp and canvas strain. Now, hark
How as the glad waves toss and toss,
The bell-buoy breaks upon the ear
Its brazen note more clear and clear.

And now it mounts upon a swell,
Another reach and it's a-lee.
Now swirling in the heavy sea,
The leader turns, with sheets eased well,
And, the next moment, bursts her cloud
Of spinaker athwart the shroud.

Then like some downy, snow-white fleck,
She's blown across the blue expanse.
The fresh wind seems to pause in trance,
To those who stand upon her deck,
The seas to cease their headlong race
In homage to her matchless grace.

The breeze dies with the setting sun,
But not until the trembling air,
Ruffling the waters here and there,
Has wafted on its chosen one
Across a goal of gleaming gold,
And then the conq'ring pinions fold.

RACING AT MARBLEHEAD.

EASTERN Y. C. ANNUAL REGATTA, JULY 15-16.

IN spite of the great annoyance and disappointment caused by the absence of the outer marks on the first day of the Eastern Y. C. annual regatta, the racing as a whole may be considered a great success, as a good race was made in each class, and the wet jackets and cold rain of the first day were well paid for by the glorious weather of the second. The racing may be divided into four parts—that of the schooners, the larger single-stickers, the forties and the thirties. From the following list of entries it will be seen that, as usual, the turnout was but meagre, especially in the large single-stick classes, only Clara, Alga and Fanita being present; but the number and excellence of the smaller boats, as well as the close matching in the largest class of schooners, made the sport most exciting. The entries were as follows, those marked thus * not starting:

FIRST CLASS—SCHOONERS.

	Length.
Merlin, Col. W. H. Forbes	43.45
Sea Fox, A. Cass Canfield	91.43
Mayflower, F. T. Underhill	90.32
Fortuna, H. S. Hovey	94.25

SECOND CLASS—SCHOONERS.

Œnone, Col. Cochrane	79.60
Quickstep, Fred Grinnell	70.18
*Diana, J. C. Soley	41.60

FOURTH CLASS—SLOOPS.

Clara, Dr. J. C. Barron 54.90

FIFTH CLASS—SLOOPS.

Alga, C. A. Longfellow 51.83
Fanita, T. H. Shepard 50.80

FORTY-FOOTERS.

Verena, J. A. Beebe 47.00
Chiquita, A. Hemenway 46.88
Gorilla, R. P. Carroll 48.50
*Helen, C. A. Prince 46.20
Alice, P. D. Wheatland 47.00
Minerva, C. H. Tweed 46.07
Pappoose, Bayard Thayer 42.60

SPECIAL CLASS.

Kathleen, W. Whitlock 37.56
Saracen, W. P. Fowle 36.40
*Elf, W. H. Wilkinson ....
Harbinger, J. R. Hooper 27.10
Beetle, Curtis Guild 29.04
*Swordfish, J. B. Paine 29.80
Evelyn, W. D. Small ....
*Siva, H. D. Ward ....
*Duchess, Wood Brothers ....
*Crystal, E. J. Andrews ....

SEVENTH CLASS.

Ramona, W. N. & W. P. Bray 33.65
*Hilda, C. P. Curtis ....

The classes and prizes were—For schooners: First Class (over 75ft. w.l.), $250; Second Class, (over 50ft. and not over 75ft. w.l.) $125; Third Class (30ft. and not over 50ft. w.l.). $50. If three or more first class schooners complete the course, a second prize of $100 will be awarded.

For sloops, cutters and yawl: First Class (over 70ft. w.l.), $200; Second Class (over 61ft. and not over 70ft. w.l.), $150; Third Class (53ft. and not over 61ft. w.l.), $100; Fourth Class (46ft. and not over 53ft. w.l.), $75; Fifth Class (40ft. and not over 46ft. w.l.), $75; Sixth Class (35ft. and not over 40ft. w.l.), $50; Seventh Class (25ft. and not over 30ft. w.l.), $50. If five or more yachts in any class complete the course, a second prize of $25 will be awarded.

In addition to the regular prizes offered by the Eastern Y. C., through the kindness of Mrs. A. Cass Canfield the following cups were also offered for the best corrected time made by any yacht of the Eastern or Seawanhaka Corinthian Y. C., provided two or more yachts complete the course in competition for each: A cup valued at $250, to schooners of the first and second classes; a cup valued at $150, to sloops, cutters and yawls of the first class, third, fourth and fifth classes; a cup valued at $100, to schooners of the third class, and sloops, cutters and yawls of the sixth class and smaller.

Schooners of the third class to be rated at ⅞ their actual measurements.

The course was the usual triangular one shown in the diagram in our last issue, the start in this case being made to the S.W. of Halfway Rock, and the distance being: To S.E. mark, 12⅝ knots; thence to S.W. mark, 12 knots, and thence to finish, 11⅝ knots. The two outer marks were to be floats with a ball and flag on each, the S.W. being set ¾ knot E. of Harding's bell buoy. The full triangular course, 36¾ knots, to be sailed in either direction, according to the wind, was for all above fifth class sloops; the thirties and forties, as well as the 35ft. class, sailing out and back over one side of the triangle only. The start for the Canfield cups was timed from the gun, but 5m. was allowed in the start for the class prizes; the large schooners starting first, the second class 10m. later, the other regular classes 5m. after them all, and the special (30ft.) class 8m. later.

Sunday was spent quietly at anchor in Marblehead Harbor, a fine racing breeze blowing all day, and at evening there was fair promise of the best of weather on the morrow. At 4 A. M., however, a light rain began to fall, with the wind about E. by N., gaining in strength to a moderate breeze before the start and a lower sail breeze by the middle of the race. The fleet worked out about 10 A. M. and was off the start in good season. The signals on the judges' tug showed the S.E. mark as the first turn for the triangular course, and the S.W. mark as the outer one for the smaller classes. All hands were on the watch for a sharp start, and when the whistle blew at 11:15 the four big schooners came for the line on port tack, Fortuna leading, then Mayflower and Sea Fox, pushing each other, and Merlin last by a minute or two. A little later the two second class schooners, Œnone and Quickstep, crossed the line together, the former leading. Clara sailed alone in her class, but she was matched for the Canfield cup with the class below, Alga and Fanita. She and Alga crossed side by side, Clara to windward, while Fanita was a little late. Clara carried a working topsail, with small club on mast-head foot, and intermediate jibtopsail. Alga had much more than she should, with clubtopsail and jibtopsail, while Fanita staggered along under a single big jib. The small craft from the forties down started in another direction, having the wind so nearly abeam that it was a question whether spinakers or balloon jibtopsails were wanted, Alice and Harbinger setting the former and the rest carrying ballooners or No. 1 jibtopsails.

The schooners were soon lost in the mist, but as they hurried on Merlin gradually made up her lost ground, and finally caught the others. Mile after mile was sailed and still no mark nor tug was found, and after going some 4 or 5 knots beyond the position of the mark all gave up and started for home, the second class following their example. The three single-stickers, Clara, Alga and Fanita, had been making a good race of it, the narrow cutter gaining on the wider keel craft, while the centerboard boat was a poor third. Alga was handicapped by a clubtopsail which she was stiff enough to carry, but which held her back. Clara had a long lead about 10 miles out, when her topsail sheet parted and the sail was torn before it could be taken in. An effort was made to reeve a new sheet, but in a heavy sea it was a difficult matter, and she continued under lower sails. Alga started to lower her club to leeward and was soon in a box, with sheet and halliard started and the sail careening like a kite to leeward, but after a time it was safely landed on deck. Fanita held on for about five miles, making very poor work of it with her big jib, and at last turned and ran for home. Failing to find the mark and not seeing the leaders returning, Clara held on for about 16 miles and then ran back to Alga, hailing her to the effect that she was going home, but the words could not be heard on the other boat. Alga continued for a time, hunting for the mark, and then changed her course in the direction of the second mark. As soon as this was seen on Clara she too squared away and set spinaker and working topsail, the new sheet being rove off when before the wind. She ran for a long time in the heavy rain and dense mist, until finally Minot's Ledge Light was made out, when she came on the wind for the second mark. A heavy sea was now running and the wind was blowing very strong, so the topmast was housed. Alga was made out some distance inside of her, also on the wind. The pair sailed thus for a time until the Graves Buoy was picked up, nothing being seen of the mark for the very good reason that the tug had not set either raft. It was now late in the afternoon, and Clara was headed for home, Alga being still inside of her. The pair beat up past Nahant and Swampscott, Alga coming in a little ahead. On the long leg out to sea Clara had led Alga by about 10m. in 16 miles.

Thus far no race had been made, but the smaller craft were more fortunate, finding the Bell Buoy and turning that in place of the float, the leaders, Verena and Saracen, each losing a little time in hunting for the proper mark before determining to turn the buoy. The forties made a close start, Gorilla ahead and to windward, most of them carrying clubtopsails. Spinaker booms were dropped to port, but only Alice set a sail, and soon all were carrying balloon jibtopsails. The order at first was Gorilla, Verena, Pappoose, Minerva, Chiquita and Alice, but about 5 miles out Verena took the lead. When the lower mark was neared and it became necessary to take in kites for the beat home, the full force of the wind became apparent and the ballooners gave a great deal of trouble, getting in the water in several cases. Verena was first to jibe around the mark, the times being:

Verena	12 56 30	Minerva	12 58 07
Chiquita	12 57 10	Alice	1 02 30
Gorilla	12 57 10	Pappoose	1 03 47

Minerva had carried less sail down wind than any of the others and was fourth boat, a fact that troubled her skipper very little with 12 miles yet to go to windward in a strong breeze and sea.

Just after rounding Alice lost her owner, Mr. P. D. Wheatland, overboard from the counter, where he was at work on the mainsheet. As he had on thigh boots and oilers with heavy woolens beneath his case was very serious in the heavy sea. Those on board the boat were able to do very little to help him as she came around the mark in bad shape, but fortunately Pappoose, after leading Alice all the way, had been in trouble near the mark with her ballooner, so that Alice passed her. Coming up now a line was thrown from her deck to the struggling man, and he was drawn on board completely exhausted.

The story of the beat home is a very short one, simply that Minerva outsailed the centerboard boats so badly that no one questions the fairness of her victory, besides which she came through all right, while two of the centerboard craft, Verena and Chiquita, were seriously disabled in the sea, their boards being injured. Minerva made one long leg to Tinker's Island, then two short hitches more brought her to the finish, Gorilla, Chiquita and Verena each requiring three.

If Minerva's victory was a decided and undisputed victory for the keel cutters, the result in the 30ft. class was no less a point for the other side, as the two cracks of the class, the Burgess cutter Saracen and the Gardner cutter Kathleen, were badly beaten by a centerboard catboat, and in "cutter weather." Lest the friends of the sandbagger such as is known about New York and on all internal waters as a catboat should be too greatly elated, we must explain that this craft, though wide, shoal, and with a board, and by courtesy a catboat, is really a "morfydite" sloop, carrying jib, spinaker, and in some cases clubtopsail. The "Cape Cod catboat," of which several specimens have lately been seen about New York, is in a way the product of the Beverly Y. C., a part of whose races are sailed on Buzzard's Bay. The strong competition has had an effect on the local builders, and under encouragement of the club such fast craft as Surprise, Harbinger, Mucilage, Atala, A. P. E., Gymnote, Kiowa and Elna have been produced. These boats, though upward of two beams in length and of light draft, are necessarily able and seaworthy, on account of the rough water found where they are most raced. The rig, a cat mainsail set well forward, a large jib set on a long bowsprit without stays, a spinaker and a topsail, has very little top weight compared with a cutter or sloop, and is very handy, though the boats are hard to steer without the jib. Harbinger is 28ft. l.w.l., plumb stem and square stern, the latter quite wide. She has a large cockpit and a flush deck forward of it, with a good cuddy beneath. She steers with a wheel. In the last (full) Y. C. race Harbinger beat Nimbus, a well-known 33ft. sloop, and one of Shadow's rivals, by elapsed and corrected time; and on July 4, though handicapped by a collision which cost her a bowsprit and sent her jib under the keel where it fouled the board, she made a good race. Like most of her class Harbinger is ballasted with stone, which permits of a distribution of the ballast that is believed by the builders of these craft to be essential to speed and ease in rough water. She was built by Hanley, the builder of Surprise and Mucilage.

Ramona, in the 35ft. class, had a walk over, her opponent not appearing; but five boats started in the 30ft. class, Saracen, Kathleen, Evelyn, Beetle and Harbinger. Saracen took the start, with jibheader and second jibtopsail, Harbinger under jib and mainsail following. Kathleen evidently expected to carry a spinaker, but soon found her error and set a second jibtopsail. Harbinger tried her spinaker until the boom went in four pieces. Saracen gained on the run down, all having their hands pretty full in the heavy sea. Harbinger was next and then Kathleen, a little distance astern. After passing the Graves all hands turned to in good season to prepare for the beat home, the cutters housing topmasts, which put Harbinger, with small lower sails and no topweight, on more than an even footing with them. The times at Harding's Bell Buoy, which was turned in the absence of the proper mark, were:

Saracen	1 11 20	Kathleen	1 55 15
Harbinger	1 11 55	Beetle	1 21 15
Evelyn	1 15 16		

On the first long leg home Kathleen began to do better work and passed Saracen, running up on Harbinger when near Tinker's Island, and getting a good berth on the cat's quarter, both standing inshore on board tack. Then and Saracen had to go on port tack, off shore, to weather Tinker's Island, butting into the heaviest sea of the day, but to their great disgust the cat held her starboard tack around the island and in smoother water. Harbinger finished first, while Kathleen headed Saracen to the line, but was beaten on allowance. Beetle and Evelyn did not finish, the former springing her masthead and being towed home. The full times are as follows, as given last week:

40FT. CLASS.

	Start.	Turn.	Finish.	Elapsed.	Corrected.
Minerva	11 31 21	12 57 59	2 58 18	3 22 18	3 19 14
Gorilla	11 30 28	12 57 20	2 56 28	3 26 28	3 25 28
Chiquita	11 31 45	12 57 05	3 04 32	3 34 32	3 32 14
Verena	11 30 49	12 57 00	3 09 35	3 39 35	3 37 15
Pappoose	11 31 03	1 05 30	.. ..	.. ..	.. ..
Alice	11 31 55	1 02 25	.. ..	.. ..	.. ..

35FT. CLASS.

Ramona	11 32 41	.. ..	3 39 45	4 09 45	.. ..

35FT. CLASS.

Harbinger	11 36 19	.. ..	3 31 43	3 56 43	3 37 56
Saracen	11 35 40	.. ..	3 45 49	4 00 09	3 58 50
Kathleen	11 35 51	.. ..	3 34 56	3 59 56	3 59 05
Beetle	Disabled.				
Evelyn	Not timed.				

Minerva wins the cup offered by Mrs. Canfield, the corrected times being: Minerva 2:19:14, Kathleen 3:41:14.

The disgust and disappointment of the regatta committee and the yachtsmen over the conduct of the tugboat captain was most emphatically expressed when all reached the club house, and it is proposed to sue the owners of the tug for the loss. The club steamer, with a number of ladies and members on board, was out all day, but nothing in the way of a race was visible after the start. It was determined to sail the race of the larger boats next day, and Mr. Bayard Thayer, owner of Pappoose, offered a special cup, to cost $100, for the forties to try again for.

During the night the weather again changed, and the morning was fair and pleasant as any one would wish, with a nice sailing breeze from N.W. Again the fleet worked out to Halfway Rock for the start about 10 A.M., but several were missing. Fanita was not visible, evidently having enough on the first day, so Alga had a walkover in her class, but was matched with Clara for the Canfield cup. Gorilla's owner had left on the previous evening before the special race was arranged; Alice and Helen did not enter, and Chiquita could not raise or lower her centerboard after the hard race of Monday. Clubtopsails were barred on the schooners, but Clara and Alga each carried one as they maneuvered about the line. A one gun start was the order in each of the classes for the Canfield cups, the regular club prizes being given for the usual start with 5m. interval. The starting line was long enough and all conditions favorable, and the start in each class was very fine. That of the large schooners was by all odds the best piece of schooner racing seen for a long time, in fact the present was the only schooner race sailed this year which was worth looking at from start to finish. The four yachts crossed the line together, with an interval of 31s., while in the second class the difference between the two boats was but 9s, and with the singlestickers but 13s.

The course this time was the reverse of the previous day, sailing first to Harding's Bell Buoy and then to the S.E. mark, a tug; the two forties being sent off free to the latter mark first. The steam yacht Oneida was kindly offered by her owner, Mr. E. C. Benedict, to the regatta committee, and followed the race closely. The wind was quite light at the start, blowing W.N.W., with a little more weight at times inshore, and very light on the second leg off shore.

All went over on starboard tack, Sea Fox, Merlin, Mayflower and Fortuna, in order, Mayflower carrying balloon jibtopsail and the rest No. 1 jibtopsails in addition to balloon maintopmaststaysails. Merlin, being to windward on the line, soon drew ahead, with the Fox on her weather quarter, while Mayflower and Fortuna were busy with each other a little astern. The wind was stronger inshore, and all hugged in close to Nahant, passing well inside the Graves. Fortuna and Mayflower luffed out and finally took the lead of the others, easing off a little to make the mark, which was turned as below. In the second class, Quickstep had the weather berth at the line and held it for several miles, stopping all attempts of the larger boat to pass her to windward, but at last Œnone ran through her lee and left her a little. Clara and Alga also started close together, the former to windward. She gained steadily from the start, the pair taking a direct course for the mark instead of running inshore with the schooners. The forties went off in another direction, sailing for a time with spinnakers to starboard, but finally Verena lost her centerboard and was obliged to retire, Pappoose also giving up the race. The times at Harding's Bell Buoy were:

Fortuna	12 27 02	Œnone	12 50 21
Mayflower	12 38 03	Quickstep	12 52 44
Merlin	12 39 17	Clara	12 57 45
Sea Fox	12 40 43	Alga	1 02 00

After a jibe spinakers were set to port and Sea Fox at once gained on the leaders, soon taking first place. Quickstep, too, pulled up, heading Œnone, while Alga left on Clara. The times at the second mark were:

Sea Fox	2 43 33	Quickstep	2 57 30
Merlin	2 45 25	Œnone	2 59 08
Fortuna	2 48 33	Clara	3 01 15
Mayflower	2 53 15	Alga	3 10 24

Quickstep had broken the gooseneck of her spinaker boom and was delayed for a time in setting the sail, but still managed very handily to pass her rival. The last leg was, as it proved, a little more than a very close reach for all but Clara, the cutter jamming up for Half Way Rock on one tack, while all the rest made two and some three. Sea Fox held Merlin over the last leg, leading her in by less than 2m. Quickstep had the race beyond question with an allowance of nearly 12m., but she managed to win on elapsed time as well by a clever maneuver. Failing again to pass her to windward Œnone ran through her lee and ahead, but when the latter had tacked and the pair met again Quickstep crossed her bows. Both were now very near the line and Quickstep could not weather the rock, so she tacked just to windward of Œnone and sailed along the line, the other not being able to head her nor willing to go astern. When she was ready Quickstep came about and crossed the line, having forced her rival to keep on a little too far to cross ahead of her after tacking. Clara had not been held up as closely as she might have been on the first part of the leg and had to nip up to weather the rock, but she cleared it without a tack, Alga just missing it and having to make a hitch to get by. The full times were:

FIRST CLASS SCHOONERS.

	Start.	1st Mark.	2d Mark.	Finish.	Elapsed.	Corrected.	Can'l'd Cups.
Merlin	11 15 55	12 39 17	2 45 25	4 21 38	5 05 43	5 04 50	5 05 45
Sea Fox	11 15 53	12 40 43	2 48 38	4 19 55	5 04 02	5 01 22	5 02 15
Mayflower	11 15 58	12 38 03	2 53 15	4 32 03	5 16 05	5 12 30	5 13 28
Fortuna	11 16 24	12 37 02	2 48 33	4 32 57	5 16 33	5 16 33	5 17 57

SECOND CLASS SCHOONERS.

Œnone	11 27 28	12 50 21	2 59 08	4 45 28	5 20 28	5 20 28	5 06 17
Quickstep	11 27 37	12 52 44	2 57 30	4 45 05	5 20 00	5 08 25	4 54 14

FOURTH CLASS SLOOPS AND CUTTERS.

Clara	11 30 34	12 57 45	3 01 15	4 50 34	5 20 34	5 20 34	5 20 34

FIFTH CLASS SLOOPS AND CUTTERS.

Alga	11 30 47	1 02 00	3 10 24	5 05 33	5 35 33	5 35 33	5 29 28

The last column gives the corrected times for the Canfield cups, reckoned from the starting gun of each class. The allowances in all classes were increased by ¼ as the race was sailed at a greater speed than 6½ knots. Sea Fox wins the class prize, $250; Quickstep wins the Canfield cup for schooners, the class prize, $125, and the Puritan cup for the year, for best corrected time over the course for yachts of the Eastern Y. C., with rig allowance. Clara is not enrolled in the club, but she makes the best corrected time over the course after giving the rig allowance to the schooners. The race was a fair one in every way, the Marblehead course, though liable like all others to calms and fogs, is beyond question the finest and fairest in the country, with a minumum of tide, deep water all over it, straight legs and little to break the wind. Sea Fox won fairly on her merits, after as fine a race as has been sailed for a long time. Merlin did well, especially when it is considered that she, as well as Quickstep, went through that most trying experience of new sails and gear in a N.W. wind. Mr. Burgess sailed on her in this, her first race. She is a wooden craft, designed by Mr. Burgess for Col. W. H. Forbes, and is 112ft. over all, 90ft. l.w.l., 25ft. 9in. beam, 9ft. 3in. draft, with a centerboard of the usual form, coming up to the deck. She is painted white and has the fashionable clipper stem and a single mosepole.

The honors of the second class go to the handsome little Quickstep, a new boat designed by Mr. Burgess for Col. Frederick Grinnell, and built in steel by Piepgrass. One is apt to be misled in judging of the speed of a yacht by the form of her topsides, but before the race Quickstep attracted the eye at the first glance as the handsomest in sheer and the fashioning of the counter of all Mr. Burgess's large yachts, and after the race she showed that she was as fair below as above. She is a centerboard boat, 65ft. l.w.l., with trunk cabin, designed for a fast cruiser, a very good type of boat for the purpose, and every way preferable to a single-sticker of the same size. The sheer is very fair and graceful, with but a moderate curve, while the counter is cleaner about the bulwarks than any of the older boats, with a marked improvement in appearance. She defeated her keel sister Œnone very easily, in spite of the difference in size, both on even as well as corrected time.

Alga, the rival of Clara for the Canfield cup, is also a keel, one of the new Burgess 45-footers. With her present rig, though by no means a small one, she cannot be called a racer in comparison with the latest forties, but is a fine type of boat, and it will be a great pity if the class is ruined by the racing fever and an excess of sail. Her present sail plan is but little greater than the last forties, some 200ft. less than Liris, in fact, if we are correctly informed. Her dimensions are l.w.l. 45ft., beam 15ft., draft 8ft. 3in. Below she has the best arrangement we have yet seen in any boat of her size, a fine cabin with a permanent berth built in on each side, with closets, bookcase, stove, etc.; a large after cabin, and ample room forward for pantry, ice chest, galley and forecastle.

Most of the forties are by this time pretty well known to our readers, but Verena is a new boat, an improved Nymph, the dimensions being the same, l.w.l., 40ft., beam, 14ft. 5in., draft 6ft. She is a handsomer craft than Nymph, both above and below water, and from her sailing thus far a great deal was expected of her. In the first race she moved very fast in the light air and held first place until she lost the wind, but in the second race she did but little, wrecking her centerboard in some way, though it was not discovered until the following day that anything was wrong. Her poor performance might be laid to some unusual accident to the board, but considering that her sister boat Chiquita, built last year, a deeper boat with a smaller board, also wrecked hers, the most reasonable inference is that in such powerful craft, with big spars, the centerboard is a serious element of weakness, and that in each case it succumbed to the strains incident to hard racing in a heavy sea. Considering the character of Minerva's victory over Gorilla as well as Verena and Chiquita, the honors of the race of Monday must go to the keel, while even making allowance for a fluke on Saturday Minerva has the Hovey cup and did some good sailing in order to win it.

Between Saracen and Kathleen there is evidently little to chose; the former was beaten in New York, on unfamiliar courses and among strange boats, by the latter, and at Marblehead the beating was reversed under similar conditions. Saracen is not only a well-sailed boat, but she is sailed by a small crew, only six being allowed in the Corinthian Y. C.; but this crew has sailed with Mr. Fowle for a long time in the old Saracen, and is well used to working together. Kathleen, on the contrary, has been handled in her New York races by a crew of ten, brought together this spring for the first time. The first race was a hard one in every way for the visiting boat—a tired crew, only a few hours to prepare for the race after a trying cruise, and a new and perplexing course; but the second race was much fairer. The honors are now fairly even between the two, and a series of matches would be very interesting; but it is doubtful, though Kathleen will be East for some time, whether she can command a full racing crew.

The question between the small cutters and the Cape cats is a very interesting and by no means a simple one. The two types are so far different that it is difficult to compare them, and it is also an open question whether they should race as one class. In weather where the cutters must house topmasts her small sail plan and light weight aloft is a great advantage, but how it would be when the deep boats could carry the kites that they are sparred and measured for is another question; or even what the result would have been on Monday had the course been a dead hammer to windward in the sea that was running.

The details of the racing, though in new hands, were this year very well arranged, and the regatta committee, Messrs. Charles H. Joy, T. Dennie Boardman, J. S. Fay, Jr., R. D. Sears and William S. Eaton, Jr., have nothing in the way of blunders or neglect of duty to reproach themselves with. The measurements and allowances for all courses were ready in advance, and the racing throughout was well conducted.

BEVERLY Y. C.—147th Regatta, Second Cup Race, Marblehead, July 20.—The club met with the worst and most aggravating weather on July 20 that it has yet encountered. It had been blowing hard S. by E. all through the previous day, and during the night was almost a gale. The day opened with a very strong S. by E. wind, a pouring rain and a very heavy sea; it seemed certain to be a repetition of Monday's weather. Only the heavy weather boats put in an appearance, everybody being soaked, but expecting a good time. Just before the start wind died suddenly to a dead calm; sun came out very hot, while ugly black clouds threatened a squall. Elf withdrew just before start, and the following drifted over the line, some with bows to port, others to starboard, it being absolutely a flat calm: First class, Saracen; second class, Swordfish and Marguerite; third class, Nerina, Wraith, Kathleen and Kiowa; fourth class, Dolphin. A breath from N. E. caught Nerina, Kathleen and Wraith, and sent them up a trifle on Swordfish. Marguerite withdrew. Dolphin seemed to gain on Kiowa, but it turned out that she was anchored and Kiowa was going stern first. After half the allowed time had run out and boats were two-thirds way to first mark, Nerina withdrew, followed by rest of third class. They held on but failed to make race on time. It will be resailed July 26.—X. Y. Z.

NEW YACHTS.—Lawley has finished up all of the spring work except the Owen 45, which is now in frame awaiting a purchaser. In the big shed is a 28ft. l.w.l. keel cruiser, designed by Mr. Burgess, a strong, staunch and roomy little craft with good headroom under a combination skylight and companion. Near her is a centerboard 34, with lead keel, hollow S section and hard bilge, the sheer outline being similar to Mr. Burgess's centerboard forties. The lead keel has also been run for a new forty, a centerboard similar to Verena.... Boyle of East Boston, is busy with a centerboard jib and mainsail boat for Messrs. Small. She will be 24ft. over all and 19ft. l.w.l.... Williams is busy with a 20ft. catboat for Mr. C. E. Turner, the keeper of the Bug Light.

GREAT HEAD Y. C.—The second championship regatta is postponed from July 17 to Aug. 16.

MINERVA.

THE leading feature of this season's racing is the new 40ft. class, and among the large fleet of new racers that adorn it the little Scotch cutter Minerva is certainly the most prominent thus far. The fleet itself, including twenty yachts of the same length, none of them over three years old, and all built for speed, has never been equalled in the past history of yachting, and while as yet the racing has not been as hot as it should be, and some of the boats have failed to enter more than once or twice, it is far more instructive and conclusive than in any class in the past. It is too soon yet to pick out the ultimate winner, but it is easy to see that Minerva stands a very good chance for first place at the end of the season, and that the boat which will beat her must begin very soon and sail very fast. Whether or no she proves in the end to be the fastest of the fleet, she is a most remarkable craft, and well deserving of careful study by all who are interested in the improvement of our yachts.

Two points about her are worthy of special notice; she represents the first serious attempt by a skilled designer to build a fast boat with a moderate sail area under American rules; and also she is in every respect an honest, strong and safe vessel, no sacrifice of strength being made for the sake of a gain in lightness. There have been many yachts in the past on this side of the water with small sails, and on the other side the narrow cutters have carried rigs of very modest proportions, but the whole tendency of American designers has been toward larger rigs and more powerful models, the winning boats of one year being simply larger on the same measurement than those of the preceding year. This is plainly shown this year in such craft as Maraquita, Tomahawk and Chispa compared with Baboon and Xara of last season; to say nothing of Liris, a still more extreme craft. With the same problem before him as that at which Messrs. Burgess and Gardner were working, Mr. Fife has sought a very different solution, and it would seem thus far with complete success. In place of great beam, 13 to 15ft., he has taken a moderate amount, 10ft. 6in.; on the same extreme draft, a little over 9ft., he has arranged his lateral plane in a different form; above the water he has been content with a moderate freeboard of about 28in.; and in place of 3,400 to 3 600ft. of sail he has taken but 2,700it. Assuming that the narrow boats of six or seven beams to length were bad, it has been the fashion of Americans to jump to the general conclusion that to be fast a yacht must be very wide, at least 5½ beams, and any one who has dared to insinuate that the new yachts, from Volunteer to Nymph and Verena, were too beamy, has been scoffed at as a "cutter crank."

As we have repeatedly pointed out, there is a very wide difference between the 15ft. beam of Galatea and the 23ft. 3in. of Volunteer; the 17ft. of Fanita and the 7ft. 2in. of Ulidia; and the 13it. 6in. to 14ft 6in. of the new Burgess forties compared with a narrow cutter of the same length. At the time when the close matches between the very narrow cutter Clara and the wide Cinderella were attracting so much attention (in December, 1886) we published a very handsome design by Mr. Will Fife of a moderate Clara, built to race under the New York and not the old tonnage rule, and with 11ft. 4in. beam in place of the 9ft. 1in. of Clara. There can be no doubt that such a yacht would be very successful here as a racer, to say nothing of her space, accommodation and economy of running, the sail area being about that of Maraquita or Tomahawk, though she would be 13ft. longer; but none of our acute yachtsmen or designers took the hint, it was left for Mr. Fife himself to put the principles of the design in wood two years later. How successfully he has done it is proved by Minerva's performances thus far, her merits being fully conceded by all.

The fact that the new yachts of all classes are too large and powerful for their length, too deep ,and too heavily rigged, has been fully recognized by all intelligent yachtsmen and designers for the last two years, and yet it never seems to have occurred to any of them to try a more moderate type of cratt. Proposals in plenty have been made to change the rules, but no one has cared to try whether anything but extreme beam and immoderate sail could win under the present conditions. It is more than likely that important changes in the rules will be made at the end of the present season, but in view of what Minerva has done and is likely to do it seems probable that less radical changes will be necessary than were at first contemplated.

As matters now stand, Minerva is as fast as any of her class under the New York rule, and able to give her time to them, but this is only half the story. If she were a mere shell or racing machine her speed might count for little, but on the contrary she is a remarkably strong and handy little ship, as her long voyage across the Atlantic has proved. We understand that Mr. Fife's contract called for the delivery of the yacht safely in American waters, and he evidently proposed to take no risks on light build or flimsy construction for the purpose of winning races. The frame is of oak, of liberal scantling, with planking 1½in. thick of elm, pitch pine and mahogany, the latter from the waterline up. The planksheer is of teak, and with the deck is 1½in. thick, while the bulwark is about 5in. high and 1½in. thick, capped with a neat elm rail. The coamings and deck fittings are of teak, and all remarkably neat and shipshape. The channels are of steel plate, the bowsprit is fitted with turnbuckles and legs so as to house in for one reef, as in most American forties. The turnbuckles are small affairs of gunmetal, on the outboard end of the bowsprit shrouds. The windlass is one of Reid's patent, and the mast is fitted with Pagel's patent mast winch.

If Minerva has somewhat less room below than some of the overgrown monsters which are compressed into a length of 40ft. on the loadline, she has ample and comfortable accommodations, and all that can be reasonably expected on the length. Entering the main companion, there is a space 3ft. long, by way of steerage, on the port hand abreast the ladder being a large toilet stand and bowl, with running water, with linen closet below; while on the starboard side is a large water closet. The after cabin has ample standing room under the deck, and is fitted with two permanent berths, besides lockers and closets, making a very cosy room. The main cabin has a good breadth to the floor and the usual arrangement of sofas and cellaret lockers, with closets above the latter for china, etc. In the center is a swing table, with room to pass on each side. The finish below is in mahogany, very neat and attractive. The fore part of the boat contains, besides the forecastle, a galley, ice chest and conveniently arranged pantries, there being ample headroom from the stem to the after bulkhead for the whole length of the boat. In material and workmanship, Minerva will compare favorably with any of the American forties; while as to her strength and seagoing powers, she has stood a test that few of them would care to be put to, having crossed the Atlantic under her own canvas in thirty days, from Fairlie, Scotland, to Boston.

We have heard but one opinion as to her appearance, all conceding that she is as handsome as any if not the handsomest of her class, both in hull and rig. She has a very long clipper stem with neat figurehead and trailboards, a long overhang aft, but so nicely proportioned that it does not appear excessive, while her sheer is straight forward and moderately curved aft, being fair throughout, and with no exaggerated features. The freeboard is low compared with the home boats of the class. The rig is the conventional cutter, but with laced mainsail and bar bobstay in place of the old bobstay tackles. Minerva's cost was probably about $5,500 at her builders, or under $6,000 delivered in New York or Boston. A 35ft. yacht of similar build and design would cost about $3,500 and a 30 about $3.000 on the other side.

Our reports of the races thus far show what Minerva has done, but we quote the following from other journals, whose views differ from our own on many points, and who certainly can not be accused of any partiality for such yachts as she. The Boston *Globe* says: "Minerva was doing wonderful work, outpointing and outfooting the fleet, and so much so that she crossed the finish line just 4m. 10s. ahead of her nearest competitor. When Capt. Barr was asked after the race how she did it, he could only say that she seemed to be faster than the rest and so won."

The Boston *Herald* says: "Minerva was showing what she could do in such a sea and wind. There she was marching out from the others, outwinding and outfooting them all. She carried her sail well, and, although she dragged her boom through the water at times, this did not seem to stop her. It was a grand rush, and the others were not in it under the severe conditions. Gorilla was beating Cniquita, and the latter was too much for Verena. Minerva outpointed and outfooted the centerboards. The order on the way home was Minerva, with Gorilla between her and Chiquita, Verena holding the leeward position of the four. Minerva crossed the line a winner, sailed to a handsome victory by the skillful hand of Capt. Charles Barr. It was no walkover, gained by chance or luck, but an honest victory, and one which means more than a dozen victories gained in light winds and flukes.

"Chiquita and Verena did not do so well as Minerva, and made one more tack than she did to reach the finish line. Minerva is a fast one, and she showed yesterday that, with her slack bilge and small beam, she could carry her sail better than the coarse bilge and wider beamed boats.

"In summing up the races sailed, a fair judgment would be that Minerva is a very fast boat and one it will be hard to beat. In strong winds and heavy sea is her best play, and if she is beaten, it will be in light airs. Her record thus far has been a remarkable one, and she seems to win all the cups that may be offered in her class, especially under yesterday's conditions."

The Boston *Post* speaks as follows: "Minerva sailed grandly. She went through the water very fast, and not only outfooted the others, but pointed better, and altogether made much better weather. The others seemed to sag to leeward, and made heavy work in the seaway. Two miles from Harding's, Minerva went to the lead, which she increased continually to the finish. On her first hitch she made Tinker's Island, and from there only two short tacks were needed to take her to the line, which she crossed nearly five minutes ahead. The other yachts could only make Tinker's island on the first hitch, and they were obliged to make three tacks before crossing the finish."

The Boston *Herald* of July 21, in summing up the races, deals with Minerva as follows: "Coming to the forties, one finds data and facts to work on. It will not now do to make the unreserved statement 'that Minerva will show up only in light winds,' as two most prominent yachtsmen have said, for the facts are strongly against it, and the result has proved that the Burgess or any other boats have a better chance against Minerva in light airs than in anything else, as the performance of Verena with Minerva in the race for the Hovey cup fully shows. Minerva is a cutter pure and simple, so are all the other forties, so far as rig goes, and they are in no particular like the old American sloop. Minerva is the first 40-footer that Fife has built for American waters, still she beats a fleet of a dozen or more of American design in the first month of her racing. To say that Fife could not improve on Minerva would be unfair, and not giving him due credit for his intelligence and experience in building this type of boat. By the wind, where the centerboard was expected to outwind the cutter, Verena and Chiquita failed, and came out, not only beaten, but disabled, with broken centerboards and part of bulwarks on Chiquita carried away. Close hauled they were not in it with Minerva. They could not lie so high and were not so comfortable or easy in a seaway. Verena was crippled on account of her board, and she was badly managed and handled, and allowance should be made for this. This much is known, however, Verena did not fetch as high in two boards as Minerva did in one, and Capt. Barr says: 'Had not our compass gone wrong, Minerva could easily have fetched higher than she did, because she could have been sailed closer.' The centerboards suffered with the keel-boats as to breakdowns, for none of the latter came to grief, while Verena and Chiquita met with mishaps. In no item or particular has Minerva an advantage over our forties more than the rig. On her weight aloft is everything, and every extra ounce of weight has been done away with. Her rigging is smaller and weighs less, and still is stronger than the American forties. She has a comparatively short lower mast, which measures four feet less from deck to hounds than Mariquita, Gorilla or Tomahawk; also a shorter bowsprit, less sail area and narrower beam. She has a snug lower sail plan, smaller than on any of our forties, while she has a larger topmast. Take her mainmast. It is smaller in diameter, her gaff is also smaller, and her spinaker pole is very light. Her topmast, though longer, is smaller than the American forties. Instead of having a knife edge on the lead keel, it is very wide at the bottom, and is full 20in. amidship. The lead keel is not put on parallel with the rabbet, but runs diagonally, thus lowering the center of gravity of the lead keel. Her mast also rakes aft. She has more outside lead, with the possible exception of Liris, than any of our boats. Thus far Minerva has shown up better than any of her class, though Liris and Tomahawk have yet to be heard from in future races."

Minerva is likely to sail in most of the races to come and if she does as well in them as she has thus far she will stand at the top of class in racing honors.

EASTERN Y. C. CRUISE.

ON Wednesday morning the united fleet of the Eastern and Seawanhaka clubs sailed from Marblehead for Bar Harbor, the immediate destination being the Isle of Shoals. To enliven the cruise Mr. Bayard Thayer offered a prize under the following conditions:

"A purse of $250 will be awarded the schooner in the first and second classes of the fleet, which shall make the best average record in the daily runs, with time allowance, according to the Eastern Y. C. table. During the cruise of the two clubs all yachts are to sail in cruising trim and to carry no more than the regular crew, but a pilot may be carried. Clubtopsails shall not be used. The first yacht at the finish shall anchor, so as to define with the mark previously agreed upon, the finish line, and shall time all yachts crossing it thereafter, including the 40ft. class. She shall show by day her ensign at the main truck, and at night her side lights immediately below her anchor light, the red above the green. Except as above the conditions shall be governed by the sailing regulations of the Eastern Y. C."

Mr. P. D. Wheatland also offered a cup for the 40ft. yacht making the best average record. The day was clear and bright, with a smooth sea, the wind being very light from N., working to the eastward. About 10:30 A. M. the Nooya, steam yacht, Mr. J. M. Sears, ran out of the harbor, in company with Dagmar and Radna, and anchored off Half-way Rock, forming a starting line. The signal to get under way came from Fortuna, Clara being the first yacht to leave the harbor. The three forties, Alice, Gorilla and Pappoose, soon followed; then came Hanniel, steam yacht. The big schooners Gitana and Dauntless were anchored off the mouth of the harbor, and both weighed anchor together, but it was a long time before either gathered way. Gitana finally worked out, but Dauntless lay across the narrow harbor for half an hour before she was finally filled away and moving. Meanwhile the little Burgess schooners, Monhegan and Viator, and the cutters Zigeuner and Medusa passed out, followed by Ruth, Mystery, Nebula, Vixen, Clytie, Fortuna, Œnone, Quickstep, Adrienne, Sea Fox, Crusader and Mayflower. The latter two left the fleet for the westward. Before the fleet, now in a long line from Marblehead to Half-way Rock, had crossed the starting line, a very violent storm of rain and hail came up, with thunder and lightning in abundance. A small centerboard yacht, the Mist, was capsized off Egg Rock, sinking and leaving her crew of two to save themselves by means of cork cushions, while the schooner Adrienne took a bad knock down, starting for Boston after she righted to repair damages. After the storm the weather cleared again and the fleet reached Isle of Shoals safely. Booth Bay was made on Thursday and Rockland on Friday, the fleet being detained there over Saturday by fog, and only reaching Bar Harbor on Sunday. Kathleen had stayed behind at Marblehead, but caught up with the fleet at Rockland.

CAPE CATS AND CUTTERS.

Editor Forest and Stream:

In looking over your account of Eastern Y. C. race of July 15 you seem to me unfair to the "big Cape cat Harbinger," when you say: "But she was inside the islands in smooth water out of the heavy sea."

Any one who did not see the race would infer from this that she had smooth water for a large portion of the race. Now, the facts are, Harbinger is at least 2ft. shorter on waterline than the others, has no overhang and a much small sail spread. All the boats ran 12 miles to Hardings over exactly the same course without any lee whatever, then had to beat back, a long and short leg.

The first long leg, just 10½ miles, took them to the outer end of Tinker's Island,- it was entirely open and the same for all. As the wind was parallel with the coast there was little or no lee to be had except behind Tinker's Island, which projects from the shore. Kathleen and Saracen tacked at outer end of island, while Harbinger held on through the lee of Tinker's in smooth water, tacking across the bar at inner end of island.

Now, Tinker's Island is less than one-third of a mile long; Harbinger had the advantage of the difference between rough and smooth water for this distance only. Boats now had to sail three miles to the rock. Harbinger's starting point being one-third of a mile nearer shore, but all were off mouth of Beverly Harbor and none of them under a lee. Saracen and Kathleen tacked again in shore, one-half mile beyond Tinkers, into the same water Harbinger had, but from Tinkers to Half Way all had to meet a heavy head sea. Harbinger got some advantage no doubt, but the race was won, bar accidents, long before she parted company with the others. Harbinger lost her spinaker in run out, getting it into the water; this did not help her. FAIR PLAY.

[As we were too far distant to see the end of the 30ft. race we were obliged to depend on the statements of others. Harbinger's performance in any case during the whole day was good enough to stand on its own merits, even though she had been beaten by the larger boats, and as it was she would have won on time, even though she had not headed the cutters at the line.]

DORCHESTER Y. C. CRUISE.—The annual cruise of the Dorchester Y. C. began on July 20, the first port visited being Portland, where a race for a $50 cup, offered by Com. Soley, will be sailed by the fleet of the Dorchester and Portland clubs. The fleet will spend about 10 days in cruising along the Maine coast and back.

NEW YORK Y. C.

A MEETING of the New York Y. C. was held on July 18 at Delmonico's with Com. Gerry in the chair, the following members being present: Ex Com. James D. Smith, chairman of the America's Cup Committee; Sec. J. V. S. Oddie, Edmund C. Stanton, Frederick B. Fiske, Stephen Peabody, ex-Com. S. Nicholson Kane, E. E. Chase, F. W. J. Hurst, John Hyslop, E. S. Auchincloss, William E. Iselin, R. S. Church, R. Underhill, John E. Brookes, Edward M. Brown, Chester Griswold, S. H. Nichols, John M. Wilson, John H. Bird, J. Frederick Tams, Robert Inman and L. H. Smith.

The following report and correspondence was then presented by the America's Cup Committee: The America's Cup Committee have the honor to report that the challenge made by the Royal Yacht Squadron, on behalf of the Earl of Dunraven for the America's Cup, has been withdrawn. To this herewith submit the entire correspondence. In their letters of July 16 to the special committee of the Royal Yacht Squadron, and also to Lord Dunraven, they felt it incumbent upon themselves to show that the last statement in the letter from the special committee of the Royal Yacht Squadron, viz., that "in the event of winning the Cup they would be compelled to insist upon receiving more favorable terms from a challenger than those under which they challenged," is a clear contradiction of the terms of the deed of gift, because it gives to the club challenging and to the club holding the Cup the right to make the match on any terms or conditions satisfactory to both parties; thereby giving the holder the right to make any concessions if willing to do so. We therefore submit that a lamentable ignorance is betrayed as to the nature and terms of the deed, or such a statement could not be made at the very moment that the New York Yacht Club was giving terms for a match different from those contained in the deed of gift. With this your committee's functions end, We ask to have our report accepted and the committee discharged.

JAMES D. SMITH, Chairman.
J. R. BUSK.
RUTHERFORD STUYVESANT.
WILLIAM KREBS.
PHILLIP SCHUYLER.
GOUVERNEUR KORTRIGHT.
ELDRIDGE T. GERRY, ex-officio.
LATHAM A. FISH, ex-officio.
ARCHIBALD ROGERS, ex-officio.
J. FRED TAMS, Secretary.

NEW YORK, July 16, 1889.

Richard Grant, Esq., Secretary Royal Yacht Squadron, London:

SIR: I am duly in receipt of your note of June 27, forwarding a communication of the same date from the special committee of the Royal Yacht Squadron appointed to decide any question that might arise relative to the challenge of the Royal Yacht Squadron, on behalf of the Earl of Dunraven, for the America Cup, and I inclose herewith a reply to the same, which please deliver to the committee. I have the honor to be your obedient servant,

JAMES D. SMITH, Chairman.

TO THE ROYAL YACHT SQUADRON.

NEW YORK, July 16, 1889.

DEAR SIRS: I have the honor to acknowledge the receipt of your communication of June 27 last through the Secretary of the Royal Yacht Squadron, and I note with great regret that you are unable to confirm the challenge of the Royal Yacht Squadron on behalf of the Earl of Dunraven for the America Cup.

The members of the New York Yacht Club and American yachtsmen generally were looking forward to the contest with much interest and pleasure, and will be disappointed at this result.

To correct the misapprehension which appears to exist in the minds of your committee and to prevent, if possible, the recurrence of the same, the committee of which I am chairman feel called upon to refer to the last paragraph of your communication and to point out to you that the new deed of gift, to the terms of which you object, expressly provides that "the club challenging for the cup and the club holding the same may, by mutual consent, make any arrangement satisfactory to both, and also any and all other conditions of the match," etc., so that, in the event of the Royal Yacht Squadron being successful in winning the cup, it would not be compelled to insist upon receiving more favorable terms from a challenger than those under which it challenged, and I trust you will pardon me for adding that my committee believe that if opportunity were given other objections to the new deed of gift would be found susceptible of easy explanation. I have the honor to be, dear Sirs, your obedient servant, JAMES D. SMITH, Chairman.

To Messrs. CHARLES BARING, JOHN MURHOLLAND, ALLEN YOUNG, C. B., Special Committee of the Royal Yacht Squadron.

TO THE EARL OF DUNRAVEN.

NEW YORK, July 16, 1889.

MY LORD: I have the honor to acknowledge the receipt of your letter of the 24th of June last. I have also received a letter from the special committee of the Royal Yacht Squadron, appointed to decide any question that might arise concerning the challenge made by them on your behalf for the America Cup.

You are doubtless familiar with the contents of this paper, and it was with profound regret that I learned from it that the special committee were unable to confirm the challenge made on your behalf for the America Cup.

American yachtsmen were greatly interested in the proposed match, and are much disappointed at the result, especially as at this period of the negotiations it was entirely unexpected.

The action of the special committee appears to be based upon objections to the terms of the new deed of gift, and as the only one of the objections mentioned by them is founded upon a misapprehension, I cannot refrain from expressing to you the belief of my committee that if an opportunity had been offered the difficulties in the way of completing the arrangements for the match might have been removed.

As it is, however, the whole matter has come to an end, as have also the functions of the committee of which I am chairman. I am, consequently, unable to say anything to you concerning other races to be sailed.

The entire correspondence will be referred to the New York Y. C. at a meeting to be held on the 18th inst., and I trust the suggestions made by you will receive favorable consideration.

I desire to express for myself and other members of my committee the hope that we may have the pleasure of seeing you on this side of the Atlantic during this summer. I have the honor to be yours very truly, JAMES D. SMITH, Chairman.

To the Right Honorable the Earl of Dunraven.

The report was subsequently modified by substituting for the sentence following "if willing so to do" the clause "and we fail to understand their misconception on this point," after which it was adopted and the committee discharged.

The following resolution, offered by Mr. J. F. Tams, was also adopted:

Resolved, That the New York Y. C. do not put up a special cup for competition in a match race with the Valkyrie, as suggested in Earl Dunraven's letter of June 24, 1889, to the chairman of the America's Cup Committee, but that all the club events be opened to him, and that the Earl of Dunraven be so notified by the secretary.

On a motion of ex-Com. S. Nicholson Kane, chairman of the Regatta Committee, that committee was authorized to spend $600 for cups as first and second prizes, to be raced for during the coming cruise by single stickers of the 70 and 40ft. classes; after which the following gentlemen were elected: F. L. Osgood, F. P. Sands, Henry E. Jones, Wm. H. Hollister, John Mason, Lansing Lamont, David J. Jackson, W. E. Pearl, John J. Kane, Wm. Butler Duncan, Jr., Richard Suydam Palmer, Mary B. Mollins, Hugh Cochrane, Paul Eve Stephenson, Fordham Morris, F. M. Jenks, L. W. Coe, Edmund Warren, Willoughby Weston, Henry A. Bishop, J. Edward Addicks.

A VERY POOR EXCUSE.—While no one disputes the fairness of Minerva's victories, it is said by way of excuse that she is in better form and is better handled than the rest of the fleet. Such an excuse as this is worse than a beating, and speaks little for the skill of the skippers on the other forties. Capt. Charles Barr, who commands Minerva, is a young man who has yet to win his reputation as a racing skipper, having sailed, we believe, three or four races in Shona in the past three seasons, besides three races in Minerva this year. There is no doubt that in his hands Minerva is kept in perfect shape, but it is too soon for the older and more experienced men in the other forties to admit that they are behind the young Scotchman in keeping up or handling their boats. In the Hovey cup race she was sailed for the first time by Capt. John Barr, of Clara, and she suffered at the start by setting her No. 1 jib and large foresail, neither of which had been tried on her before, and which, even in the light air, made too much headsail. She also carried a No. 2 clubtopsail at the start, doing much better later on when it was shifted for a No. 1. Some of the new boats have been seriously handicapped by the late dates at which they were completed, but there are others for which no such excuse can be urged, though not more than three or four of this year's and last year's boats together are yet in fair racing form.

ATLANTIC Y. C. CRUISE.

ALTHOUGH the carefully arranged programme of the Atlantic Y. C. was not carried out, some important changes being necessitated by the weather, the cruise was a complete success, a goodly number of yachts following Com. Hogan's flagship Cavalier from Whitestone to Newport. The original plan was to rendezvous at Whitestone on July 12, sailing to Black Rock next day, Saturday, remaining over Sunday, and running to New London on Monday, racing to Shelter Island on Tuesday for cups offered by the Commodore; thence sailing to Stonington on Wednesday, Newport on Thursday and New Bedford on Friday, disbanding there. The fleet gathered at Whitestone as per orders and sailed on July 13 with a light S.W. wind for Black Rock, the following yachts being present: Chispa, Gem, Arab, Mabelle, Fanny, Anaconda, Beatrice, Roamer, Athlon, Republic, Venitzia, Concord, Mouette, Cavalier, Fearless and Azalea. The run was a scrub race, each striving to be in first, though no prizes were offered. The times of arrival at Black Rock were:

Fanny	2 52 00	Concord	3 31 00
Azalea	2 58 30	Beatrice	3 23 00
Fearless	2 56 30	Arab	3 34 30
Athlon	3 01 00	Roamer	3 29 00
Chispa	3 06 00	Polly	3 33 00
Cavalier	3 08 00	Venitzia	3 12 00
Shamrock	3 12 30		

The flagship Daphne, of the Larchmont Y. C., with the cutter Oriva, now owned by Mr. C. C. Munroe, Nymph, Curlew and several others of the Larchmont fleet were at anchor, being on the club cruise. In the evening a ball was given at the George Hotel. Daisy, Stella and Olga joined the fleet here. Sunday was spent in port, service being held by the Fleet Chaplain, Rev. W. H. Thomas. In the afternoon several of the smallest yachts started for the Thimble Islands in order to break the long run to New London.

Monday morning brought such a storm from N.E. that part of the fleet decided to remain at Black Rock, but the little Chispa was promptly away when the signal was given, followed by Anaconda, Fanny, Athlon, the Cavalier, Roamer, Azalea and Venitzia. The wind and sea increased during the morning until Anaconda, after reefing, was glad to turn tail and run for Black Rock again. Concord also had enough, running back to the anchorage, while Fanny ran into Bridgeport. The Commodore finding the fleet so scattered put into New Haven and set the wires at work to find out how many were safe. Only two yachts reported from New London, Athlon and Chispa, the latter a forty, all the rest had given up and run to leeward for shelter. Athlon held on, though the weather was far from pleasant, and Mr. Lawton kept his little ship going under gaffmainsail when the big schooners Azalea and Fearless had had enough. The fleet was scattered all along the Connecticut shore, at Black Rock, Bridgeport, Morris Cove, Thimble Islands, Sachem's Head and New London, straggling into the latter port during Monday night and Tuesday morning after the storm had abated. Cavalier and Azalea had a private race from Morris Cove to New London, the latter winning. Gem and Roamer had lost topmasts during the cruise, but joined at New London after making repairs. The race to Shelter Island for the Commodore's cup was sailed on Wednesday, the start being made at 10:06 A. M. The yachts were close-hauled on the first leg, making several tacks to weather Plum Island. At times there was breeze enough to take the topsails off Athlon and Fanny. The full times of the race were as follows:

SCHOONERS BETWEEN 50 AND 63FT.

	Start.	Finish.	Elapsed.	Correct'd.
Azalea	10 14 36	1 21 10	3 06 34	3 08 34
Fearless	10 11 00	1 29 15	3 18 15	3 15 25
SLOOPS BETWEEN 54 AND 71FT.				
Fanny	10 12 50	1 04 50	2 52 00	2 52 00
Athlon	10 13 27	1 23 19	3 09 52	3 08 28
SLOOPS BETWEEN 47 AND 54FT.				
Anaconda	10 12 20	1 07 45	2 55 15	2 55 15
Venitzia	10 13 37	1 51 10	3 37 33	3 36 19
Roamer	10 14 58	1 25 09	3 10 11	3 06 50
SLOOPS BETWEEN 41 AND 47FT.				
Concord	10 09 40	1 48 40	3 39 00	3 39 00
Stella	10 13 43	2 08 24	3 54 41	3 50 48
SLOOPS BETWEEN 35 AND 41FT.				
Chispa	10 07 15	1 15 09	3 07 54	3 07 54
Polly	10 09 12	1 48 42	3 39 30	3 39 22
SLOOPS BETWEEN 30 AND 35FT.				
Daisy	10 07 55	1 40 41	3 32 46	3 32 46
Beatrice	10 07 22	1 58 59	3 51 37	3 51 37
SLOOPS BETWEEN 25 AND 30FT.				
Arab	10 09 15	2 04 54	3 55 19	3 55 19
Mabelle	10 08 35	Not timed.		

Azalea beats Fearless 8m. 51s., Fanny beats Athlon 16m. 28s., Anaconda beats Roamer 11m. 35s., Concord beats Stella 11m. 43s., Chispa beats Polly 31m. 38s., Daisy beats Beatrice 18m. 51s., and Arab beats Mabelle.

In this, her first race, the keel forty Chispa made a very good showing with the large centerboard boats.

At 5:30 A. M. on Thursday the fleet was under way for Newport, the wind being very light. After noon it dropped entirely, and the yachts drifted nearly all night, Roamer, Anaconda, Fanny, Azalea and several others reaching Newport before midnight, and the rest straggling in next morning. A meeting was held on board the flagship, at which it was decided not to proceed to New Bedford, as the weather was bad outside, and the fleet was formally disbanded at Newport. The last event of the cruise was a race on Saturday from Newport to New London between Anaconda and Fanny in a strong N.W. breeze. Anaconda won. Cavalier and some others will go on to Bar Harbor, several of the yachts have returned to New York, and others are still about Newport and New Bedford.

RHODE ISLAND Y. C. ANNUAL REGATTA.

THE Rhode Island Y. C. sailed a very successful regatta on July 16, the third annual championship for cups in each class, as follows: Class A, the Low cup; Class B, the Flint cup; Class C, under 24ft., the Anderson cup; each cup to be won three successive times to become the property of the winning boats. A prize was also given by Vice-Com. F. P. Sand, to be awarded to the yacht in Class A winning under the sail area and waterline measurement proposed by Mr. Burgess. The courses were for Classes A and B from between judges' boat and signal off club house, to and around stakeboat off Gull Point, mouth of Potter's Cove, leaving same on port, and return to starting point, distance 20 miles; Class C, from between judges' boat and signal off club house, to and around red spar buoy off Nayatt Point, leaving same on port, back to starting point, distance 8 miles. All boats to go on channel sides of buoys, beacons and lighthouses, except that can buoy 1 mile south of Conimicut Light, and spar buoy north of Providence Point, might be ignored. The weather was clear with moderate N.W. wind, but quite puffy during the race. The chief interest was in the performance of the new Burgess 40, Awa, a yacht similar to Nymph and Verena. She only left Lawleys's a few days before, and was not yet completed. As she had neither spinaker nor clubtopsail these sails were barred by agreement with her rivals. The summary was as follows:

CLASS A.

	Length.	Start.	Finish.	Elapsed.	Correct'd.
Millie	44.10	12 31 45	3 01 07	2 29 22	2 29 22
Awa	42.10	13 32 43	3 02 14	2 29 31	2 27 29
Peri	38.06	12 23 35	3 07 43	2 34 08	2 27 06
Mignon	37.07	12 34 08	3 16 37	2 42 29	2 34 19
CLASS B.					
Diamond	26.02	12 35 43	3 21 18	2 45 35	3 45 05
Mascot	26.05	12 36 46	3 31 08	2 54 22	2 54 22
CLASS C.					
Faust	23.03	12 42 20	2 26 40	1 44 20	1 44 20
Victor	22 06	12 40 29	2 22 25	1 41 56	1 41 11
Gladys	22.01	12 40 09	2 27 02	1 46 53	1 44 40
Jessie	21.00	12 40 29	2 27 14	1 46 45	1 46 26
Arnold	18.09	12 40 51	2 36 17	1 55 26	1 50 26
Vision	18.05	12 40 51	2 35 08	1 54 17	1 48 51
Jaunty	17.05	12 40 50	2 40 32	2 09 02	2 02 14
Edna	21.09	12 40 05	2 27 42	1 47 37	1 46 14

Winners—First prize: Class A, Peri; Class B, Diamond; Class C, Victor; Sand's prize, Millie. Regatta committee, R. H. Carver, Owen L. Leach, Frank E. White, Wm. G. Brennen.

Peri is an old-style centerboard boat, built by Alonzo E. Smith, and is but 37ft. l.w.l. Under Mr. Sand's ownership she has been greatly improved, and is kept and raced in excellent form. Awa was greatly handicapped by new sails and gear and lack of trial. Peri would have won the Sand's prize, a handsome pair of marine glasses, but her owner was the giver of the prize, so it goes to Millie. The open regatta of the club will be sailed about Aug. 27, and will be open to the 40ft. class. Awa will doubtless be in fair condition by this time, and a race between her and the keel forties would be very interesting.

GREAT HEAD Y. C. CRUISE.—On July 13 the fleet of the Great Head Y. C. visited Marblehead, continuing on the following day to the eastward.

CANARSIE Y. C.—The postponed regatta of the Canarsie Y. C was sailed on July 20 over a 12 mile course from Canarsie around the Rockaway Inlet Buoy and return. The wind was light N.W. The summary was:

FIRST CLASS.

	Start.	Finish.	Corrected.
Kate, W. Tillotson	3 37 30	5 54 05	2 22 37½
Peri, W. Sheppard	3 28 04	. . . .	. . . .
Amaranth, P. Ketchum	3 39 40	6 00 50	. . . .
Ethel, A. Kalenbarth	3 37 20	6 00 47	. . . .
Edda, T. H. Jers	3 37 30	. . . .	. . . .
Yucatan, E. X. Kan	3 38 25	. . . .	2 18 55
Crygnet, F. Gallagher	3 40 50	6 00 30	. . . .
So So, D. Brinsley	3 38 00	. . . .	1 56 55
Clara D., W. H. O'Donohue	3 38 00	5 37 00	2 14 02½
Ajax, F. Ketchum	3 38 00	. . . .	. . . .
Amora, F. Wrischirg	3 38 00	5 46 20	2 07 27½
SECOND CLASS.			
Siren, W. A. DeLong	3 42 10	5 50 35	2 02 20
Sardine, H. Rigby	3 40 40	5 43 30	1 57 20
Bulkur, F. C. Ninderman	3 41 35	6 00 30	2 18 55

E. H. Brewn, Israel Fisher and John H. Isco were the judges.

RACING AT DUXBURY.—On July 20 the annual Standish House regatta was sailed in a strong S.W. wind, the times being:

FIRST CLASS—10 MILES.

	Length.	Elapsed.	Corrected.
Pearl, H. M. Freeman	17.06	2 04 12	1 21 51
White Swallow, E. M. Watson	18.09	2 20 00	1 20 00
Marion, J. M. Watson	19.02	2 01 50	1 22 10
Hildegarde, W. T. Whitman	19.02	1 57 50	1 17 50
SECOND CLASS—8 MILES.			
Carrie R., John C. Dawes	16.02	1 38 30	1 00 34
Ida B., F. H. Pratt	17.02	1 57 26	1 23 01
Kittie, L. H. Delano	15.03	1 57 18	1 19 53
Solitaire, S. C. Winsor	17.01	1 32 25	0 57 53
Mayflower, W. Porter	16.00	1 50 15	1 16 53
Ben Harrison, S. Richards	17.09	1 47 16	1 12 26
Myra, W. Beadle	16.03	Not taken.	
Henrietta, A. M. Watson, Jr	16.09	1 46 40	1 11 38
THIRD CLASS—8 MILES.			
Sadie W., W. J. Turner	15.01	2 01 35	1 23 53
Marie, Frank P. Speare	14.11	Not taken.	
Clear the Track, Oscar C. Hunt	15.04	1 53 35	1 16 19
Josephine, J. Burnes	17.00	2 02 25	1 27 45
Paul Revere, Clarence Smith	16.00	1 53 53	1 22 21
Jessie, I. Morton	15.03	1 53 37	1 16 12

In the third class the first and second prizes were not declared, owing to dispute in measurement. The judges were John A. Irwin, Sidney M. Hedges and Wm. J. Wright.

SOUTH BOSTON MOSQUITO FLEET.—The second championship race was sailed on July 20 in light and variable winds. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Skipper, J. R. Tufts	14.11	1 21 48	1 21 43
Minnie, J. Bertram	15.00	1 24 04	1 24 04
Sprite, H. M. Wells	15.00	1 24 24	1 24 24
Enigma, J. F. Small	14.04	1 26 10	1 25 26
Victor, C. A. Borden	14.10	1 26 37	1 26 26
Lucy, W. H. Ransom	14.10	1 29 02	1 28 51
Nellie, J. O. Leary	14.11	1 31 02	1 30 57
Nina, J. P. Bullard	14.11	2 00 22	2 00 17
SECOND CLASS.			
Grace, F. Borden	12.02	1 41 38	1 38 08
Sadie, F. W. Green	11.11	2 03 48	1 59 43
Baby, J. W. Bragdon	12.11	Capsized.	

The judges were Messrs. J. S. Barry, M. W. Ransom and W. O. Elliott.

SAVIN HILL Y. C.—The third regatta of the Savin Hill Y. C. was sailed on July 20, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
White Fawn, W. C. Cherrington	25.01	1 55 00	1 31 45
Merlin, A. C. Peters	22.08	Withdrawn.	
SECOND CLASS.			
Peri, Frank Driscoll	19 00	1 45 30	1 20 54
Jester, W. H. Besauck	19.02	1 50 30	1 25 55
Petrel, W. Briggs	18.00	1 54 00	1 28 14
Avis, I. H. Odell	18.09	2 01 30	1 35 17
Siko, A. McInnes	19.10	2 00 03	1 38 02
Elsie, W. B. Bird	17.04	2 04 30	1 38 00

The judges were Messrs. R. H. Rice, Frank Driscoll and E. P. Sharp.

ROYAL CANADIAN Y. C.—Club race, 25ft. class, July 13. Courses triangular; start from front of Town Club to south spar buoy, thence back through west gap past a buoy in front of Island Club; thence to a buoy half way between Gooderham's wharf and east gap. Distance 10 miles. Weather very wet and almost dead calm at start. Wind, none at start; a slight breeze from S.W. sprang up at 3:45.

	Elapsed.	Corrected.
Mischief, F. Thomas	3 11 57	3 11 51

THE DOUGLASS YACHTS AND BOATS.—One of the largest and most comprehensive catalogues of yachts and boats that we have yet seen is that of the R. J. Douglass Co., of Waukegan, Ill., in which is described every sort of pleasure craft from a twenty dollar skiff to a fully equipped keel cutter costing $2,000 and over, besides a large line of steam craft. The firm builds every description of rowing boats, hunting skiffs, gigs, dinghies, racing shells and barges, besides which it has established an enviable reputation, especially in the West, for canoes, having introduced some very good models of its own, a number of them being of a class in favor on the lakes, from 33 to 40in. beam. The firm has made a specialty of one class of boat that is a branch of its business which is likely to prove very successful. This is the designing and building of cruising and racing yachts ready for shipment to any point, the only limit of size being that of the ordinary freight car. These yachts are of excellent design, with lead or iron keels and any rig desired, but mostly the cutter, and are constructed of the best materials. The smallest size is the 18ft. keel cruiser or canoe yawl, and the largest stock size is keel cutter 34ft. over all, 27ft. l.w.l., 9ft. extreme beam, 6ft. 6in. draft, 7 tons displacement, 3½ tons of lead on keel. One member of the firm is a trained designer and a practical sailor and cruiser as well, and under his care the models of all the boats built are constantly tested and improved. With new shops and a complete wood-working plant, as well as a large stock of seasoned material the concern is able to turn out a far better craft than the average small builder and at a less cost. The list of steam yachts, screw, sidewheel and sternwheelers is quite a long one, including all varieties of launches for hunting, pleasure steaming or working purposes.

INDIAN HARBOR Y. C.—A regatta under the auspices of the above club will be sailed at Greenwich on Aug. 3, open to the following classes of open boats: First—Jib and mainsail boats 23ft. and under 27ft. Second—Jib and mainsail boats 20ft. and under 23ft. Third—Catboats 23ft. and under 27ft. Fourth—Catboats 20ft. and under 23ft. Fifth—Catboats 18ft. and under 20ft. Sixth—Catboats under 18ft. (special class). Boats to be classed on their mean length, *i. e.*, load waterline, to which is to be added one-half of overhang. The regatta will be sailed under the rules of the New York Y. R. A., which allow shifting ballast, one man for every 3tt. of sailing length in addition to helmsman, for crew, and regulate the time allowance by the Herreshoff table. The course will be from Rockport Point twice around Captain's Island and return; distance about 10 miles. Suitable cups will be given as prizes to the winning boat in each class in which two boats start, and a second prize will be given in each class in which five boats start. Owners of boats in any class desiring to enter for a sweepstake of $25 each, to be sailed for in addition to the regular prizes, are requested to communicate with the committee on or before Aug. 1. A fee of $1 must accompany each entry. Entries will close at 10 o'clock on the morning of the regatta. Race will be started at 1 P. M. Regatta Committee—Richard Outwater, Henry O. Asten and F. B. Jones, Silleck House, Greenwich, Conn.

"YACHT AND BOAT SAILING."—We have received a copy of the sixth edition of this successful work, containing a number of additions, mostly in the direction of small racing and cruising craft, such as have become so popular within the last few years, both here and abroad. The new British rule on the one hand, and the latest development of yacht designing in America on the other, have tended to a close similarity of types, and in the small classes at least there is now little difference. Such yachts as Minima, by Mr. Arthur E. Payne, Madcap, by Mr. C. P. Clayton, and the design by Mr. Dixon Kemp for a 5-rater, are not widely different from the new thirties, such as Saracen and Kathleen, in model. A class of small yachts that is this year in great favor in England, and that would prove equally popular here for young Corinthians, is shown in the Madcap, a keel cutter, 21ft. 8in. l.w.l., 7ft. 3½in. beam, and 5ft. 4½in. draft. These craft, of which a number have been built this season, are known by the rather undignified title of "hencoops," owing to the fact that they are all raced by ladies. They sail about Southampton and are of 2½ rating, Madcap being allowed 700ft. of sail. Her owner, Miss Mabel Cox, has won quite a reputation as a successful racer, and now a number of other ladies propose to emulate her. A very interesting series of designs by Mr. Watson gives some valuable details of the double-skin construction, the yacht being a very stylish single-hander, of 20ft. l.w.l. and 6ft. 4½in. beam, a miniature Thistle in outline and finish. The famous Thames racing gigs are represented by the remodelled Ruby and the Mystery, the latter a very curious craft with a deep forefoot and no draft aft, the rudder being very large. Among the other new designs is one by the author, Mr. Dixon Kemp, of a very powerful and handsome 19ft. gig for rowing and sailing, a class of boat that is adapted for pleasure or racing use in all inland waters. The older portion of the book has been revised and brought down to the present date.

SEAWANHAKA CORINTHIAN Y. C.—The new club book of the Seawanhaka Corinthian Y. C. shows a membership of 340, and a fleet of 138 yachts, including 22 steamers, 27 schooners, 32 decked keel yachts, 27 decked centerboard yachts, and 30 open yachts. Among other interesting matter the book contains the new routine for colors, salutes, etc., and a valuable article by Fleet Surgeon J. West Roosevelt, on the treatment of medical and surgical emergencies on yachts. The private signals are this year for the first time arranged on a new and very convenient plan, being grouped together by their colors instead of alphabetically.

YAMPA.—On July 19 at 2:30 P.M. the steel schooner Yampa, Mr. C. W. Chapin, anchored off Staten Island after a voyage of 33 days from Havre, the wind being very light and ahead most of the time. The run across was made in better time, 9 days from New York to Fayal, whence she proceeded to St. Michaels and Madeira, making the run from the latter port to Cadiz, in 52 hours, logging 306 knots in 24 hours. Mr. Chapin and his two young daughters visited Paris from Cadiz rejoining the yacht at Havre for the return. Yampa is commanded by Capt. W. E. Eldridge, formerly with Mr. Chapin in the Julia.

CHANGES OF OWNERSHIP.—Puzzle, str., J. L. Mott to A. B. Claflin....Espirito, slp., G. L. Haight, to F. J. Adams....Flora Lee, skipjack, W. H. Packard, to C. D. Lanning....Mystery, steam yacht, N. P. Ryder, to F. W. Hurlbutt....Phantom, schr., H. D. Faulkner, to H. S. Parmlee....Beatrice, schr., J. H. Darsen, to C. A. Smith....Eugenie, steam yacht, H. E. Converse, to A. R. Culver.

AN AMERICAN DESIGN FOR ENGLAND.—Mr. Burgess has lately made a design for a 20 rating yacht for an English yachtsman, the yacht to be built in England. She will be about 43×13ft. l.w.l., and will race with boats about 2ft. longer and 3ft. narrower, such as Vreda, Dragon and Windward.

SOUTH BOSTON Y. C. CRUISE.—On July 20, pursuant to the order of Com. Fuller, the fleet was ready, but the bad weather prevented the review in the morning. It was held later in the day, after which the fleet sailed for Salem Willows, where a dance and illumination occupied the evening. The cruise will continue during this week.

LARCHMONT Y. C.—A very pleasant cruise through the Sound was made by the Larchmont Y. C. The fleet included the following yachts: Leona, Elin, Clochette, Triton, Vision and Mist, and sloops, Daphne, Nymph, Carrie, Oriva, Volusia, Amaranth, Mona, Undia and Narwhal.

ALVA, steam yacht, Mr. W. K. Vanderbilt, arrived at Newport on July 20. Nepenthe, sloop, Vice-Com. Richardson, reached New Orleans on July 12, after a voyage of 47 days from Boston, her best run being 194 miles in 24 hours.

MONATIQUOT Y. C.—The championship race will be sailed on July 27. Vice-Com. E. F. Linton has presented to the club three prize cups or other trophies to be sailed for by the different classes.

DEFEAT OF THE PARADOX.—The new lugger Paradox sailed her first races on Saturday and Monday in the regattas of the Royal Cinque Port Y. C., off Dover, being beaten each time.

OHIO Y. C. CRUISE.—The first cruise of the Ohio Y. C. was brought to a successful ending last week, Com. Ketcham, in the schooner Speranza, led the fleet.

FREDONIA.—Mr. Forbes's yacht-fisherman was at Madeira on June 22 about to sail for home via Teneriffe and Bermuda after a pleasant voyage out.

NEVERSINK.—The Norton yawl Neversink, commanded by Capt. Lawlor, reached Havre on June 28 after a successful voyage.

QUAKER CITY Y. C.—The second Corinthian races of the Quaker City Y. C. will be sailed at Riverton, on the Delaware, on July 27.

NEW YORK Y. R. A.—The programme of the Labor Day regatta has been issued, but we have not space for it this week.

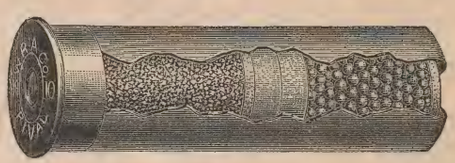
LYNN Y. C.—The regatta of July 13 was postponed, most of the fleet being absent.

QUEEN CITY Y. C.—A club by this name has just been organized in Toronto.

"Those were pretty good fish stories published the other day," remarked a Nashville gentleman, to a reporter of the *American*, "but there is a moderately young man in the real estate business in this city whose experience can discount any I ever heard of. Here, last week, he was fishing down in the Big Harpeth River, and had just settled down to business, when a fish came along and ran off with his hook and line while he was killing it. He looked into the water and saw his disappearing tackle and saw myriads of fine fish sporting amid the waters. He had to return to Nashville at the close of that day, and it wouldn't do to come without something to show for his skill. Though his line was gone, he had plenty of hooks and bait remaining, and a desperate expedient flashed through his mind. Divesting himself of all his wearing apparel except the shirt, he carefully tore the rear of that useful garment into strips, and upon each he placed a baited hook. Thus equipped, he plunged in the stream and boldly made for the opposite shore. It seemed that he never had so hard a swim in his life, but he finally reached the bank and unloaded dozens of the finest fish that you ever saw. When he swam back for his clothes he took off the hooks lest the accumulating weight of the fish might drown him. Those who are not in the secret regard his luck as phenomenal."—*Nashville Republican.*

Missouri is one of the few States in the Union which continue to pay bounties on wolf scalps. A St. Louis paper explains that during the war men were so busy hunting men that they paid no attention to wolves, which increased so rapidly as to make sheep-raising impracticable in some of the southern counties. In five years, from 1870 to 1876, the State paid out $1,500,000 for wolf scalps at $3 per scalp. The St. Louis editor says it will take another million and a half to exterminate the wolves of south Missouri.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.



THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

GURDON TRUMBULL'S

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Sheppard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, [illegible] of books of which the need is felt in every department of natural history.—*Troy Press.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

DODGE'S PATENT

Collapsing, Folding, Landing and Minnow Net Frame.

No. 1 represents the frame unfolded and expanded, ready for use. Can be unfolded and expanded with the net on the ring (in 30 seconds) by the same motion that is used to open an umbrella. The ring is 12in. in diameter, made of steel, broad and strong where it joins the staff, and narrow and light at the outer side. The other working parts are made of brass, nickel plated. Nos. 2 and 3 represent the frame collapsed and folded, staff unjointed ready to pack. Can be carried in tackle box, trout basket, grip sack or pocket.

PRICE COMPLETE, $4.00.
J. N. DODGE, 278 Division St., Detroit, Mich

LOG CABINS

AND

HOW TO BUILD THEM.

BY WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

FOREST AND STREAM PUBLISHING CO,
318 Broadway, New York.

Ligowsky C. P. No. 3

The only target having the patent

INTURNED EDGE.

2,000 shots out of each 1,000 targets on account of non-breakage in shipping, trapping and falling upon ground. The only target made with the INTURNED EDGE, producing the surest breaker when hit, and surest non-breaker when not hit. Our traps are sold for the sole purpose of shooting our targets.

PITCH YOUR TENT

on the Mountain, by the Lake or Stream, and have an enjoyable and economical vacation.

Send 15 cts. for large Illustrated Catalogue of Tents and Sportsman's Goods; also, "How to Camp, Where to go," etc.

49 DEARBORN ST., CHICAGO, ILL.

Increasing Sales Attest the Popularity of THE GENTLEMEN'S CIGARETTE.

SPECIAL FAVOURS.

Manufactured only by
KINNEY BROS.
(KINNEY TOBACCO CO. Successors). Also manufacturers of the Old Reliable
SWEET CAPORAL.

No Chemicals.

W. BAKER & CO.'S

Breakfast Cocoa

Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

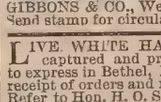
For Sale.

TROUT STREAM.

For Sale—1050 acres of land within four miles of the city of Cheboygan, Mich., on which there is five miles of the best stocked trout stream in Michigan; hatching house, two dwellings, ice house, barn, stables, etc., which cost over $3000, and forty acres of cleared land, all for $10,000; $3000 in cash, balance in five or eight years at 7 per cent. Ill health is the owner's only reason for selling. Apply to WM. ELLIOT, Box 204, Cheboygan, Mich. may16,3mo

Chinese Golden Pheasants.

Superb plumage; domesticated; $25 per pair; five pair $22.50; ten pair $20; cocks $12; chicks $12 a pair. JAMES MORRISON, Mr. Schieffelin's place, Tarrytown, N. Y. jy18,2t



FOR SALE.—HELGRAMITES FOR BASS fishing in quantities to suit customers. Price $2 per 100. JOHN SCOTTON, Nashua, N.H. jy18,2t

FINE HAMMER GUN

For Sale Cheap—A very fine 12-gauge hammer breechloading gun, made by E. & G. Higham, Liverpool, Eng.; cost $300; full pistol grip, weight 7lbs. 10oz., length of stock 14½in., drop at comb 1⁹⁄₁₆in., at butt 2³⁄₁₆in. For cash only. Address W. H. PIERCE, Peekskill, N. Y. 1t

Common Pigeons.

Old birds, good flyers. C. I. BLACKFORD, Bellefonte, Pa. 1t

Chester White, Berkshire and Poland China Pigs, fine setter dogs, Scotch Collies, Foxhounds and Beagles, Sheep and Poultry. Bred and for sale by W. GIBBONS & CO., West Chester, Chester Co., Pa. Send stamp for circular and price list.

LIVE WHITE HARES (*Lepus Americanus*), captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at $3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner. J. G. RICH, Bethel Me. dec16,tf

LIVE QUAIL,—SEASON CLOSED. Re-open Sept. 1. Send orders early. Other specialties, live deer and English pheasants. Also English partridge and pheasant eggs.
E. B. WOODWARD, Commission Merchant

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 1, 1889.

VOL. XXXIII.—No. 2. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 80 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

DOCKING TAILS AND CROPPING EARS.

IF we recollect rightly it is Hugh Dalziel who tells of a time in Great Britain when dogs without tails were exempt from taxation; and so to chop off a dog's tail was to lop off with it one's tribute to the crown. That time, if it ever existed, is now as hazy as the reign of good King Womba, and in the degenerate present the most that can be said in defense of docking the tails of dogs and cropping their ears is that fashion calls for such mutilations. And the whims of fashion are quite as apt to be dictated by perverted tastes as by good sense. Witness the docked-tailed horses of our avenues and the villainous high check-rein, both of them a reproach to humanity. The practice of docking horses' tails, it is true, is not without defence on the ground of utility; veterinary surgeons there are who aver that to cut the tail off short is beneficial to the physical condition of the horse. Nor are there wanting advocates of docking dogs' tails for hygienic reasons. The notion is entertained by many ignorant people, and stoutly enough defended, that a puppy's tail must be cut off because in the end of it is a worm, and this worm is the cause of distemper. Cut off the tail and thus remove the worm, say these sapient grannies, and the dog will never be ailing. This "vulgar error" of the worm in the end of the dog's tail is widely prevalent, and thousands of puppies have sacrificed their brushes in consequence thereof. A similar superstition holds with respect to a mythical worm in the cow's tail, which must be cut out to insure the cow's good health. It is not difficult to understand that the white cords of the tail, in dog or cow, might have been mistaken by an ignorant person for worms, and that in this way the curious belief about their removal may have arisen. But the strange thing is that intelligent dog owners will accept this ridiculous theory of the worm in the tail, when propounded by ignorant individuals whose opinion would be received on no other subject under heaven; and will countenance the mutilations which are based on the silly superstition.

Another reason given for docking the tails of sporting dogs is that when of reduced length this appendage is less subject to injury in the field. It is a common thing for dogs working in the brush to whip their tails so vigorously as to seriously wound them by the constant beating. The end of the tail becomes raw, and after working a rough cover the dog's sides and flanks will sometimes show the marks where the bleeding tail has whipped against them. If cutting off a few joints of the tail would remedy this laceration, the operation might be admissible, but experience demonstrates that the docking is not effectual to accomplish such a purpose. A dog given to whipping its tail in the brush so violently as to lacerate it will suffer whether the tail be of natural length or shortened by a few joints; of course if the mutilation be such as to leave only a stump of the tail, that remnant will be safe enough, but though a man may be content to drive sheep with a bob-tailed sheep dog, no one of good taste wants to follow a stump-tailed setter in the field.

It is well known that a greyhound's tail is of the greatest importance to it in directing its course and turning; a dog without this useful member would stand no chance to win a coursing match. It is quite reasonable to conclude that the tail of natural length serves a like useful purpose in other breeds. The rule is that nature does her work well, and if she has given dogs tails and ears, man with his notions and knives canot improve on nature.

Those who have read Théophile Gautier's chapters on his pets will recall a pertinent bit of testimony afforded by his experiment with a white rat. Acting on the prevalent notion that a rat would do better if its tail were cut off, Gautier deprived one of his rats of this appendage; but the effect was quite the reverse of beneficial; in spite of being lightened of his caudal extremity, this rat was always less agile than his companions, was wary in gymnastic exercises and often experienced a tumble; he was like a tight-rope walker without his pole, like a boat without a rudder; he would not venture on narrow ledges where his long-tailed fellows went with *sang froid* and safety; in short, he was a rat without a tail; a rat tinkered by man, and very much less of a rat than nature made him.

WAYS OF THE WOODCOCK.

IN his interesting paper on the woodcock, published in our Natural History columns, Mr. Brewster requests our views on certain habits of the bird. The two points of especial interest are the boring and the whistle, or twitter, so well known to shooters, and about which such diverse opinions are held.

We have only once seen the woodcock bore in the wild state. The bird, started by a companion, alighted within 6 or 8ft. of where we were standing, ran a step or two, stopped, turned its head on one side, stood so for an instant as if listening, and then plunged its bill into the mud. It at once withdrew it, and raising the point of the bill, appeared to be swallowing, but as its back was toward us we could not see just what it did.

We have, however, seen the woodcock bore in captivity. The operation, which was performed with great deliberation, was repeated many times, and was witnessed on several different days, being always done in the same manner. The bird introduced the point of his bill into the damp earth at an angle of about 80 degrees, and by a series of slow pushes buried it to the base. While doing this, his left foot was slightly advanced and his body inclined downward. When the bill was fairly buried, the bird stood perfectly still. He looked as if he were listening, and we thought it quite probable that he was doing so. It seemed likely also that he was feeling, employing both senses to detect any movement in the earth beneath him. The apparent sensitiveness of the bill in the woodcock, as in some other waders, appeared to us to justify the impression that the sense of touch as well as of hearing came into play. If the bird found no worm, he withdrew his bill, and again plunged it into the earth at a little distance further on. If a worm was felt, or some sound or motion indicated that one was near, he partly withdrew his bill, and, altering its direction, plunged it in again and drew out the worm. The operation of deglutition seemed to begin as soon as the point of the bill touched the worm. A movement of the bases of the upper and lower mandibles indicated that he had a worm, and as the bill was withdrawn the two came together again and again very rapidly, and almost as soon as the bill was fairly clear of the earth the end of the worm disappeared down the bird's throat. It appeared, when the bird made his first thrusts into the ground, as if they were tentative, a deliberate thrust followed by a moment of waiting, another thrust and then another wait, in all perhaps three or four motions before the bill was buried to its base. This slow action we took to be an exploration by the tip of the bill for motion in the earth, at first near the surface and then deeper and deeper. When the bird had learned that there was a worm in the soil there was no hesitation. The bill was buried by a sharp quick thrust, about which there was no uncertainty. After devouring all the worms that it could, this bird commonly cleansed its bill by means of its feet, and then washed it in water by gently shaking its head. This bird, which weighed six ounces, devoured eight ounces of worms in twenty-four hours.

The cause of the whistle of the woodcock has long been a mooted point. There is no doubt that in rising the bird makes a noise with its wings, which might perhaps be called a whistle, but the sound to which we refer is the well known ringing note, as often heard in the woodcock cover, and which sometimes closely resembles the twitter of the kingbird. A crow, a robin, an English sparrow and a pigeon all make a noise with their wings, and so does the woodcock, but this sound, we believe, is not to be confounded with the other and better known note of the springing bird. We said last week that we believed that this sound was vocal, and that we could give reasons for this belief, which appeared to us conclusive. We came to this conclusion in October, years ago, when we one day shot a woodcock and broke its wing close to the body. Having a puppy at home we captured the bird alive in order to work the young dog on it. While attempting to catch it in our hands it ran ahead of us, now and then springing into the air as a wounded bird will, trying to support itself on its uninjured wing, and at each attempt to rise from the ground whistling. To us it appeared impossible that this one wing, which from the circumstances could not have been moved rapidly or it would have turned the bird quite over, should have made this sound.

At another time we captured a wing-broken bird which we held in the hand in the house; by a sudden spring it slipped from our grasp and fell to a chair, a distance of a foot or two. As it struggled to release itself and fell, it uttered the well-known whistling note. Subsequently, when this same bird was released on the ground before the young dog, it sprang into the air, using its uninjured wing as before, and whistling. This we have seen a number of times, and with many different wing-broken birds. Again, some of these wing-tipped birds, in the thick grass and weeds of a yard, have made this whistling when it appeared to us an impossibility for them to have used their wings.

The vocal whistle of the woodcock and the whistle of its wings appear to us as different as the well known "scaip" of the Wilson's snipe is from the whistle of its wings. Most snipe shooters have seen a wounded snipe run on the ground, constantly springing into the air and uttering its cry. We have never heard it questioned that this call of alarm was vocal, and we believe that the twitter or whistle of the woodcock is in the same way vocal.

SNAP SHOTS.

THE presence in the Yellowstone National Park of Hon. S. S. Cox, of New York, as reported in our last number, will interest and encourage those who have long been hoping for legislation by Congress looking toward the protection and proper government of this reservation. It will be remembered that several years ago Mr. Cox, by his eloquence, defeated by an overwhelming majority a bill which authorized the running of a railroad through the Park. Since that time he has taken a great interest in Park matters, and it is believed that his present trip is made for the purpose of thoroughly informing himself about this region with a view to possible future discussions in Congress.

The world does not weary of Izaak Walton, nor do publishers tire of bringing out new editions of the "Compleat Angler." It is reported that James Russell Lowell has written a preface for a new edition which will be published in Boston next autumn.

The Sportsman Tourist.

SHOOTING ON MOUNT OLYMPUS.

BROUSSA, Asia Minor, Nov. 25, 1888.—Almost up to the day of my departure from home I was debating with myself whether to take rifle, rod and gun along with me, or devote myself in my travels wholly to the haunts of men. I meant to stay abroad two years, going through to Eastern Europe and on to Egypt, and it was dimly borne in upon me that my enjoyment of foreign cities would have an added zest if I could strike out of the regular routine of foreign travel occasionally and dropping down on some remote country place, devote a few days or a week to those sports in which, whether because of the sports, or the charms of the surroundings, I have spent perhaps the pleasantest days of my life. My hesitation was due to more causes than one. Firstly, I was in doubt whether in the over-populated countries of the Old World there was any fur, fin or feather left worth going after; secondly, if I took my guns, I must take all needed supply of ammunition along with me, for the probabilities were that I should find no cartridges to fit my weapons on the continent of Europe; and the possession of a few hundred cartridges might expose me to grave suspicion and possible detention. Finally, I determined to confine my ammunition at starting to fifty metallic shells for my Winchester (loaded), as many empty metallic shells for my 12-bore, a bullet mould for each, for I have great faith in the efficacy of a smooth-bore for big game at close quarters, and then it is so light and comes so readily to the shoulder! To this I added one canister of powder and half a bag each of Nos. 4 and 6 shot, with caps and recapping apparatus, so that I might be prepared whenever opportunity or inclination for sport might overtake me.

For fishing I brought two split-bamboo rods, light and heavy, with two spare tips for each, and plenty of tackle; and up to a week ago these last were the only portion of my outfit which had afforded me any amusement. I have had some very pleasant days' fishing in Germany, and might have had some shooting had it been later in the season; but I went on to Vienna—*lustiges Wien*—at the beginning of September, and spent six weeks there without the least desire to tear myself away from its charms. But even gay Vienna paled at last before the enchantment of distant lands, and by the middle of October I was gliding down the beautiful blue Danube on my way to the city of the Golden Horn, of dome and spire and minaret, the Constantinople of the Christian, the famous Istamboul of Moslem story. And now Constantinople, too, has been left behind, and presents to my mind nothing but a confused picture, in which the bright eyes of Greek and Armenian and Frankish women gleam sparkling through the shadows of the Christian quarter of the city.

Such pictures are not wanting here in this famous old city of Broussa, the old-time capital of the Moslem invader; but here nature triumphs, and always will triumph. In Constantinople the city is everything, the distant mountains and the Bosphorus are but accessories; but in Broussa the works of man pale before the grandeur of Olympia, before the calm sublimity of its snow-capped peaks rising above the rich, many-hued foliage of its forests; the autumn tints of its oak and beech and walnut and chestnut contrasting with the dark foliage of the pines above, and the pale olivaceous green patches of an intermediate belt, in which the boxwood tree grows in clusters or intermingles itself with the other hardwood trees, looking like olive groves in the distance.

Turning seaward, the eye from the city's elevation wanders away out over the broad expanse of the deep blue sea of Marmora, watches the ceaseless flow of its heaving, rolling waves, and insensibly comes round to the soft curved line where its waves lave the feet of the mountain below us and far away on either hand, and rests on the broad plain cultivated or dotted with fig trees and mulberries almost down to the water's edge.

The plain below the city and between it and the sea is largely devoted to agriculture, and the harvest being long past the fields are now for the most part bare, but the presence of innumerable groves of the China mulberry, grown by every peasant for silk worm culture, relieves the monotony; while from the level of the city upward the whole country is laid out in olive and fig and mulberry groves and vineyards, and divided by ravines, whose clear sparkling streams roll unimpeded down to and through the streets of the city to the sea. How deliciously cool are the streams of Broussa on a hot day! Fresh from the snows of old Olympus and flowing through shady forest and grove nearly their whole course. There is no need for ice-water in Broussa.

And yet it is a weary and a rugged course that these streams have wandered over on their way downward from the snowy crests above. One would hardly believe it sitting here at the window and looking up, but I know it. There was evidence of it in every aching bone of my body this morning, evidence of it in my thorough appreciation of rest, for I only returned last night from a week's outing among the secret defiles of its higher ranges, touching the snow line which from here I see so plainly.

Looking up, it appears to be but a pleasant half-day's climb to the snow line, and as to elevation, it is only ten thousand feet or say two miles high, and yet it has been a weary week's journey to climb to the snow line and back again. Why, it took a day and a half to walk down, and although I rode in the last six or eight miles of the journey last evening, I never felt so stiff in my life after a march as I did this morning. I took a cup of coffee in bed at eight o'clock, and lay lazily dreaming until eleven, before I got up to breakfast. Again I lay down for a couple of hours, before I summoned energy to go to the vapor bath, that luxurious institution in which one is exposed to the exhalations of nature's own vapors as they rise upward from the cavernous recesses of the earth through the floor of the building. I went through the vapors, my thews and sinews were kneaded, every kink and twist taken out of them, and then as I leaned back in my couch, lazily inhaled the smoke of my narghile and supped my fragrant mocha, I felt myself already in elysium, and could not help the spontaneous exclamation, "Bismillah, God is great!"

When I sat down last evening to the long-neglected duty of penning a letter to FOREST AND STREAM, I was animated by a sense of duty to my brother sportsmen at home, to give them the benefit of my experience, and be as it were a light to the path of those who wish to follow in my footsteps. I planned in my mind to give an account of flies cast upon the sparkling waters of rippling German streams, winding up with an account of my week's outing on the heights of my neighbor old Olympus, but there go more words to the telling of a story than I had any idea of, and looking back I see now that I ought to have told about the fishing by the way before I said anything about Broussa, and the classic mountain which looks down upon it, and now it appears to me that I missed the thread in telling my story and that it would be to violate every canon of the story tellers not to go back and pick it up. I have come down from the heights of Mount Olympus to the haunts of men, and your readers having been advised of the fact, are immediately interested in knowing what I did there. As to my experiences with the rod in the streams of the German fatherland months ago, they will perhaps be ready to listen to the narrative of them some other time, but for the moment their ears are not attuned to it. They are listening for the echoes of my rifle among the cavernous recesses of Mount Olympus, and they shall not be disappointed but let us go back and begin at the beginning, for "order is Heaven's first law."

Already while I was in Constantinople, through my Greek servant Timayanes, whom I had engaged as body guard, and who expressed himself ready and able to cook if required, I had begun to make inquiries about the prospects of shooting in the mountains. Plenty of quail and sober-colored brown pheasants were being brought into the market, but mountaineers who brought them in all agreed in the statement that there was nothing to shoot within three days' march of Istamboul, and that the upper tiers of forest which sheltered wolves and wild boar and occasional bear, were more accessible from Broussa. Arrived in Broussa I was delighted to find the statement corroborated, not merely by heresay evidence, but on the day after my arrival Timayanes brought me a man who lived in one of the highest villages up the mountain side, and who reported stags and boars and wolves in the forest, which were frequently killed when a leading village headsman of those parts, one Ahmed Khan, turned up with men and dogs for a grand battue; he added further that of his own knowledge there were wild goats among the rocks on the grassland above the forest, and ptarmigans under the snow line, but nothing to compensate one for the rough climb, excepting brown bears, which it was better for the solitary sportsman to leave unmolested. This was on Saturday, and having got precise instructions as to the route to Ahmed Khan's village, I had a letter written to him to the effect that I proposed being at his place on Monday evening and hoped that he would arrange a battue for Tuesday, and that he might charge me with a day's rations for any number of men and dogs employed in beating, not exceeding fifty of each. On Sunday, shortly after midday, Ahmed Khan's messenger arrived with a very courteous and satisfactory reply, and instructions to wait and guide me up the following day, and all necessary preparations being made and a lot of cartridges, both ball and shot, filled for the smoothbore, it was arranged to start at 9 o'clock the following morning and make a leisurely journey.

We were in the saddle about half-past eight, Agina, the guide, accompanying us on foot. Our road ran obliquely across the hill behind the city for a mile, and then descended into a ravine over whose bouldery bed ran a clear stream which looked very promising for fish. The whole country is laid out in vineyards and groves and gardens, the fig trees covering the rocky sides of the ravine. Crossing this we began a tolerably stiff ascent, after two miles of which we again got a view of the sea of Marmora, with Broussa some two thousand feet below us. Climbing on until we had reached an elevation of three thousand feet, we passed over the brow of the hill and began to descend. For two miles we went steadily downward before we touched a stream at an elevation of not more than a thousand feet above sea level. From this point out the ascent was gentle but steady, and by noon the groves and vineyards of the lower slopes were left behind. The hillsides were terraced for cornfields, and higher up was the woodland, large areas of which had been laid bare, and were evidently being still laid bare, for droves of donkeys and mules were continually passing us with their loads of firewood for the city.

At 1 o'clock we stopped at a mountain stream for luncheon, after which we again pushed onward and upward through the timber land, sometimes sunk in the deep recesses of the forest, at others getting a commanding view of the sea, and arrived at Ahmed Khan's village toward four in the afternoon after a march which I estimate from fifteen to twenty miles, and there was Broussa nestling at our feet barely four miles as the crow flies, and looking not more than two miles off.

Ahmed Khan was a fine looking old fellow, and received me very courteously, making numerous inquiries through my dragoman about my health, country and friends, and I having been previously instructed by the daughters of the hotel keeper at Broussa, who, by the way, is a German, made a series of similar polite inquiries in return. Then I turned the conversation to the battue, and was informed that all had been arranged, that five village headmen would turn out to-morrow, with as many guns and probably seventy or eighty followers and dogs. We are here, said Ahmed Khan, just at the upper limit of the range of both deer and bear, and below the region of the timber antelope (which latter, he explained to me, was a larger animal than the wild goat of the rocky cliffs above the timber), and the battue will cover a range stretching from the level of the village to about 1,500 feet below. The bears, too, my informant said, came down from the mountains at this season every evening, but for the most part return to the upper ranges in the morning.

My Winchester was produced and an effort made to explain its capabilities. I don't know with what success, but they all said Allah Akbash most emphatically, which means God is great, and this I understood as a polite way of suggesting that miracles were nothing to God, but that to fire a dozen times without reloading was something outside of human experience. The barrel was too short, too, for his approval, being some nine inches shorter than his flintlock, and he asked how far it would kill in a tone that implied that it might do for close quarters. Looking across the ravine at a big white rock, that I judged to be 400yds. distance, I challenged him to a trial of skill; but he said he had never tried shooting at that distance, which must be at least 600 paces. But he was anxious to see me try, and as there was still half an hour of daylight remaining, two villagers were sent across with instructions to go above and some fifty paces to the left of the mark and watch results.

They looked very small in the fading daylight, as they crawled up the hillside more than a quarter of an hour later, for the ravine was deep, and recollecting how apt one is to underestimate distance in mountain country, and attaching weight to the opinion of my host, I put up the 500-yard sight and aimed for the top of the rock. I sighted first in the middle and was slowly rising the muzzle when one of the two men shouted to announce they were in position. As I pulled the trigger I thought I saw something move on the top of the rock and come into my line of vision, and as the two men at once set up a continuous yelling, I reported that I had seen something move on the top of the rock, and had fired at it, but did not know whether I had hit it or not, and that indeed at that distance I could not say whether it was a deer or a bear.

It was quite dusk when the men returned, and reported that as soon as they got into position and shouted a bear rushed out and made straight for the top of the rock, and at once rolled over and down its face before the report of the rifle reached them. Following in its wake they found blood, and one of them brought a small stone, the other a leaf, each with a drop of blood on it. I need hardly tell you what a sensation I created nor the amusement with which I listened to the exclamation, "Bismillah! Allah Akbar!"

My supper soon arrived, and consisted of a pilaff, or great dish or rather tray, of boiled rice, moistened with butter and rendered savory with raisins, pistachios and cardamoms, and crowning this a hindquarter of kid. This was followed by figs and raisins for dessert, after which the attendant brought narghiles and coffee, my host and his villagers returned to the Serai, as the building is called which in every considerable village is allotted to travelers, and the evening was passed not so much in conversation as in looking at each other, and giving vent to occasional exclamations of a pious nature, such as "Bismillah! Allah Akbar! Allah hu!" etc., etc.

Ahmed Khan withdrew early—about half-past 8—the villagers followed immediately, and Timayanes at once set about preparing my bed. As I seated myself at the edge of it finishing my last pipe, the evening prayer fell upon my ear, and as it ceased the whole villaged repeated the concluding sentence, "La Allah il Allah, Mahomed Rasool Allah"—There is no God but Allah, and Mahomed is the prophet of God. A.

CAMPING OUT.

IN CAPE BRETON.

HERE on the waters of the fair Bras d'Or
I glide along through an enchanting scene,
Where nought is heard, save unseen birds that pour
Their songs through halls of forest decked in green,
And voices of clear waters that have been
Wooed from their woodland dwellings into rest.
Afar the quick-winged eagle glides between
Vast mountain gulches to its young and nest;
Silence and shadows fall, and day dies in the west.

The glassy mirror of the lake assumes
A color borrowed from no earthly hue;
The air around is laden with perfumes
Of drowsy flowers impatient to renew
Their dewy sleep; the robin sings adieu,
And wings its flight to where its nestlings are;
Each passing moment charms the more the view,
Till comes on twilight's breast her single star,
And night floats slowly in the varied scene to mar.

But only for awhile, for lo, the change—
The wondrous change from dark to mellow light!
The moon appears, and o'er the woodland range
Ascending, steeps its sides in glory. Bright
The waters gleam beneath, and lonely night
Has cleared her brow of sorrow. Growing still,
The giver of this fair, enchanting sight
Develops to the eye o'er yonder hill
A flock of wild birds flying. From the mountain rill,

A distance off, come murmurs crystal clear;
The sad owl starts the echoes from the brake,
Complaining to the moon; while, drawing near,
A zephyr murmuring, bids the tall trees shake
In ecstacy of motion till they take
Its wandering spirit in their outstretched palms
And charm it into music. Now awake
The drowsy forests sweet melodious psalms,
Born of the wind that comes from meadowlands and farms,

Where yellow buttercups and daisies lie
In dewy sleep beneath the glow worm's light
And starry beauty of the summer sky.
But when the moon in clouds withdraws from sight,
And all the fairy scene has vanished quite,
Comes gentle sleep with many a lullaby
And pleasant dream, until Aurora bright
Spreads all her wealth of loveliness on high,
And pours the linnet forth its early melody.

Now push from off the beach the light canoe,
The tapering rod and choicest flies prepare,
And where the river joins the waters blue
Of the deep lake, all rippling, cast with care
To lure the wily sea trout sporting there!
Now beautifully dance the flies, and lo!
A moment more he leaps into the air,
And then with sudden plunge doth downward go
Till, spent, his spotted sides upon the surface glow.

When, tiring of the angler's theme, at last
You long, in autumn, after noble fare,
You soon can quit the lakes for forests vast
Where towering Smoky penetrates the air
A thousand feet from ocean. Here the bear
Dwells in his hermitage of rocks and wood,
The swift-limbed caribou darts forward where
Long level tracts of meadow yield him food,
Hemmed in on every side by mountain solitude.

Or track the monster moose through regions vast,
Where primal oaks and stately pine trees grow,
Until the rifle's fatal speed at last
O'ertakes and lays the antlered monarch low;
And as the life-stream from his side doth flow,
Mark how he struggles in his pain to rise
And combat with his death-inflicting foe,
Till gloomy darkness shoots athwart his eyes,
And quivering in each limb, the mighty victim dies.

Then homeward speed through verdant solitudes,
The heart exulting and the eye aglow,
Until, what time the broad sun, sinking, floods
The heavens with his splendor, on the brow
Of the vast mount you stand and far below
Behold the liliputian haunts of men
Beside the mighty sea whose murmurs low,
By distance mellowed, turn to music. Then
Descend the winding path and join the world again—

The selfish world, where, 'mid the ceaseless strife,
The heart grows callous and the soul's confined;
Where petty longings dwarf the better life,
And freedom blest we ne'er or seldom find.
But where the mighty oaks sway to the wind,
And mountains lift their cloud-clapped peaks on high,
The heartache and the care are left behind;
Forgotten is life's sad satiety;
Health, peace, contentment cheer; and joy beams in the eye.

FOURCHIE, Cape Breton. H. E. BAKER.

Natural History.

SOME OLD-TIME NATURAL HISTORY.

THE terrible story of the massacre at Fort William Henry has seldom been told without quotations from or at least allusion to the account thereof given by Captain Jonathan Carver, a provincial officer who was an eye-witness of the tragedy, and narrowly escaped becoming one of the victims. This account occurs in his "Three Years' Travels throughout the Interior Parts of North America," as an illustration of the horrors of Indian warfare, and has been credited by historians, according to their bias, as more or less trustworthy.

The dingy little volume, which is inscribed to "Joseph Banks, Esq., President of the Royal Society," has a chapter devoted to "The Beasts, Birds, Fishes, Reptiles and Insects" which are found in the interior parts of North America, and another which treats of the "Trees, Shrubs, Roots, Flowers, &c." These chapters seem to have attracted little attention; though as curiosities in the literature of natural history and as internal evidence as to the value of whatever else the author has written, they are worthy of notice.

One is given the impression that the author has not fabricated his accounts out of whole cloth, but given us in good faith second hand what he has received from very untrustworthy first hands. He never as offensively offends our credulity as does the Rev. Samuel A. Peters in his "General History of Connecticut," who as for example thus describes the Connecticut at Bellows Falls: "Here water is consolidated without frost, by pressure, by swiftness, between the pinching, sturdy rocks, to such a degree of induration that an iron crow floats smoothly down its current; here iron, lead and cork have one common weight; here, steady as time and harder than marble, the stream presses irresistible if not swift as lightning; the electric fire rends trees in pieces with no greater ease that does this mighty water."

Carver's fault is simply in being inaccurate and careless. Certainly the Provincial captain could not have been an officer of the Rangers, whose peculiar service taught them to read as they ran, signs so obscurely traced that they were as a sealed book to the ordinary plodder of forest byways. Nor, in the days before he went soldiering, could he have been a Yankee country boy, to have learned no more of things that such a boy is likely to meet now whenever he drives the cows home from the woodside pasture or goes a-fishing, things that such a boy would hardly fail to see then, when this New World was so wild that the shadow of the untamed forest crept close to the most populous town.

Doubtless more nighthawks then than now wheeled in wavering flight against the evening skies of summer, and boys watched their headlong plunge from aerial heights, listening for the twang of their swift descent, and found the one nestless egg laid on the bare earth, and saw the mother bird flitting silently away, alighting lengthwise on the nearest branch. Yet of so common a bird our captain says: "This bird is of the hawk species, its bill being crooked. At twilight it flies about and darts itself in wanton gambols at the head of the belated traveler."

Without falling into the vulgar error of confounding the two birds, he briefly describes the whippoorwill, which the Indians call the Muckawiss. Upon hearing its note they are "assured of milder weather and begin to sow their corn. The Indians and some of the inhabitants of the back settlements think if this bird perches upon any house, that it betokens some mishap to the inhabitants of it."

In his description of the fish hawk there is a hint which may enable unlucky anglers to improve their score and reputation. "It skims over the lakes and rivers, and sometimes seems to lie expanded on the water as he hovers so close to it, and having by some attractive power drawn the fish within its reach, darts suddenly upon them. The charm it makes use of is supposed to be an oil contained in a small bag in the body, and which nature has, by some means or other, supplied him with the power of using for this purpose." And he adds, with the certainty of faith, "It is, however, very certain that any bait touched with a drop of the oil collected from this bird is an irresistible lure for all sorts of fish, and insures the angler great success."

"The loon," he tells us, "is a waterfowl, somewhat less than a teal, and is a species of dabchick," and wrongly says that the "color is a dark brown, nearly approaching black;" but rightly enough, that "its flesh is very ill-flavored and only repays the trouble taken to obtain it by the excellent sport it affords," for "it requires three persons to kill one of them, and that can only be done the moment it raises its head out of the water as it returns to the surface after diving," as "they will dexterously avoid the shot by diving before they reach them." Had war alarms frightened all the loons from Lake George when the captain was campaigning on its shores; or had innumerable triplets of gunners destroyed them, or had the abashed waterfowl, outdone in devilish vociferation by Montcalm's Indians, withdrawn themselves from observation and left only "hell-divers" to invite the fusilade of marksmen and fool our naturalist into such belittling and erroneous description of our great northern diver?

He tells us that "the whetsaw is one of the cuckoo kind, a solitary bird and scarcely ever seen," and we are convinced that he never saw the little Acadian owl, but he had seen "the king bird, which is like a swallow and seems to be of the same species as the black martin or swift. It is called the king bird because it is able to master almost every bird that flies. I have often seen it bring down a hawk."

What is the Wakon bird, so called by the Indians, who hold it in veneration? He says it "appears to be of the same species as the birds of paradise. It is nearly the size of a swallow, of a brown color, shaded about the neck with a bright green: the wings are of a darker brown than the body; its tail is composed of four or five feathers, which are three times as long as its body, and which are beautifully shaded with green and purple. It carries this fine plumage in the same manner as a peacock does. I never saw any of these birds in the colonies, but the Naudowessie Indians caught several of them when I was in their country, and seemed to treat them as if they were of superior rank to any other of the feathered race," and in the Indian language its name signifies Bird of the Great Spirit.

Our captain has more to say of the rattlesnake than of any other reptile. In his "Travels" he tells a marvelous tale of a rattlesnake that a Menomonie Indian had tamed and carried about with him in a box, from which he let it loose in October, and wagered two gallons of rum with the French gentleman who told Carver the story, that the snake would appear there and return to the box on a certain day in the following May. At the appointed time the Indian and the Frenchman met at the place, but the snake did not come at the call of his master, who then offered to double the bet that the snake would come within two days; and "on the second day about 1 o'clock the snake arrived, and of his own accord crawled into the box, which was placed ready for him."

The rattlesnake plantain is an approved antidote for the poison of this snake, bountifully supplied by Providence wherever this creature is to be met with. "The leaves of this herb are more efficacious than any other part of it," and being chewed and applied immediately to the wound and some of the juice swallowed, seldom fails to avert every dangerous symptom. "A decoction of the buds and bark of the white ash taken internally is another remedy, salt another—newly discovered—and "the fat of the reptile rubbed on is frequently found to be very efficacious." He never could discover the manner in which they bring forth their young, but he gives positive testimony on the subject of snakes swallowing their young. "I once killed a female that had seventy young ones in its belly, and these were perfectly formed, and I saw them just before retire to the mouth of their mother, a place of security, on my approach. The galls of this serpent, mixed with chalk, are formed into little balls and exported from America for medical purposes, an excellent remedy for complaints incident to children." The flesh of the snake also dried and made into broth is much more nutritive than that of vipers, and very efficacious against consumptions!"

The thorn-tail snake "is found in many parts of America, but is seldom seen. It receives its name from a thorn-like dart in its tail, which is said to inflict a mortal wound." Only one specimen of the two-headed snake was ever seen in America, and that was found near Lake Champlain in the year 1762, and presented to Lord Amherst.

Of seven or eight sorts of land turtles it is well to know that the bite of the least and most beautiful "is said to be venomous."

Capt. Carver describes the tiger of America as resembling in shape those of Africa and Asia, though considerably smaller and of a "darkish fallow color, and entirely free from spots. The cat of the mountain is in shape like a cat, only much larger, in color of a reddish or orange cast, beautified by black spots of different figures."

In his Western travels he can hardly have fallen in with the grizzly bear, for he makes no mention of it, and says that the bears of America are timorous and inoffensive, unless they are pinched by hunger or smarting from a wound. The sight of a man terrifies them, and a dog will put several of them to flight."

"There are two sorts of foxes in North America which differ only in their color, one being of a reddish brown, the other of a gray; those of the latter kind that are found near the river Mississippi are extremely beautiful, their hair being of a silver gray."

He gives a very good description of the buffalo, but confounds the elk and the moose, saying of the first that its horns are not forked like those of a deer, but have all their teeth or branches on the outer edge, and that the horns of the latter, though "almost as numerous" as that animal's, branch on both sides like those of a deer. "It has feet and legs like a camel."

"The carcajou, which is of the cat kind, is a terrible enemy" to the deer, elk, moose and caribou, which he lies in wait for and springs upon," when he fastens upon his neck and opening the jugular vein, soon brings his victim to the ground. This he is enabled to do by his long tail, with which he encircles the body of his adversary; and the only means they have to shun their fate is by flying immediately to the water; by this method, as the carcajou has a great dislike to that element, he is sometimes got rid of before he can effect his purpose."

"The skunk," he says, "is the most extraordinary animal that the American woods produce," though he has just described a quadruped whose tail enables it to hold on to its victims—a "tail-holt" quite different from that taken in the ordinary sense. "As soon as he finds himself in danger, he ejects to a great distance from behind, a small stream of water of so subtle a nature and at the same time so powerful a smell, that the air is tainted with it for half a mile in circumference, and his pursuers, whether men or dogs, being almost suffocated with the stench, are obliged to give over the pursuit." This "displeases rather from its penetrative power than from its nauseousness," and "is considered as conducive to clear the head and raise the spirits." The captain is not squeamish, for he has often fed on skunks and found them sweet and good. Indeed, one who can speak authoritatively of the broth of rattlesnakes, would not spleen against the flesh of the skunk. Does it occur to the Ichthyophagos Club what a valuable member it might have had it been born a century and a quarter earlier, or Captain Carver a hundred years later than he was?

His lengthy description of that prolific theme of the imaginative naturalist's pen, the beaver, is only noticeable for the absence of exaggeration and for his forbearance when in the closing sentence he assures us that were he to "enumerate every instance of the sagacity that is to be discovered in these animals they would fill a volume and prove not only entertaining but instructing."

The otter "greatly resembles a beaver but is very different from it in many respects." Wherein the resemblance consists he does not set forth, but only the differences, except that "in winter it is contented with the bark of trees or the produce of the fields."

But nothing is likelier to shake the reader's faith in the captain's veracity or accuracy than what he writes of animals that he could hardly have failed to see often and that would almost force the most careless observer to notice their form and habits. How could one whose service must frequently have taken him to the haunts of the muskrat, escape a better acquaintance with that miniature beaver than to write of him that his summer fare is "strawberries, raspberries and such other fruits as they can reach," and that "in winter they separate, when each takes up its lodging apart in some hollow tree, where they remain quite unprovided with food and there is the greatest reason to believe subsist without any till the return of spring," or of the mink, that in shape and size "it resembles a polecat," which he has told us is larger than a skunk, that it "is blacker than almost any creature," and that its tail is round like that of a snake but growing flattish toward the end and is entirely without hair!" If he ever smelled the nauseous effluvia of the mink, he must have had a nose of his own to enable him to say that "an agreeable musky scent exhales from its body."

Of the little space devoted to insects, the greater part is taken up by a description of the "lightning bug, or firefly, which is almost the size of a bee, and if you permit five or six to crawl upon your hand and they freely exhibit their glow together, they will enable you to read almost the smallest print."

Of trees, he tells us that the hemlock, though "of very large growth, is quite useless and only an incumbrance to the ground," an opinion in which he would find few to agree with him now.

What can be the "Wickopic or Lucknic," which "appears to be a species of the whitewood, and is distinguished from it by a peculiar quality of the bark, which when pounded and moistened with a little water, instantly becomes of the consistence and nature of size. With this the Indians pay their canoes, and it greatly exceeds pitch or any other material usually appropriated to that purpose; for, besides its adhesive quality, it is of so oily a nature that the water cannot penetrate through it, and its repelling power abates not for a considerable time." It is a pity that a tree having such valuable qualities should not be generally known.

The hickory is, as we well know, "a very good firewood;" but how many know that "as it burns an excellent sugar distills from it?"

Who that is accustomed to the weird autumnal bloom of our witch hazel would recognize it when found "covered early in May with numerous white blossoms." He tells us, "It has been said that it is possessed with the power of attracting gold or silver, and that twigs of it are made use of to discover where the veins of these metals are hid," but he conscientiously adds, "I am apprehensive this is only a fallacious story and not to be depended on."

A stickler for old names is glad to see that our captain gives that of wake robin to the Indian turnip and not to the moose flower or white trillium, as is the fashion nowadays. If he was ever fooled into tasting the root and knows whereof he affirms, the effect recorded is singular, for he says that "it will greatly inflame the tongue and immediately convert it from its natural shape into a round hard substance, in which state it will continue for some time."

With this pungent taste of Captain Carver's wake robin we take leave of the naturalist and traveler, wondering whether he who so long since journeyed to the undiscovered country from which no traveler returns, was attempting to impose upon the credulous reader or was himself imposed upon by unscrupulous tellers of campfire tales. ROWLAND E. ROBINSON.

[The thorn-tail snake, so called from the thorn-like dart at the end of its tail, must be identical with the hoop snake, so much discussed in these later times, and with the stinging snake "H. P. U." and "Coahoma" are interested in finding a specimen of. This elusive creature is certainly entitled to veneration because of its age, and is no less deserving of respect for so successfully keeping itself aloof from naturalists for a century or more.]

LOONS.—In FOREST AND STREAM of July 11, "J. G. R." has an article on loons, in which he says: "Once in a small space of open water, there they must stay until the ice thaws sufficient to give them a chance to rise, which requires at least one-eighth of a mile. They cannot arise from the land nor from any hard surface, only from a large space of water. They can be easily shot when confined in one of these open spaces of water, but to shoot one in the open lake is considered a big thing to do." Such was my belief in years gone by and will be accepted by most, if not all, who read the article. But is it true that a loon cannot rise from a small body of water? If one will remain in a small body of water and suffer death it is pretty good evidence that he cannot get away, but it is not conclusive. One will stay in the open lake for hours under a constant fusilade and not take to wing for safety. The loon usually leaves the water in the manner described by "J. G. R.," for the reason that it is easily done by a bird heavy in body and small in pinion. I believe the loon can rise from a small body of water or from any body of water likely to attract attention. What say the readers of FOREST AND STREAM?—JOSEPH IDE.

THE WOODCOCK AND THE WORM.

Editor Forest and Stream:

The following, coming from Audubon, ought to bear a good deal of weight on the question raised in your last issue as to how the woodcock get their food from the mud by boring. He says on page 20, Vol. VI. (of the edition of Roe, Lockwood & Son, New York, 1861): "The food of the woodcock consists principally of large earthworms, of which it swallows as many in the course of a night as would equal its own weight. It obtains its food by perforating the damp earth or mire, and also by turning the dead leaves in the woods and picking up the worms that lie beneath them. On watching a number of individuals probing mud in which a number of earthworms had been introduced, in a tub placed in room partially darkened, I observed the birds plunged their bills up to the nostrils, but never deeper; and from the motion of the parts at the base of the mandibles I concluded that the bird has the power of working the extremities so as to produce a kind of vacuum, which it enables it to seize the worm at one end and suck it into its throat before it withdraws its bill, as do curlews and godwits."

Some summers ago, while shooting woodcock, I observed some birds in an old field ditch under some willows; these birds were in the open ditch and were feeding or boring in the mud; it was early in the morning, but the sun was well up, so that I had full chance to see them; they were not twenty to twenty-five feet away. These birds acted as Audubon relates that his tame birds did, that is, they ran the bill deep into the mud, held it there, and appeared to suck in with their throats, but on the withdrawal of the bill I never saw the worm. Now with snipe, I have often seen the worm after the bill is withdrawn, and more often have taken the worms from their mouths after they were shot.

There is one point I don't understand in regard to the construction of the woodcock's bill, nor can I reconcile it with the sucking theory, and that is that, unlike the snipe's, the woodcock's upper bill overhang's the lower, or more properly speaking, the lower bill is shorter and fits into the upper; and if I am right, it is stiff at the ends and not soft and capable of being opened like the snipe's. Now if this is so, how can he open his bill while in the mud to suck, and not open the whole length of it? A snipe can; he opens just the very end and makes a tube of his bill. I have not a woodcock head with me, and an old one would be too dry to surely test this point, but I am quite sure a woodcock's bill is as I describe it.

BOSTON, Mass. E. B.

Editor Forest and Stream:

"A Study of Woodcock," by "Paul Pastnor," in FOREST AND STREAM for July 18, is certainly a remarkable contribution to the literature of the subject of which it treats. Indeed, one hesitates to take the writer seriously or to feel quite sure that his "little old wood witch hobbling about with a very long black cane," did not befog his senses by some potent spell, under the influence of which he dreamed, instead of saw, the curious things which he describes so pleasantly. But, as he truly observes, "many mirth-provoking theories, in the course of modern investigation, have become science," and it would be not less unsafe than ungenerous to positively ridicule or discredit any of his observations or theories, however fanciful they may seem. Moreover, most of them, as I shall presently show, are by no means as new as their author apparently thinks. For convenience of discussion, the leading points in his article may be briefly restated and considered as follows:

(1) That the woodcock possibly has a song. There is no doubt about this, for the fact has been recorded and more or less freely commented on by several observers. (See *American Sportsman*, IV., 1874, p. 19; the same, pp. 41, Torrey's "Birds in the Bush," pp. 222–225; Nuttall's Manual, "Water Birds," pp. 196–197). The bird sings in the air during the mating season, in the evening twilight, rising in a spiral course to the height of three or four hundred feet, thence descending in zigzag lines, at the same time uttering warbling notes, which, to my ears, at least, are very sweet and musical, recalling the sound produced by a water whistle such as boys sell in the streets of our cities. I have witnessed this performance many times at various places, and on several occasions have traced the bird's flight from the ground to the highest point which it reached and back to earth again.

(2) That both the European and American woodcock pick up and carry off their young is also a fact attested by many observers, although writers differ in their impressions as to the way the thing is done, some asserting that the chick is carried in the parent's bill; others, on her back; others, in her claws, and still others, that it is held pressed close to her body between her thighs. The last view seems to be supported by the best evidence, although it is not improbable that the method varies at different times. An article on the subject in the *Zoölogist* (third series, Vol. III., pp. 433–440) is accompanied by on illustration, depicting the European woodcock carrying its young very much as "Paul Pastnor" describes.

(3) I have never seen anything to indicate that the woodcock has a strongly developed bump of curiosity; but there seems to be no reason for challenging your correspondent's observations on this point, which are certainly very interesting and apparently quite conclusive.

(4) The assumption that the woodcock is only semi-nocturnal, although doubtless, contrary to the general impression of sportsmen, is perhaps correct. I have never detected a wild bird in the act of boring in the day time, but in the stomachs of several specimens, killed at about mid-day I have found fragments of earth worms. This would seem to be strong presumptive proof of diurnal feeding, for earth worms must be very rapidly digested in the stomach of a healthy woodcock.

(5) It is certainly possible that the evening flights of woodcock may be occasionally undertaken, as your correspondent believes, simply to enjoy "a mad, merry whirl in the air;" but nothing that I have seen warrants such a conclusion. On the contrary, after observing these flights on many occasions and at various places and seasons, I am convinced that the birds rise at evening from the thickets in which they have spent the day merely to seek richer but more exposed feeding grounds, where they dare not trust themselves by daylight. The fact that "Paul Pastnor's" birds flew into open meadow is significant in this connection.

(6) The assumption that the woodcock does not secure its food by boring, but that the holes which it makes in the mud are intended to serve as passages through which earthworms may be lured to their fate by the simulated sound of rain, produced by the subsequent dancing and fluttering of the bird on the surface above, is apparently an original, and certainly a rather startling theory. From the nature of the case such a theory cannot be disproved, but it may be discredited, partly on the ground that observations made in the field at night, even in the clearest moonlight and with the aid of a good glass, cannot be wholly reliable, partly by evidence that the bird sometimes gets its food in simpler ways.

Audubon, "watching several individuals probing mud in which a number of earth worms had been introduced, in a tub placed in a room partially darkened," concluded "from the motion of the parts at the base of the mandibles * * * that the bird has the power of working their extremities so as to produce a kind of vacuum, which enables it to seize the worm at one end and suck it into its throat before it withdraws its bill, as do curlews and godwits (" Birds of America," Vol. VI., pp. 20-21). I am not aware that this supposition has been since verified, although it does not seem improbable that the woodcock, without withdrawing its bill, may sometimes suck up very small earth worms or other minute animals found in soft mud. However this may be, it certainly frequently, if not habitually, employs a different method, at least with earth worms of fair size.

In July, 1878, I saw a live woodcock in the possession of Mr. C. J. Maynard. He had it from a boy who flushed it in a garden, whence it flew against the side of a house, falling sufficiently stunned to be easily captured. It recovered in a short time and was placed in a large box, prepared for its reception by covering the bottom several inches deep with loam, sinking a basin of water in the center, and planting tall living weeds about the back and sides. When I first looked in the bird was squatting among the weeds, nor did any motion on my part avail to cause it to shift its position, save by shrinking a little closer to the ground, but when a live screech owl was brought and held against the wires that covered the front of the cage, the woodcock at once rose and advanced to meet its *vis-à-vis*. Singularly enough the owl seemed to be the more frightened of the two. Indeed, the woodcock showed no perceptible fear. After the removal of the owl the woodcock ran about freely, exploring all the corners of its limited domain, and probing the earth vigorously, but apparently without success, although it left no spot untried. Its long bill was thrust downward with wonderful rapidity and on every side in quick succession, the motion strongly resembling that of a man spearing eels. Then the bird would take a step or two and try again. Sometimes it would stop and apparently listen with its head held slightly on one side, the ear directed downward. Again it would stamp with its feet quickly and forcibly, several times in succession, then hold its head very near the ground, evidently listening for the movements of suspected worms beneath, for, immediately afterward, it twice probed rapidly and closely over the spot to which its ear had been applied. It rarely stood erect, and moved with a skulking gait, the head drawn in between the shoulders and slightly raised and lowered, with a nodding motion, between each step. When frightened, it held its tail nearly erect and spread to the utmost the down lower coverts, drooping beneath the tail feathers in a vertical, fan-shaped fringe. When undisturbed, and always when feeding, the tail was depressed and closed. Mr. Maynard told me that the bird ate half a pint of earth worms twice each day.

It will be observed that during the observations just recorded, I did not actually see the woodcock secure an earth worm; in fact, it is quite certain that of the many thrusts which it made while I was watching it, none was successful, for I stood within a few feet of the cage into which a strong light penetrated freely. If I remember rightly, Mr. Maynard said that no earth worms had been put into the cage for several hours previous to my visit, and that the bird had probably nearly or quite exhausted its last supply. Hence its ill success in boring had no special significance. The attitude of listening was most suggestive, however, and the subsequent rapid and exciting boring about the spot to which the bird's ear had been applied convinced me that its stamping was simply for the purpose of startling the worms and inducing them to betray their whereabouts by the sound, however slight, of their movements beneath the surface. Robins listen in a similar way before locating and dragging forth an earth worm. They also sometimes stamp just before listening, although this action is not as vigorous and strongly marked on their part as it was with the woodcock. If the latter stamped for the purpose of simulating the sound of rain, and thereby inducing the worms to come to the surface, why did it not, after executing its "war dance," remove a step or two, or, at least, assume a position of watching instead of listening and immediately boring again?

Fortunately it is needless to multiply arguments in support of this view, for Mr. Maynard actually saw his bird, after stamping and listening, "turn either to the right or left or take a step or two forward, plunge his bill into the earth and draw out a worm which he would swallow, then repeat this performance until all the worms were eaten." ("Birds of Eastern North America," pp. 374, 375). Then this statement proves that the woodcock is perfectly able to "withdraw a worm from the ground with its bill," despite "Paul Pastnor's" incredulity on that point; while taken in connection with the other facts and arguments above detailed, it also proves that the "war dance" serves—at least sometimes—the purpose which I have explained.

Since writing the above I have come upon the following in an early number (Vol. I., No. 16, p. 251) of FOREST AND STREAM:

"Did our readers ever see a woodcock 'boring?' We have, and this is how he did it: Once on a time we surprised one of these gentry at his matutinal occupation, and so intent was he that he never noticed our presence. We had always supposed that he thrust his long bill into the moist earth and drew out his grub, snipe-fashion, and swallowed it; but no, he pegged away vigorously at the ground, something as woodpeckers hammer, digging deeper and deeper, until he actually stood on his head to reach the greatest depth. Then when he had one hole bored he began another, and so continued until he had made nine, as we ascertained by counting afterward. But never a worm or grub did he draw forth from subterranean sources. He had been merely preparing his little stratagem, setting his traps, so to speak, and when all was ready he laid down on his stomach, with his bill flat to the ground, and commenced beating the perforated earth violently with his wings. Presently a little worm or a grub or other insect came to the surface, and peering above the edge of one of the holes was incontinently sucked into the long protruding bill. Directly afterward a red well-scoured angle worm was victimized—we could see it distinctly as it passed into the bill—and possibly others would have followed had not our stupid dunderhead of a setter worked up on the scent and flushed the bird."

This note, which was apparently written by Mr. Chas. Hallock, the then managing editor of FOREST AND STREAM, curiously confirms as well as anticipates "Paul Pastnor's" observations. Although it does not mention the "rain" theory, it undeniably gives the latter much added probability. Indeed, if Mr. Hallock (?) was deceived in his impressions, the behavior of his bird may be fairly regarded as proving that the woodcock sometimes gets its food in the way that "Paul Pastnor" maintains.

Before concluding I should like to add a word about the whistling sound which the woodcock makes when flying. In your editorial remarks in the issue of July 18 you say that you "believe that it is not made by the wings, and could give reasons which to us appear conclusive." Will you kindly give these reasons? I must confess that nothing in connection with the habits of this interesting bird seems to me surer than that its shrill silvery whistle, which so thrills the heart of every sportsman, is produced by the wings. My grounds for this conviction are: (1) That I have over and over again had the same experience as that given by your correspondent, "H. D. N." (FOREST AND STREAM, Vol. XXXII., No. 25, July 11, 1889, p. 510), of shooting birds that did not whistle and finding that they were without the small, stiff, attenuated primary quills, while in no instance have I ever known a bird which lacked these quills to make the least whistling sound; although I do not deny—indeed, I have seen repeated instances of the fact—that a full-plumaged woodcock possessing these quills sometimes rises without whistling. (2) That twice upon picking up wounded woodcock by their bills I have had them beat their wings vigorously as if flying, producing at the same time the usual shrill whistle. One of these birds flapped so slowly that the whistle was not continuous, but on the contrary, made up of closely connected, but still separate, notes, each of which could be distinctly associated with a stroke of the wing. In both instances I held the bird's mandibles tightly together.

Surely nothing could be more conclusive than this. Assuming that it settles the origin of the sound, we are led naturally to consider what advantage a bird derives from it ability to whistle with its wings, for it is an universally-admitted law of nature that no highly specialized or peculiar function is developed in any animal except to serve some definite purpose, either of use or ornament. Now the attenuated primaries, as I prefer to call them, whistling quills, are present and equally developed in young as well as old birds of both sexes, and at all seasons excepting during the moult. It is evident, then, that they are not secondary sexual characters. The woodcock is also the only member of its family with which I am familiar which does not habitually and frequently utter some vocal whistle or call when flying. As far as is known the love-song already described, a harsh, night-hawk-like *paip*, made only when the bird is on the ground, and chiefly, if not wholly, by the male during the mating season, and a low *put'l*, given in connection with the *paip*, are the only vocal notes which the woodcock utters. Why then may not its wing-whistling serve the same purpose as the vocal calls of other waders, viz., to inform its companions of its movements and approximate position? This, at least, has seemed to me a logical inference from the facts just stated.

CAMBRIDGE, Mass. WILLIAM BREWSTER

THAT STINGING SNAKE.

Editor Forest and Stream:

Your number of July 11 contained a very interesting and instructive communication from Miss Catherine C. Hopley upon my favorite subject—snakes. As a good deal of Miss Hopley's letter was devoted especially to my enlightenment, I hope, through your courtesy, to be permitted to thank her, and express my high appreciation of her kindness.

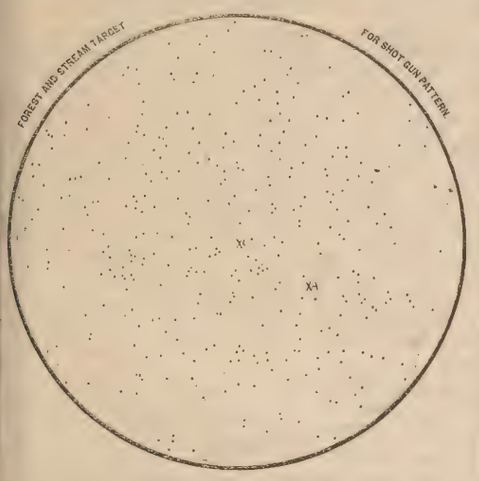
I am especially indebted to Miss Hopley for elucidating the question as to whether venomous snakes shed their fangs periodically; and, indeed, I had myself concluded that they do so, from the invariable provision of young ones to take the places of the mature fangs when displaced, as nature could hardly be expected to provide so lavishly and with such regularity for the probably infrequent occasions when the supplementary fangs would be needed to repair accidental breakage.

As regards the other question, of the existence or not of stinging snakes, which Miss Hopley has effectually set at rest, I believe she taxes me with rather more credulity on the subject than my observations of inquiry warranted. I had myself made the same reflections which she suggests, that is, that the existence of such a species could hardly have escaped the investigations of naturalists. I am also aware that most unscientific people are more credulous about snake myths than about any other subject, except perhaps those of ghosts and the efficacy of remedial nostrums. Still, having heard quite a number of intelligent and generally veracious white men positively aver that they had seen and killed such snakes, I think I may be pardoned for making inquiry touching the matter of scientific authority. Mr. Walter Clark, of this place, a man of education and intelligence, assured me that he had killed a snake with a sting in its tail this spring, and thought he could procure me a specimen. I have offered ten dollars to any one who will bring me a live specimen of the stinging snake.

In conclusion I wish to say to Miss Hopley that I have derived more information about snakes from her writings than from any other source, as no scientific snake literature has ever fallen into my hands, and my knowledge of them is mainly gathered from my own cursory observations in the woods. COAHOMA.

CLARKSDALE, Miss.

P. S.—A friend at my elbow affects to see something very ludicrous in the idea of a denizen of the Mississippi swamps going to London for information about snakes.—C.



Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents. Wild Fowl Shooting; see advertisement.

PATTERN AND PENETRATION TEST.

THE GREENER GUN.

WHEN the FOREST AND STREAM sent out its invitations to gun makers, asking them to have representative guns in our gun trials, a prompt answer came across the ocean that a gun would be sent from the works of W. W. Greener. It came a few days ago to the American representative of the Greener gun, Mr. Squires, of 176 Broadway. It bore the tag "FOREST AND STREAM Trial Gun," and was as beautiful a piece of mechanism as one could care to look upon. It was of the last output from the Greener establishment, and with it came cartridge cases, wads and shot. "Load fifty cartridges with your best English powder, and also make up fifty cartridges of American powder and shot, and we will try

GREENER GUN, 40YDS., RIGHT BARREL, 382 PELLETS, AM. CART.

them together." This was all the request made by the FOREST AND STREAM gun man, and on the 24th a gentleman from Squires's came to the range laden with gun and charges. The big roll of paper, nearly five hundred pounds in weight and over fifty-two inches wide, was set rolling. Pad after pad of penetration paper was placed behind, and soon the shots were telling their stories in emphatic style on the paper sheets. It was not a happy day for a test, or rather it was a day for a very severe test. It was not dry enough to cake the barrels to any extent, but there was a sharp, increasing wind which blew across from right to left at the rate of from twelve to sixteen miles per hour, increasing as the test went on from the lower to the higher rate of speed. The 40yds. distance was first covered, and the opening shots, after a warming-up pair of cartridges had been fired, was with the American-made charges. How well they acted and how finely the gun handled them is shown fully in the tabulated report. The large size of the paper sheets employed, and the easy working of the gun-test machinery,

GREENER GUN, 40YDS., LEFT BARREL, 355 PELLETS, AM. CART.

enabled a double count to be made on every discharge. Thus, when the large sheet of clean white paper rolled down, a bullseye was pasted on it, and when the shot was fired a 30in. circle was struck from the center of this bullseye. Then another circle of the same size was struck from such a center as to include the best pattern shown on the large white expanse. It sometimes happened that the aimed-at circle included the best pattern, and nothing was gained by shifting. The circle first struck was the one in which the gun, practically in the hands of a gunner, ought to make its best pattern. The second circle was the best work of the barrels, with the disturbing factors of wind, any possible bad barrel setting and bad aiming all obliterated. How they compare is shown in the following table, showing the pattern results of every shot fired:

PATTERN 40YDS.—ENGLISH CHARGES.

	Right Barrel. Aimed circle.	Struck circle.	Dist. bet. centers.	Left Barrel. Aimed circle.	Struck circle.	Dist. bet. centers.
1	236	249	5 in.	146	206	9 in.
2	188	185	3½in.	123	211	9½in.

Average	77	75	6 in.	68	83	7 in.

PATTERN 60YDS.—AMERICAN CHARGES.

1	113	124	4½in.	69	78	5½in.
2	131	123	7 in.	77	115	11 in.
3	122	147	8 in.	70	81	8 in.
4	95	125	7 in.	52	91	9½in.
5	98	126	6½in.	108	141	7 in.
Average	112	129	6½in.	75	101	8 in.

GREENER GUN, 40YDS., RIGHT BARREL, 249 PELLETS, ENG. CART.

There was no cleaning out of the gun when the trial was in progress and Range Supt. Moss who did the firing said he found it a pleasant working arm with a slight increase of recoil when the English charges of the quick burning Pigou, Wilkes & Laurence powder were throwing the No. 6 shot, which according to the American measurement would very nearly correspond with the grade No. 7, there being a difference of but 10 pellets in the ounce. As the gun went from the range it was with the understanding that it should be available for another test when the weather conditions might be of the most favorable, and the gun given an opportunity to show a still better average than that indicated in the subjoined formal exhibit of the test.

CLAREMONT, N. J., July 24, 1889.

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Greener Hammerless Ejector. Cost, $250. No. of gun, 36,854. Weight, 8lbs. Length of barrels, 30in. Gauge, 12. Right barrel, full choke. Left barrel, full choke.
Weather—Clear. Direction of wind, 3 o'clock. Force of wind, 15 miles per hour. Thermometer, dry, 78°. Do., wet, 67°. Humidity, 63°. Barometer, 29.8in.

GREENER GUN, 40YDS., LEFT BARREL, 242 PELLETS, ENG. CART.

Charge, as given by holder of gun:

AUGUSTA, Ga., July 23.—Dove shooting has commenced in this county. The Legislature now in session has changed the law, so that the season now opens July 15 instead of August. This is the best game we have. The doves feed morning and evening on the new pea fields and millet and wheat patches. They are fine eating, and the young are tender and juicy. A bag of 25 to 30 in an afternoon or early morning is not rare. As a table bird I consider them superior to quail, woodcock or snipe.—J. M. W.

A BEAR SCRIMMAGE.

BETHEL, Me., July 17.—Last week as P. Conley was coming home from Bethel to Greenwood, just at sundown, when near the home of J. G. Rich, he saw a bear in a ravine making his way up into a patch of woods near the house of M. Deegan.

He at once ran his horse to Deegan's house and alarmed him. Mr. Deegan had an old muzzleloader double gun, which was empty and rusty, hung in the slings, which he was not long in loading with No. 6 shot, a handful of powder and a small bullet to each barrel. Then calling his (shepherd-and-cur) dog Rover, and Conley taking an axe, they started out, striking the woods ahead of where the bear was last seen, in the direction he was heading. The dog took the lead, crossing the ravine and ascending the hill in the woods some distance ahead of the two men, thinking, no doubt, they were after the cows, as that was where they were pastured. Soon after the dog entered the woods beyond the ravine he commenced barking, and the men separated, Deegan going directly toward the sound of the dog, and Conley with his axe up ahead, so as to cut him off in case the dog was running him.

Deegan, by his short cut, soon came to the place where the dog was full of business, running around a hemlock tree which was about one foot through, looking up and singing out at the top of his voice. Deegan soon espied old bruin up among the limbs, grinning, growling and gnashing his teeth; so he called to Conley to come quick, as they had the bear.

At this moment the bear showed signs of jumping from the tree, evidently not liking the appearance of the intruders, and as he sided round to leap Deegan "unhitched" and placed a charge of small lead and big powder just back of his fore shoulder among his ribs which had the effect to expedite his leap, and before Deegan was aware what had happened, the bear was under full headway up the hill closely followed by Rover. Conly hearing the tumult came tumbling over the logs through the thick brush, almost out of breath, catching up with Deegan in his race after the dog and bear.

The scrimmage was now at its height; the dog close to the heels of the bear, who, in his anxiety to seize the dog, would turn a somersault backward, growling fiercly; and this together with the barking of the dog, the hallooing of the men and the crashing of dry limbs under their feet, made the woods echo with unearthly sounds. The bear finding it too hot for him soon took to another tree, going into the limbs in a twinkling. It was now nearly dark, and it was hard catching a glimpse of the black beast in the tree. Underneath stood Conly with his axe with blood in his eye. The teeth and howl of the dog were fearful, and Deegan, to get a look at the bear, had climbed the hill above him until he was breast high with him.

The bear was now mad, and his eyes were like two balls of fire that shone through the darkness in a complete blaze, showing his position to the men below, who both discovered the bear in the act of leaping upon them from his high perch. Conley sang out, "Shoot now or never." Deegan drew up instantly and pulled, and not a moment too soon, for as the charge crashed through the bear's skull he had given a spring for the ground below and fell dead at the feet of the three braves. He was a noble beast with fine pelt and a big head full of savage-looking teeth. It was altogether a hunt to be proud of. They hauled the bear up to Rich's house on a wagon, for him to skin and cure the pelt for them, and the meat was the next day distributed among the game-loving people of Bethel.

It is no unusual thing for bears to make havoc among the flocks of sheep in our vicinity, but to hunt and kill one in forty-five minutes after he is discovered, and within forty rods of a house, is an unusual thing, and makes an item we think worthy of record.

This is the seventy-fourth bear we have skinned, seventy-three of which we ourselves have killed.

J. G. R.

BETHEL, Me.

HOLLOW BULLETS.

Editor Forest and Stream:

In the FOREST AND STREAM of July 18 there is an article on hollow bullets, the writer saying he drills a hole in the .44-200 Winchester bullet and uses 45grs. of powder. He says these bullets with this charge tear a muskrat to strips and in soft pine or earth they expand and resemble a mushroom. I think when he tries the above bullets with the load of powder he names on game as large as deer he will be disappointed, as I think there will be no shattering nor smashing over that produced by a solid bullet of same size.

A charge of 45grs. powder behind 200 of lead would hardly give velocity enough to cause the bullet to expand on large game. To be sure, boring out the point of the bullet would decrease its weight and increase the velocity.

I have found that a bullet which will turn almost inside out in a bag of sand and expand in soft pine so as to resemble a mushroom and which will also badly shatter an animal the size of a woodchuck, will simply go through a deer, leaving no signs of shattering in its course, and making a hole where it comes out no larger than a solid bullet of same caliber and weight.

My experience with hollow express bullets has not been very extensive, yet last summer I shot about 300 of the Winchester 300-grain 45 hollow pointed bullets, using a Winchester .45 rifle with slow twist. I load my cartridges and used 100 grains American Rifle Cartridge Powder No. 2. The penetration with this load was very good, at 40yds. it would drive a buliet through 12in. of clear pine, at 150yds. through 5in. of well-seasoned chestnut and flatten the bullet against a wall. I shot eleven woodchucks with this load and there was considerable smashing; in most cases it would make a hole on coming out as large as my fist, and often when through the middle of the body, one side would be completely torn off.

I expected great results from these bullets on large game, but was disappointed. The first deer I shot at was standing on a bog in some water bushes, and I could just see the outline of its back. The bullet struck the shoulder a trifle back and high, cutting off the lower end of spine. The deer dropped in its tracks and never kicked. I expected to find a hole where the bullet came out from 3in. to 6in. in diameter, but found it but a trifle larger than the size of the bullet. The next two deer were shot, one square through the shoulders and one standing quartering, just back of shoulder, bullet coming out near hip. Later I shot a four-year-old steer and a heifer which had been running wild all winter in the woods. I hit them about the same as the deer, and when cutting up both deer and cattle I was very careful to follow the course of the bullets, and in no case was there any shattering; a solid bullet would have done the same work.

I expect this summer to experiment with the Winchester .45-300 grain solid bullet, and by boring holes of different depths and dimensions, to get a bullet that will expand in a deer's body and also have sufficient penetration. The difficulty is to get something to test them on. Pine, sawdust, sand, etc., are unsatisfactory, and I think I will try the carcass of a horse or cow. A bullet which would expand in such a target ought to do the same on a deer.

C. M. STARK.

NORTH DUNBARTON, N. H., July 22.

BULLET FROM SHOTGUN.

IN the report of the Colt gun sent in for trial by Dr. Merrill, given in the FOREST AND STREAM of last week, it was stated that the gun was choked in the manner indicated in order that it might do good work when loaded with ball cartridge. In sending on the weapon Dr. Merrill kindly inclosed the ball mould, and this enabled a test to be made of the quality of the weapon as a single bullet carrier. Three sets of cartridges were prepared. In each was placed a charge of 85grs. of Dead Shot powder, and over it two B. E. wads and a card. The variation in the cartridge was in the bullets. These were cast of an alloy made up of fifteen parts of lead to one of tin, again of pure lead, and again of the harder and lighter alloy used in type metal and in the making of stereotype plates. Fifteen selected balls of each casting were taken and loaded, five of each sort were fired from each barrel of the Merrill Colt gun and five were taken to the FOREST AND STREAM laboratory for analysis. The bullets were well crimped down over the wads, and when three of each sort were weighed up showed as follows in grains.

	1	2	3	Aver.
Lead and tin	553	549	550	551
Pure lead	562	565	565	564
Type metal	525	525	523	524

The afternoon taken for the trial was a very good one. There was a cross wind from the right and to make the test a severe one of the arm, distance of 100yds. was taken from the target face, while to avoid any irregularity from bad aiming on the part of Range Supt. Moss, who fired the weapon, the shooting was done over a bag rest. One of the FOREST AND STREAM shotgun targets was put up for the right and another for the left barrel results, and out of 30 shots fired 19 were located on the targets, 12 from the right and 7 from the left barrel. All the shots fired were located within a 4ft. square, but the paper sheet with its 30in. circle was but 36in. square and did not catch all the bullets.

In the target diagrams printed the shots are numbered in the order fired, A being the lead and tin shots, B the pure lead, and C the type metal bullets. How they stand in string measurement the following will show:

RIGHT BARREL.

	1	2	3	4	5
Lead and tin	13 in.	13½in.	12in.	....	4 in.
Pure lead	18 in.	14 in.	....	11 in.	14 in.
Type metal	13½in.	15½in.	4in.	....	10 in.

LEFT BARREL.

	1	2	3	4	5
Lead and tin	16½in.	7 in.	19in.	....	....
Pure lead	....	....	....	10½in.	10½in.
Type metal	9 in.	....	....	20½in.	....

In having the gun choked as he did, it was not the intention of Dr. Merrill to secure a gun with which he could do exact work at extra long distances. He spends much time as a collector, and frequently when not after the smaller species of birds, finds chance for a near-by shot at something heavy; and if he could secure a weapon at all good for this double demand he would be content How the gun acts under the double test is shown fully in the trial to which it was subjected by FOREST AND STREAM, and which is set forth in exact tabulated form both for shot and ball.

NOTES FROM WORCESTER.

WORCESTER, Mass., July 24.—Tuesday was the Worcester Sportsmen's Club's annual field day at Rutland, which is always looked forward to by members of the club (and particularly by their families) as the red-letter day of the trap-shooting season.

It is the club's "ladies' and children's" day, and a royal good time is always had. Rutland is very prettily situated on high ground, about twelve miles north of the city, and is quite a resort for New Yorkers who wish to escape the heat and dust of the city.

The Prospect House was thrown open to the ladies and children, who at once made themselves at home and proceeded to engage in the various diversions by which they could get the most enjoyment out of the day's outing. A large tent had been erected near the shooters' stand for the convenience of those who wished to witness the shooting. The range was laid out in a field, just in the rear of the hotel.

The principal event was the fifth contest in the series of sixteen for the Norcross trophy. The conditions of each shoot are 30 clay birds from 5 open traps, distance handicap. The previous winners were: M. D. Gilman, E. F. Smith (2), Chas. Howe and C. B. Holden. The contest to-day was close and exciting and resulted in a victory for Geo. Sampson, of South Lancaster, he breaking 27 birds. The birds were hard thrown and the heavy wind made them anything but easy shooting. Many guests from the hotels were interested spectators of the shoot. Everything passed off remarkably smooth considering the difficulties under which the shoot was run, and everybody had a jolly time, the only drawbacks being the heavy shower about noon, and the execrable dinner served at the Prospect House. The former soon cleared away, leaving the air deliciously cool and fragrant, but the dinner will linger unpleasantly in the minds of many for some time yet. At the close of the shooting the youngsters were gathered in and the start for home made.

The drive home in the cool of early evening was delightful and a fitting close to a most enjoyable day's outing. How the little ones had enjoyed it, and their mothers too, and what a pity we can't have such days more frequently. Little do the majority of our wives know of the pleasures of the field, but they prove apt scholars, and who will say that they have no need for the health-renewing power of the woods. Fortunately for us, we have not to look so far forward to our next field day as they, for many a time during the day, had I heard the boys remark, one to another, with much significance, and in tones of eager anticipation, "Only six weeks more."

The prospects for a good season's shooting are decidedly bright. A good number of broods are reported, and the season so far has been very favorable to their growth.

While trouting last week I put up two broods of partridges and the chicks were able to fly well and apparently could take care of themselves now if left alone, but, as in every section where there is no concerted action to compel observance of the game laws, there is but little hope that they will escape being shot into before Sept. 1. The "bird hog" is already at work on woodcock, in fact the only brood I have found this season during my tramps along the trout streams was cleaned up by one of that class last week.

Still we are not without a fish or game warden.

He got his appointment, leased and posted a little brook, and warned, through the daily papers, all violators of the fish and game laws, that he would spare no man.

That was in the early spring. HAL.

THE SNIPE FLIGHT.—The Cedars, Oakdale, L. I., July 20.—The first flight of snipe made their appearance here this morning, the flight commencing about 10 o'clock and lasting till 2, when the wind changed from the southwest to northwest, the birds dropping off to the leeward, thus ending the flight and the shooting. What little time it lasted I made a small bag of yelpers, yellowlegs and meadow plover. The birds were in splendid condition, and had the wind continued in the southwest the prospect was big for good shooting.—ALFRED A. FRASER.

"CRUISING IN THE CASCADES."

Editor Forest and Stream:

A very valuable addition to the literature of subjects congenial to the sportsman and lovers of nature in all its forms, has just been issued under the above title. Its author, "Coquina" (G. O. Shields), is well known to sportsmen as the author of several books, and many sketches on kindred subjects.

To those who derive no pleasures but such as are to be found amid the busy haunts of men, this volume will have but few attractions. But the true lover of nature who delights to occasionally escape from the petty annoyances and petty worriments inseparable from civilized (so called) life, and to wander amid scenes that tell only of the infinite power, the beneficence and the grandeur of the Great Ruler; who delights to worship in the grandest of all of His temples (not made with hands), the mountains; who realizes and feels His presence on every mountain peak, in the dark cañon, in the rushing wind, in the gentle zephyr, and amid such scenes, above all, realizes his own infinite littleness, he it is who will take pleasure in following the author amid some of the grandest and most beautiful scenery of this continent. If added to this he should be imbued with some of the tastes and sympathies of the sportsman, additional zest will be given in the pleasant and graphic and truthful description of fishing and hunting incidents. The young sportsman who is desirous of hunting large game will find many indispensable hints as to their habits and the best method of pursuing them. The general reader will get much valuable information as to the prospects and resources of the country bordering on Puget Sound. This book will meet with much favor. P.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

Sea and River Fishing.

CHICAGO ANGLERS AND ANGLING.

CHICAGO, July 17.—My late visit of two or three days at Fox Lake has given me an opportunity to learn something more of Chicago angling waters, and also something more of Chicago bait-casting, and I would say something of both.

While at the Mineola club house I heard that Mr. Chas. F. Hills, of the Fox Lake Club, had taken a very fine string of bass, and on going over to investigate, found the facts to be these: Two boats had taken fifty-one bass on Saturday. Messrs. Charles E. Hyde and R. B. Miller, fishing in the same boat, had taken twenty-two bass and four pickerel, the largest bass weighing 4½lbs. Mr. Hills, fishing alone, had taken twenty-nine bass, the largest 4½lbs. Out of the total catch it was said there were only three or four bass weighing less than 3lbs. The average was very heavy, and the joint string, so great that one man could not lift it from the wharf, was pronounced the best brought in during the season, unless one might except the slaughter by pot-fishers on the spawning beds in May. Mr. Hills is known as probably the most successful bass fisherman of Fox Lake. He is a member of the Fox Lake Club, and is president of the Fox River Fish and Game Association, the most active and most practical protective organization in Illinois. He said that Saturday's score was the best he had made for four years, and that although he and his friends had recently been leaving Fox Lake for other waters, they were content to stay at home now. It is Mr. Hills's custom never to take over twenty-five bass in a day. On this occasion he thought he had twenty-six, but found the count a trifle long when it came to stringing up.

These bass were all taken by casting with the frog. I knew Mr. Hills to be the champion and the ablest exponent of the art of two-handed casting, and the leader of quite a school of Fox Lake anglers of that style. I wished to study this style, the more especially in order to avoid the imputation of having ascribed to the single-hand men all the glory that belongs to Chicago bait-casters in general. Therefore, when Mr. Hills invited me to go out in his boat with him on Monday, I accepted with a graceful alacrity that must have made his head swim.

When we put off from Fox Lake Club landing at 7 o'clock Monday morning, the lake was quiet, but much discolored from the heavy storm of the day before. The wind was in the north, and the day cool. It was not an especially good prospect for bass, and things did not improve when we pulled up the channel into Grass Lake and found the pockets where Saturday's bass were taken all full of roily and disturbed water. The weather remained very quiet during the day until afternoon, and the water gradually cleared. The evening was a very good one for fishing.

As I had not brought up any casting outfit, Mr. Hills brought out one from his extended stock. He has four butt pieces, nicely made to his own order, with eight sections and tips. The rod he handed me was of rounded split bamboo section and lance tip, 8ft. 3in. long. I do not know the weight, but it was heavy for single-handed casting. In feel the rod was very stiff, but when mounted with the No. 4 reel, which Mr. Hills prefers, the balance was good. Mr. Hills himself used a bethabara section, with a trifle more action than my rod had. His reel was a No. 4 Meek. He gave me a No. 4 Milam. Later on I experimented with a jeweled Meek No. 3, which I found in his tackle box, the best provided one I ever saw a bait-caster carry. There were one or two other reels besides those mentioned, and a lot of lines, swivels, hooks and what not. This box in annually filled at wholesale, and perhaps this is the reason that it has come to be generally understood in Fox Lake Club that it is Mr. Hills's duty to fit out any stranger who may be within the gates.

Contrary to the code of the single-hand men, Mr. Hills uses no leader above his frog, but attaches the snell of the No. 6 Sproat hook to the swivel at the end of the line by means of a brass snap-link built much like a blanket pin. The single-hand men use no swivel, but do use a split shot for sinker. The double-hand men use a swivel and no sinker. This is partly warranted on Fox Lake and Grass Lake waters, where the water plants are so dense and numerous as to make it very desirable to keep the hook on top of the water. I noticed that Mr. Hills never let his frog sink, and he had little or no trouble from fouling his line. I tied a short leader above my frog, and found that the knots of it constantly accumulated moss and grass, and this was the : orse if I did not at once reel in the frog along the surface. There would seem to be a reason for this Fox Lake style, therefore. Its chief drawback seems to be the way in which it handles the frog after the cast, and I must say that my late observations would incline me think the single-hand men have the advantage here. The little bullet keeps the frog belly down, an excellent thing in casting, as every angler knows. Our frogs on last Monday often floated on their backs with disgusting persistence. It should be said, however, that these were not the tougher and much superior meadow frogs, but the big yellow lake frogs—young bullfrogs, I believe. These would bloat up after a few casts, and after that they had to be squeezed out, or they never would float belly down. The swivel and link ought to work a meadow frog all right, and we may suppose it effective, at any rate, certainly in view of the results. It is results that count, and I don't know of anybody in this neck of woods who gets any more bass than Mr. Hills.

Besides the casting outfits mentioned, we had everything else two anglers could possibly need. There were 60 lusty frogs in the pail, and half a ton of lunch just back of the boatsman's seat. A serviceable long-handled landing net reposed at hand, and there was a sack for our bass when we caught them. Mr. Hills offered me a big straw hat which he fished from under the seat, and gave me some glove-fingers to protect the thumb in case the line made it sore. He himself drew on a pair of white kid gloves. I must say that when Mr. Hills is thus fully attired for a bass reception, in trousers, flannel shirt, big straw hat and white kids, he makes an imposing figure. "There is nothing too good for these bass," said he.

It transpired later on that nothing we had was good enough. Never were bass so persnickity as these Grass Lake fellows, which on the Saturday previous had fairly jumped out of water to catch the frog. "They don't act like the same fish," said George Drury, the oarsman who pulled us. We only got six in a day's steady fishing, one of which was adjudged too small and so returned. Mr. Hills caught all the fish. I had only three strikes, and lost the only fish hooked. I should think Mr. Hills had twenty strikes at least, but he waited for the bass to swallow the frog before striking, and as the bass seemed only half hungry, he lost most of his fish by that operation. The bass would whirl down on to the frog, carry it to the bottom, look at it, turn it over, and let it go, to the grief of the waiting trio in the boat. They acted very singularly and gingerly, and all we could do was to ascribe the trouble to the late storm.

I prefer to attribute my lack of success to the fact that I did not have on any white kids, although I am afraid that my fate would have been the same for any other ordinary bait-caster who might go fishing in the same boat with this casting demon who proceeded to cast all over and around the country between Antioch and Lake Villa. It was my business to watch this, and I took so much pleasure in doing so that my own poor luck ceased to concern me. I found my rod heavy for single-hand casting, and was fain to inquire into the method of the two-handed men.

"Why," said Mr. Hills, as he gave a careless sort of a jerk which threw the frog about half a mile over toward the Lotus club house, "it's easy enough. It's very easy indeed when you get the motion. You simply steady the butt of the rod with one hand in the cast. At the close of the cast you let go of the rod with that hand and swing the rod on out with the other hand. The tip of the rod is pointing toward the frog when it lights, so that the line may run straight out, and the reel is thumbed just as in any kind of casting. Double-handed casting does not require any very great amount of strength. It is done with an easy swing. Yet I think the double-handed men can cast further and more accurately than the single-hand men. The steadying of the rod at the butt with one hand affords a fulcrum, which is a great advantage. It does not make any difference on which side of the boat you wish to cast. You can use either hand on the butt of the rod, and so reverse positions; and you can cast straight ahead of the boat better with two hands than in any other way. If you want to make a quick cast without much change of position you can cast over head with both hands, and that is often a good way to do."

Mr. Hills gave me practical illustrations of all these different positions, and I was delighted at the ease with which he cast, time and again, a distance which must have been close upon 50yds. He can cast over 50yds. on special effort, and is the best two-handed bait-caster with light tackle I ever happened to meet, albeit matter of fact and not boastful in the least; which latter is a pleasant fact to add.

Study of the methods of our two classes of bait-casters leads to the noting of some slight differences in detail, though their methods are essentially the same. The two-handed casters usually stand up in the boat while at work, as Mr. Hills did, his boat being large and steady enough to render that proceeding safe. It is the boast of the single hand men that they can sit down and work their lighter rods as well. The two-handed men retain to some extent the old Henshall pattern of rod, although they have stiffened it a little, and they follow also to some extent what may be called the Henshall style of casting, with the addition that they very freely use the overhead cast, a very effective and useful one. They do not rely so much on the spring of the rod as the single-hand men do, and in the cast with them the rod traverses a larger arc. There is a tendency toward a larger reel with the two-handed men, although Mr. Hills told me that he did not see that the No. 4 gave much actual advantage in distance. He always has his No. 3 reels mounted on No. 4 plates and provided with No. 4 handles. Nothing is more troublesome in reeling in a fish than a meagre little handle from which the fingers are constantly slipping.

Bringing up the question of oil or no oil for the casting reel, Mr. Hills told me that he found the best of reels needed a little oil after two or three days of hard work. He had one reel spoiled by over-heating and friction, and since then had made a practice of watching and occasionally oiling his reels, using the oil very sparingly, and only upon the spindle and main cogs.

In the matter of casting lines, I found that Mr. Hills favored the pure silk line, and had a number of them. He thought the raw silk harsher on the thumb and not superior in any way. The linen line he did not like, because it did not work so well when water-soaked and swelled.

We discussed all these things as we sat on the shady lake shore and made away with the large and typically luxurious Fox Lake Club lunch, which, like everything else in the boat, was perfectly adapted to the angler's needs. I was more than ever convinced that there is no laying down any absolute law for anglers, since each is bound to exercise his own taste and judgment, and since the customs of each angling water are usually based upon reason. There remains, however, no question that the style of casting used by Mr. Hills and his friends is the most perfectly practical and suitable one possible in the shallow, weedy, and yet transparent waters of the lake where they do the greater part of their fishing; neither is there any question that I saw this style of casting at its best when I went out with Mr. Hills. The day was, therefore, a thoroughly satisfactory one to me, and I was only sorry to see it close when, hailing the little yacht Frolic as she was gliding down the channel, we were taken in tow, and so swam gently home in the early evening.

Ever since I had been talking with the two Comstock brothers about their catching bass on flies by moonlight, I had had a curiosity to see also this form of bass fishing, and it was with regret that I learned at the last moment that these gentlemen could not go upon the Twin Lakes trip we had planned, for fly-fishing. There was a late moon on at the time of my Fox Lake trip, and I deter- to try after supper if I could not redeem my fortunes among the smaller *Percidæ*, since the big bass had not come my way. Accordingly I jointed up what is after all my favorite rod, a split-bamboo fly-rod, and after dark hied me toward a certain bend of the shore which appeared to have a fishy look. This was just beyond the Mineola boat houses, near the sunken fence. I tied my boat fast to a clump of bulrushes, and began to cast with coachman and professor flies. At first I took sunfish, then as it grew darker the rock bass and croppies took hold, and I caught some good big ones. It was quite dark when I landed my first bass, a gamy little fellow of about three-quarters of a pound, which I put back into the water. A little after this I struck a 2lb. wall-eyed pike, which broke my leader and escaped at the boatside. I do not know what this fish was doing in the shallow end of the lake, nor should there have been any bass there. I took another bass, a half-pounder, just after the moon came up, and this one I also returned.

There were fish rising about the boat continually. It was so dark part of the time that I could not see my cast, which I knew was broken and tangled up, but the fish seemed not particular. I had two angle-worms, which I stuck on the flies, but the sunfish soon got them. As it grew dark the fish ceased rising, and I put some pieces of fish on the fly-hooks and sunk the flies with a split shot. I caught some rock bass in this way, and then the bullheads began to bite, and as every bullhead meant a good fly broken off in his interior, I quit fishing in that way, after having a good deal of fun with one or two of the big ones. The moon was just up nicely, and I was settling down to comfortable fishing, at about 11 o'clock, when they began to put out the lights at the Mineola Club, at which I cut loose from the bulrushes and rowed in. I had thirty odd very nice little fish, all caught pretty respectably. I always thought it better fun to catch a little fish on a light rod than to catch a big one on a heavy rod, and I am prepared to say now that fly-fishing by night on these lakes is a delightful and fascinating sport. I hailed it as one more addition to the many pleasures of the woods and waters I have shared in this region, and as one more face in the many-sided field of legitimate sports so easily accessible from this city.

July 18.—State Fish Commissioner Bartlett will be at Fox Lake this week and will then go on down Fox River to make the final arrangements about putting in the fishways. It is thought that the work already done has had much to do with the improvement of the fishing this spring. Mr. Bartlett will on this trip also put down some brush for croppy beds in Fox Lake or Grass Lake. The croppies breed and hang about such spots.

The outlook for angling at Fox Lake certainly appears favorable under the circumstances, although it is simply a wonder that it remains so good as it is. We saw a number of old spawning beds in Grass Lake, and in one little hole in the weeds saw five or six hundred bass fry about ¾in. long. Grass Lake is a vast natural breeding ground, and the little ones have every chance for their lives among the dense reeds, rushes and mossy undergrowth of that remarkable piece of water. It is Grass Lake that has fed Fox Lake and the near-lying waters.

Fishing through the ice is carried on to a frightful extent at Fox Lake during the winter time. There is no law against it. The maudlin, wretched, cowardly pseudo-sentiment of our State Legislature still accords to our poor, dear farmers to catch some fish "for food" during the winter. As a matter of fact, the farmers and others fish for the market. Stop the sale of fish or game, and you preserve it. The two Dutchmen who last winter loaded a wagon box full of game fish in one day at Fox Lake did not want the fish for food. They sold them. When will the time come when we can get three sensible and courageous men in the same Legislature! Never, I fear, while there is any money in politics and the same old selfish fear in the politician's heart. Speed the quiet efforts of our strong and growing organization, the Fox River Association! This society is gathering strength all the time, and is spreading quietly all over the State through the efforts of its able officers. I hope to live to see the time, and I believe the time will come, when this organization will dictate terms to the politicians. Their selfish fear may then be on the angler's side. This is the deliberate plan of the organization, and if it succeeds, its success will be a notable one for anglerdom.

There is another cause of terrible destruction of fish life in the *constant use at Fox Lake of young black bass for bait.* Thousands and thousands of this noble fish are destroyed thus every month and every week. It is impossible to use the seine for catching minnows in those waters without taking out as many young bass as minnows. These are offered for sale by the boatmen, and are bought by the city people who ought to know better. There is one boatman, whose name I know, who has repeatedly sold pailfuls of young black bass in this way, knowing them to be such. What should be done to such a man, and what to the people who would buy his spoil of the waters? Let Fox Lake anglers watch this, and spread a better sentiment about the lake. It is easy at least to empty the minnow pail of every such inhuman offender, and it is to be hoped that this will be promptly done upon occasion. The wonder is that there is any fish at all left in this lake system.

There has not been much night spearing done this season on Fox Lake waters, although what was taken to be a spearing light has been seen on two nights on Grass Lake. There is only one man suspected of having an illicit set net. Such rewards have been offered by the clubs and protective society that open violations of the law are now infrequent. The fault now lies with the law itself.

Mr. Hills tells me he saw a dozen muscallonge of this year's spawn, I believe in Pistaqua Lake. They were six to ten inches in length. They were in shallow water. He also saw some pickerel of this year's spawn, which were much smaller.

The gentleman above named has been spending a week or so at Fox Lake, and he relates one odd experience of the week, in which he took, on last Saturday, a bass which on last Thursday had broken off his hook and swivel, with a part of the line. On Saturday he lost another cast, with a red-ibis fly attached, and this he is confident of recapturing yet. Hr. Hills has thus retaken bass on four different occasions at Fox Lake. Once in Lane's Bay he lost a frog and 8in. of line, and within fifteen minutes caught the same bass with the hook in his mouth, and within 10yds. of where he first struck him. From this he would infer that the bass feels little pain from taking the hooks, and fights merely against the restraint of the hook and line.

Mr. Chas. E. Hyde caught twenty bass in one day over in Nippersink Bay earlier in the season, and twenty-one another day. He has also been with Mr. Robt. Miller, Mr. Hills and Mr. John Wright, of Lincoln, Neb., over at Loon Lake on one or two of the successful trips mentioned earlier. Mr. Hyde's largest bass for this year is

5½lbs. His largest fish story is that of the bass which swall owed a chimney-swallow that happened to be dipping down into the lake, the bass being taken a few moments later with the tail of the swallow sticking out of his mouth. Mr. Cook and Mr. Foster both vouch for the truth of this story, but they think the story might have been arranged better and more dramatically.

When I reached the province of fish scores and fish stories, I knew I could call all the returns until I had seen Col. Lippincott over on the point. I rowed over and learned that the Colonel and Mr. John Coles on last Wednesday caught 29 bass and 18 wall-eyed pike, and on Thursday afternoon 7 bass and 30 wall-eyes that weighed 78 pounds. To the Hon. Andrew Shuman was accredited the following remarkable score: One dogfish, 2 garfish, 17 bullheads, 15 silver bass, 1 wall-eye, 1 pickerel, and a number of perch and sunfish. I was evidently upon the land of Kit North. Col. Lippincott's mascallonge story for 1889 I shall be obliged to defer, but promise to write it out at some future day. I passed a very pleasant hour or two at this old landmark house of the lakes.

E. Hough.

CAMPS OF THE KINGFISHERS.—III.

ECHO LAKE, ONTARIO, CANADA.

At last we were really on the way to camp again, with Louis at the tiller of the Mackinaw and headed quartering across and up the river for the head of Squirrel Island instead of down and around the islands into the bay; but Tom knew a channel around that way that would cut off a mile or two in reaching the mouth of the river, and this was a consideration not to be overlooked, as it was getting well along in the afternoon.

Around the head of the island the Indians had to use setting poles in the shallow water, as the island had "shut off our wind;" but after a couple of hundred yards of this creeping along, at a grunt and a motion from Tom, Lewis shoved the tiller hard to starboard and we slid into an opening in the grass and rushes barely wider than the boat, and soon after had the wind again on the starboard beam, which drove us along at a spanking rate through a streak of open water, rush-lined on either side, 'till we entered the mouth of Echo River.

At the bridge spanning the stream a short distance above, the masts were unstepped to pass under; and here we took to the small boats to relieve the Indians of the tow.

Here at the bridge is a little settlement called Echo; we were on our way up Echo River to Echo Lake, and at the head of Echo Lake another river comes in called Upper Echo River, verily a region of country where the woods seem full of echoes.

Lower Echo River is more like a crooked canal than a river, having no perceptible current and a width of 50 to 80ft. from the mouth to where it leaves the lake, the distance being perhaps a trifle over three miles. The banks are low, in some places swampy and heavily wooded on both sides except for a couple of small clearings on the right hand side going up, and is about as lonesome, God forsaken looking a locality as one could well get into.

With the small boats in the lead we followed the windings of the sluggish stream, but as we kept the heavy pulling Mackinaw in sight our progress was slow, even with no current to contend against; and when we reached the outlet it was nearly nightfall, and the air was so full of haze and smoke that we could not see a quarter of a mile up the lake. To make matters worse a heavy wind was blowing straight down the lake, kicking up such a rough sea that Tom and Louis thought it would be unsafe to try to beat up to the camping place without good daylight to work the boat in.

Between us and the hills to the right was a good-sized clearing in which stood a comfortable-looking hewed log house with a new log barn. In the clear, open barn lot reaching to the water we decided to put up a couple of tents and get some supper, for we were both tired and hungry. As the last bundle came ashore the farmer came down from the house to investigate this invasion of his premises; but on explaining the situation to him he said there was no occasion to pitch any tents or bother about supper; if we would come up to the house his wife would try to scare us up a bit to eat such as they had, and we could bring our blankets and sleep on the floor, as there was plenty of room for us all but no spare beds. Blessed are the Samaritans, of whom Dan Ruttle (our farmer friend) is one, and his good wife is another. We got some blankets and quilts, and to make as little trouble as possible, some eggs, butter, and a piece of side meat were fished out of the provision box to help out the supper, and took our way up to the house with a thankful feeling that we had fallen into good hands. Mother Ruttle, a short, fat, buxom matron, with dress sleeves rolled up to the shoulder exposing an arm the size of a city bell's waist, bustled around and soon had the pork and eggs fried, and a two-gallon pot of tea brewed that was strong enough to loosen the feathers on a loon at one application. A great loaf of most excellent home-made bread, nearly a foot square and half as thick, was sliced up, and the other boys and the Indians fell to, while farmer Ruttle and "James Mackerel" stood around outside in the dark waiting for the second table, "fit muskeeters" and got better acquainted. We made our beds in the parlor and a small side room, both guiltless of a carpet but scrupulously clean and neat, and lay down to pass a rather uncomfortable night, for the mosquitoes were troublesome, and a pine floor is several shades harder than the bosom of mother earth; but we were tired and worn out with the day's work and vexations, and daylight was abroad before we were aware of it.

Declining an earnest invitation to wait for breakfast, we soon had the Mackinaw loaded, and with the small boats again in the lead took our way up the now placid lake to the "mine dock," where we were to make our camp, not without a promise that some of us would visit our neighbors frequently thereafter, as Mother Ruttle had agreed to bake us a loaf or two of her famous bread as needed, and supply us with milk, butter, eggs, and a chicken or two occasionally if our appetites took a turn that way. (All we could prevail on these good people to take, except our thanks, for the trouble they had been to on our account the night before was just one dollar; they said it was enough and wouldn't take any more, and their charges for everything we got of them afterward were just as reasonable).

A pull of two good miles up the lake more than ever convinced us that our steamer acquaintance, Ben, was a direct descendant of Ananias, for we were not yet half way to the head of it, and it was wider where we then were than its utmost length as given by him. Farmer Ruttle told us the lake was over five miles long and the upper half something more than two miles in width, and from our experience with Michigan miles this seemed to be about correct. He said that the bass fishing in the lake was first-class, but we were too early for it; the same story that had been dinned into our ears ever since sighting Detour Point. "Pickerel, pike and muskylunge were also abundant," he said, "but the pickerel were not biting at all, just now, and wouldn't for a month or more."

This part of it was good news, for as old Ben Renshaw would have expressed it, "Ef ther' was ary fish on the face o' this livin' airth that we wus tired of ketchin', it wus them durned 'snakes.'" However, our rejoicing was brief, as it turned out that neighbor Ruttle, like most of our Canadian brethren, had fallen into the error of calling a wall-eyed pike (pike-perch) a pickerel, and a pickerel a pike; and there is probably not a day in the year, Sundays not excepted, that a "Canada pike" will not bite; but we consoled ourselves with one of old Ben's scraps of philosophy, "that ef we couldn't ketch any bass, 'snakes' an' muskylunge, an' trout was good enough for the Joneses, for they never was used to the best of everything nohow."

The landmark by which we were to find our camping place was a warehouse near the water's edge well up to the head of the lake, built by a copper mining company for storing tools and supplies pending their need at the mine, and a low dock of small pine logs reaching 40 or 50ft. out in the lake in front of the warehouse, known as the "mine dock." An easy pull of about an hour took the small boats alongside the little dock, and a light breeze springing up, the Mackinaw spread her wings, and half an hour after the calamities were ashore and we were looking around for soil enough to hold a tent pin in this region of rocks for our first camp in the Queen's territory.

The warehouse proved to be a great affair of at least 15 by 20ft., as near as we could guess its dimensions without measuring, sided up and down with inch pine boards and covered with a good tight shingle roof. Three or four boards had been torn off near the big door (which was closed and fastened with a padlock), giving free access without the trouble of bothering the fastenings, an arrangement that Sam figured out to be "a heap handier 'n a pocket in a shirt." Inside we found the wreck of an old wheelbarrow, some bars of ½in. iron, some dirt and a good pile of clean hay in one corner, which makes an excellent bed if good browse is scarce; and we decided to make use of the warehouse instead of pitching the tents. Old Sam cut some "bresh" from an adjacent thicket, of which he made a broom, and soon had the place swept clean; the boxes were carried in and opened, and while the others arranged the beds and fixed up for housekeeping, Louis and I set up "that stove" a few yards back of the house (this is for the especial eye of brother "Seneca") and in fifteen minutes had a roaring fire belching black smoke and flame out of the pipe, and breakfast under way.

After breakfast a table ten feet long was built of boards brought from the saw mill, a big fly stretched over it and the other stove put up (the Jedge had brought along his "four-holer")—a proceeding which I fear would have paralyzed Brother "Seneca" had he been there—and then we took a few minutes' rest, which were passed in "a genuine and absorbing interest in the beauties of (surrounding) nature," right there in presence of those two harmless looking camp stoves. The fact is we have come to believe that a camp stove has nothing whatever to do with one's love of nature or a keen relish for sport with rod and gun. It is a matter of preference and convenience, and above all, comfort in the matter of camp cookery; a question of preference as between contented serenity over a simple sheet-iron stove, and smoke-blinded, watery eyes, smothered profanity between gasps as you dodge the blinding, stifling puffs that pursue you from every point of the compass as you sweat and swear over a coffee-spilling, frying-pan-upsetting, "onsatisfyin'," tribulation-breeding open fire, as usually constructed; and moreover, I believe Brother "Seneca," or any other brother, would devour a flapjack cooked in a frying-pan over "that stove of ours" with as much relish as if it were baked on the hardest, and smoothest, and cleanest of hot flat stones; and then turn and "absorb the beauties of a rare landscape" (slightly misquoted) with as keen a zest as moved him in the absorption of the flapjack.

Are we to be denied the privilege of worshipping in the great outdoor sanctuary of the woods and charged with not possessing a genuine love of nature because we choose to surround ourselves with a few comforts that can be conveniently transported to a camp? Must we be classed as "tenderfeet" and rated with those who see nothing in the woods but trees? and read out of the brotherhood on account of a little harmless, comfort-giving sheet-iron stove that may be carried with one hand? Must we fall back on the primitive methods of our forefathers before we can "be possessed of a genuine and absorbing interest in the beauties of nature?" If this be so we had better leave our tents, our frying-pans and our match boxes at home, and go to the woods equipped only with blanket, flint and steel. We hold up for the camp stove when it can be taken along with as little inconvenience as a box of tents or provisions (otherwise we can get along with a couple of ½in. square iron bars, a matter of three feet long, or a plain open fire with no accessories); and we don't believe it lessens in the smallest degree our appreciation of the beauties of nature in whatever shape they may come to us, or our inborn and abiding love of the woods and the waters of the forest and stream. But this is a disgression, for which I trust the brethren, and especially "Seneca"—may his days be long in the land—will not "hold a skunner agin me."

Making camp was accomplished in much less time than usual, thanks to the little warehouse; and it was yet early in the day when rods were jointed and preparations made to go a-fishing: to make a study of the water; look up the likely spots for bass; spy into the lurking places of him of the vicious eye and the terrible jaw—the mighty maskinonje—and bring sure to gaff, as the signs in the waters made certain promise, a goodly score of sneaking pickerel (the pike, by reason of being on the wrong side of the border line).

The Indian boys ran up the sails of the Mackinaw to a gentle breeze blowing from below, and stood away from the little dock on a "larboard leg" down the lake for home without a word or sign of adieu; in fact, they had said nothing since leaving the sawmill dock the day before, except an occasional grunt or a word or two at long intervals addressed to Louis or each other in gutteral Chippewa. They were handy with their boat and good boys to work, but they were about as talkative and companionable as their imitation wooden brethren that infest the cities, and the expression their stolid faces would have made a green frog look cheerful and hilarious in comparison. The last seen of them they were well down to the foot of the lake under bare poles, the big oars shining in the sun as they rose and fell in lazy, measured stroke, which took the place of the fickle breeze which soon after spent itself in a feeble flurry among the pines and cedars at the head of the lake.

Selecting a couple of dozen frogs from the menagerie box (only about forty or fifty of them had been jolted to death on the journey), old Sam and I left the dock in the smallest of the three boats for a cruise of observation that would doubtless bring back the old smell to the frying-pans at supper time. We left the other boys to finish slicking up the camp, try the waters for bass or snakes up and down shore from camp, or make the acquaintance of the little trout stream, the mouth of which was only three or four rods above the warehouse.

We followed the trend of the shore around to the upper end of the lake, a quarter of a mile or more from camp, along a belt of bulrushes and grass where the water looked very "pikish," fishing carefully with the choicest of speckled frogs, but not a hungry long-snout, bass nor wall-eye seemed to take the slightest note of our presence; but we were not discouraged, for years of experience had taught us the virtue of patience in waiting on the whims of fish. "If they won't bite to-day, they will to-morrow," has soothed the heart of many a disappointed angler at the close of an unsuccessful day, and Sam and I went on our way, content that if the fish wouldn't bite we could enjoy the beautiful day and the wild, rugged scenery around us, and be none the worse for our contemplated trip around the lake. Near the upper end, on the left, a thick growth of trees and bushes extended back from the water a few rods to the foot of an almost bare, perpendicular cliff of brown-gray rock, rising 200ft. or more above the lake, scarred and seamed and rent into a thousand fantastic shapes, with here and there a hardy, dwarfed pine or cedar hanging out from the rough wall, held in place by its tough roots that found a holding in the teams and fissures that zigzaged over the ragged front of the time-stained and weather-beaten crag, drawing sustenance to prolong their stunted lives, it seemed, from only the bare rock. On a dead spike projecting out from one of these, three crows were having a vigorous cawing match because the limb was not long enough, according to their views of elbow room, to hold all three at once, and as each crow seemed to think that particular limb the only one in the vicinity worth perching on, they were crowding each other off the end by turns, the one forced to take wing cawing furiously as he circled around a moment before taking his place next to the cliff; when the crowding process would begin again till the outer one was forced from the limb under vociforous protest, addressed to the other two in selected invectives in the original "crow."

As we stopped the boat to watch the performance, a shadow swept across the face of the rocky wall near the noisy trio, and instantly the show was at an end and the three egg-sucking thieves sought the shelter of the tree-tops below in silence and were lost to sight.

Looking up to discover the reason of their caws-less flight we saw a magnificent bare-headed, snowy tailed American eagle high overhead slowly flapping his way in the direction of Upper Echo River, but whether the crows had made him out to be one of the "crow-eating" variety in search of a lunch, or whether they had suddenly remembered something left below in the cool shadows of the woods which called for immediate attention, we have never been able to determine.

"Crows are queer critters," said old Sam as he stood up to make a cast in toward the rushes, "full o' deviltry an' cunnin' an' tricks, a new-fangled game o' 'crow-quet' they were playin' on that limb up there, I reckon," and as the crowsfeet around his hone-t old gray eyes contracted into a faint smile he hummed in a Michigan-sawmill-like tone:

> "Quoth the blackbird to the crow,
> Down to the cornfield we will go,
> For it's bin our trade to pull up corn
> Ever since old Adam was born."

Thus relieved he sat down with his eye on his line waiting for the expected bite as it swung around astern when the boat gathered headway under a few quiet strokes of the oars.

Just here we found out how the lake must have received its name. Having occasion to change the oars on account of a slight unevenness in the pull an accidental rap of one of them against the boat was repeated in the woods against the base of the cliff with startling distinctness, and a shout from old Sam was echoed in the same frayed and ragged tone in which it left his unmusical throat.

We amused ourselves like a couple of boys for awhile "hollerin'" and shouting a word or two at a time to hear the echo "talk back," but when we had passed a certain point we could get no response, and we turned our attention to the more serious matter of catching a few fish for supper and breakfast.

We had plenty of pilot bread, salt pork, bacon, dried beef, beans, eggs, butter and other plain groceries in the camp, but we wanted fish; even the despised pickerel would taste better now than the most toothsome dish Louis could devise from all our stores.

Just now we were at the very head of the lake off a little bay where the Upper Echo River came in, winding, as we afterward learned, around near the base of the cliff through woods and bushes so dense that we could not determine the locality of the mouth; but as we were more concerned in the waters of the lake a search for it was left for another day. With quiet stroke we skirted along the rushes, admiring the wild, rugged beauty of the towering cliff, the green clad hills sloping down to the water nearer the camp, and the placid lake veiled in a thin blue haze that softened the rougher points of the high, rock-lined shore a mile or more below the camp, when as we passed a clump of bulrushes a hundred yards out from shore, a sharp warning note from the click of old Sam's reel told us that mischief was afoot, and in-

stantly the beauties of the landscape were out of sight and mind, and the keener instincts of the angler aroused for the coming fray at the first musical turn of the reel handle. A noiseless, backward sweep of the oars stopped the boat, and Snakeroot was on his feet with a world of expectancy in his eyes, leaning eagerly forward awaiting the next move of the fish, which had stopped after running off twenty or thirty feet of line.

"Pickerel, from the symptoms," said Sam, and very gently the point of the rod was raised to "feel of him," and as the line tightened the fish made a quick dash, jerking the rod down straight, which knocked the curve of anticipation out of old Sam's spine, and with a smart "swipe" he "smote him full sore," and the first battle of the campaign was opened.

Pulling out three or four rods from the rushes, having quickly reeled up to prevent fouling the lines, the "skipper" held the boat in position to watch the fun, but the fight was short and uninteresting. Foiled in two or three efforts to reach the rushes, the fish swung out in the lake and went by the boat with a rush that made the line hiss, but the pull of the rod stopped him inside of thirty yards, and he was reeled back with little resistance to within striking distance with the gaff—a villainous-looking Canada pike of four or five pounds.

As he lay there slowly working his pectorals and glaring wickedly at us, I reached out and hit him a smart whack on his partly exposed head that stunned him for an instant, and reversing it, jerked the steel through both jaws and lifted him in the boat, where the club finished the murder, for it does look like murder to kill a brave fish that has fought a good battle and lost against superior strength and generalship, even though it be a piratical, predacious pickerel.

With a grin of intense satisfaction, but without uttering a word at scoring the first fish ahead of the skipper, old Sam hooked on another frog and we resumed our way around the head of the lake at a slow pace that would keep the frogs a couple of feet or more under the water.

As we passed a patch of "muskrat" grass a little further along, the music of the click brought Sam to his feet again, and with the tightening of the line and the strike a moment later, a bass went into the air with a glorious leap that made us hold our breath until he struck the water with a splash and the rod bent in a graceful curve, proclaiming that he was "still thar," as Sam tersely expressed it. Then ensued a brief, fierce struggle, old Sam silent and unmoved the while, except for a subdued chuckle and a sparkle in his eyes that betokened the intensity of his pleasement at "hanging" the first bass.

Once again after a wild rush the fish left the water, only to fall back to his death; for the hook still held and at last he was gently led alongside and lifted by thumb and finger in the boat, a clean built, black-backed, small-mouthed bass of not quite 3lbs weight, as registered by Sam's "instantaneous pocket scale."

This was encouragement for sport ahead, but we fished diligently along for a mile or more down the south shore without striking another fish.

The water was shallow, 4 to 8ft. deep, for 200yds. out from shore, with a scattering growth of bulrushes that marked the line of deep water, good looking territory for long snouts; but we could lure them from their hiding places with neither frog nor troller.

Along this shore to the very water's edge was a line of woods that rose in gradual ascent to the top of the mountain, a half mile back, so dense that from the camp across the lake it looked like a great green carpet spread evenly over the entire slope. It was a rare and ever-pleasing picture, and Old Knots spent hours in his comfortable, high-backed camp chair, placed at the end of the little dock, lost in silent contemplation of "his landscape," as he called it, and filled with an "absorbing interest in the beauties of nature," utterly oblivious to the "near adjacency" of that hapless camp stove that had ministered to his comfort in so many pleasant camps before.

On bright afternoons, when the sun had got around where its slanting rays brought out the full glory of the landscape, he would sit there in silence till the shadows from the hills behind fell on the camp, gazing abstractedly across the lake, weaving, as we fancied, quaint figures in the carpet of living green, the while yanking out with lancewood switch some heedless sunfish or pert young perch that had fanned lazily in near the dock, attracted by the wiggling worm, that to its simple mind had no connection with the harmless-looking little stick projecting motionless over the water—this, as he said, "just to add spice to his enjoyment." Sitting there with his landscape spread out before him, with his rod, his pipe—the old brown friend that had solaced him for many a year in sun and shadow—he was a picture of serene and indolent content; his cup of happiness was full to the brim, and if ever honest angler got full measure of enjoyment out of his camp with the least possible exertion, Old Knots got it at the camp on Echo Lake. KINGFISHER.

A SALMON SCORE.

THERE is one club of anglers, holding the lease of a Canadian salmon river, who have abundant cause to be satisfied with their season's work. The fishing began June 15 and was continued until July 1. Six fishermen were on the river, and their catches were as follows:

	Number.	Average Weight.	Total Weight.
No. 1	93	21⅝lbs.	2,031lbs.
No. 2	44	23½ "	1,033 "
No. 3	72	24⅝ "	1,778 "
No. 4	51	22⅝ "	1,152 "
No. 5	74	23 "	1,704 "
No. 6	70	22⅛ "	1,548 "
Total	404	22.881bs.	9,2481bs.

THE BIG BASS RECORD.—A correspondent, A. F. N., reports from Renovo, Pa., that a black bass of large size was taken in the West Branch of the Susquehanna, at that point, last week. It measured 29¾in. in length and weighed 9lbs. 15oz. It was speared by torchlight, and surely deserved a better fate. Another black bass which deserves to go on record was captured at Greenwood Lake, July 24, by Nat Davy, a guide who was at the time out with Messrs. H. J. Phillips and J. N. Lewis. It was a big-mouth, measured 24¼in. in length, 16¼in. girth, and weighed 7¾lbs. It was taken by skittering close to shore.

TROUT OF THE POOLS.

CENTRAL LAKE, Mich., July 18.—*Editor Forest and Stream:* I had hoped that what I have heretofore written about late spawning trout would have moved others of your correspondents to state facts about their experience in this regard, and relating to other waters than those which I have fished. Perhaps we shall yet hear from some of them, for I know that there are those who have caught many more trout than I this season. I yesterday took seven, of which four contained spawn, apparently ripe. I regret that I cannot truthfully say that I was sorry that I had killed these trout, for some of them were unusually large for these waters, and one in particular I had, in Irish phrase, put my "comether" on some time ago.

One of your entertaining correspondents not long since alluded to the fact that in the experience of most anglers there are pools apparently fitted to contain good trout, yet there they are "never" taken. I know such places, and have usually found the explanation of the apparent dearth of fish to be that the pool was tenanted by a trout whose wisdom rendered him proof against the ordinary allurements of the angler, while his size and pugnacity kept other trout from occupying a portion of his chosen retreat.

With this opinion, I one day, some three weeks ago, approached with great caution a bend in a brook where the water swirled in an eddy beneath overhanging trees and bushes, and had scooped beneath the bank a glorious lurking place for a large trout. I had always tried it in passing, but invariably without success. Creeping cautiously behind a large cedar tree, I made a cast beneath the pendant foliage, which landed my bait (not fly) several feet up stream and quite out of my sight, for it was much as if I had been fishing from a sentry-box, and casting around to the back thereof. The bait was taken, but not so greedily as to lead me to suppose that I had aroused a whale; and when after a moment I lifted the tip, I was surprised at the fuss kicked up at the end of my line. Steering the trout clear of roots and bushes, I was cautiously drawing him in, when the hook pulled out and I left lamenting.

I yesterday found myself at the same place, and no bite. Some five yards distant was a similar pool, only more brushy, and which, like the first, had always disappointed me. Over this the cast was made, and the bait taken exactly as my trout had seized the other. I gave all the time necessary for gorging the hook, perhaps a little more, as I wished to make sure work. Then I moved my rod tip south and by west, so as to clear the branches, and I had him.

In a pool where there were about twenty roots and sticks to the square foot, nothing is easier than to let the trout foul the line over some of them, but in about two minutes he was within reach, and shortly lay quivering among the hepaticas. This trout weighed 15oz. In that brook they seldom exceed ¾lb. to ¼lb.

Having deposited my capture among some freshly gathered ferns at the bottom of my creel, I moved down stream to a large log which stretched across, below which was a pool where I seldom missed a capture. Making a cast, I was rewarded by a minnow, and supposed there were no trout there. Another cast sent the bait a few feet further on, and it was taken. The trout was a large one, and before I had landed him the snood parted close to the hook, and the fish disappeared. I stood upon the log, looking disconsolately into the clear, shallow stream, when behold! my trout appeared in sight and evidently in trouble. He darted here and there, half turned upon his side, and floated near the surface with his nose above water; then settled to the bottom of the pool, just under my eye. While I was gazing, surprised, and uncertain what I should do next, the trout again rose near the surface, and lowering the butt of my rod I tapped him on the head, and then stepping into the brook, I managed to slip my hand under his gills and to lift him out of the water. He weighed ¾lb.

The hook had caught in his throat, and, as I concluded, disorganized his breathing apparatus. He would probably have died had I not succeeded in capturing him.

KELPIE.

NEWFOUND LAKE FISH.

IN reply to a letter of inquiry which we sent to Commissioner Riddle, he writes of the great lake trout of Newfound Lake, New Hampshire: "In reply to your inquiry of yesterday I inclose you two paragraphs from the Manchester *Union* of July 13. The fish are a superior quality of lake trout; on account of the very clear water they are much better eating than our common lake trout. The weights of the fish were given by Capt. R. W. Musgrove, of Bristol, and the names of those who caught them. He is a reliable man, and his statements are correct. The Legislature now in session will make an appropriation to build a hatching house at Newfound Lake, and it will be complete this fall in season to fill the troughs full of eggs. No finer landlocked salmon can be found in this section than at Newfound Lake, excepting at Sunapee Lake The commission have planted thousands of young fry within the past four years and thousands of young salmon can be found in the tributaries of Newfound Lake at this time. GEORGE W. RIDDLE.

The *Union* describes Newfound Lake as "one of the most charming bodies of water that dot the face of the earth, a gem of which New Hampshire may well be proud. Lately it has become famous by reason of the catch of lake trout and landlocked salmon, which has been heralded through the columns of Captain Musgrove's excellent paper. It is needless to say that the people of the towns surrounding the lake are enthusiastic, for in size and number of trout taken no New England lake compares with it. It is about seven miles long and three miles wide at the broadest part, opposite the Lake View House, and of depth, over 200 feet in some places. It has a large watershed, and is fed by Cockermouth River, Fowler's River, and half a dozen or more good trout brooks.

"It is a natural trout water and has always yielded tribute to the spear in spawning time, but has not excited real sportsmanship until within three years. There have been several plants of lake trout and landlocked salmon, and their comparative immunity from pursuit by anglers has given them opportunity to develop remarkably. The introduction of the spoon hook has taught Bristol people that there is more sport in landing a 10lb. trout or salmon in a legitimate way, than in spearing a bushel when they are performing the natural offices of the reproduction of their species, and public sentiment accordingly protects them from vandalism very effectually. Their greatest enemies now are the devouring sucker, eel and shadwrites, which fatten upon the spawn in the fall.

"The notoriety given the lake is drawing sportsmen from all over New England, and while their coming is welcomed and desired, the people about the lake wish to guard against the practical extinction of these desirable fish by the establishment of a hatchery, where the spawn, stripped from the fish, may be hatched out, and the fry, when in some measure able to take care of themselves, returned to the waters of the lake.

"The success of the Commission in increasing the stock of game fish in Sunapee Lake in spite of continuous fishing seems to warrant the attempt at Newfound. Black bass, trout and salmon have contributed to make Sunapee Lake a popular summer resort, and real estate values have increased until hitherto worthless pasture lands are bringing from $200 to $1,000 per acre for building lots for summer cottages. The mammoth trout of Newfound are sure to draw increasing numbers of fishermen annually, while the lake affords peculiar attractions for cottagers. Its outlet is two miles from Bristol village, where the visitor must leave the cars, which precludes the possibility of the lake being thronged with excursionists. It is preëminently a place for fine summer residences. The present dream of people interested in its development is a small steamer, with a stage line from Bristol to Plymouth, the latter being only about ten miles from the upper end of the lake."

The record of fishing in the lake, as kept by Capt. R. W. Musgrove, editor of the Bristol *Enterprise*, gives the following scores for five weeks for trout and salmon:

"The season opened April 16 and practically closed May 23. During this time W. C. Ross and John F. Rogers, of Bristol, caught one trout weighing 10lbs., another 15lbs. and four others, weight not given, also a landlocked salmon weighing 16lbs.; George H. Fowler and C. N. Drake caught 19 trout weighing 185lbs., that being 4 of 10lbs. each, three of 9lbs. each, 2 of 7lbs. each, 2 of 3lbs. each, 2 of 12lbs. each, 2 of 6lbs. each, 1 of 13lbs., 1 of 11½lbs., and 1 of 20lbs.; W. H. Wheeler and Henry Boutwell, Fitchburg, Mass., 2 trout, one weighing 5 and the other 13lbs.; Fred Holmes, Hebron, 3, weighing 8, 10 and 8lbs., also 2 trout and a salmon, weights not given; George Follansbee, Bristol, 2 trout, one weighing 8¾ and the other 7lbs.; Charles Alden and George H. Wood, Laconia, the former catching 1 of 6¾lbs. and the latter 4, weighing 5½, 8, 4, 8¼lbs. each; E. F. Pike, Bristol, 5 weighing 47½lbs.; Capt. W. A. Bickford, Bristol, 3 weighing 12, 10 and 7lbs. each and 2 weight not given; Marshall Ballou one weighing 9 and another 8lbs.; Moses Noyes, Craig and Lund, Nashua, 3 trout, weighing 7, 8 and 12lbs.; F. W. Colley, Bristol, trout weighing 8, 9, 10, 5, 10 and 9lbs. each; William Ackerman, Bristol, one weighing 9lbs.; H. Tukey, Bristol, 2, 8¼ and 5¾lbs. each; James Colley, Bristol, 1 of 8lbs.; Charles Mason, Bristol, 4, weighing 12, 10, 8½ and 5lbs. each, and 2 salmon, weighing 8 and 13lbs. each; Albert Hill, Boston, 1 of 8lbs, and Henry Thayer, Boston, 1 of 10lbs.; Frank Huse, Ashland, trout weighing 5, 6 and 10lbs. each; Frank Sanborn, Franklin, 1weighing 8¾lbs.; N. Adams, Bristol, trout weighing 9, 10, 12 and 10lbs.; A. Adams, Bristol, trout weighing 9, 4 and 12lbs. each; Capt. Saunders, Bristol, trout weighing 11, 5 and 6lbs.; Frank Mudgett, Lake Village, 1 trout weighing 19¼lbs.; Chas. Fox, Hill, 1 trout weighing 8lbs.; G. Sumner, Lawrence, Mass., 1 trout weighing 10lbs.; F. F. Roby, Boston, 1 trout weighing 12lbs.; Phillip Adams, Bridgewater, 2 trout weighing 7 and 8lbs.; Henry Rogers, Hebron, 1 trout weighing 8lbs.; S. S. Clark, Hebron, 1 of 8lbs.; Fred Hall, Bristol, 1 of 12lbs.; Dr. A. Q. Ballou 1 of 8lbs.; Gen. H. L. Porter, Concord, 1 of 12lbs.; Gust Walker, Concord, 1 of 10lbs.; James Ballou, Bristol, 1 of 11lbs.; C. H. Hinds, Franklin, 2 of 10lbs. each; Darius Cross, Bristol, 2 landlocked salmon; D. H. Sleeper, Bristol, 1 of 4¼lbs. and a 8lbs. salmon; Rev. C. H. Taylor, formerly of this city, 6, 3 of 9lbs. each and the others of 10, 11 and 5lbs., one salmon weighing 4lbs., Mr. Taylor's catch being the result of two days on the lake; J. F. Rogers, Hebron, 3 trout and 1 salmon, weight not given, making a total of 109 trout, weighing 976½lbs. and an average of 9lbs. each."

SUSQUEHANNA RIVER FISHING.—Harrisburg, Pa.—The Susquehanna is one of the most magnificent rivers in this country for the small-mouthed bass and the Susquehanna salmon (pike-perch). It is not necessary to mention any particular location, as there is good fishing from tidewater, at Port Deposit, to Renova on the West Branch, and in the entire Juniata. Harrisburg is well supplied with anglers; private and social club houses are numerous and well appointed, and located near good fishing grounds. Many visitors from distant cities have gone home full of praise for the generous hospitality shown them, and highly pleased with the large strings of fine fish caught. While there are a good many who depend upon the delusive fly, the majority stick to the stone-cat and the lamprey eel, which are the most killing in these waters. Since bait is so scarce and high priced some of our people are trying a new and lazy method to capture the wary bass. When the water is muddy rods and lines are discarded and parties go out in row boats, and by keeping in near the grass, close to shore, the fish are frightened into jumping out of the water and frequently into the boat. A short time since, a party of four, at Marietta, had thirteen bass jump into their boat. As the writer, with some gentlemen, was returning one dark night from an island in the river, holding a lantern to guide us, three fine large bass jumped into the boat. They were, no doubt, attracted by the light. We have quite a number of lady anglers here who handle the rod with a skill equal to that of some of our oldest veterans. One of them, Miss E., successfully landed a black bass weighing 4lbs. 13oz., and another bass, weight 3lbs. 8oz., was taken by one of our other lady anglers. Louis Kapphan, with Mr. Hartz, at Coxestown, took twenty-five bass, the largest of which weighed 4¼lbs. Geo. Meredith, a railroad engineer, captured fifteen bass at Dauphin, the largest weighing 6lbs. I hope to give you some good records later on.—DWAIR.

BLUEFISH AT THE MOUTH OF THE MERRIMAC.—It is reported that a bluefish was caught near the mouth of the Merrimac River on July 22.

HAUNTS OF BOSTON ANGLERS.

THE season is well advanced, but the trouting is not yet entirely over. Reports continue to come in of good catches. The streams in New England are very high for the midsummer season. Abundant rains have kept them up and the vacationist has a better chance for trout. This is peculiarly true of the brooks in the region of the White Mountains. A couple of Boston salesmen fishen some of the streams in the vicinity of Mount Washington last week with remarkable success. They report the trout larger than usual. The fishing at Rangeley is said to be holding out better than usual this season. The Houghton & Dutton party, of Boston, have been at their Pleasant Island camps, and the fishing has been good. Salmon fishing at Bangor has not been a success this year, but the reports from the New Brunswick waters are better. Dr. Frank Getchel, of Philadelphia, formerly a Waterville, Me., boy, has been to the New Brunswick salmon waters and has had remarkable success. He claims to be nothing more than a green hand at the business of salmon fishing, though a lover of trout fishing when a boy, yet on the first forenoon he hooked and landed four. In one day he hooked thirteen salmon and landed ten of them. He returns with a paper signed by native fishermen and guides saying that such a feat had never been performed before on the waters where he fished.

But the big men of Beacon Hill like to go a-fishing as well as the common mortals for whom they make laws, even well into the hot weather, and thus deprive themselves sometimes of the annual fishing trip. Senator Daniel Gunn, of Suffolk, has just returned from a two weeks' fishing trip to Country Harbor, Nova Scotia. The Senator has been to the same fishing point before, but last year he was deprived of an outing by the long session of the Legislature. This year he resolved, come what might, to drop the business of making sleepy statutes for the line and fly-rod. The fourth of July he picked up his already packed fishing outfit and just boarded the "Flying Yankee" for St. John, and thence to Moncton, N. B. Thence he went to Truro, New Glasgow and Antigonish, Nova Scotia. Thence his route was by stage, 29 miles, to Melrose. This part of the ride is through a delightful farming country. Mr. Gunn says that the pasturage is "up to the eyes" of the sleek, well-fed cattle, and that the crops are "hiding the fences"—a most delightful country for a cool summer ride. From Melrose it is 17 miles further, by team, to Country Harbor. Here, in their season, Senator Gunn finds the sea trout in all their glory. Country Harbor is at the head of a beautiful sheet of transparent tidewater, flowing in and out, some 12 miles, to the sea. On the north side of the bay are lofty mountains covered with dense hardwood, close down to the water's edge, rendering the scene at nightfall or at moonlight grand and beautiful in the extreme. The artist might visit there with profit, as well as the sportsman, and if both were happily combined in the same man, then that man would be doubly paid for his trip. But Senator Gunn is well satisfied to bring away a good slice of the scenery "in the eye of his memory." All sorts of salt-water fish abound in this bay, and at the proper season, and when wind and tide both serve, the famous sea trout are taken very freely.

Senator Gunn's luck was all that could be asked for. On one tide he hooked and landed sixteen trout in less than one hour. Several times doubles were taken on the fly. Contrary to his usual custom, he put on three flies, with the result of triplets, twice successfully landed. But the crowning cast of all brought up a trout on one fly, a pollock on another, and a perch on the third. At the same moment a fishhawk and a gull were soaring above his head, and while he was landing this most remarkable catch each dropped into the water and secured a fish. The Senator concluded that that was a lucky day for all hands. To say that our good friend had a pleasant time is not to over state the story in the least. Senator Gunn is a warm friend of the FOREST AND STREAM, and when he had landed the trout, the pollock, and the perch, all at the same cast, his first thought was, "How will that sound in that much loved paper which comes regularly once a week." Then he thought: "Now, when I get home and tell this story to the boys, even the old wooden codfish in the State House, on Beacon Hill, will wink his eye and smile." There was no room for him on that cast. The only other time that he has ever deigned to move was, when, several years since, some one was making a remarkable speech before the House, and happened to declare that the fishing interests of Massachusetts Bay would some time be of greater value than her agriculture. Then the old wooden fish turned around into the position he is in to-day.

Moose are still plenty in that country. Mr. Gunn saw tracks and signs. Partridges are abundant, and the flocks are large. Rabbits are very plenty. Mr. Gunn thinks that he has found something of a sportsman's paradise, though he has no further interest in it than that his brother sportsmen may share it with him. Good accommodations are to be had at Mrs. McZaren's, Country Harbor.

SPECIAL.

THE KENTUCKY FISH AND GAME CLUB will pay $20 reward for information that will lead to the conviction of any person or persons caught in destroying the fish in the public waters of the State of Kentucky, by the use of dynamite or other explosives, and this club will faithfully promise to keep the name of the informer a profound secret, and consider any correspondence strictly confidential. Address, G. G. BERRY, Sec'y, 234 Fifth street, Louisville, Ky.

PENNSYLVANIA.—A Beaver correspondent writes anent the report of Warden Hague's work, given in our last issue: "Warden Hague received his appointment in June, 1888, and has accomplished in that time more than all his colleagues, as not one of them has up to date brought about a prosecution and conviction.—G. A. S."

THE SPRINGFIELD CLUB, of Springfield, Mass., who have acquired a 300-square-miles fishing and hunting territory in the Lake Amabilish district of Quebec, report great trout fishing. Some of the members declare that they have had a surfeit of trout, and their fishing experience transcended the most ambitious dreams.

FISHING IN THE CHESAPEAKE BAY has been poor during the past ten days owing to the storms.

FISHING IN MASSACHUSETTS.—Wellesley, Mass., July 25.—We have been fishing several times this season, and for the last few times have had very good success. My brother Win and I went up to the lake this afternoon for live bait (minnows, etc.) and then went over to the perch grounds. The perch kept us busy for two or three hours, and we got a fine string of them. Win pullled one to the surface which broke his line and got away. I think it was the largest perch I have ever seen; we both thought him a large black bass at first, but as he turned over on his side he showed his black bands and red fins. I once caught a yellow perch in the same place that weighed 1lb. 8oz.; this one must have weighed all of 2 or 2¼lbs. Toward evening the eels began to take hold, and we soon had the boat so slimy with them that it was unsafe to step about in it, the footing becoming very insecure. I have been up to the farm pond several times this season, but have only caught a few bass so far. The best fishing seems to be right here in our own lake, and for one who likes to catch small fish the sport is good. Frogs are very abundant this season, and many of them are of extraordinary size. I caught one a week ago that weighed exactly 1½lbs. It was the largest frog that I have ever seen except, perhaps, the monster preserved in the Smithsonian.—S. F. DENTON.

THOMAS J. CONROY'S ASSIGNMENT.—It is with much regret, that will no doubt be shared by thousands of anglers throughout the United States and Canada, that we announce the assignment of the old and well-known fishing tackle house of Thomas J. Conroy, New York. Established nearly 60 years ago by the original John Conroy, the firm has changed its title a number of times and was variously known as John Conroy, J. & J. C. Conroy, J. C. Conroy & Co., Conroy, Bissett & Malleson, Conroy & Bissett, and in '83 it took the present style, Thomas J. Conroy. During this long term of years this noted concern has supplied the wants of anglers in every section of the country, and we feel sure there is no lack of sympathy for them in their present trouble. It is hoped that a speedy settlement will be arrived at and that the old concern will once more cater to the angling fraternity. As a sequel to this, and no doubt caused by it, we learn that Mr. Frederick Malleson, fishing tackle manufacturer of Brooklyn, N. Y., has also failed. He was formerly connected with the firm of Conroy, Bissett & Malleson, but separated from them in 1881 and assumed control of the manufacturing department. We are unable to state how disastrous these failures are, but trust the embarrassment will be only temporary.

THE CATSKILL MOUNTAIN WATERS are looking up. Trout fishing there has been restored, until it is now possible to make good catches in many streams long barren of any but fingerlings. A 2lb. trout was secured last Monday by John H. Ireland, who took his beauty from Eastkill Lake, near Onteora Park.

Fisheulture.

LAKE RONKONKOMA.—Messrs. Fred Mather and Prof. Bashford Dean, of the College of New York, are exploring Lake Ronkonkoma, Long Island, with the view of ascertaining its depths, bottom temperatures, and the characteristics of its animal and vegetable life. They report having found bottom in the deepest part of the lake, but as yet have not made the results known. Black bass, pike, pink and yellow perch are found in large numbers in the lake.

THE PENNSYLVANIA FISH COMMISSION have just completed a contract for a new and large hatching house at Allentown in addition to the one already there. This will increase the capacity of the eastern hatchery to double its present size.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 7 to 11.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary.
Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary.
Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.
Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary.
Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Company, Toledo, O. Chas. E. Rowland, Secretary, Box 423.
Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Secretary.
Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y.
Oct. 7 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.
Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.
March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.
March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.
Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.
Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.
Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.
Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.
Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.
Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

IRISH RED SETTER CLUB'S FIELD TRIALS.

ASHBOURNE, Derbyshire, Eng., July 17.—*Editor Forest and Stream:* Presuming that it will be interesting to the readers of your valued journal, I herewith inclose programme of the Irish Red Setter Club's field trials. The trials will begin Sept. 17 at 9 A. M. Seven events are on the card.

No. 1.—The Irish Setter Puppy Stakes, for Irish setters born on or after Jan. 1, 1888, with £5, cup and 50 per cent. of entry fees to first, 20 per cent. of entry fees to second and 10 per cent. to third. Entry 2 guineas for non-members and 1 guinea for members.

No. 2.—The Irish Setter All-Age Stakes, for all Irish setters, with £5, cup and 50 per cent. of entry fees to first, 3 guineas, cup and 20 per cent. of entry fees to second and 10 per cent. of entry fees to third. Entry same as No. 1.

No. 3.—Irish Setter Brace Stakes, for Irish setters, with 5 guineas, cup and 50 per cent. of entry fees to first, 20 per cent. of entry fees to second and 10 per cent. to third. Entry same as No. 1.

No. 4.—The Irish Field Trial Derby Stakes, a sweepstakes of £5 each for setters (all breeds) and pointers whelped on or after Jan. 1, 1888, with 50, 20 and 10 per cent. of the pointer entry fees to the pointers and the same to the setters, and a special 5 guinea cup to absolute winner.

No. 5.—The Grand All-Age Stakes, a sweepstakes of £6 10s., with 50, 20 and 10 per cent. to first, second and third.

No. 6.—The Grand Brace Stakes. Entry and prizes same as No. 5.

No. 7.—Special Prize—The Irish Red Setter Club's Field Trial champion cup, value 20 guineas, to be competed for by the winners in all the stakes. Entries for Derby close Aug. 1. All other stakes Aug. 31. The judges are Dr. J. H. Salter and Capt. J. K. Millner.

The moors are abundantly stocked with game, it lies well and the dogs will be shot over. The absolute winners of each stake, including one dog selected from each of the first prize winning braces will compete for the champion cup. Three of the stakes are open to pointers and setters of all breeds, and three are for Irish red setters only.

The committee have taken every care to frame these trials on a sound and popular basis, and have given every encouragement to owners. In all probability the competitors will be very numerous, and the competition keen, as the time of year is very suitable. The brunt of grouse shooting will be over, and in England a fortnight's sport on partridge will have been had. The dogs will then be in the height of training, condition and experience, and as real work will be done by them, without doubt all sportsmen will look upon the winners of each stake, and the champion cup, as absolutely the best sporting dogs of the year.

Dr. Salter is one of the most respected, experienced and fairest of judges in Great Britian, and every one will have the greatest confidence in his decisions, assisted by Capt. J. K. Millner.

The committee look forward to one of the keenest competitions ever known. It is the first time these trials will be held for open competition, and the committee trust that it will become a most important annual event, and in that case they will endeavor to present a 50 guinea champion cup in the future.

M. H. COOPER.

ENGLISH SETTER BITCHES STOLEN.

ROSECROFT KENNELS, New York, July 27.—*Editor Forest and Stream:* On Jan. 24 last, our English setter bitches Passion and Countess Peg disappeared from the kennel of our Mr. Fiske at Plainfield, N. J. It was not deemed wise to advertise them by name at the time, for obvious reasons; but as all efforts to find them, or any trace of them, have entirely failed, it is believed that they have very probably been removed from this part of the country, and we consider it proper to advise the dog world in general, especially the managers of shows, etc., throughout the country, against the possibility of their being brought to light in some other section. Below is a description of the two, although at least one of them, Passion, would be sufficiently well known to be recognized, at any rate, anywhere in the eastern part of the country. If they, or either of them, should at any time "show up," we should be glad to have any brother sportsman do as he would be done by; and, of course, we will cheerfully pay any expenses incurred in any way.

Passion—7246—blue belton bitch, whelped July 29, '83, by Goodsell's Prince out of Pebble. Was bred by Prof. Rice, of Brooklyn. Rather small—weighs about 43lbs. Head nearly evenly marked, and very much resembling Royal Albert's in contour and marking, but, of course, a trifle lighter; circular black patch over the top of the hips; no other patches, but is heavily and pretty evenly mottled all over. Short stem, heavily feathered and correctly carried; excellent chest, body, quarters, hocks, shoulders and elbows; very strong loin. One of the few good, pure Laverack bitches, and shows her Laverack breeding at the first glance. Her weak points are a trifle throatiness, not very marked, and a tendency when heavy to drop a trifle in the back and pasterns, not very noticeable when light in flesh. Very mild in disposition, but not very free with strangers, and inclined to hunt better for her friends than any one else. Is an excellent quail and partridge bitch; ranges very wide, and with great judgment, as she has had considerable experience

Countess Peg—8290—black, white and tan bitch, by Fairy King out of Countess Floy, whelped June 30, 1885, also small; not far from Passion's size. Black ears with the usual tan linings, and both sides of head black with tan marks on the cheeks, triangular star on forehead with a narrow blaze; triangular patch of black above the root of tail; tan fleckings on forelegs and muzzle; otherwise pure white; stands low behind and raises high in front; head shows the Foreman tendency to a little shortness, as also does the neck; very fine chest, back, loin, ribs, quarters, hocks, legs and feet; coat and feather very soft, full and long; stern short, but usually not well carried, though at times it is carried perfectly. Has lost one toe on right hind-foot, although she does not go lame. Exceptionally quiet and a great pet. In following "to heel" walks very close and always a little on the right hand. Is a good bitch on quail, on which she has been principally used.

WILSON FISKE.

SALE OF SPORTING DOGS AT ALDRIGDE'S.

ON Thursday afternoon the salesroom at Aldridge's in St. Martin's lane was crowded with would-be purchasers of the many pointers, setters, retrievers and spaniels which were to be sold to the best bidder. Among the kennels represented were those of Mr. Lloyd-Price, of Rhiwlas; Sir T. B. Lennard, Belhus; Mr. Assheton Smith, Vaynol, and others, including altogether some thirty-eight brace of dogs, most of which had good characters in the field as workmen. The pointers from Rhiwlas were first offered and had a speedy sale, ten animals fetching 236gs., or an average of about 23½gs. each. Ben Ultimus, by Little Ben out of Bellona, a liver and white pointer, winner of third prize at the late national field trials, realized most money, viz, 50gs.; then Luck of Merioneth, a lemon and white 2½yrs. old dog, by Luck of Edenhall, sold for 40gs.; Belle of Edenhall, his sister, 30gs.; Rowdy, a black and white bitch, 27gs., and Yellow Stockings, by Sixpense out of Golden Slippers, changed hands for 21gs. The other pointers went for less money. An Irish setter, only 15mos. old, sold well for 24gs.; a Sussex spaniel, said to be perfect in work, was not dear at 17½gs., while three retrievers, all well broken, went for 92½gs., viz., Ben, 2yrs. old, wavy-coated, 40gs.; Yarrow,

3yrs., 34gs., and Nell, curly-coated, 18½gs. Seven and a half brace of dogs from Mr. Price realized the excellent sum of 346gs. Two brace of Irish setters from Mr. J. M. Niall brought 52½gs., although one of the animals appeared to suffer from chorea. Sir T. B. Lennard's dogs did not sell so well. The good-looking Chandos, a great winner on the bench and perfect in the field, was cheap enough at 26gs., as was Kite at 15gs., both bought by W. Nicholson, of Ercall Heath; Belhus Duchess and Marcel changed hands at 14½gs. Following these come the well bred and highly broken two-and-a-half-year-old retriever Darkey, 18½gs; Coch-y-Bondhu, a black and white pointer, who ran at the late Kennel Club trials, and a right good dog, 16½gs., and Sam, a retrieving spaniel, 2 years old, a close worker, ran up to 16gs. Charles Bishop sold Blucher of Halesworth privately for 25gs., by no means more than his value; a peculiar colored slate-liver brace of pointers went together for 26gs., well matched they were in appearance; and Bella of Halesworth, a lemon and white bitch, changed hands at 20gs. Ben Hellam, an old breaker, sold two brace of pointers and setters for 48gs., then several lots went for little money, until Woolton Grouse (brother of Woolton Game, sold last week for £150), a good-looking, rather leggy dog, was bought for less than his value by Mr. T. Statter for 20gs. A number of Clumber spaniels were sold, including Barney (16,467), a cup winner at Edinburgh; Dash, a very good-looking dog, and several others, at much below their value, at prices ranging from 1g. to 3gs. each, those from Mr. Assheton Smith's being most promising, and cheap. A handsome orange and white setter bitch, Belle, sold for 10gs., and a well-bred blue and white setter, Ulverston Duke, for 6gs. The next sale, which will be the last of the season, takes place on Friday, July 26, at the usual time.—*London Field.*

MASTIFF IMPORTATION.

MELROSE, Mass., July 27.—*Editor Forest and Stream:* I have imported the mastiff dog champion Ilford Chancellor, winner of the following prizes: First Crystal Palace (puppy class) and Old English Mastiff Club produce stake; first and special Dover, first Frome, first Maidstone, 1886; first and special Crystal Palace, first Newport, first and special Ipswich, first Hull (beating Albert Victor and Victor Hugo), first Southport, challenge Norwich and Chelmsford, 1887; champion Crystal Palace (beating Victor Hugo, Hotspur, Prince of Wales, Montgomery and Admiral under Dr. J. Sidney Turner), first Manchester, first West Hartpool, 1888; first and special Coventry and Guisboro, champion Liverpool, first Otley, Bradford, Harrowgate, Bakerwell and Altricah; challenge Manchester, 1889. He has also won many silver cups and gold medals. He is the best son and best-bred son of champion Ilford Caution. He is also the sire of many promising puppies, including Chocolate Girl, the winning bitch puppy last year at Agricultural Hall, beating the well-known Jubilee Beauty. Also Ilford Cato, first Peoples Palace, 1887; second Crystal Palace and Old English Mastiff produce stakes, 1888; and Ceral, winner of two firsts Ilford, and first Peoples Palace, 1888. E. H. MOORE.

BROOKLYN DOG SHOW.

THE premium list of the first annual exhibition of the Brooklyn Dog, Poultry and Pet Stock Association is now ready for distribution. The show will be held at Ridgewood Park, Sept. 8 to 11. The judges so far announced are Messrs. K. E. Hopf, H. C. Glover, T. F. Rackham, W. J. Stanton and H. F. Schellhass. The show will be held under A. K. C. rules. Challenge classes are provided for each sex in mastiffs and both varieties of St. Bernards, with prizes of $10 and $8, $5 and medal in open classes. Pointers, English setters, Irish setters, Gordon setters, field spaniels and cocker spaniels have one challenge class each, with prizes of $8 and $3, and $5, $3 and medal in open classes. Fox-terriers and pugs have one challenge class each, with $5 and $3, and $5, $3 and medal in open classes. Spratts Patent will bench and feed. Mr. T. F. Rackham is the superintendent, and Mr. Charles Deckelmann, Ridgewood Park, Evergreen Station, L. I., is the secretary. Entries close Aug. 28.

DOG TALK.

THE well-known St. Bernard champion Save died July 3. He was owned by Mr. J. F. Smith, of Sheffield, Eng. Save has long been considered one of the finest specimens of his breed ever shown, and his winnings have been numerous and valuable, among them are the 100-guinea challenge cup, which he won twice.

It has been announced that Mr. John Davidson would judge at different shows the second week in September. Although his services have been requested at other places, it is definitely stated that he will judge the sporting classes at Toledo, Mr. H. W. Lacy taking the non-sporting.

There is a report that Dr. Cryer has sold his pug bitch champion Bessie in England to Mrs. C. Houlker, a well-known breeder and exhibitor of pugs.

Mr. Trenor L. Park, of this city, has purchased from Mr. Alfred George, London, Eng., the bull bitch Mischief, famous as the losing contestant in the recent "bulldog match" between Messrs. Peace and Pybus-Sellon.

It appears that the cropping question was not settled by the English Kennel Club after all. Dr. Turner's resolution as passed only proposes "to consider the advisability of taking into consideration the question of cropping." The matter is now in the hands of the Kennel Club committee, and possibly some action upon the question may some time be taken.

In England it is felony to steal a dog's collar, but only a misdemeanor to steal the dog. An act has recently been introduced into Parliament providing that dogs shall be deemed domestic animals within the meaning of the act relating to the possession of property. It is certainly odd that in law the collar should be rated above the dog. This reminds us of a little circus that took place in an animal store on Park Row, this city, the other day. One of the snakes laid hold of a monkey and slowly but surely gulped her down, the proprietor meanwhile with great presence of mind taking off the monkey's collar, and saving at least so much from the serpent's maw.

PATSY AS A STUD DOG.—Des Moines, Ia.—*Editor Forest and Stream:* On July 23 my Nino whelped thirteen, six dogs, by Claremont Patsy (formerly Patsy), thus one of Mr. Damon's first statements to me, to wit: that "Patsy is a very strong stud dog," has, to a certain extent, proven true. Of course we cannot tell what the puppies will be like until they get some age, but I will say that they are of very good color and have but little white on them. I am glad that the Indiana Kennel Club is going to give Irish setters a chance to distinguish themselves, and we all ought to enter one or more of our dogs and give the public a chance to see what they can do. Mr. Sweeney says he will enter one and I will do the same. Let us all come in and make it a success. For my own satisfaction I would like to see what some of our fine dogs can do in the field with hot competition. In my judgment this is the only way we can find out which are the best dogs to breed to to get fine field performers.—F. H. PERRY.

CUPID'S RECORD.—Englewood, N. J., July 26.—*Editor Forest and Stream:* My Italian greyhound Cupid was a prize winner at the following places: Cincinnati, Richmond, New York, Troy, Albany, Utica, Rochester, Boston, Worcester, and was given hc. at Philadelphia for some unexplained reason. No certificate of merit or prize card was sent me, except in two cases, viz., New York and Richmond. Will you kindly tell me if there is any way for me to prove the above winnings (in case I wish to sell) unless I refer to the A.K.R.—EDITH M. VANBUREN. [The winnings of Cupid are: Second New York, 1887, First, Boston, New Haven, Syracuse, Richmond; and second Cincinnati, 1888. Second New York; first, Boston, Worcester, Rochester, Troy, Albany and Utica, and hc. Philadelphia, 1889. This will probably be accepted by a purchaser of the dog.]

A COLLIE'S HEROISM.—Augusta, Ga., July 23.—Last week the heroism and intelligence of a collie dog was exhibited in this city to a remarkable degree. A little white boy, ten years old, was walking the railroad trestle spanning the Augusta canal, and fell through in water about 6ft. deep. A collie dog belonging to the little boy had already passed over, but on hearing the cries of his young master, immediately jumped in and dragged him to shore, when he was assisted by men passing along. The photograph of boy and dog is attracting much attention in front of one of our galleries.—J. M. W.

TORONTO DOG SHOW.—The bench show committee of the dog show to be held at Toronto Sept. 16 to 19, have decided to offer $1,300 in prizes. The premium list will be ready for distribution this week. In addition to the regular prizes a large number of valuable prizes will be offered. The Governor-General has signified his willingness to become patron, and has donated a special prize of $50, which will be awarded to the best kennel of English setters. The address of the secretary is Capt. C. Greville Harston, Public Library Building, Toronto, Can.

BLACK AND TAN SETTER STAKE.—New York, July 29.—*Editor Forest and Stream:* A mistatement occurred in my letter published in your issue of last week which I wish to rectify. The Central Field Trial Association has offered a special stake of $100 for black and tan setters, providing they receive ten entries and not less than eight starters, the winner to take this stake. My previous letter states that the winner is to be run against the English setters, which is incorrect. Kindly insert the above and oblige JOHN H. MEYER.

OTTAWA DOG SHOW.—We have received the premium list of the dog show to be held at Ottawa, Can., Sept. 9 to 14, in connection with the second annual fair of the Central Canada Exhibition Association. The prizes in the regular classes are $7 and $3, with $5 for puppies. In addition there are a large number of valuable specials already offered and many more are promised. Mr. J. Otis Fellows will judge all classes. Entries close on Aug. 31, and should be made to the secretary, Capt. R. C. W. MacCuaig, Ottawa, Can.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Spray. By Chesapeake Kennels, Malvern, Ia., for sedge Chesapeake Bay bitch, whelped Oct. 16, 1887, by Barnum (Monday—Maryland) out of Nan (Bob—Nellie).

Maryland. By Chesapeake Kennels, Malvern, Ia., for sedge Chesapeake Bay bitch, whelped June 23, 1888, by Barnum (Monday—Maryland) out of Gympsie (Barnum—Nan).

Magnolia. By Chesapeake Kennels, Malvern, Ia., for sedge Chesapeake Bay bitch, whelped March 7, 1887, by Duke (Drake—Fannie) out of Nellie (Dash—Fannie).

Gowrie II. By Chesapeake Kennels, Malvern, Ia., for sedge Chesapeake Bay dog, whelped May 20, 1888, by Gowrie (Sunday—Nellie) out of Twist (Gowrie—Lucy).

Leon. By H. W. Neefus, Elizabeth, N. J., for lemon and white pointer dog, whelped May 27, 1889, by Sancho Pedro out of Sall La Blonde (Ted of Bergen—Duchess Hessen).

Sir Lucre. By Chas. Sidler, Milwaukee, Wis., for apricot fawn pug dog, whelped June 20, 1889, by Lord Nelson (Toby—Queen May) out of Minnie (Cricket—Pansy Blossom).

Althea II. By W. H. Walker, Portland, Ore., for black cocker spaniel bitch, whelped July 14, 1889, by Zero (Banjo—Nellie) out of Althea (A.K.R. 842).

Takawa. By A. E. Pitts, Columbus, O., for white, black and tan markings fox-terrier bitch, whelped June 11, 1889, by Raby Signal (Raby Mixture—Richmond Olivebud) out of Gretchen (champion Bacchanal—Marguerite).

BRED.

☞ Notes must be sent on the Prepared Blanks.

Nellie II.—Barnum II. Chesapeake Kennels' (Malvern, Ia.) Chesapeake Bay bitch Nellie II. (Gowrie—Kate) to their Barnum II. (Barnum—Gympsie), July 13.

Fannie Brown—Glencairn. C. G. Hinckley's (Lee, Mass.) collie bitch Fannie Brown (Clipper—Nellie McGregor) to Jas. Watson's Glenclairn (Glenlivat—Nellie McGregor), May 16.

Roslyn Belle II.—Scotilla. H. C. Folmer's (Shenandoah, Pa.) collie bitch Roslyn Belle II. to Mitchell Harrison's Scotilla (Dublin Scot—Flurry II.), June 25.

Belle Randolph—Nick of Naso. Fleet View & Reading Pointer Kennels' (Lynn, Mass.) pointer bitch Belle Randolph to C. J. Peshall's Nick of Naso, July 21.

Daisy F.—Kash. Thos. Fowler's (Pittsburgh, Pa.) pug bitch Daisy F. (Silver Shoe—Dixie) to A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy), July 9.

Queen Dido—Kash. G. Gillivan's (West Jefferson, O.) pug bitch Queen Dido (Joe—Flora) to A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy), July 19.

Bacchante—Blemton Trump. H. P. Thompson's (Toronto, Can.) fox-terrier bitch Bacchante (Bacchanal—Venatrix) to Macdonald's Blemton Trump (Bacchanal—Tiara), July 3.

WHELPS.

☞ Notes must be sent on the Prepared Blanks.

Magnolia. Chesapeake Kennels' (Malvern, Ia.) Chesapeake Bay bitch Magnolia (Duke—Nellie), May 1, seven (three dogs), by their Barnum (Monday—Maryland).

Spray. Chesapeake Kennels' (Malvern, Ia.) Chesapeake Bay bitch Spray (Barnum—Nan), July 24, three bitches, by Ed. Lynch's Duke (Drake—Fannie).

Fannie Brown. C. G. Hinckley's (Lee, Mass.) collie bitch Fannie Brown (Clipper—Nellie McGregor), July 16, two (one dog), by Jas. Watson's Glencairn (Glenlivat—Nellie McGregor).

Flirt. J. R. Hulk's (Bridgeport, Conn.) pointer bitch Flirt, July 19, fifteen (nine dogs), by F. E. Clark's Vanstone (Tammany—Juno).

Beauty. O. J. Stoddard's (Lynn, Mass.) pointer bitch Beauty (Bonne—Bess), July 24, eight (four dogs), by Fleet View & Reading Pointer Kennels' Spot Dash.

Nun Nicer. A. E. Pitts's (Columbus, O.) pug bitch Nun Nicer (Douglas II.—Dot), July 11, six (five dogs), by his Kash (Bradford Ruby—Lady Cloudy).

Zadie. G. Gillivan's (West Jefferson, O.) pug bitch Zadie (Treasure—Peggie), June 13, five (three dogs), by A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy).

Puss B. G. Gillivan's (West Jefferson, O.) pug bitch Puss B. (Treasure—Peggie), June 4, six (three dogs), by A. E. Pitts's Kash (Bradford Ruby—Lady Cloudy).

Madam Barry. American Kennels' (Boston, Mass.) St. Bernard bitch Madam Barry, July 26, ten (five dogs), by their Gruss Bayard.

Nino. F. H. Perry's (Des Moines, Ia.) Irish setter bitch Nino (Elcho—Noreen), July 23, thirteen (six dogs), by his Claremont Patsy (Frisco—Nellie IX.).

Bessie Glencho. St. Cloud Kennels' (Mott Haven, N. Y.) Irish setter bitch Bessie Glencho (champion Glencho—Flame), July 18, twelve (five dogs), by Dr. Wm. Jarvis's champion Elcho, Jr. (champion Elcho—champion Noreen).

Brown Betty. C. M. Raymond's (West Brighton, S. I.) cocker spaniel bitch Brown Betty (Beauclerc—Dozzle-Dozzle), June 24, four (two dogs), by A. C. Wilmerding's Black Prince (Benedict—Madcap).

Miss Brag. G. H. Carr's (Hartford, Conn.) cocker spaniel bitch Miss Brag (A.K.R. 3997), June 1, five (four dogs), by his Obo V. (A.K.R. 4590); four black, one liver.

Nina. E. W. Fuller's (Hartford, Conn.) cocker spaniel bitch Nina (Brag—Phyllis), June 25, seven (five dogs), by G. H. Carr's Obo V. (A.K.R. 4590); all black.

Lulu Obo. Wm. Shiloh's (Hartford, Conn.) cocker spaniel bitch Lulu Obo (A.K.R. 6501), March 1, two (one dog), by G. H. Carr's Obo V. (A.K.R. 4599); all black.

Gypsy S. R. N. Seyms's (Hartford, Conn.) cocker spaniel bitch Gypsy S. (Newton Abbot Laddie—Dinah), July 21, three (two dogs), by G. H. Carr's Obo V. (A.K.R. 4590); all black.

Pundita. G. H. Carr's (Hartford, Conn.) cocker spaniel bitch Pundita (A.K.R. 6089), March 25, seven (four dogs), by his Obo V. (A.K.R. 4590); all black.

Elora Tatters. H. P. Thompson's (Toronto, Can.) fox-terrier bitch Elora Tatters, July 12, seven (five dogs), by Macdonald's Blemton Trump (Bacchanal—Tiara).

Dusky Daze. W. S. Applegate's (New Albany, Ind.) fox-terrier bitch Dusky Daze (Dusky Trap—Daze), July 20, two bitches, by A. Belmont, Jr.'s Dusky Trap (Dusky Splinter—Spider).

Jessie. John Hackett's (Hamilton, Ont.) Yorkshire terrier bitch Jessie, June 30, six (two dogs), by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ Notes must be sent on the Prepared Blanks.

Gowrie, Jr.—Wave whelps. Sedge Chesapeake Bays, whelped March 10, 1889, by Chesapeake Kennels, Malvern, Ia., a dog each to Edmund Key, Marshall, Tex.; A. L. Crumb, St. Cloud, Minn.; Ed. O. Geran, Manitowoc, Wis., and A. I. Schreier, Dubuque, Ia., and a bitch to H. D. Ford, Chicago, Ill.

Cricket—Pansey Blossom whelp. Stone fawn pug dog, whelped April 27, 1889, by C. G. Hinckley, Lee, Mass., to H. C. Burdick, Springfield, Mass.

Punch. Stone fawn pug dog, whelped April 27, 1889, by Cricket out of Pansey Blossom, by C. G. Hinckley, Lee, Mass., to Thos. Fayhe, Lenox, Mass.

Brighton Queen. Lemon and white English setter bitch, whelped May 12, 1888, by King Fred out of Lady Brighton, by F. M. Shelley, Sheridan, N. Y., to W. D. Bremen, Ind.

Sandycroft Vim. Red Irish terrier bitch, whelped Jan. 16, 1887, by Benedict out of Geesala, by V. M. Haldeman, Milford, Del., to W. Flood, Philadelphia, Pa.

Sandycroft Clipper. Red Irish terrier dog, whelped March 26, 1889, by Dennis out of Sandycroft Vim, by V. M. Haldeman, Milford, Del., to A. B. Frost, West Conshohocken, Pa.

Sandycroft Grit. Wheaten Irish terrier dog, whelped March 26, 1889, by champion Dennis out of Sandycroft Vim, by V. M. Haldeman, Milford, Del., to Dr. E. M. Moore, Jr., Rochester, N. Y.

DEATHS.

Golden Gem. White and tan fox-terrier bitch, whelped Aug. 25, 1888 (Dick—Norwich Belle), owned by C. H. Kobicke, San Francisco, Cal.; from poison.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

G. E. W., Littleton, N. H.—A spaniel has canker in her ear very bad, her eyes run a little, the hair has come off around them; she also scratches a great deal, but has no lice or fleas. Please send me a receipt for it and oblige. Ans. Give five drops of Fowler's solution in the food night and morning for three weeks. Keep the bowels free with teaspoonful doses of syrup of buckthorn and use the following:

℞ Tr. opii..... ℥i.
Bromo chloral..... ℥i.
Aq..... ℥i.
Mix. Let a few drops fall in the ears night and morning.

TUPAC.—What is the dog's normal temperature? I can find no statement of it in standard works on canine pathology. Ans. The normal mean temperature of the dog is 99.4°. This would be slightly increased if the thermometer were introduced into the mouth or rectum.

Rifle and Trap Shooting

RANGE AND GALLERY.

OUR TEAM ABROAD.

LONDON, July 29.—The Massachusetts rifle team were received to-day at the Mansion House by the Lord Mayor of London, who toasted them and congratulated them upon the many successes they have achieved during their visit to England. Major Frost in returning thanks on behalf of the team, said that the courtesy shown by the Lord Mayor to American visitors was proverbial.

LONDON, July 29.—The Ancient and Honorable Artillery Company gave a banquet to-night in honor of the Massachusetts riflemen. Major Jones presided. Mr. Lincoln, the United States Minister, was among the guests. Mr. Lincoln, replying to a toast to the President of the United States, dwelt upon the absence of a military element in America. The Americans, he said, had learned to do without large armies. A stranger traveling from New York to San Francisco, and thence to New Orleans and Montreal, would learn to be no more surprised at the presence of a soldier than at the sight of that remarkable bird called "adjutant."

On Thursday, July 18, Major Frost, in the name of the team, presented their English honorary secretary, Mr. Gratwicke, with a magnificent watch, in testimony of their high appreciation of the services he had rendered to them, and of their regard for him personally. "A gift," says the *Volunteer Service Gazette*, "made in such a manner is equally honorable to the donors and the recipient. Certainly it would have been hard to find any one better fitted for the arduous duties of English Secretary to the American team than the able and cheery quartermaster of the 4th V. B. Devon."

On the day of the departure of the team from Wimbledon the *Volunteer Service Gazette* voiced the sentiment of all British riflemen as follows:

"Our Massachusetts visitors leave Wimbledon this afternoon and go thence to Paris for about a week. They will make but a very brief stay in London on their return, as they are to sail from Liverpool by the City of Chicago on July 31. We are sure that we shall be joined by every one who has been brought into contact with Major Frost and his comrades in wishing them God speed and a happy return home. They have, indeed, been most courteous and friendly guests, and have throughout evinced the utmost willingness to accept all the arrangements which they found existing, inconvenient as some of them must have been to them. Even in the case of the abandonment of the great match with the North London Club, in respect to which some of us might have been disposed to grumble a little, we find our mouths closed by the American marksmen, who decline to admit that they are in any way disappointed, or that any one is to be blamed. We hope that as the Massachusetts riflemen have seen the death of Wimbledon, they will have the curiosity to come and see the birth of Bisley Common, where we can promise them a cordial welcome."

CANADIAN OFF-HAND SHOTS.—The Off-hand Rifle Association shot its fifth match July 23 for the championship, in a series of ten matches. Each club shot over its own range. The greatest enthusiasm prevailed in the association. The last match of the series will be shot at Orillia on Oct. 10, when all teams will be present. The annual meeting will take place on the evening of the first day, and individual prizes will be given for the second day's shooting. A large sum of money will be distributed. A valuable silver medal will be presented to the gentleman who makes the highest average during the series of matches. The score of each team on July 27 and the total matches won and lost is appended:

	Points.	Won.	Lost.		Points.	Won.	Lost.
Orillia	803	46	2	Aurora		20	28
Newtonbr'k	782	41	7	Pt Edward..	691	18	30
Scarboro,...	759	46	8	Midland		13	35
King City..	723	29	19	Alliston..... ...		8	40
Tottenham.	702	25	23	Byng Inlet.. ...		3	45

The sixth match will be shot on Aug. 20.

BOSTON, July 27.—The shooting at the Massachusetts rifle range to-day was done during a pouring rain storm and under such conditions as only rifle enthusiasts would have endured. When the markers came out of the pits they looked like drowned rats. It was one of the worst days ever experienced at this range. Mr. Clarke won the champion medal, Mr. Munroe won the gold medal in the 20-shot rest match and Mr. Kelley won the bronze victory medal. This association has put on two new matches to close Dec. 31, one medal match for rest shooting, and one military medal match for off-hand, with three medals in each match. Following are to-day's scores:

Twenty Shot Rest Match.

J R Munroe	11	11	11	12	9	9	8	11	12	10
	10	12	9	10	9	11	8	9	12	11—205

W P Conway	11	12	9	9	9	10	7	9	9	8—93

Military Match.

G H Wright	3534543434—38	A E Tenney	4324234454—35
H W Atkins	4443344434—37	W L Swan	4434404543—35
D J McGilvray	3543442433—35		

CREEDMOOR.—New York, July 30.—The fifth of the series of marksman's badge and sharpshooters' matches was shot at Creedmoor July 27. The attendance was small on account of the heavy rain in the forenoon. Conditions fair, but bad light, changing from cloudy to sunshine. Following were the winners:

	200yds.	500yds.	Total.
J T Hull, Co F, 23d Regt	21	24	45
W A Stokes, Co I, 23d Regt	22	23	45
F S Kennedy, Co F, 7th Regt	21	22	43
G L Stebbins, Co K, 7th Regt	20	22	42
O E Dudley, Co F, 7th Regt	23	19	42
H M Field, Co F, 23d Regt	19	22	41
J Macaulay, Sup Stf Off	22	18	40

Next matches: Aug. 3, 10, 17, 24, and Sept. 2 (Labor Day).—J. MANZ, Jr., Asst. Sec. N. R. A.

ST. LOUIS, Mo., July 27.—The Pistol Club had a small attendance, and those who did take part made very poor scores. Standard target reduced to 20yds. is used for all shooting. The scores:

S G Dorman	9	8	8	7	10	7	7	10	10	8—84
M Summerfield	9	6	9	10	9	7	7	8	7	8—80
G Alexander	10	6	6	6	7	9	6	10	10	10—78
E Mohrstadt	8	9	9	7	9	6	10	5	8	6—77
A E Bengel	6	4	6	6	9	5	9	7	9	9—70

SPRINGFIELD, Mass., July 26.—Teams from City Guard in competition yesterday at Lake Lookout range made some unusually fine scores, that of the winning team, 196, never having been made at a State match at Framingham previous to 1887, when the City Guard team made a total score of 197. Not 5 teams in the State have beaten the total of 190 made by the other team yesterday. These were the scores:

Team Match.

Martin	5355544—31	Sterling	5554454—32
W E Hosmer	4441545—30	Johnson	5444444—29
Merrick	4444444—28	F L Hosmer	3454453—29
McInnery	4443444—27	S E Smith	3434444—26
H J Smith	4444344—27	Bowers	4343435—26
McDonald	4444443—28	Lamerhirt	4432345—25
Taft	4533144—25—196	F Syner	4544033—23—190

THE GODSAL RIFLE.—A repeating rifle action on an entirely new principle has been invented and designed by Major P. T. Godsal, 4th (Eton College) V. B. Oxfordshire Light Infantry, late Instructor of Musketry, 52d Light Inf antry. It seems to hold an intermediate position between what are known as the bolt and block systems, and it is claimed for it that it combines all the strength and soundness of the former with the repeating power of the latter, and that it is the simplest action and cheapest to manufacture that has yet been produced. The main advantage in the bolt system is that traveling motion which enables it to be used as a repeater, and, having this motion, the Godsal rifle would be taken by a superficial observer to be a "frock-locking bolt." A closer examination, however, reveals that it is better entitled to be called a "traveling block action," since in all its essential features it resembles the block systems. Instead of a bolt 6in. long the obturator in the Godsal action consists of a solid steel cylinder less than 1in. long. This locks by means of 3 lugs into the breech, and it is held, when unlocked, by a hollow carrier containing the mainspring and striker, which travels on a slide or bar, which bar forms a rearward continuation of the lower lug of the breech, and forms a rigid connection for the wood of the butt. Thus the long heavy bolt and the corresponding long trough or breech shoe of the bolt action is dispensed with altogether.

The extractor is of the well-known block action type. The peculiarity of it is that it has a long rod projecting buttward from the claw, and lying alongside the above-mentioned stock-bar parallel with the axis of the barrel. As the carrier is drawn back it strikes at the right moment against a projection on this rod, and so knocks out the cartridge. It is well known that a knock or tap is better than a wrench for breaking the adhesion of a sticking cartridge, and in point of fact, it is said that the pressure of the end of the little finger throwing back the carrier never fails to extract a cartridge with the Godsal action. On the contrary, with a bolt action, a spring claw snaps over the rim of the cartridge, and to extract it a severe wrench, often requiring the whole force and weight of the right hand, is necessary, and the action is jammed shut until the cartridge moves.

In the one model exhibited, the Godsal rifle is fitted with a modification of the present Government magazine, which is attached in a simple manner to the left side of the action. We understand that the Godsal rifle has been not only invented but entirely designed by Major Godsal himself, but the workmanship is by Messrs. W. & C. Scott & Son, of the Premier Gun Works, Birmingham, and the inventor bears high testimony to the admirable manner in which his designs have been carried out.—*Volunteer Service Gazette.*

CHICAGO, July 22.—At the annual encampment at Springfield Company D, First Regiment, I. N. G., won the beautiful Forsyth medal, which has been competed for by companies C, D and E, for the last three years, the terms being best company score at ranges from 100 to 500yds., and also in running skirmish fire at 10 shots between those distances. The highest individual score this year was made by Lieut. Jas. A. Clark, 146 out of a possible 175. Company D won by only .39 on the average. The Forsyth medal was presented to the First by the actress, Kate Forsyth, in return for a uniformed regimental visit to one of her performances in this city. It is an elaborate and beautiful medal, large and expensive, and is recognized as one of the most prominent incentives to marksmanship known to the Illinois State militia. It is at present in possession of Capt. Jos. H. Barnett, who will probably deliver it to Lieut. Clark for keeping until the next yearly competition.—E. HOUGH.

TORONTO.—Capt. Beaty, of the Toronto Field Battery, is making arrangements for a rifle match between a team of eight or ten men of his battery and one from the Hamilton Field Battery. It is likely that the contest will take place on the fine range of the latter.

NEWARK, N. J., July 25.—It was expected that the fine weather to-day would draw a big crowd to the shooting park to take part in the trophy and expert matches, but the party at no time numbered more than a dozen. The conditions were almost perfect for good shooting, and the result was shown in some remarkably fine scores. The eighth competition for the members' trophy was won by H. Williams with a total of 222 out of a possible 250 points on the German ring target. Other scores were: F. C. Campbell 211, C. H. Townsend 208, J. A. Boyken 207, A. Begerow 197, C. E. Derivaux 190. C. E. Gensch 183, F. A. Freiensehner 175, W. M. Drexler 149. The previous contest was also won by H. Williams on a score of 229, J. A. Royken getting 201, J. Coppersmith 195, A. Begerow 195, F. C. Campbell 193 and F. P. Laute 183. In the expert match first place was taken by H. Williams, who scored 69, 66, 66, 65, in four consecutive tickets. F. C. Campbell made 65, 63, A. Begerow 65, 64, 62, 62, 60. J. A. Boyken 64, 63, 62, 61. F. A. Freiensehner 65, 65, C. E. Gensch 64, 61. In the previous contest C. E. Gensch made 68, 60, 59. 57, 57, F. C. Campbell 66, 61, 60, C. E. Edgar 62, 60, 58, P. Bell 58. The expert match will be open at the shooting park on Thursday and Saturday....Entries of teams for the New Jersey championship shoot at the picnic and prize shoot of the Our Own Rifle Club on Aug. 20 close to-day. The conditions of the shoot are 5 men in a team, 5 shots per man at 25yds. on the Our Own Standard 25-ring target. .22-calibre s, with 3lbs. trigger pull only are allowed. Each club may enter as many teams as it chooses, but no man can shoot on more than one team. The members of the winning team will each receive a handsome gold medal, and the team will be declared the champions of New Jersey. The Our Own Club will not enter a team.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

July 31 to Aug. 2.—Dakota Territorial Sportsman's Association Tournament, Aberdeen, Dak. C. Sam Vroom, Secretary.

Aug. 7, 8, 9.—Forester Gun Club Tournament, Davenport, Ia. For particulars address J. W. Howard, Davenport.

Aug. 8.—West End Social Gun Club, of Pittsburgh, Inanimate Target Tournament, Williams Grove, Cambria county, Pa. James Worden, Secretary.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 13, 14, 15.—The Charlotte Gun Club's First Annual Tournament, Charlotte, Mich. E. W. Dolson, Secretary.

Aug. 13, 14, 15, 16 and 17.—Tournament at Leadville, Col.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 3, 4, 5.—Annual Tournament of the Rocky Mountain Trap Shooters, Denver, Colo., Broadway Athletic Park. Inanimate and live targets. Address C. M. Hampson, Denver.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati; $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

LEAGUE SHOOTING.

THE American Shooting Association is not by any means sitting idly by in the matter of encouraging trap work, and in the scheme which Manager Taylor has put forth there is enough for a good deal of discussion. Will such leagues pay? Will they provoke enough rivalry to make them successful in the way of sport? and if they fail on a large scale, may they yet not prove a great benefit on a small scale?

The Association has started out to encourage trap-shooting in every way. Its large tournaments are intended to bring together trap men in a wholesale and wholesome fashion. So far as they can, the Association's managers have rid trap-shooters of many of the annoyances, in the way of unfair classification, which marked the old-time gatherings. They have been fair to the tyro shot, the rising shot, while sitting down fairly and flatly upon the professional who made his marksmanship pay at the expense oftimes of sportsmanlike conduct. Now, the plan of the Association is to keep up the interest in trap matters between the tournaments, and this it is proposed to accomplish by means of the systematic league shoots.

The plan which the Association's circular outlines shows that much thought has been given the project, and it shows further that the Association is prepared to back up its side of the scheme by a liberal advance of funds, if the shooters will on their part get together and do their best at the trap. Major Taylor has worked the plan out with considerable care, and it would seem that it is clear enough to be readily understood by any one at all familiar with shooting contests. As far as possible the utmost liberty has been given every contestant, with proper regard to the rights of the other shooting teams. It is a chance for teams to wipe out old grudges by shooting under the general rules laid down by the Association, and the final scores, when reached, will form good gauges to measure future team work by.

AMERICAN SHOOTING ASSOCIATION.

League Shooting.

THE American Shooting Association presents to the trap shooters and clubs of America the proposed rules for league shooting, and invites their criticism of them. It is proposed to put them to actual test the coming year, confidently believing that this system of shooting will largely increase the interest in trap-shooting, the social intercourse between individuals, and promote that friendly rivalry between the clubs of the different States, so desirable, and at the end of the season create unusual interest when the final ties are to be decided. Although little has been known or said about the proposed league shooting, many leagues have been formed and tendered to the Association for action; and many other clubs have said "We can form a league on short notice, advise us of plans, rules, etc." The Association having had so many matters to attend to, consequent upon its formation and getting properly under way, thought it best not to begin this system of shooting until May or June of next year; in the meantime, through proper criticism and ample preparation, it will be prepared to carry it to a successful termination. There seems to be no reason why this system of shooting should not become a very popular one, creating such popular enthusiasm that the scores and standing of the different leagues will be reported and published in such manner as other sports of the day.

The rules are liberal in permitting shooters in the teams to use any gun, shell, target, etc., in use by their club, with only the provision that they are in accord with the Association's rules. As will be seen, the teams are to shoot but once a week, and at such number of targets as are shot at in usual club practice matches—this will not involve any additional expense to clubs or individuals of the teams. Clubs will find that this manner of shooting weekly on home grounds by a selected team (or meeting the opposing team on home or other grounds) will very much increase attendance at their weekly shoots, for all will be interested in the result, and as the time taken to shoot such matches is short, those in attendance will join in other shooting for the afternoon with increased interest.

Leagues can be so formed from the teams representing them, that they may very many times meet each other on grounds mutually agreed upon, specially so on holidays, where an admission can be charged. In this way every club that is represented in a league can pay its team entrance fee without recourse to other means. Accompanying this, the plan for forming purses is given, and if clubs do not take hold of it, we believe there are few clubs who do not have members spirited enough to form a team to represent their club, assuming all responsibility of entrance and who will shoot through the season with good results to themselves and their clubs. The figures given are based upon there being 20 leagues formed, and show from this small number the largest purses, with smallest amount of entrance money, and the greatest number of chances to win ever proposed. It is confidently believed, from the assurance given from many sections, that 40 to 50 leagues will readily be formed; if so, the purses will be increased accordingly, and if over 50 leagues are formed no doubt the different prizes can be divided, 40, 30, 20 and 10 per cent. and still leave them much larger than in statement given.

It is asked that all clubs throughout the United States will at their first meeting consider this matter, and give such expression concerning it as they may care to, to the manager at the New York office, that such preparation as is necessary may be made for the coming season's work. The details are many and should be thoroughly settled and published by Jan 1 for benefit of clubs. No club should consider that it is too weak to be represented by a team, as the club will be much benefitted by the increased attendance that will surely follow at its weekly shoots, and each team must secure a place in the ties. No doubt in many instances it will prove to be better to have a position of second or third to a strong team than to have first place in a league of ordinary teams. A table of a supposed league in Ohio is published with the rules, showing in the simplest manner how and on what dates teams will meet each other; also a statement of the prizes with the division of them, on a basis of fifty, thirty and twenty per cent., which shows that even the lowest prize that can be won is well worth contending for—should as many as forty leagues be formed, any one can figure out how large the prizes will be by doubling those given as first, second and third, and so on, and dividing them into forty, thirty, twenty and ten per cent. No matter how many additional leagues may be formed above the basis of calculation, on twenty, no additional entrance money will be charged.

It only remains now for the clubs throughout the United States to take action and respond to the efforts of the Association, to inaugurate an interest in the favorite sport of trap-shooting never before thought of, and which will give the public a correct estimate of the strong and popular hold it has among the healthful pastimes of the day. It will also enable the sportsmen to form correct conclusions as to the comparative strength of club against club, State against State, and section against section; for under the proposed rules all sections of our country can compete.

Respectfully submitted J. M. TAYLOR, Manager.

RULES OF THE AMERICAN SHOOTING ASSOCIATION (LIMITED).

For League Shooting.

FORMATION OF LEAGUES.—Sec. 1. Each league must be composed of six teams, formed from the members of a regularly organized gun club. Sec. 2. Any club wishing to enter teams for the formation of leagues in the State in which the club is located, must notify this Association of the fact, giving the name of the club, the address of its president and secretary, and the names and addresses of the men comprising its team (four active, and not over four reserve). Sec. 3. Any club may enter as many teams as there are leagues in its State, but only one team to each league. Sec. 4. The Association will form leagues from the teams that are reported to it; but any six teams from as many different clubs in the same State, may form and report a league to the Association, and if properly formed the league will be recognized. Sec. 5. If more than one league is formed in any State they will be designated as league number 1, 2, 3, etc., of the State in which they are located.

FORMATION OF TEAMS.—Sec. 1. Each team must be composed of four active and not over four reserve men, who are all members of one regularly organized gun club, and also residents of the State in which the league is formed. The name and address of each member of every team must be furnished to this Association. Any four members of each team reported to the Association shall be eligible to shoot in any of that team's contests. No person shall be eligible to shoot in more than one team. Sec. 2. The appointment of the eight men selected shall hold good to the first day of January next following, except in the event of death, or unavoidable or protracted absence, in which case the vacancy in the team shall be filled by the club of which the team are members, by the appointment of another member of that club.

TEAM SHOOTING.—Sec. 1. Each team shall shoot three matches with every other team of its league on days appointed by the Association or mutually agreed upon by the contestants with the consent of the Association. In every such contest four members of each team shall shoot at 25 single rises each and in accordance with the rules of the American Shooting Association (Limited) for trap-shooting. Sec. 2. Teams may shoot all matches on their home grounds at the given scheduled dates for shooting with each other, such matches to be known as telegraph matches, or they may meet on grounds mutually agreed upon. Sec. 3. Any team failing to shoot upon the schedule or agreed date shall forfeit the match to the opposing team.

FRAUDULENT ENTRY.—Should any person, not entitled to enter under the Association's rules, appear as a shooter at a match, the team with which said person is shooting shall forfeit the match to the opposing team.

GUN, AMMUNITION, ETC.—No restriction is placed on the use of any gun, shells, targets, etc., provided they are in accordance with the Association's rules for trap-shooting.

SCORES.—The scores of all matches must be made in triplicate, as provided for in the score book, with ink or indelible pencil, and shall be properly attested by two judges and a referee. One score must be mailed to the Association, and one to the opposing club, within twenty-four hours after any match, and the third retained in the score book. *Note.*—A score and record book, arranged for triplicate scores as required above, and sufficient for two years; also giving the schedule days appointed for each team to shoot, and the names of all the members of their league, will be furnished each team by the Association at a cost of $1.

REPRESENTATIVE.—Each team shall have the right to send a representative to see that the scores of opposing teams are properly made; and the Association reserves the right to have a representative, known or unknown, at any contest, to see that the shooting is conducted according to its rules.

VIOLATION OF RULES.—Any violation of rules reported to the Association, will be promptly considered by the Association's Court of Appeals, and if deemed sufficient cause, the team violating the rules shall forfeit the match to the opposing team.

PRIZES.—Sec. 1. Prizes will be offered by this Association to be competed for by all teams that secure either first, second, third, fourth, fifth, or sixth places in their respective leagues, as follows, and are based upon the condition that 20 leagues are formed, of six teams each, that shoot through the series. If a larger or smaller number of leagues are formed, the prizes will be increased or decreased accordingly. Sec. 2. All winning teams of each league will compete against each other for the prizes offered for their respective places. Sec. 3. All contests for these prizes and all ties in such contests must be shot in accordance with the trap-shooting rules of the American Shooting Association (Limited), and will be under the direction of the Association as to time, place, etc., and four members of each team must shoot at 100 targets each.

First Prize, $1,000.—A first prize of one thousand dollars is offered to be competed for by all teams winning first place in each league. Entrance, each team, $20, with $30 additional when first place is secured.

Second Prize, $900.—A second prize of nine hundred dollars is offered to be competed for by all teams winning second place in each league. Entrance, each team, $20, with $25 additional when second place is secured.

Third Prize, $800.—A third prize of eight hundred dollars is offered to be competed for by all teams winning third place in each league. Entrance, each team, $20, with $20 additional when third place is secured.

Fourth Prize, $700.—A fourth prize of seven hundred dollars is offered to be competed for by all teams winning fourth place in each league. Entrance, each team, $20, with $15 additional when fourth place is secured.

Fifth Prize, $600.—A fifth prize of six hundred dollars is offered to be competed for by all teams winning fifth place in each league. Entrance, each team $20; with $10 additional when fifth place is secured.

Sixth Prize, $500.—A sixth prize of five hundred dollars is offered to be competed for by all teams winning sixth place in each league. Entrance, each team $20; with $5 additional when sixth place is secured.

Entrance money, $20, to be paid on or before..... Each prize will be divided 50, 30 and 20 per cent. among the teams having the three highest scores in first, second, third, fourth, fifth and sixth places respectively as follows:

First prize $1,000, divided $500, $300, $200.
Second prize $900, divided $460, $270, $180.
Third prize $800, divided $400, $240, $160.
Fourth prize $700, divided $350, $210, $140.
Fifth prize $600, divided $300, $180, $120.
Sixth prize $500, divided $250, $150, $100.

Note.—In this arrangement every team in each league secures a place and gets into the ties, where the chance for winning one of

the prizes is less than one in seven, viz: twenty leagues of six teams each, total 120 teams. Number of prizes 18, divided is 6⅔. If twenty leagues are formed the shooters forming teams have a great number of chances for winning, and more money for the amount of entrance, than by any plan ever before proposed.

CHAMPIONSHIPS.—Sec. 1. The team making the highest score in the final contest for the first prize, shall fly the championship pennant of the United States until the close of the contests next following. Sec. 2. The team of each State making the highest score in the contest for the first prize, shall be entitled to fly the State championship pennant of the State in which the team is located for the following .....

FORFEITS.—Scores made by any team failing to pay entrance money, or the amount of additional money when a place is secured, and before shooting ties, will not be recognized; and any team paying entrance money and not paying the additional money, will forfeit the same, with all other rights.

Supposed league in Ohio, with schedule based on Thursdays, commencing May 23, 1889:

Names of Club Teams.	Cincinnati.	Dayton.	Cleveland.	Springfield.	Columbus.	Toledo.
Cincinnati...	{	May 23 June 27 Aug. 1	May 30 July 4 Aug. 8	June 6 July 11 Aug. 15	June 13 July 18 Aug. 23	June 20 July 25 Aug. 29
Dayton.....	May 23 June 27 Aug. 1	{	June 6 July 11 Aug. 15	June 13 July 18 Aug. 22	June 20 July 25 Aug. 29	May 30 July 4 Aug. 8
Cleveland....	May 30 July 4 Aug. 8	June 6 July 11 Aug. 15	{	June 20 July 25 Aug. 29	May 23 June 27 Aug. 1	June 13 July 18 Aug. 22
Springfield...	June 6 July 11 Aug. 15	June 13 July 18 Aug. 22	June 20 July 25 Aug. 29	{	May 30 July 4 Aug. 8	May 23 June 27 Aug. 1
Columbus....	June 13 July 18 Aug. 22	June 20 July 25 Aug. 29	May 23 June 27 Aug. 1	May 30 July 4 Aug. 8	{	June 6 July 11 Aug. 15
Toledo.....	June 20 July 25 Aug. 29	May 30 July 4 Aug. 8	June 13 July 18 Aug. 21	May 23 June 27 Aug. 1	June 6 July 11 Aug. 15	{

Example: Cincinnati will shoot against Dayton, Cleveland against Columbus, and Springfield against Toledo on May 23. To ascertain when matches will take place, take the name of the club in left hand column and follow out to column of opposing club, and the dates will be found where the columns meet. Thus Cleveland will shoot against Columbus May 23, June 27, Aug. 1.

THE CROOKSTON TOURNAMENT.

CROOKSTON, Minn., July 18.—*Editor Forest and Stream:* The Crookston tournament is ended, and the participants have returned well satisfied with everything but their own shooting. The weather was fair but windy, except the last day, when it was fearfully hot, 95° in the shade. Everything passed off smoothly and pleasantly, not a jar or cross word being heard during the three days. The attendance was not as large as it should have been for so excellent a programme, and the club lose some money, but have paid all guaranteed and average prizes in full.

Among the visitors present were Rolla M. Heikes, of Dayton, O., who was permitted to shoot in sweepstakes only; John A. Ruble, of Beloit, Wis., who captured first, a city lot valued at $250; J. H. Benson, of Fargo, who secured second average, a fine Parker hammerless gun; H. W. Jones, of Atwater, Minn., third average, $30; P. E. Hanson, of Lutchfield, Minn., fourth average, $20; W. H. Skinner, fifth average, $15; also R. M. Anderson, Stillwater, who with A. K. Fuller, of Crookston, won first money in the team shoot; Burkhart, the gunman, of St. Paul, "Holt," "Max," "Hamline," "Chandler," also from St. Paul; S. H. Robbins, Fargo, Dak. Ties divided when not otherwise specified:

10 singles, $1.50:

Morris	1111110111—9	Holt	1111111111—10
Skinner	1101111101—8	Burke	1111110111—9

BANDLE DEFEATS WINSTON.

ST. LOUIS, Mo., July 26.—Winston failed to make good his share of the stake money for the match between himself and Al. Bandle, of Cincinnati, and the $100 forfeit which represents $50 deposited by both when the match was made, was paid the latter. But rather than disappoint a large crowd that had assembled at Compton Avenue Park on the 24th, they put up the filled-case watches and shot at 100 birds, with the result that the Cincinnati man won by the score of 91 to 84. The weather was most disagreeable for the shoot, and the birds were only a fair lot. Some were moderately strong, but the majority were rather tired when liberated. Bandle was the first to miss, but Winston soon after dropped to the rear and remained there all through the match. Mr. Jeff Daniels, of East St. Louis, acted as referee. The score:

One hundred live pigeons, London Gun Club rules, guns not to exceed 8lbs. in weight:

J L Winston	2212022021—8

	2112121220—10
	0121112221—9
	1121122122—10—91

The figure 2 denotes killed with second barrel; o dead out of bounds. Summary: Bandle—Tailers, 15; right crossers, 18; left crossers, 12; incomers 19; right quarterers, 20; left quarterers, 16; used second barrel 33 times; dead out of bounds, 4; best run 31. Winston—Tailers, 14; right crossers, 17; left crossers, 22; incomers, 17; right quarterers, 12; left quarterers, 19; used second barrel 39 times; dead out of bounds, 2; best run, 16.

At the conclusion of the above shoot J. E. Hagerty, who suffered one defeat at the hands of Winston, jumped him for another race, and one of the Cincinnati gentlemen who accompanied Bandle offering to back Winston, a match was made at 100 live birds for $100 a side. It took place yesterday and resulted in favor of Winston. It was a much more interesting affair than the one of the day previous, as the score will show. Birds were an average lot. Mr. J. C. Addington officiated as referee. The score:

One hundred live pigeons, modified Hurlingham rules, for $100 a side:

J E Hagerty	2211222212—10	J L Winston	2113211121—10

Summary: Hagerty, tailers 10, right crossers 32, left crossers 18, incomers 21, left quarterers 12, right quarterers 7, dead out of bounds 2, used second barrel 42, best run 23. Winston, tailers 9, right crossers 24, left crossers 23, incomers 27, right quarterers 9, left quarterers 8, dead out of bounds 2, used second barrel 34, best run 28.

TRAP CTAT.

THE annual tournament of the Rocky Mountain trap shooters will be held at Denver Col., Broadway Athletic Park, Sept. 3, 4 and 5. Inanimate and live targets, 3 sets of traps, $2,000 premiums. Only professionals barred from medal contests, class shooting 80, 70 and 60 per cent. It will be under the auspices of the Queen City Gun Club, C. M. Hampson, President, and visitors are promised a grand good time.

The New Jersey State Sportsmen's Association for the Protection of Fish and Game will hold a tournament on the grounds of the Jersey City Heights Gun Club, at Marion, N. J., on Sept. 24, 25, 26 and 27. An attractive programme has been arranged, to include two days at live bird shooting and two days at inanimate targets. This is the first tournament given by the association in a number of years and will no doubt bring out all the old time Jersey shots. The State trophy shot for by teams of three, will be an interesting event and altogether an enjoyable time is anticipated. We understand that the Jersey City Heights boys will leave no stone unturned to give visitors a rattling good week.

CORRY, PA.—At the regular shoot, July 25, of the Corry Gun Club, Laurie took the gold medal, Blydenburg silver medal, Hammond leather medal. Penrose barred from medal contests:

WORCESTER, Mass., July 26.—The regular meet of the Worcester Sportsmen's Club this week was not held at the Coal Mine Brook Range as usual. The day of the meet was also the annual ladies' day. This year the club decided to make a trip to Rutland, which is about a 12-mile drive. A temporary range was constructed in the field back of the Prospect House, and a large tent erected for the ladies. The forenoon was occupied in a social way. Many were occupied in viewing the country, the outlook is very extended and interesting. Then others were engaged with whist and euchre. The first event at the traps after dinner was the fifth contest for the Nolcross trophy. Each man had a possible 30 clay birds. The result of the contest follows: George A. Sampson 27, A. B. Franklin 26, G. W. Russell 25, C. Crompton 25, G. J. Rugg 24, C. H. Howe 24, L. R. Hudson 24, H. D. Jourdon 23, E. T. Smith 23, A. L. Gilman 23, M. D. Gilman 22, W. R. Dean 22, W. E. Fuller 22, Dr. Bowers 21, E. S. Knowles 21, F. M. Harris 21, T. P. Wilkinson 18, V. E. Prentice 18, C. Doane 17, E. F. Swan 15, C. R. Holman 14, F. Forehand 14. This was the sixth contest for the trophy. At the first M. D. Gilman scored 28 and held it for two weeks; then E. T. Smith scored 27 and held it for the next two weeks. At the third contest C. H. Howard scored 28, and it went to him for two weeks; then it went back to E. T. Smith for two weeks, he having scored 26 with two others, and in shooting off the tie broke every one of the ten balls. At the fifth contest it went to C. B. Holden for two weeks, and at this week's contest it was secured by Sampson. The next contest will be week after next.

JERSEY CITY HEIGHTS.—Marion, N. J., July 27.—After an interlude of several months the regular cup shoot of the J. C. H. G. C. took place on their grounds at Marion, N. J., on Tuesday, the 16th ult. Owing to so many shoots coming off on the same day in the neighborhood and the shortness of the notice sent out by Old South Paw, there were but a few of the members present to take part, but what they lacked in numbers they made up in hilarity and enthusiasm. It reminded one of the palmy days of the club. Never has there been a better or more satisfactory meeting on these grounds; the weather fine, the birds good. Old South Paw in his glory, and Old Reliable No. 1 (Uncle Billy Hughes) himself again after his severe illness. Esculapius (Dr. Burdett), after laying aside the steel tubes for more than a year, resumed them with his old time grace and accuracy, winning the cup with seven straight kills, some of them magnificent shots. One of the nicest features of the occasion was an impromptu sweep perpetrated by that all-round joker, Old South Paw—a 5-bird sweep. The entries only for the birds, the lowest on the score to wash the glasses for the libationists. But who would have thought the victim would be Old Reliable No. 1, a veteran of fifty years at the traps, and shooting, too, in his old style? But here is where luck on the birds came in. Uncle Billy had three exceedingly foul birds out of his five; he stopped one of them grandly with one dead out of bounds. There was much hilarity on the occasion, as he was surrounded, arrested, marched into the club house, shown the water-pail, the glasses and the towels. One rinsing would not do the boys, and it was only after repeated cleansing that they would accept Uncle Bill's first attempt in the Biddy business.

The committee on the State tournament, Messrs. Quimby, Lindsley and Heritage, are working like beavers, and their past experience and success in such efforts guarantees a superior time this fall. They expected to announce the 24th, 25th, 26th and 27th days of September as the days set; but as Al Bandle has arranged that week for his big shoot, and as it is a mutual wish to have him present East with the J. H. C. boys whom he treated so royally on their trip West last year, the tournament may be postponed one week later. This will make the shooting pretty lively. Al Bandle's latter part of Sept., J. C. Heights' forepart of Oct., to be followed the following week by a four-days' shoot of the Middlesex Club at Dunnellen. Oh, my, what a cracking, and what a quantity of powder will be burnt. But it is all good for the trade. When fall arrangements have been settled upon we will duly announce. The following are the scores of the sweeps and for the cup:

Four birds, modified Hurlingham rules, first and second sweeps:

Lindsley	1111—4	2212—4	Burdett 1220—3 2210—3
Wm Siegler	2111—4	1112—4	Quinlan 1202—3 1111—4
Heritage	2102—3	0022—2	Wm Hughes 1111—4

Third sweep, 5 birds, lowest score to do the washing:

Lindsley	21111—5	Hughes	02110—3
Quinlan	02111—4	Siegler	12221—5
Heritage	12111—5	Burdett	12101—4

Uncle Billy the victim.

The fourth sweep was very closely contested between Lindsley and Quinlan, it taking the eleventh bird each man to decide. But as the scores will show, Lindsley got even with Quinlan later on in the bluerock sweep; 4 live birds:

Lindsley	1111—4	Hughes	1112—4
Quinlan	1211—4	Siegler	2210—3
Heritage	0112—3	Burdett	1011—3

Owing to the lack of shells Hughes drew out his third of the first money, and the others scored:

Lindsley	2222220—7	Quinlan	2211111—7

Regular monthly shoot for silver cup, modified Hurlingham rules, 7 birds, Wm. Siegler holding cup from last contest:

Siegler (29yds)	2121001—5	Burdett (26)	1122111—7
Heritage (26)	1102212—6	Quinlan (29)	1101200—4
Lindsley (26)	0211200—4	Hughes (26)	1111110—6

Won by Burdett, 7 straight; his third bird was an incoming twister that on its second twist, snipe-like, off to the left was splendidly dropped with the second barrel.

The live birds having given out, the clay saucer traps were placed in position with the following result, two moneys:

Siegler	1111111111—10	Hughes	1111011110— 8
Lindsley	1101011111— 8	Quinlan	1101111111— 9

Second event, 10 clays or bluerocks:

Siegler	1111111111—10	Quinlan	1111111011— 9
Lindsley	1011111111— 9		

In shoot off for second, miss and out, Lindsley 9, Quinlan 10. And thus closed a good day's sport. JACOBSTAFF.

NEW YORK SUBURBAN SHOOTING GROUNDS.—Claremont, N. J., July 27.—Shoot for Lefevre trophy:

Johnson	1110110111101110111111101—20
Jersey	1111010011101101011111111—18
Lindsley	1101111111111011111111110—22
Quimby	1110111011101111111111111—22

Sweep No. 1, 25 cents entry:

Miller	1111101111—9	Lindsley	1101110011—7
Johnson	1100010110—5	Beach	1110001100—5
Jersey	1000110110—5		

Jersey second on shoot-off.

No. 2, same:

Moffatt	1101111100—7	Jones	1011001111—7
Johnson	1111001111—8		

CONNECTICUT STATE SHOOT.—There will be a State tournament of Connecticut clubs at Meriden during the State Fair in September. Among the events will be the individual championship of Connecticut, a 2-man team match, a club team of 10 men from any club in Connecticut. Shooting will be from 3 sets of 5 traps on the Keystone system. Shooters will be divided into 3 classes, A, B and C. Class A, open to all shooters in Connecticut whose average is over 80 per cent.; Class B, open to all shooters whose average is less than 75 per cent. and over 60 per cent.; Class C, open to all shooters whose average is under 60 per cent. The management will offer a $100 guaranteed purse to be shot for each day. It is also intended to arrange events each day open to all shooters. A big time is expected.

MIDDLESEX CLUB.—At a meeting of the Middlesex Gun Club held at Plainfield, N. J., on Saturday, July 24, Messrs. W. Fred Quimby, T. H. Keller, M. W. Mulford, Nefe Apgar and William Sigler were appointed a committee to manage the annual tournament of the club, that is to take place at Dunellen on Oct. 8, 9, 10 and 11. The Middlesex Club is the largest shooting organization in this country, and is noted for its liberality in offering large guaranteed purses, consequently these tournaments are always largely attended. This tournament will be no exception, as the management propose to guarantee about $2,500. The programmes will be ready for distribution about Sept. 1, and can be had upon application to the committee, President S. G. Smith, or Secretary William L. Force at Plainfield, N. J.

BOSTON, July 24.—The best of weather conditions prevailed on this range to-day, enabling the marksmen present to put up as fine a series of scores as is often shown even in this stronghold of fine shooting. The main interest centered in the Gold Coin match, in which Perry and Stanton led, after a close and exciting contest. The shooting in all the events was of such excellence as to lead to the impression that the trap shots of this club will show up among the leaders in the coming tournament of the American Shooting Association. The summary of the day's shoot follows:

Gold Coin Match.

Fifteen clay birds and 15 Standard targets; Keystone squad system:

	Clays.	Standards
Perry	111111111111111—15	111111111111111—14—29
Stanton	111111110111111—14	111111111111111—15—29
Bowker	111111101111111—14	111111111101101—13—27
Choate	111111111101111—14	111101111101011—12—26
Swift	111011111111111—14	101111111101101—12—26
Beaudry	111111011111110—13	111101101101111—12—25
Snow	101111111111111—12	111011110111011—13—25
Eager	110010101110111—10	111111011111111—14—24
Knowles	101111111101100—11	110110111111111—13—24
White	011111111101101—12	101101111111101—12—24
Hosmer	011111110101111—12	111111111100100—11—23
Nichols	110111101111111—12	110100011111011—11—23
Roxton	111011011111100—11	111101010110111—12—23
Dodge	011110111110110—11	010110111101101—10—21
Fields	110011010111001— 9	110011010101001— 9—18
Bert	001011010010100— 6	101010000101101— 8—14

The minor sweepstakes were won by the following competitors:

Five Keystone targets—Stanton 5. Choate, Swift, 4, Beaudry, Nichols 3. Five Keystone targets—Dodge 5, Stanton 4, Beaudry, Nichols 3. Five Keystones, squad firing—Hosmer, Stanton 5, Bowker, Nichols 4, Choate 3. Ten clay birds—Beaudry, Bowker 10, Choate 8, Dodge, Stanton 7. Ten clay birds—Hosmer 10, Bowker, Stanton, Swift 9, Nichols 8. Five clay birds—Hosmer 5, Choate, Dodge, Swift 4, Nichols 3. Ten Keystone targets, squad firing—Swift 10, Bowker, Stanton 9, Knowles, Parker 8, Hosmer 7. Three pair Keystones—Bowker 5, Perry, Stanton, Swift 4. Beaudry 3, Choate 2. Fifteen Standard targets, squad firing—Stanton 15, Eager, Perry 14, Bowker, Knowles, Snow 13, Choate, Roxton 12 Fifteen clay birds, squad firing—Perry 15, Stanton, Swift 14, Beaudrey 13, Hosmer, Nichols 12. Ten Keystone targets, Keystone rules—Bowker, White 10, Choate, Hosmer 9, Eager 8, Beaudry 7. Ten clay birds—Fields, Perry 10, White 9, Dodge, Eager 8, Swift 7. Ten Keystone targets—Beaudry, Knowles 10, Perry, White 9, Dodge, Swift 8, Fields, Nichols 7. Three pairs Keystone targets—Choate 6, Perry 5, White, Nichols 4, Fields 3. Ten Keystone targets—Knowles, Roxton 10, Choate, Nichols, Perry 9, Stanton, Swift 8. Ten clay birds—Perry, Swift, White 10, Kno wles 9, Beaudry, Dodge, Nichols 8. Ten clay birds—Nichols, Roxton, White 10, Knowles, Perry, Swift 9, Choate, Eager, Stanton 8.

PORTLAND VISITS TOPSHAM.—July 24 was a day which will be held in pleasant remembrance by the members of the Riverside Gun Club, of Topsham, Me. The early morning train of that day brought nine members of the Portland Gun Club to visit the Riversides and spend the day before the traps downing the clay-birds and bluerocks. In the forenoon a friendly match was engaged in at 20 singles and 10 double birds, one trap throwing clay-birds and the other bluerocks. The day was perfect, and one that would test the skill of the shooters to the most, as a strong wind was blowing from the northwest, which was a quartering wind from right to left toward the shooter, and the birds, taking advantage of the fact, proved themselves up to the times, often sailing away as if nothing had happened, leaving the man at the score looking wistfully in the direction they had gone, wondering what they would do next. The match was a most interesting one from beginning to end, as no one could tell what the result would be until the last shot was fired, as will be seen by the scores given below. The afternoon was spent in sweepstakes shooting until time for the Portland club to return home. These clubs have visited each other several times, and enjoyed many a pleasant day together at the traps. May the good feeling which exists between them never be broken.

CHAS. GOUD, Sec'y Riverside Club.

NEWARK, N. J., July 24.—A large party attended the Roseville Maplewood match to-day, when the Roseville boys received their second defeat from their opponents. A strong wind prevented many good scores being made, but on an average the shooting was fair for the entire afternoon. The team scores were as follows:

Roseville, First Team.		Maplewood, First Team.	
Castles	11	Quad	11
Kitchell	14	Dunnican	10
Whaton	12	Siggins	14
Simms	14	Lighthipe	11
Huff	11—62	Sickley	16—68
Second Team.		**Second Term.**	
Badgely	10	Tillou	12
Thorn	11	Smith	12
Condit	12	Reilly	12
Wheaton	17	Yoemans	13
Smith	10—60	Burnett	16—65

On the total count the Maplewood team beat the Rosevilles by 11 birds. After a fine lunch sweepstakes were indulged in until dark. First sweep, 10 clays, first money was taken by Terry, second by Siggins and Badgely, third by Quad, fourth by Perry. Second sweep, 5 clays, first money by Quad and Sickley, second by Wheaton, Davenport and Burnett, third by Lighthipe and Donnican. Third sweep, 3 pair clays, first money Harrison, second by Lighthipe and Huff, third by Eager. Fourth sweep, 5 pair clays, first by Yoemans second by Badgely, third by Lighthipe. In the first match between the Roseville and Maplewood teams, the latter were the victors by 14 birds. The South Orange and Maplewood gun clubs have consolidated, and hereafter the shooting will be done on the Maplewood grounds.

GOVERNMENT PIER, Chicago.—Some of the members of the Prairie Gun Club paid a visit to the Pier on Thursday afternoon, July 18, and enjoyed themselves hugely at 10 single Keystones:

MacDonald	1110111101—8		1110111111— 9
Dominick	1111011111—9		1101010111— 7
Bart	1010101111—7		1111111111—10
Hoffman	1101111111—9		1011111111— 9
Clemens	1111111101—9		1111111111—10
Sam	1010111001—6		1101111100— 7

Twenty Keystones:

McDonald	11101111111111110111—18	Hoffman	11111111011111101111—17
Dominick	10111011111111111011—17	Clemens	11011111111111111110—18
Bart	10011101111111110111—16	Sam	11110100111111010101—14

At Saturday's shoot the pleasure of the shoot was somewhat marred on account of the stupidity or cupidity of the steamboat men, who failed to return for the shooters after charging them for a round trip and an exorbitant fare at that. These lake front steamboat men are fooling with the wrong class of people. There are no more liberal men on earth than our trap shooters when they are treated square, but they resent an injury.

Match at 12 singles:

Barlow	111101101111—10	Clark	000111000011— 5
Gillespie	111101111001— 9	Dago	111111100111—10
Wood	010111111111—10	Sinbad	111001111111—10
Lee	111110110110— 9	Smith	101001101111— 8
Spooner	010110010110— 6	Knoke	100110100111— 7
Jones	110001011001— 6	Benson	010111100011— 7

Match at 6 pair doubles:

Barlow	11 01 10 11 11 11—10	Clark	00 10 00 10 10 10— 4
Gillespie	10 10 01 11 10 11— 8	Dago	11 01 11 11 11 10—10
Wood	11 10 01 11 11 10— 9	Sinbad	01 10 11 01 10 11— 8
Lee	11 10 01 11 01 11— 8	Smith	11 01 10 11 01 11— 9
Spooner	01 01 01 00 11 01— 6	Knoke	10 01 10 01 10 10— 6
Jones	00 10 10 10 11 00— 5	Benson	01 01 11 01 00 10— 6

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

PHILADELPHIA, July 24.—*Editor Forest and Stream:* The Wawaset Gun Club, of Wilmington, Del., visited Fernwood, Pa., on Monday, July 22, and shot a team match against the Philadelphia Sportsmen's Gun Club, whose grounds at Fernwood are the finest anywhere within easy access of our city. The gun editor of the *Item* was invited to act as referee, but, owing to illness, was unable to be present, much to his regret. The contest was a close one throughout. The Fernwood shooters confidently anticipated taking the Wilmington boys into camp, but somehow or other "the thing got reversed," to use the expressive words of Secretary Joseph McKinney. That well-known trap-shot, W. W. Abbott, with Messrs. Jefferson, A. B. Mack and W. B. Hill, had their photographs taken in a group at the close of the match on account of their "off" scores. The photograph will be framed and placed in the Fernwood club house, with the inscription: "Ah, there! Why didn't you get there?" Appended are the full scores. Referee, A. L. Lumb; judges, Messrs. Weldon and Brailler:

Sportsman's Club.		Wawasset Club.

WAW-WAW.

NEWARK, N. J., July 27—Samuel Castles, Jr., and Myers Fuerth shot a match at 50 artificial birds, on the South Side Gun Club grounds, this afternoon, and Castles lost by a score of 38 to Fuerth's 40. It was an exciting contest, and was not decided until the 49th bird was shot at. R. H. Breitnhall, of this city, and Mr. Beam, of Englewood, shot a match at 50 bluerock targets on July 25. Mr. Beam won by breaking 47 to his opponent's 42.

LODI, O., July 17.—Lodi Gun Club, regular weekly shoot, at 25 standard birds, 3 traps, 18yds., National Association rules:

Smalley	0110110001100001100000000— 8
Noggle	0001100000001011001110101—10
Collins	1111011110111111001100100—17
Lee	1101100111010000001111110—14
Rogers	0111110111111010010100110—16
Elliott	1111111010000101111001101—16

THE RIVERSIDE GUN CLUB at their regular medal shoot had a large attendance. The weather was fine and some fair scores were made. Twenty bluerocks, walk around system:

Kling	1101111010100111100111—14	Schonberg	0000101011111100110010—10
Eikhoff	1111111000111111100111—15	A Predock	1101000101111111101111—15

Schulz	1110111000001010011—11	Cicardi	0111010101110101111—14

N. Predock first medal, J. Selzer second, J. Rosier third. On the 18th of August the club will hold a tournament on its grounds, foot of Dock street, and will send invitations to all city and suburban clubs. The best of accommodations will be furnished and the members will make it their object to make a palpable success out of the affair.—T. M.

WELLINGTON, Mass., July 27.—There were just eight gunners at the traps of the Wellington Club to-day, and they found the sport rather disagreeable, owing to the blinding rain storm. Sanborn, Bond and Field tied with 13 each in the silver pitcher match, and in the shoot-off Sanborn won. Bond did not contest. Sanborn also won the merchandise badge match with 14, Bond using the first time since the matches were opened that the same man carried away both prizes. The winners in the sweepstakes follow: First event, 6 bluerocks: Sanborn, Field and Melcher 6, Bond 5, Chapin, Stone and Chase 4. Second event, 5 clay-pigeons: Sanborn, Stone, Bond and Melcher 5, Chapin and Cowee 4, Chase and Field 2. Third event, 5 clay-pigeons: Stone, Bond, Field and Sanborn 3, Chapin, Cowee and Melcher 2, Chase 1. Fourth event, 6 bluerocks; Field 6, Chase and Stone 5, Bond, Chapin and Sanborn 4. Fifth event, 5 clay-pigeons: Field 5, Sanborn and Chase 3, Bond, Stone, Chapin and Cowee 2. Sixth event, 7 bluerocks: Bond and Field 7, Sanborn 6, Melcher 5, Seventh event, 8 clay-pigeons: Sanborn 7, Bond and Field 6, Stone, Cowee, Chapin and Melcher 5. Eighth event, 5 clay-pigeons: Chase, Bond, Sanborn and Field 5, Cowee and Melcher 3, Stone 2.

TORONTO, July 20.—The Stanleys shot for the ninth time to-day on McDowall & Co.'s grounds for the president's gold watch, which is a very tasty as well as good article. A merchandise match for three prizes was also disposed of, besides a number of sweeps, in which some fair scores were made. Mr. Sawdon, Sr., secured the watch with 18 to his credit out of 25. A strong wind blew across the traps. The scores stand: Watch shoot at 25 birds: Sawdon, Sr., 18, Dick 16, Creathers 14, McDowall 13, Sawdon, Jr., 12, Charles 11, Bales 10. Merchandise shoot for three prizes at 20 birds: Emond 16, Charles 15, McDowall 14, Sawdon, Sr., 14, Felstead 12, Green 11, Dick 11, Creathers 10, Bales 9. Sweepstake at 10 birds, class shooting, first class: Emond 10, Charles 9, Dick 7, McDowall 5, Felstead 6, Green 6, Creathers 5. Second class: Dick 8, Emond 8, Black 6, Charles 6. Team shoot at 10 birds per man: McDowall 10, Charles 9; total 19. Dick 8, Emond 3; total 11.

ST. CATHARINES.—The annual tournament of the Peninsular Gun and Game Club will be held at St. Catharines July 31 and Aug. 1. Ten shoots are on the programme, and sweepstakes will follow. The tournament is under the auspices of the Dominion Gun Alliance, and except in one match, in which Hamilton blackbirds will be used, the targets will be Stark's matchless birds. The guaranteed prizes amount to $500. Mr. Jas. A. Keyes is secretary of the Peninsulars.

THE FORESTER GUN CLUB will hold a grand tournament at the Forester Gun Club Park, Davenport, L. I., Aug. 7, 8 and 9. Shooting begins at 9 A. M. American Association rules. Good accommodations, refreshments and machine-loaded shells on the grounds. Price of birds included in entrance. J. W. Howard, E. Emerson, Charles Culins, Harry Young and F. O. Davis, Committee of Arrangements.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

F. O. P., New Bedford.—Commissioner Riddle tells us that the Newfound Lake fish were lake trout. See report in our angling columns.

J. O. P.—Is there any law in the State of New York compelling a person when building a dam for an ice pond on a stream that is inhabited by trout to build fishways for trout to run up over the dam? Ans. No.

A. T. F., Little Falls, N. Y.—The New York deer law allows hunting from Aug. 15 to Nov. 1, and the use of hounds from Sept. 1 to Oct. 20 (but in Queens and Suffolk counties only in first ten days of Oct.) Hounding forbidden in St. Lawrence and Delaware counties. One person allowed only three deer. Transportation limited to one carcass, which must be accompanied by owner of same.

C. W. S., Stottville, N. Y.—The Creedmoor targets are divided into three classes of the following sizes: 1, First class, to be used at all distances up to and including 300yds., target 4×6ft.; bullseye 8in. in diameter, center 26in., inner 46in., outer remainder of target. 2, Second class, to be used at all distances over 300 to and including 600yds., target 6×6ft.; bullseye 12in. in diameter, center 38in., inner 54in., outer remainder of target. Third class, to be used at all distances over 600yds., target 6×12ft., bullseye 36in., center 54in., inner, square, 6×6ft., outer remainder of target. Bullseye counts 5, center 4, inner 3, outer 2.

INFORMATION WANTED.

Would like to join hunting party for about two weeks, Colorado, Montana, or Arkansas. Address MOCCASIN, P. O. Box 3008, N. Y. City.

THE revised and abridged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

WEST INDIA HURRICANES AND THE GREAT MARCH BLIZZARD.

IT IS seldom in a temporate climate that a storm ashore means anything more serious than a temporary annoyance—muddy roads, wet streets, a trifling interruption to business or damage to crops—and it is fortunately only at very rare intervals that such a memory of hardship, suffering and even death is left as is still vivid in the minds of landsmen along the whole North Atlantic seaboard, and even far back from the coast. Prior to the great blizzard of a year ago the suggestion that a few hours of rain and snow could completely cripple the entire mechanical resources of the great American railways and make prisoners of the dwellers in the great cities, putting them for days in a state of siege and cutting off all sources of supplies and communication, would have been considered absurd and visionary. There are many who know from experience the danger and suffering which attended a short journey through the most populous streets of New York, with aid on every hand, but there are few who can form any adequate idea of the effects of the storm a short distance off shore, or of the suffering of those who encountered it on the deck of a pilot boat or coaster.

Not only from a scientific standpoint and as a guide to navigators, but as a matter of history is it fitting that the great blizzard of March, 1888, should be honored with a permanent record, and at the hands of one who is in every way qualified for the task. Mr. Everett Hayden, in charge of the Division of Marine Meteorology of the U. S. Hydrographic Office, at Washington, is well known to all who navigate the North Atlantic as the editor of the *Monthly Pilot Chart*, which has done so much to lessen the dangers of navigation. A thorough and enthusiastic student of all that pertains to the specialty that he has chosen Mr. Hayden has for a long time made a careful study of the West India hurricanes, their origin and causes, following up the great work begun many years since by another American, Mr. Wm. C. Redfield, of New York. From his official position Mr. Hayden was in possession of a large number of records of vessels on the coast during the blizzard, and from these and much additional matter he was enabled to compile the interesting lecture delivered before the Seawanhaka Corinthian Y. C. last February, and published in the FOREST AND STREAM of Feb. 14. Since then this same lecture has been carefully revised and added to by the author, being enriched by a number of lithographic plates, and is now ready for publication in book form by the Forest & Stream Publishing Company.

Beginning with a description of the great Bay of North America, Mr. Hayden first describes in detail the formation of the ordinary tropical cyclone, and then proceeds to trace the origin of the great blizzard, following it day by day by means of colored charts, and bringing into relief every interesting feature of this memorable storm. Valuable as this record is to the navigator who may be exposed at any time to similar dangers, it is no less interesting to the casual reader, as the mechanism of these powerful forces of nature is laid before him. Even the landsman, who looks upon the wind as blowing from one direction or the other according to chance and independent of any control or direction, cannot fail to be interested in the manner in which the track of a cyclone is marked out and its probable direction foretold, while to the mariner the same problem has a far more vital significance. In addition to much that will interest the non-technical reader or the scientist, the book contains a great deal of clear practical information relating to the handling of a vessel in a cyclone, the use of oil at sea, and similar important matters. It is published in the form of a large quarto volume, bound in paper, containing 30 pages of text and 23 large lithographic plates, the price being $1.

NEW YORK Y. C. CRUISE.

THE programme for the annual cruise is, so far as yet arranged, to rendezvous at New London, on Aug. 7, sailing next day for Newport, where the Goelet cups will be raced for on the 9th if possible. On Saturday, Aug. 10, the fleet will run to Vineyard Haven, racing on Monday for the Martha's Vineyard Association cups. An informal reception will be given at the Oak Bluffs Club on the same evening, and on Aug. 13 the fleet will run to New Bedford, lying there next day for the usual rowing and naphtha launch races. On Aug. 15, Thursday, the return run to Newport will be made, where the races for special prizes offered by the club will probably be sailed next day. The prize for the 70ft. class will be a $250 cup, and for the 40ft. class a $150 cup, with a second prize of $100 if more than two enter. No yachts shall enter that have hauled out to clean bottom after the beginning of the cruise. The courses will be 12 and 9 miles to windward or leeward and return.

The 40ft. sweepstakes of the Corinthian Y. C. of New York will be sailed about the same time, while the postponed race in the same class is also likely to come off at Newport. The fleet will disband about Aug. 17. The Weld cup, for 40 footers, will be raced for soon after at Marblehead, and some of the fleet may go round the cape, but the cruise will not extend any further than Vineyard Haven. The four runs will be as follows, a prize of $100 being offered for the best average record in each class:

From New London to Newport, about thirty-five nautical miles, start off Sea Flower Reef (entrance to Fisher's Island Sound) and finish off the Dumplings.

From Newport to Vineyard Haven, about thirty-seven nautical miles, start off Brenton's Reef Lightship and finish off Red Buoy 2, off West Chop. Sow and Pigs Reef Buoy must be left on the port hand.

From Vineyard Haven to New Bedford, about thirty-four nautical miles, start of the bluffs in front of the Sea View House and finish of Clark's Point Light, leaving Sow and Pigs Reef Buoy on the starboard hand.

From New Bedford to Newport, about twenty-seven nautical miles, start off Clark's Point Light and finish at Brenton's Reef Lightship, leaving the Hen and Chickens Lightship on the starboard hand.

The start and finish will be made over imaginary lines drawn from the Electra to the points or objects mentioned.

Competing yacts will receive for each run numbers according to the order in which they finish in their respective classes by corrected time. For runs on which they do not start they will be given a number equal to the greatest number of contestants in their class on any of the runs. Yachts failing to finish will receive a number equal to the total number of contestants in their class on that run. The winners in each class will be the yachts having the smallest totals at the end of the cruise. Should the totals of two or more contestants of the same class be equal, the vessel making the best average corrected time in the runs which they sailed together will be the winner. No prizes will be awarded in any class in which two or more yachts do not start in at least one of the runs.

The Goelet cups will be of the same value and offered under the same conditions as in former years. Yacht owners are specially requested to have their yachts measured before the beginning of the cruise if they propose to enter the runs or races. The flagship Electra will carry the regatta committee.

BEVERLY Y. C.

THE 147th regatta, second cup race, which was not made in time on July 20, was sailed on July 26 at Marblehead in a light E.S.E. air. It was almost a repetition of July 6, though there was a trifle more wind.

The larger classes beat out to Half-Way Rock, then had wind on port quarter to S. E. Pigs, when they had a run home, coming up harbor with spinakers set, 10 miles. The feature of this race was the phenomenal work of Swordfish to windward, starting 5m. after Elf and Saracen, she rounded Half-Way Rock ahead of Elf and close to Saracen; while at Pig Rocks Saracen only led her 10s. Here Saracen drew ahead, and getting a better breeze spun out her lead, but the flagship beat her 27s. on allowance.

The small classes beat to Half-Way, then ran home, leaving Martin's and Archer's buoys on port, 6⅝ miles.

The heavy weather boats were again at a discount, Dolphin being distanced by Nonpareil. At the start in harbor, where it always blows a little harder than outside, Kathleen took first place, closely pressed by Kiowa, who left Nerina and Pixie; Mosca seemed out of form, and on clearing harbor stood to southward, while the others followed the larger classes toward Lowell Island. At the island Kathleen barely crossed Kiowa's bow and stood on to the eastward, all the others tacked to the southward. Running along the island it breezed up a trifle, Pixie dropped astern and Kiowa outpointed and outfooted Nerina.

Outside the island the breeze moderated and Nerina turned the tables, getting abreast of but to leeward of Kiowa, who tacked to the eastward in search of a breeze. At this time Kathleen was seen coming out with a good lead, having gained decidedly in the smooth water inside; but she also seemed to sail faster than the others; Kiowa overstood to the eastward before tacking; she lost time by this, and Nerina outside had a little more wind.

Kathleen rounded first, with a good lead, then Nerina and Mosca, with Kiowa some ways astern; Nonpareil having a long lead on Dolphin. Kiowa gained rapidly, soon passing Mosca, who having no show with Kathleen made no attempt to stop her. It was soon evident that if Kiowa could pass Nerina half a mile before the finish she could give her her time; she tried again and again, first to leeward then to windward, frequently getting her bow ahead, only to be covered and drop back—for a mile and a half the crews of either boat could have touched the other; finally Kiowa got by in a luffing match, just before reaching the line, and crossed two seconds ahead, with her boom over Nerina's deck about a foot aft of the latters mast. She lost however on allowance and this race shows a flaw in the B. Y. C. rule of measurement; it is waterline and sail area, the latter being got at by measuring boom, gaff and distance from boom to upper peak halliard block. Nerina and Kiowa are both 20.4 waterline; Nerina's sail admittedly contains many more square feet of canvas, but the distance from throat to peak halliard band is less than on Kiowa, making latter the larger boat and losing her the race.

FIRST CLASS.

	Length.	Actual.	Corrected.
Saracen, W. P. Fowle	33.07	2 11 30	2 10 39
Elf, W. H. Wilkinson	36.02	2 18 37	2 16 14
SECOND CLASS.			
Swordfish, Com. Paine	31.07	2 15 57	2 10 12
Marguerite, Francis Skinner, Jr.	23.01	2 30 20	2 21 33
THIRD CLASS—SLOOPS.			
Kathleen, R. S. Peabody	25.10	1 48 00	1 41 59
Mosca, C. H. W. Foster	24.06	1 57 31	1 49 34
THIRD CLASS—CATS.			
Kiowa, W. A. and W. L. Jeffries	22.03	1 55 00	1 45 20
Nerina, R. C. Robbins	21.09	1 55 02	1 44 57
Pixie, F. W. Chandler	21.04	2 00 45	1 50 18
FOURTH CLASS.			
Nonpareil, W. O. Taylor	18.09	2 02 12	1 49 20
Dolphin, R. C. Robbins	18.00	2 13 24	1 58 44

Winner first class, Saracen, holding the cup. Winner second class, Swordfish, holding the cup. Winner third class sloops, Kathleen, tieing Mosca for the cup. Third class cats, Nerina, tieing Kiowa. Fourth class, Nonpareil, tieing Dolphin.

The 148th race, second Buzzard's Bay championship, was sailed at Monument Beach, July 27. The day opened with a strong E. by S. wind and a pouring rain; it looked so nasty that the skipper of the judges' boat did not report for duty and told the reporters there would be no race; consequently the Sunday papers so announced it. The judges and yachtsmen did not see it in this light, and started the race promptly on time, sending first and second classes over following course: Leaving Scraggy Neck Buoy and Wings Cove Buoy on starboard, Dry Ledge Buoy and Pine's Buoy on port and return, 11½ miles. Third class, leaving Pine's Buoy, Aberly Ledge Buoy and Dry Ledge Buoy on starboard, Pine's on port and return, 7½ miles. Fourth class went twice to and around Buoy 11 and return, 5 miles.

The wind played the most extraordinary pranks; most of the time it blew hard, but dead calms were interspersed; it shifted so that third class had a dead beat over the entire triangular course and the others had it dead before the wind all the way. At the start it was strong E. by S., changing to N.E., N., N.W., with heavy, squally and dead calms, then back to S.E., finishing S.W., calms being thrown in between changes and plenty of pouring rain.

Mattie had a walkover, Grekel and Sirius not showing up. In second class Mist led Thyra home by the width of her mast only, the difference was too small to time, but Mist was a few inches ahead. Both boats were measured and Thyra's new gaff was found to be decidedly longer than the old one; she had also received more ballast since her first measurement and part of her overhang was in the water, increasing her waterline.

Daisy appeared with her third rig this season, going up to 21ft. sailing length, she managed to beat Eina 14m.

Edith beat Kitten in fourth class. Mattie, Mist, Daisy and Edith take firsts, Kitten takes second, Mattie and Mist win and hold champion pennants, Daisy and Edith win legs, tieing Eina and Kitten. Summary as follows:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Mattie, Howard Stockton	26.07	3 51 12	3 42 50
SECOND CLASS.			
Mist, G. H. Lyman, Jr.	25.06	3 44 20	3 31 33
Thyra, Paul Bartholow	26.01	3 44 20	3 37 02
Gymnote, W. E. C. Eustis	25.11	3 49 19	3 32 14
THIRD CLASS.			
Daisy, Howard Stockton	21.00	2 45 15	2 32 38
Eina, John Parkinson	22.00	2 57 37	2 46 00
FOURTH CLASS.			
Edith, Irving Chapman	18.10	2 25 40	2 15 39
Kitten, G. H. Richards *et al*	17.11	2 27 00	2 16 03
Polly, Richard Codman	16.02	2 32 59	2 20 27
Nymph, Geo. G. Amory	16.11	Withdrawn.	

Judge—F. S. Edwards. X. Y. Z.

CONSTELLATION.—The new Burgess schooner Constellation made a trial trip lately to Newport, where she now lies.

MOPSA.—The new 27ft. cruising cutter Mopsa was launched last week at Lawleys'.

THE FORTY-FOOT CLASS.

FEW of those who have watched the exciting and interesting races of the new 40ft. class have paused to give a thought to its origin, or have appreciated the fact that the growth of such a fleet, in so short a time and with no apparent reason, is one of the most remarkable accidents in the history of yachting, and so far as we know without precedent. When Banshee was launched, two years ago this month, there was not only no 40ft. class, but no indications of one, and the present fleet was not even dreamed of. In the straggling fleet then in the racing, from Shadow and Elephant, 34ft., up to Vixen and Fanita, 45, there were several yachts about 40ft., the best known being Crocodile and Rival, but there was nothing approaching a clearly defined class. Banshee, as is well known, was built without regard to racing, but about the same time there was launched in Boston a new Burgess boat, a keel craft some 4ft. shorter, and intended to race with Shadow and Shona, of 34ft. Pappoose, as the new boat was christened by her owner, young Mr. Adams, then a senior at Harvard, was a wide cutter, of a type not very different from the length class boats of Southampton water, her dimensions being 44ft. over all, with plumb stem, 36ft. l.w.l., 12ft. 6in. beam and 7ft. 7in. draft, with nearly 9 tons of keel. Flush-decked, cutter-rigged and cleancut in her quarters, with a single fair sweep from keel to rail in her midship section, she betrayed no relationship to the old Boston keel sloop, with its hard bilge, flat floor, deep skag keel, heavy round quarters and high cabin house. The first performance of the newcomer was with the renowned Shadow, the fastest centerboard of her size in the country, whom she easily defeated. As to size, the odds were largely in favor of the new boat, but her sails and gear were new and bad, while Shadow had the advantage in point of crew and handling generally. Shona was very easily disposed of, and in a short time the new boat was recognized as the best of her class. About the same time Banshee was being tried, and as she gave evidence of being a speedy boat her owner was encouraged to make some changes in ballast and sail in hopes of increasing her speed. Though the pair did not meet that season, they both became widely known, and much interest was felt in their first meeting, which, however, did not take place until the following spring.

In the mean time Mr. F. W. Flint, of Larchmont, owner of the 27ft. sloop Nymph, was in the market for a new yacht, and after the Volunteer-Thistle races he gave Mr. Burgess an order for a compromise forty. During the winter and spring Mr. Burgess received three more orders, the yachts being built by Lawley; Xara, a keel boat, Chiquita, a deep keel boat with a small board, and Baboon, a keel boat, for the owner of Pappoose. With these six yachts all in the racing the class was pretty firmly established, but it so happened that the few races sailed last year were devoid of any decisive results, and no one could say at the end of the season that any one boat had shown herself superior to the rest. One result, however, followed the racing, such as it was, the forty foot fever had fairly set in, and during the past winter no less than ten additions were made to the class in New York and Boston, making, with Minerva, built late last season in Scotland, a fleet of seventeen yachts. With possibly one exception all may be considered as racing craft, speed being one of the first requirements, though all are intended for cruising and fitted up for life aboard during the summer as well.

This fleet, as it stands to-day, has never been equaled in the history of yacht racing. When racing was at its height in England, during the last years of the tonnage rule, some large fleets were seen, notably in the 5 and 10 ton classes, but the boats, though evenly matched, were all of one type, differing a little each year, but teaching nothing save how to cheat the rule under which they raced. The present 40ft. fleet, seventeen new boats, or twenty in all if we include, for the sake of a comparison of types, the two old sloops, Crocodile and Rival, and the new cutter Ulidia, covers the whole range of type from the shoal centerboard to the narrow and deep cutter, and offers opportunities for study and comparison such as have never before been known. There have been instances of large fleets of racing yachts all of one size or nearly, but these have been the result of slow growth under some special stimulus or legislation. As the above brief history of the new class shows, however, it is an accident, an unforseen and spontaneous growth, which, with the number and individual excellence of the boats, makes the class the most interesting and remarkable one that has ever raced. Some very good races have already been sailed this year, and more are in prospect, but in none have more than half the boats entered. If the entire fleet, old and new, could be brought together near the end of the season, when all are or should be in good form, and a series of four or five races sailed over the Newport or Marblehead courses, the results would be more valuable and conclusive than a dozen years of ordinary racing in all classes. Such an opportunity has never before been offered, and it is worth a strong effort on the part of the clubs to secure such a thorough trial.

The fleet, 17 new and 3 old boats, is as follows, the figures being as nearly correct as possible. Naturally, the designers are in no way desirous of making public the details of their work, in fact in most cases the figures, especially those relating to spars, ballast, draft and displacement, are jealously guarded. The table, however, is sufficiently correct for all practical purposes, differing not more than an inch or two in any dimension. The length in some cases may be a little under 40ft., the designed length being from 3 to 6in. under the class limit, but there are a few wooden boats that by their second season do not need a little judicious dubbing to keep them in their class, the official measurements running from 39.70 to 39.96ft., a very narrow margin.

	Length over all.	Length l.w.l.	Beam.	Draft.	Displacement.	Ballast.	Sail area, N. York rule.

[1] Burgess keels, [2] centerboards, [3] Smith centerboards, [4] McVey keels, [5] Fife keel, [6] Gardner keel. The above dimensions are in feet and inches. The weights are in long tons.

The fleet all through presents a most interesting study in points of model, finish, build, fittings, accommodation and rig; but, unfortunately for our readers, we are not sufficiently in the confidence of the designers to be able to present them with full working drawings of all parts. Nothing is more difficult to convey in words than the points of difference in vessels; watch any two yachtsmen beginning a discussion, words soon fail them and recourse is had to diagrams and hieroglyphics, often of the crudest, but at the same time expressive. In the course of a heated after-dinner discussion we have seen a big blue pencil brought into play on a damask table cloth, and on another occasion a bit of chalk fished out of a pocket and used with effect on the parlor carpet to clear up some knotty point. In order to make their leading characteristics clear to many of our readers who have not seen the boats, in a way that is not possible in words, we have had recourse to the accompanying diagrams, none of which are official, but are drawn as nearly to scale as possible from rough sketches made when the boats were docked and from such aid as is afforded by photographs.

While not pretending to give the minor points of difference between such similar boats as Nymph and Verena, or Baboon, Maraquita and Chispa, they show with tolerable accuracy the leading features of the different types, and the direction in which the designers of to-day are working. The overhang, freeboard, draft and beam are drawn to scale as closely as possible, and the peculiarities of sheer and outline of keel are tolerably accurate. The positions of keel and masts are not based on actual measurements, but the general disposition of the ballast is correctly indicated, being well strung out in most cases.

The first sketch shows the modern Burgess keel-centerboard compromise, such as Nymph, Verena, Awa and the 45ft. Nanon,

The second shows a still further step toward the keel boat, the compromise Gorilla, by Mr. A. Cary Smith, a deeper boat than Nymph. The next step is not shown, but is represented in the fleet by Chiquita, 3in. deeper than Gorilla and 11in. narrower, her midship section being between Nymph and Chispa. The third sketch shows Chispa and Maraquita, the Burgess keel boats, to which family belong Pappoose, Baboon, Xara, Lotowana and the 45ft. Alga. The table shows the difference of these boats in draft and beam, and the outline of the midship section is also different in each, but the main characteristics of the family are plainly shown. The next sketch shows the greatest extreme to which Mr. Burgess has thus far gone in Tomahawk, deeper and narrower than any previous American craft. The fifth sketch shows the new Gardner boat Liris, her 30ft. sister Kathleen being very similar in form but a little less extreme, while the last shows the Fife cutter Minerva. Just why Chispa, Tomahawk and Liris are classed as American keel sloops while Minerva is called a British cutter is something that we have not been able to find a reason for, but then it is sometimes desirable to keep up appearances, even though they may be deceitful.

It is of course impossible without the complete lines before us to go into a discussion of the minute niceties of form and refinements of model, but in the present condition of yacht racing and designing the question of fine form is of far less importance than power, as governed by dimensions, ballast and sails, and these latter points may be clearly illustrated by such approximate diagrams as we give.

The most striking feature of the fleet is the great draft, more than has ever been taken by British designers on the same length of loadline, the maximum for a narrow 10-toner being about 8ft. 6in. on 42ft. l.w.l. The deepest of the new fleet, the McVey boat Helen, we have no sketch of, but she is similar to Chispa in outline, though deeper, drawing 10ft. 6in. The disposition of the lateral plane, so different from that of the old keel craft with plumb sternpost and deep forefoot, is practically the same in all the new boats save Minerva. The rake of the post is moderate, from 32 to 35 degrees, only Liris and Minerva having the great rake of the old cutters, nearly 45 degrees. The keel is carried as low as possible for a distance of some 15ft. forward from heel to post, but when it once begins to rise a direct cut is made for the stem at the waterline, there being no indication of the old gripe or forefoot once considered essential to windward work. This peculiarity is most marked in Liris, but it is plainly evident in the shoalest of the new boats, Nymph and Verena. How much of it is due to the influence of Thistle we leave our readers to judge, but the same features, the carrying of the lead keel at the lowest possible point and where the weight would tell most, and then a cutting away of the draft where it gave no benefit in the way of low weight, have been a marked peculiarity of Mr. Watson's work for some years. It is clearly shown in the 5-ton Shona, built in 1884, the profile of the under-water body being the same as the modern forties. The most extreme examples of this feature, a straight line forming the bottom of the keel, and then another straight line joining it with the stem at the waterline, is found in the designs of the late Lieut. Von Saefkow, as in the Nuckel (whose lines are given in "Small Yachts), Anna, Lolly and other German cutters. In Nymph, Verena, Gorilla and notably in Liris this feature is seen, but the deeper Tomahawk shows a different outline, the bottom of the keel being a fair curve, with a deeper forefoot and more area just under the mast than in the others. In Liris the ballast is carried very low, the keel being wider than usual, and all the weight being outside, but the keel runs up very sharply to a point just below water, where a peculiar knuckle is retained. In Minerva Mr. Fife has made a marked departure, the outline being that of a huge fin or centerboard, the heel of post being carried down to the point of maximum draft, and the keel running up sharply to the waterline, preserving a little depth at the fore end.

While there is little if any more forefoot than in Thistle, there is a very marked difference in the area and disposition of the lateral plane, the deep heel being retained. The dotted line shows the proportionate depth and outline of Thistle, her draft being but 13ft. on 86ft. l.w.l., compared to Minerva's 9ft. on 40. Minerva certainly shows no lack of windward ability but seems to hold on with the centerboards in spite of her slack forefoot and absence of gripe, but unlike Thistle she has a powerful hold on the solid and undisturbed water into which the heel of the keel is constantly moving; and this, with the added area, gives the necessary resistance. It is very doubtful whether mere area of lateral plane alone, either in the shape of a forefoot or a continuous deepening of the keel, would remedy the defect in Thistle; but there is no doubt as to the advantages of such a form as Minerva's for windward work, approaching as it does the action of a centerboard. There is of course on a given draft a loss of stability compared with Liris or Tomahawk owing to the higher position of the lead, but this is more than compensated for in boats of moderate draft by the increased lateral resistance. We have no data as to the dimensions of Minerva's keel, but it is quite wide, 20in. on the upper side. Tomahawk has no outside keel, being a steel boat, but the lead is poured into the lowest point of the hull, and consequently the weight is very low.

While on the subject of keels it is worthy of notice that in his new boats Mr. Burgess has narrowed the bottom of the keel considerably, making the lead deep and thin, in fact Saracen's keel was removed and recast last winter, being made much deeper and thinner. In Maraquita and Tomahawk the keel is but 5in. wide on the bottom, being about 3½in. deep. As Liris has a breadth of 12in. and Minerva probably as much, it is easy to see the gain in stability, a point in which Maraquita and Tomahawk are both conspicuously deficient. As every inch of draft is to be avoided, especially after 9ft. is reached in a 40-footer, the main objects of the designer must be to make the most of his lateral plane on the given draft, and at the same time to keep his lead as low as possible. It would seem that while the latter end is obtained in a form such as Tomahawk's, with a deep rocker under the middle of the boat, the best disposition for the purposes of lateral resistance is that of Minerva, the triangular fin. This, however, must raise the center of the lead considerably higher than in Tomahawk and Liris, a disadvantage that may be largely overcome by a wide rather than a narrow keel. Comparing Tomahawk and Minerva, the later with 9ft. draft and 10ft. 6in. beam, is decidedly stiffer than Tomahawk with 10ft. draft and 12ft. beam, and though her sail plan is much smaller it drives her faster. As to the disadvantage of the extra foot of draft it is hardly necessary to speak; it might be endured if it gave safety, speed or room over Minerva, but it gives neither. There is another incidental advantage in such a contour of keel as Minerva's. When Tomahawk, Liris or Gorilla take the ground they must rest on a point near the center of the boat, and are on to stay until helped off by more tide or a powerful pull. When the deep-heeled craft touches, unless on a very shelving bottom, she grounds on the heel of the sternpost and may be lifted clear by a few men on the bowsprit end or any shifting of weights forward. There is nothing to prove that a keel of 12in. width on the bottom offers any more resistance than one of 5in., and the advantage in the way of low weight is material. In some of the extreme narrow cutters the width of keel in proportion to the beam was carried to a degree that was harmful, but there seems little to fear on this score in the present types of boat.

Going now to the sheer plan above water, a strong similarity in the sheer is noticeable. The added freeboard has destroyed the rank sheer once universal, and the modern boats are comparatively straight. The fashion just now is for a parabolic sheer, like that of the Watson and Fife cutters, quite straight forward and with considerable curve aft. In Liris, as shown, this feature is carried to an extreme degree, the counter being very long and with a quick curve at the end. Minerva shows a fair and moderate sheer with less side than the American boats, her least freeboard being about 28in., or less than some of the new thirty foot boats. All of this year's boats show an overhang forward, the plumb stem of Pappoose and Xara being out of fashion for the time. How much good is derived from the clipper stem save in the matter of deck space and a longer staysail is a question not yet decided; but if the performance of Pappoose in the 40ft. class and Titania in the 70ft. can be taken, it is more apparent than real as far as speed or power are concerned. In all of the Burgess boats the overhang, both forward and aft, is short, but in Liris the ends are spun out to great length, the counter being very fine on the extreme end. The stem is also quite long and finished in the English fashion with carved trail boards, giving a handsome appearance. Minerva is finished in the same manner, but the overhang is less. Her counter is of moderate length but very light and graceful in appearance.

In nearly all the Burgess boats the bulwark is regularly built up, locust stanchions, pine bulwark and oak rail, the total height being about 8in., a construction that has a great influence on the appearance, the width of the bulwark showing for the entire length of the boat. Both Gorilla and Liris have a blind bulwark that does not show from the outside, the finish being made by a broad gilt stripe below the plankSheer. In Gorilla the bulwark is a solid piece of pine, 4½in. high forward and 3in. aft, bolted to the plankSheer. In Liris a similar chock is used, but finished with a neat oak cap. Minerva has a solid teak chock about 5in. high forward and 3in. aft., finished with an elm cap. In each case there is no break where the bulwark joins the plankSheer, but the side of the boat is carried up to the rail, the plankSheer not showing. The gold stripe is run so as to give the appearance of a high bulwark, but approaches the curve of the rail toward the end of the counter, giving a very clean and shapely finish. In Tomahawk the steel side plating is carried up to form the bulwark, being capped with a small rail, the gilt line being used to define an imaginary plankSheer.

The midship sections afford an interesting comparison, running as they do from a beam of 15ft. to a little over 10, with equal variation in draft. The first is approximately that of Nymph and Verena, 14ft. 6in. beam, Awa being still wider by 9in. In the centerboard boats the keel is of necessity kept wide, as shown, owing to the slot, being about 12in. on bottom. These boats all have the regular cabin house, the side being about 13in. high, and a large cockpit extending aft of the wheel. The headroom is a full 6ft. under beams, but of course much less in the forecastle. Though 3in. narrower, Gorilla has really a more powerful section than Nymph and Verena, the differences in this respect not being correctly shown in the sketches. She is also about 12in. deeper, and has a flush deck, with 5ft. 10½in. under beams, the headroom forward being much better than in the others. She too has a centerboard, but the trunk only comes 4ft. above the cabin floor instead of running up to the cabin roof, as in the others. The midship section of Chiquita is not shown, but it would be between that of Verena and Chispa, the draft being 7ft. 3in. She too has a centerboard, but the trunk is entirely below the cabin floor, and she would be called a keel boat if seen out of water or below deck; as she shows a deep body, while inside there is no evidence of a trunk. She has a cabin house as a matter of choice rather than necessity, as she is deep enough to be flush-decked; and the same may be said of the new Lotowana. The section of Chispa is very nearly that of Maraquita, one being based on Baboon and the other on Xara, but the four boats are very similar, differing in a little more or less bilge and a thinning through the keel at about the height of the floors. The keel of Chispa is 12in. on bottom, 18in. on top and 30in. deep, but Maraquita's is but 5in. on bottom and about 35in. deep. Tomahawk is thus far the narrowest of the lot and the deepest save Helen. Liris shows a very large and powerful section, and taken with her ballast plan her great stability is easily accounted for. The bilge is deeper and harder than in the Burgess boats, and there is plenty of room for lead below, the keel being 18in. wide on top and 12in. on bottom by 32in. deep.

The tendency of the Burgess models has been away from the direction of the moderate cutters (an S section as in Tomahawk and Minerva with moderate beam about the waterline and quite thick through the floors); and has approached more nearly to the "wine-glass" section, with great beam, easy bilge, high and rather flat floor, and a deep thin fin by way of keel. Such a boat must be very stiff and powerful, fast in smooth water, but a poor sea boat and hard on spars and gear, while the shoal body, apart from the thin, deep keel, gives little headroom. No doubt under the present classification a light test on sail a very fast boat might be built by carrying this principle to an extreme as yet only indicated; a very wide, saucer-shaped hull, of light displacement, with a deep fin and lead keel. Such a boat would be a most undesirable sort of machine in every way, and in no respect the equal of such a compact little ship as Minerva. In her no feature has been carried to an extreme, but the aim of her designer would seem to be a careful and harmonious combination of the elements to produce a successful whole, rather than to excel the rest of the class by pushing to an extreme in one direction or another.

The great difference in size between Minerva and the others of her class is very accurately shown by the drawings, she is a much smaller vessel in every way; but all familiar with the subject will admit that she is as large a boat as should be built on the limit of the class, 40ft. load waterline. Thanks to a life long training in a measurement and classification by length, American yachtsmen have come to regard length as the sole standard of size, the one controlling factor in design, and to consider that they could take what liberties they pleased with all other elements so long as the class length was not exceeded. Length was taxed, but beam and sail were not, consequently the general effort was to cheat the rule, no one realizing that at the same time it was beating himself. In the past both beam and sail were taken in excess, and of late the case has been even worse as beam, draft and sail are all pushed far beyond a reasonable limit. In the days of the shoal boats the modeller was always impelled by the idea that he was getting something without paying for it to take a few inches more beam, with its accompanying sail; and though now and then a man was wise enough in his generation to see the advantages of moderate beam and sail he found few to listen to him. In the same way to-day the constant temptation is to beat last season by more beam, more draft, more sail, and as a rule it has been successful. As greater extremes are reached there is less margin left for this sort of improvement (?) in design, and the time has now come when the limit of draft at least has been exceeded in the 40ft. class. The next step has been taken this year, the lightening of the hull, with an increase of ballast and sail, until a limit will soon be reached in that direction also.

It is beyond question that great improvements have been made in American yachts in a few years, and that greater speed has been attained than in the past, the average of the fleet as well as in the best of each class being higher. It is a pertinent question, however, as to just what proportion of this advance is due to improvements in model and the refinements in designing, and how much to such purely mechanical features as the lead keel, a better construction, wire rigging, fine canvas and patent blocks. The means and tools at the disposal of the yacht designer are far superior to fifteen years since; but is he doing any better work individually? Do the boats of this year win from those of last because of better models and more perfect adjustment of details, or because after carrying 12 tons of lead and 3,000ft. of sail last year a designer feels safe in carrying 14 tons and 3,300ft. of sail this year? The laws of the clubs have practically dealt with length alone, and the efforts of both designer and owner have been directed to evading these laws, but very few have comprehended that there is a far higher law that cannot be disregarded with impunity. The laws of the clubs say that so long as length is kept within limits, any amount of beam and draft, of lead and canvas may be taken, but there is a natural law which forbids that more than a certain amount of power shall be disposed of to advantage on any given length. More than one designer, both professional and amateur, has already butted his head against this law and is rubbing a sore spot without a very clear idea as to what hit him, and a couple of seasons more of racing under the present rules will bring others up all standing. Given the present limit of 40ft., it is hard to say exactly what beam, draft and displacement should go with it to make the best yacht, not of necessity the fastest under the present conditions, but a desirable type of boat under amended conditions. This we know, that the limit has been exceeded in draft, beam, nearly 11ft. draft, and a displacement not far under 30 long tons.

Continuing our description to other details we need only say that the boats are all cutter rigged according to the latest American practice, that is with a slightly different sail plan from the old narrow cutters, a longer lower mast and shorter topmast, with jibs set flying in most cases, but in Nymph, Verena and some others set on a stay, with laced cotton mainsails, mostly fitted with a jackstay and toggles on the boom and a cutter outhaul, with a round bowsprit fitted to house in about 5ft., the bobstay and bowsprit being set up with turnbuckles instead of tackles. On the wider boats, Nymph, Verena, Awa, Baboon, Pappoose, Xara and Chiquita, the chainplates are set on the inside of the plank, but in Minerva, Liris, Alice and Helen steel plate channels are used to increase the spread. The outfit of sails includes generally four sizes of jibs, a working and balloon foresail, working and clubtopsail, baby, intermediate and large jibtopsail, balloon jibtopsail and spinaker, while Chispa and several others carry a gaff trysail. Minerva rejoices in two sizes of foresail in addition to the balloon, and in a small clubtopsail, a very handy little sail. The standing rigging, of steel wire, is usually set up by turnbuckles instead of lanyards, and the quarter lifts, topsail halliards and jib halliards are of flexible wire rope. Hollow spars are used to a certain extent, but the masts are all solid.

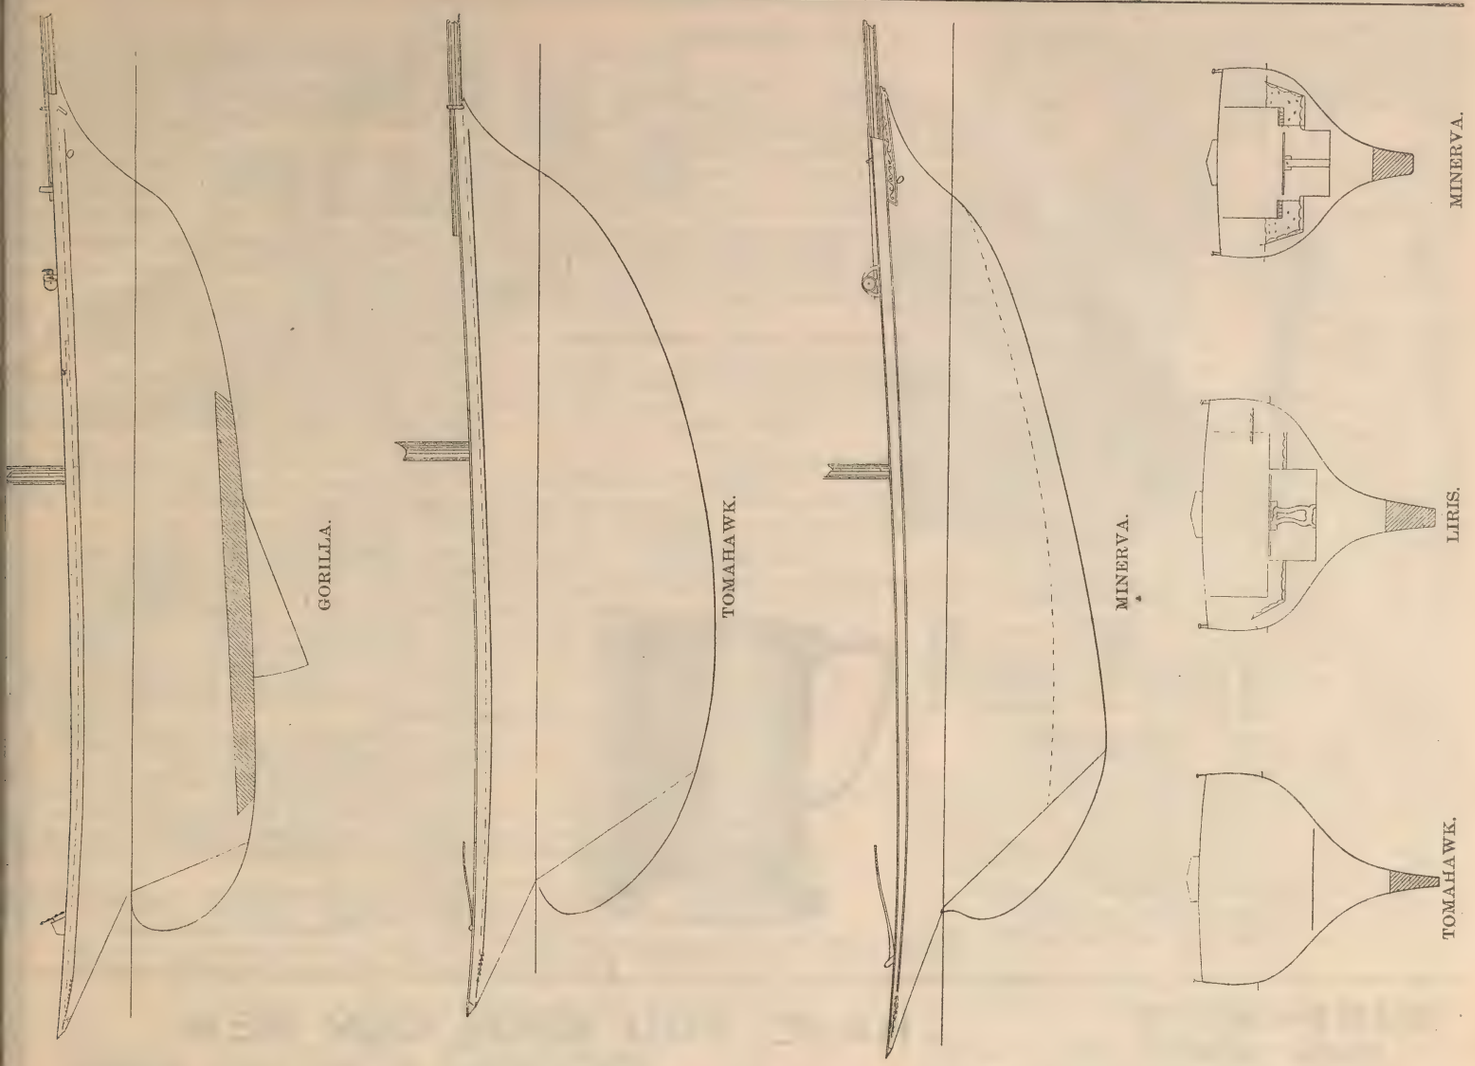
The sail areas are given in the table, the official measurements of the New York Y. C., which are sufficiently close to the actual areas for all purposes of comparison. The wide range will be noticed from 3,600ft. on Liris to 2,724 on Minerva, these two extremes showing up thus far as the fastest of the class. As sail spread is a pretty good gauge of the cost of running and also of building, these figures tell their own story. On a given length larger sails mean a larger and more powerful boat, extra lead, stronger construction, more expensive form (as a rule), larger spars and rigging, consequently greater first cost, and at the same time a larger crew, greater wear and tear of hull and gear, and breakage of spars, and more expense in renewals. Each of these items may be but small in itself, but when the sail area is increased 25 or 30 per cent. the expenses begin to increase quite rapidly. Whether or no the speed and accommodation must increase in the same ratio remains to be seen.

We have already described the leading yachts of the class in detail during the past winter, but a brief comparison of the general fittings of the fleet will serve to make this description more clear. The centerboard boats have each a large cockpit, from 8ft. to 10ft. long, a feature which is permissible in them as the depth is not sufficient to allow an after cabin. In the keel boats, however, a very good after cabin or ladies' stateroom may be had, and all but Maraquita are thus arranged. She has a cockpit 9ft. long and 7ft. wide, about 16in. deep, from which the companion opens, as in a cabin house yacht, in spite of her flush deck. When it comes to a choice between an after stateroom and a cockpit in a yacht of 30ft., and over, we should take the cabin every time as of more value, but no such alternative exists in the 40ft. class, and both may be had. Chispa is arranged with a very convenient cockpit on deck, far enough aft to allow an after cabin as well, the only disadvantage being a slight loss of space in the sail locker. Minerva has a convenient cockpit or steering well abaft her cabin, and several others are similarly fitted. Liris and Tomahawk are flush-decked, with no opening save a circular one giving access to the sail locker and used as a steering well, and Pappoose, Baboon and Xara are fitted with oval openings for the same double purpose. There can be no question of the advantage of a cockpit large enough to accommodate three or four in bad weather, especially in "family cruisers," as some of the forties purport to be.

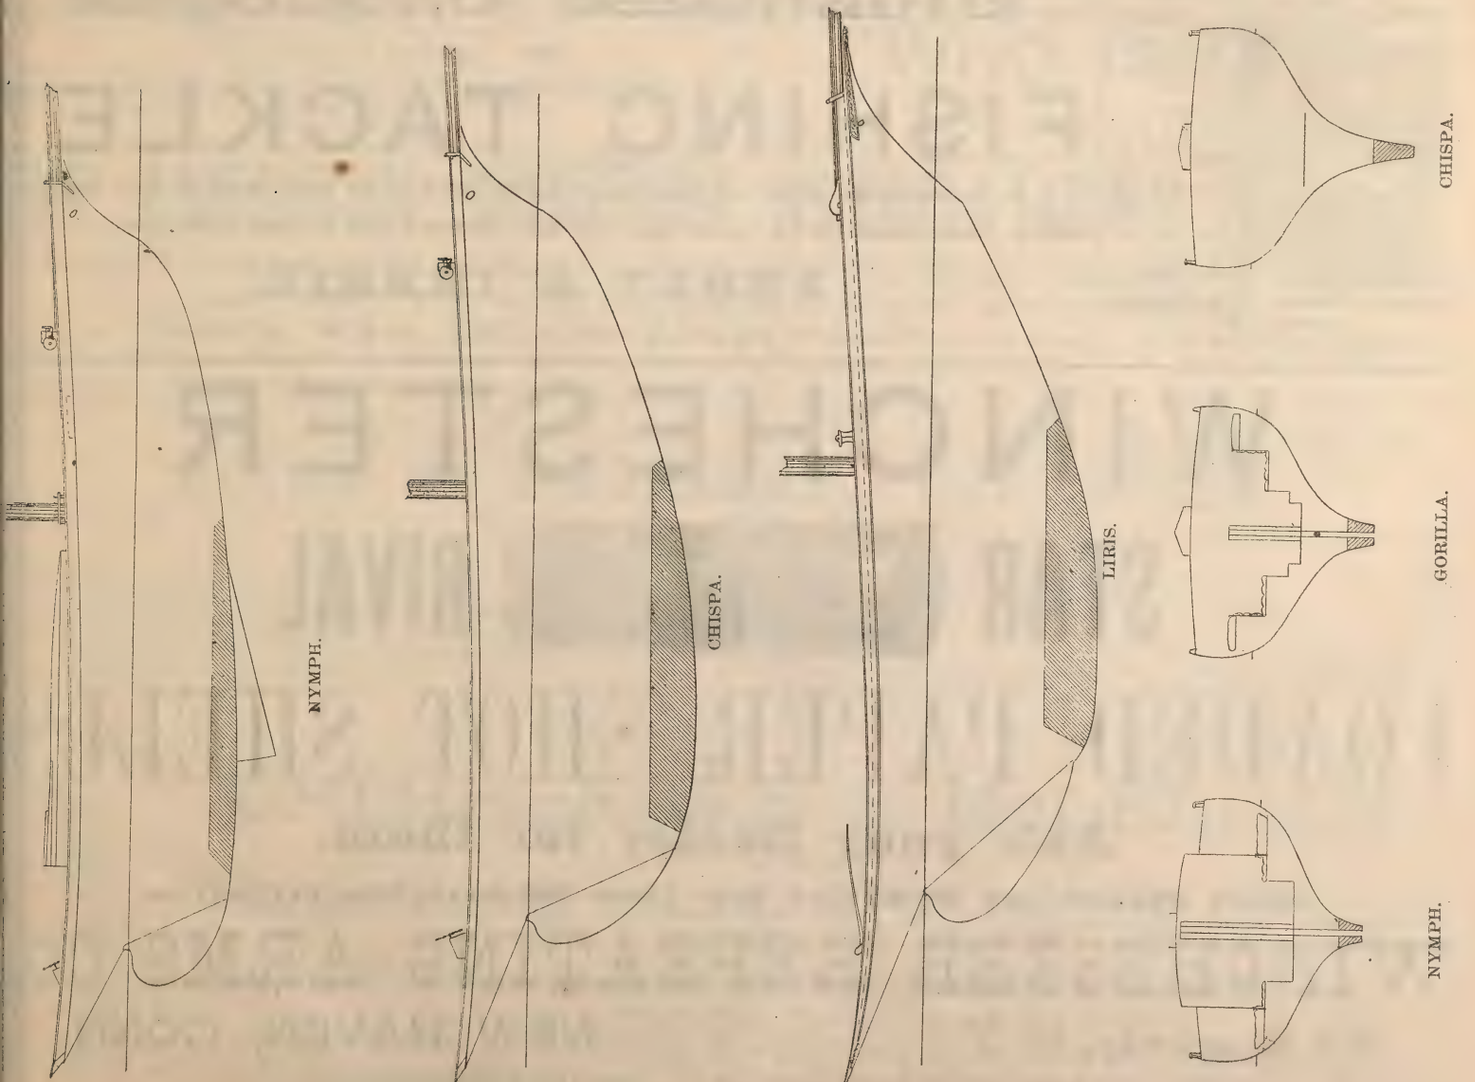
Minerva, Liris, Tomahawk, Baboon, Pappoose and Xara steer with a tiller, but most of the others use a wheel, Gorilla being fitted with both. On nearly all the pump break windlass is used, Liris having a neat little crank capstan of Irish make, while Minerva and Helen are fitted with Reid's bitts and windlass, a Scotch device. The ordinary oak or locust bitts are used to carry the heel of bowsprit and the windlass in most cases, but Liris has bitts of steel plate, similar to Madge and Clara. All except Liris and Tomahawk are of the usual wooden construction, more or less heavy in proportion to the care and skill of the designer and builder, Liris being of composite build and Tomahawk of steel. The cost is a detail that will interest many, but we can only give approximate figures. A centerboard boat like Verena or Nymph, with all lead ballast, oak frame, yellow pine planking, iron fastenings in deadwood and plank, main cabin and state-room finished in painted pine, with toilet-room with wash bowl and closet, ice-box, pantries, water tanks and plumbing; with complete outfit of spars, sails and rigging, will cost about $6,000. The new keel boats, Chispa and Maraquita, are said to have cost about $7,000, while a steel or composite boat will cost from $8,000 up. If we have been successful in our attempt our readers will have a fairly good idea of the 40ft. class as it stands to-day, and will be able to draw their own conclusions from the results of the races. The first question in the minds of most yachtsmen is, "Which boat will win?" but we propose to carry the subject further and to endeavor to determine which are to be commended and improved, and which condemned and replaced by something better.

VALKYRIE.

BEYOND the facts that Gen. Paine has replied to Lord Dunraven's letter, and that he has also written to the owners of Titania, Katrina, Bedouin and Shamrock, in regard to matches between these yachts and Valkyrie, there is nothing definitely known. Gen. Paine will not state whether he has agreed to act as the representative of Lord Dunraven, and declines to make public his letter. Valkyrie has been fitting out at Southampton for the voyage, and will probably sail in a few days. Lord Dunraven's 60 of last year, Petronilla, is also fitting out for the home racing, and will sail at Cowes for the Queen's Cup.



NEW YORK Y. R. A. REGATTA.—The first union regatta of the New York Yacht Racing Association will be sailed on Labor Day, Monday, Sept. 2, being open to the following clubs, members of the N. Y. Y. R. A.: Columbia, Harlem, Hudson River, of New York; Jersey City, Pavonia, of Jersey City, N. J.; Newark, of Newark; Newark Bay, of Bayonne; New Jersey, of Hoboken; Sing Sing, of Sing Sing, N. Y.; Staten Island Athletic Club, Yachting Dept., West New Brighton, S. I.; Williamsburg, N. Y. C., Astoria, L. I.; Yonkers C. Y. C., Yonkers, N. Y.; Point O' Woods, Y. C., Saugatuck, Conn. The start will be made from Liberty Island at 11 o'clock A. M. and will be a flying one for all classes. Preparatory signal will be given by long blast of steam whistle and raising blue peter on flag staff of steamer. Ten minutes later long whistle and raising yacht ensign will be the signal for classes A, B, C, D, E, F and G to start. Ten minutes later long whistle and raising N. Y. Y. R. A. signal will be the signal for all other classes to start. Ten minutes later a long whistle be given as handicap signal. All yachts not having crossed the line within ten minutes after the signal for their class will be timed as starting at the expiration of said ten minutes. The courses will be as follows: Start and finish for all classes from an imaginary line between the steamboat and a stakeboat anchored to the east of Liberty Island, Courses I.—Classes A, B, C and D. To and around buoy No. 8½ (S.W. Spit), leaving it in turning on the port hand and return over same course. Course II.—Classes E and F. To and around the red bell buoy at inside end of Swash Channel, leaving it in turning on port hand and return over same course. Course III.—Classes G. Nos. 1, 2, 5, 6 and 7. To and around buoy No. 13 off Swinburn Island and return, keeping same on port hand. Course IV.—Classes 3, 4, 8 and 9. To and around buoy No. 15, leaving it on port hand, thence to and around Fort Lafayette and return to starting point. The classification will be according to the rules of the N. Y. Y. R. A. as follows: Class A, schooners, 40ft. and over; Class B, cabin sloops, over 53 and under 62ft.; Class C, cabin sloops, over 45 and under 53ft.; Class D, cabin sloops, over 38 and under 45ft.; Class E, cabin sloops, over 32 and under 38ft.; Class F, cabin sloops, over 27 and under 32ft.; Class G, cabin sloops, all under 27ft.; Class 1, open sloops, over 27 and under 32ft.; Class 2, open sloops, over 23 and under 27ft.; Class 3, open sloops, 20 and under 23ft.; Class 4, open sloops, all under 20ft.; Class 5, cabin cat-rigged yachts; Class 6, open cat rig, over 27 and under 32ft.; Class 7, open cat rig, over 23 and under 27ft.; Class 8, open cat rig, over 20 and under 23ft.; Class 9, open cat rig, all under 20ft. Measurements and time allowances: The sailing measurement shall be according to the rules of the N. Y. Y. R. A.—the load waterline added to one-half the overhang. Time allowances according to the tables adopted by the association. All entries must be made in writing, giving the correct measurement according to the Association rules as specified above, and must be sent to the secretary on or before Aug. 26. Numbers will be distributed to the competing yachts from the stakeboat on the morning of the regatta, and must be returned to the regatta committee after the race or by mail. Yachts may carry crew as follows: Cabin yachts, one man for every 5ft. of sailing measurement or fractional part thereof besides the helmsman; open yachts, one man for every 3ft. of sailing measurement or fractional part thereof besides the helmsman. Club signal—Each competing yacht must fly its club signal at the peak. Ballast—Shifting ballast will be allowed in open yachts. Sails—Cabin sloops, mainsail, forestaysail, jib, flyingjib, jibtopsail, clubtopsail, gaff topsail, balloon jib and spinaker; open sloops, jib and mainsail only; catboats, mainsail only. Time of race—The race must be made by any yacht in any of the classes in seven hours or less, and will be a race for all classes. Copies of the N. Y. Y. R. A. sailing rules and regulations can be obtained from the secretaries of any of the clubs. Regatta committee: R. Palmer, Pavonia Y. C.; Charles B. Cameron, Newark Y. C.; B. S. Gibson, Sing Sing Y. C.; J. K. Tucker, Hudson River Y. C.; George Parkhill, Secretary Columbia Y. C. and Secretary N. Y. Y. R. A., 61 East 130th street, N. Y.



THE 70FT. CLASS.—The seventy-footers have been keeping very quiet since the New York Y. C. regatta, none of them entering in the Sound or Eastern races. The reason for all this is that they are busy preparing for the races of the New York cruise, and more particularly for those with Valkyrie later on. Titania and Shamrock have needed little in the way of alterations, but Katrina and Bedouin have been making some important changes. The pair are at Poillon's; where Katrina's mast has been replaced by a larger one of the same wood, Oregon pine. Her new boom, of white pine, lately made from one of Mayflower's, will be replaced by a cheese sandwich stick of Oregon pine 4ft. longer, or 75 in all, her sail plan being increased considerably. In addition her board has been deepened about 18in. Bedouin has had a longer topmast and a new cheese sandwich boom 68ft. long, of Oregon pine. Both sticks have been very carefully put together under the direction of Mr. Driscoll, being sawn in two and hollowed out, the adjoining edges carefully dowelled together and joined with a mixture of lime and pot cheese. Similar sticks of Oregon pine are doing good work still on Titania and Gorilla.

EASERN Y. C. CRUISE.—The combined cruise of Eastern and Seawanhaka fleets came to an end on July 24 at Bar Harbor, where the fleet was formally disbanded. On Monday the gig race, for the purse offered by Mr. E. V. R. Thayer, was rowed with 5 entries, Sea Fox being first and Fortuna's gig second. The 40ft. race for the Carroll cup did not come off on account of fog, but it will be sailed off Newport after the New York cruise. The winners of the prizes for the best average on the runs have not yet been determined. On Wednesday the fleet dressed ship in the morning, after which it was formally disband by Com. Hovey. Kathleen and Medusa were at Portland on July 27 and Sea Fox at Marblehead.

XARA, Mr. Meau's 40-footer, is now fitting out at Lawleys'. Capt. Tom Sloan will race her during the season.

MONATIQUOT Y. C.—The first championship race, of July 27, was postponed to July 30, on account of rain.

AMERICAN Y. C. OF NEWBURYPORT, MASS.—The first championship race of the American Y. C., postponed from July 8, was sailed on July 20. At the time of starting, 2:30, it was calm, and so the start was set for 4 o'clock, when a very light air from the N.W. sprang up, continuing light throughout the race. The first class crossed the line at 4 o'clock, and the second class five minutes later. The inside, No. 2, courses were sailed by both classes:

FIRST CLASS.	Length.	Elapsed.	Corrected.
Budge, Durland and Rogers	19.00	1 56 47	1 16 59
Vexer, P. J. Lowell	19.10	1 59 12	1 20 33
Hazard, Pierce and Moody	23.02	1 58 36	1 24 25
SECOND CLASS.			
Gem, Besse and Wordwell	14.10	2 05 38	1 26 25
Cuckoo, Walter Pitchford	14.09	2 12 28	1 32 03
Maude		Did not finish.	

Distance of first class, 10 miles: second class, 8 miles.

MAHOPAC Y. C.—First pennant regatta for sloops 19 to 23ft., July 20, regular club course, sailed twice, 10 miles, weather fair, wind light, northerly:

	Elapsed.	Corrected.
Flora, E. S. Ponvert	2 20 27	2 19 27
Vida, David Hunt	2 22 25	2 22 25
Vixen, F. H. Patteson	2 23 35	2 23 15
Mattie, J. Luckenbach	2 25 20	2 24 00

Regatta Committee: Wm. A. Nash, A. Ammerman and J. F. Suydam.

SING SING Y. C.—On July 26 a race for class 6 and class 8 catboats was sailed over a 12m. course, in a squally S.W. wind. Aller, owned by Samstag brothers, beat Com. Ralph Brandreth's Madge by 2m. 19s. actual time, going over the course in 1:56:30. Columbia, owned by Isaac Washburn, Jr., won in the 8 class, beating the Orient, owned by Augustus Osborn, by 49s., corrected time, covering the course in 2:00:39. Pauline B., owned by James Smith, capsized off Scarborough. The judges were Col. B. Stuyvesant Gibson. Charles Gowen and Justice Pierre Reynolds.

DORCHESTER Y. C. CRUISE.—On July 22 a joint race of the Dorchester and Portland clubs was sailed off the latter place, the times being in first class: Restless, 4h. 24m. 41s.; Ianthe, 4h. 52m. 11s; Clytie, 5h. 18m. 7s.; Bohemian disabled. Distance 31m. In the second class race, Nomad, of Dorchester, won in 2h. 38m. 10s.; Ethel second, in 3h. 1m. 33s.; Willie and Idler, of Portland, were third and fourth. Rondina carried away her topmast, while Aldo and Magic also were disabled. A $50 cup for each class was given by Com. Soley. On July 26 the fleet was at Camden, Me.

LARCHMONT Y. C. OYSTER BOAT RACE.—The fifth annual oyster boat race of the Larchmont Y. C. will be sailed on Aug. 24 over the regular Captain's Island course, starting at 10 A. M. The classes are: Cabin sloops, 35ft. and over, and those under 35ft.; open sloops, 30ft. and over, and those under 30ft., and catboats. The prizes, two in each class, will be in cash. Entries free to be made in writing not later than Aug. 23 to the regatta committee at Larchmont.

AMERICAN Y. C.—The annual regatta of the American Y. C. will be sailed in September this year, over two courses, from Race Rock to a point opposite the club house at Milton Point, a distance of 80 knots, and from the club house to Stratford Shoal Light and return, 56 knots. The annual races of naphtha launches belonging to the club will probably be held next month.

FREDONIA.—Mr. J. Malcolm Forbes and party arrived at Gloucester on July 26 in the schooner Fredonia. Puritan is now fitting out at Naushon and will join the New York fleet.

RACING AT CASCO BAY.—A race will be sailed in Casco Bay on Aug. 17 for prizes offered by the Waldo Company, open to all yachts under 35ft., the course being about 11½ miles.

SULTANA.—At Handren & Robin's yard, the Erie Dry Dock, the new steel steam yacht Sultana, designed by Mr. J. Beavor Webb for Mr. Trenor L. Parke, is now in frame and partly plated.

ATLANTA.—The Pride of Bay Ridge has lately been put into commission under her new schooner rig, and is now cruising on the Maine coast.

PURITAN C. C.

SINCE last we met many things have hapnened. The months of May and June were pleasant except when we desired good

days; then it usually rained or blew a gale, causing many postponements, which have run over till September and October.

So far this season there have been three mainmasts gone by the board and seven men have taken involuntary baths.

The club has recently been presented with two cups to be raced for; one a silver cup and one a pewter mug for the second best man.

The silver cup presented by Capt. and Mrs. James W. Cartwright is to be held three years in succession before the winner owns it. The races are open to members of the club, each boat to be sailed by her owner, thus stimulating the activity of the members.

The rules governing it are as follows:

I. This cup is to be raced for at least three times each season by members of the Puritan C. C., the canoe winning the most races to hold the cup for one year, and to have its name and the owner's inscribed upon the cup.

II. The races are open to any canoe of the A and B classes, A. C. A. classification.

III. Each canoe must be sailed by her owner, and one man shall form the crew of each canoe.

IV. Mainsails, except in the case of "pin and ring" rigs, must hoist by means of a halliard.

V. No ballast may be shifted above the gunwale.

VI. No deck seat which projects beyond the beading of the gunwale, or any other appliance which illegitimately increases the beam and not the body of the canoe may be used.

VII. With the above exceptions, the racing rules of the A.C.A. will be followed in the races for this cup.

VIII. Any man holding the cup for three years in succession may keep the same as his own property.

The cup has three handles, is 8in. in height and 5in. in diameter. Mr. Jos. S. Dean, a member of the club, gives the pewter cup for a second prize, to be kept by the winner. It is hoped that these cups will have the desired effect.

Our race days have all been bad so far, and as many of the members are away for the summer the races will be sailed in the later summer.

The record races for June 16 and 17 were given up, the club attending the local meet on Peddock's Island, both of the paddling events coming to our club.

JAMES W. CARTWRIGHT, JR., Sec'y P. C. C.

THE CANOE CLUB LIST AND A. C. A. YEAR BOOK.—We have received from the Nautical Publishing Co. a neatly printed volume bound in canvas containing a complete list of all American canoe clubs, as well as foreign clubs, the total number of the former being 85. The reports as to membership are not complete, but a total of 2250 active members is given, to which must be added the associate members. A very attractive and useful feature of the book is the large collection of club flags and totems in colors, the first attempt of the kind. The editorial work was done by Mr. C. B. Vaux, editor of *Sail and Paddle*, and he has turned out a very complete and useful volume. It is proposed to make the List an annual if the support which it receives from canoeists shall prove sufficient to justify it. The price is $100 per copy.

A. C. A. MEMBERSHIP.—Northern Division: Jas. MacKendrick, Galt; J. S. Wallace, Toronto; Robt. S. Barrow and C. A. Sanderson, Montreal. Central Division: Martin D. Atkins, Geneva, N. Y.; Fred. M. Barnard and Benjamin H. Beach, Rome, N. Y. Atlantic Division: Dr. W. A. Campbell, Brooklyn; Charles Philip Easton, Yonkers, N. Y.

REDUCED RATES TO THE A. C. A. MEET.—Members desirous of securing the reduced rates of fare to the A. C. A. meet must present their certificates of membership at the office where they buy their ticket, and will receive there the proper trunk line certificate. The division pursers do not supply the trunk line certificate.

BRITISH CANOE ASSOCIATION.—The third annual meet of the British Canoe Association began yesterday at Lake Windermere, continuing until Aug. 10.

HOW TO BUILD THEM.
BY WILLIAM S. WICKS.
This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa
Is Absolutely Pure,
and it is Soluble.
To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.
W. Baker & Co.'s Breakfast Cocoa
is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.
W. Baker & Co., Dorchester, Mass.

GURDON TRUMBULL'S
Names and Portraits of Birds
Which Interest Gunners; with descriptions in language understanded of the people.
Practically speaking, this is the first popular volume of ornithology ever issued from the press; a work which goes far to demonstrate that scientific accuracy may be as easily maintained in English as in Greek or Latin. Follows the game birds all over the continent and gives a glossary of all the local names in popular use. Illustrated with admirable portraits from the pencil of Mr. Edwin Shepard of the Academy of Natural Sciences, Philadelphia, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, [illegible] of books of which the need is felt in every department of natural history.—*Troy Press.*
The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*
I would much rather know what this book tells me, the various names by which the people call a bird, than the Latin, Greek or Hebrew name which science gave him for the sake of cataloguing him. * * * It is more value to me to have a description of a bird in plain English which I understand than in scientific language which I do not understand.—*W., in Journal of Commerce.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 8, 1889.

VOL. XXXIII.—No. 3. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $11; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $6 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS

DEATH OF "SENECA."

HENRY H. SOULÉ, whose pen name of "Seneca" has long been known to readers of the FOREST AND STREAM, died at his home in Syracuse, N. Y., last Tuesday evening, Aug. 6. His age was thirty-five.

Mr Soulé was a journalist of decided versatility; for several years and up to the time of his death he was the managing editor of *Freund's Music and Drama*, of this city; and he was a constant contributor to the dailies of New York and Washington. Many bright things came from his pen, but there were no subjects of which he wrote with more ready sympathy than of the pursuits of the field. To these pleasures he had been devoted from boyhood. Deprived of the use of one of his legs, and compelled to go on crutches, he nevertheless, with a sturdy pluck which commanded the admiration of his friends, overcame this seeming obstacle to participation in outdoor life, and proved himself an adept in shooting, fishing, and of later years canoe and small-boat cruising.

The same high spirit and cheerful resolution which thus triumphed over physical disability also prompted "Seneca" to make the most of his opportunities, so that while busily engaged in newspaper work in New York he found time to make himself familiar with all the cruising waters, fishing resorts and camping sites in the vicinity. He had a penchant for exploring hidden nooks, and penetrating into out of the way places; he found out the by-ways. From these solitary excursions he brought back fresh knowledge of natural history, and often, too, quaint studies of human nature there encountered. The marsh folk, the trapper, the pot hunter, the fisherman, all the queer characters who haunt the borders of civilization, waifs and strays of humanity left behind in the eddies and on the shoals, these were picturesque subjects of study whose interest for him never failed.

"Seneca" had many characteristics of that type of sportsmen of whom "Nessmuk" is a familiar example. His taste for nature was pure and simple. He loved the forests, and the streams, and the marshes, and the lakes, for themselves. With a crowd in camp he had no patience; in canoe racing he could find no pleasure; but the charms of single-handed expeditions in canoe or sneakboat and the witchery of the solitary camp-fire on the shore lured him for days and weeks.

Some years ago he collected in book form and published under the title of "Canoe and Camp Cookery" the culinary lore he had acquired in these outings. Within the last few months our Sea and River Fishing columns have contained papers from his pen descriptive of the fishing resorts in the vicinity of New York. A comprehensive book of hints and recipes for sportsmen was in preparation and nearly completed before his last illness.

Always a bright and cheery companion and a true friend, Henry H. Soulé will be widely and sincerely mourned.

SOME CAMP PESTS.

WE hear so much of the delights of life in camp that those whose experience is limited are somewhat given to imagine that camping is all sunshine, and that not even a summer cloud rises above the horizon, to lower the spirits of the woodsman by the prospects of a shower. Old hands, however, those who measure the time that they have spent in camp by years, and not by days or weeks, know that this impression is an erroneous one, and that there is no place where a man can be so utterly wretched as in camp. That the past is always looked at through rose-colored spectacles is due merely to the well known fact that memory always brings out in strong relief that which is pleasant, while sad and painful recollections soon fade from the mind. And it is well that this should be so, for were men to recall the trials, disappointments and misfortunes of life as vividly as they do their past pleasures, successes and triumphs, one of Mr. Mallock's queries would certainly be answered by most people in the negative. But we forget in part all that is disagreeable, or if we remember it, do so with pleasure, and in our present happier circumstances laugh at past miseries.

Of the torture caused by mosquitoes, blackflies and fleas; or the pronounced and sincere dejection caused by traveling day after day through the rain, it is not worth while to speak at length, for almost every one who has lived in camp at all has been through these dismal experiences. The sorrows of the insect-bitten wretch who annoints himself with evil-smelling compounds in the hope of thus escaping the attacks of his enemies, and of the scarcely less unhappy mortal who for days is drenched with rain, for nights has to sleep in wet blankets, and whose food during all this time is cold, soggy and unattractive, have often been recited.

There are a number of camp annoyances, however, which are not often experienced except by one whose outdoor life has extended over a good deal of time, and who has taken the rough with the smooth in many places. One of these, and an extremely annoying one, especially in autumn, is the plague of flies. These pests make themselves felt all through the summer, but they are especially annoying in the early autumn. They then become veritable pests, spoiling one's meat, getting into dishes and food, both cooked and uncooked. But perhaps the most aggravating thing that these wretches do is at the approach of sundown to collect inside the tent and cluster in a thick black mass along the ridge pole. Then as the night advances and it becomes colder, one by one they lose their foothold and drop down on to the faces of the individuals who are trying to go to sleep on the ground below. It is really very annoying to be roused just as you are stretching out your limbs before dropping off to sleep by having a fly strike you on the face and remain there. You shake it off, not exactly knowing what it is, and then presently one drops on the blanket just below your face, and then you feel your next door neighbor start as one hits him. By this time you have realized what the trouble is, and are in doubt as to whether you had better get up and scrape all the flies down from the tent or shall simply cover up your head with the blanket and let them drop. In the former case you will be shivering with cold before you have accomplished your task; in the latter you will be likely to be kept awake half the night by the flies, which, revived by the warmth of your body, will make little exploring tours under the blankets and will try to lodge themselves between your clothing and your skin or to get into any other good warm place. The best thing to do with meat when flies are troublesome is to raise it on a pole as high above the ground as may be convenient. On the top of a pole from 25 to 30ft. in height flies will seldom find meat, and it is practically secure from their attacks.

The industrious ant too often proves himself a nuisance to the camper who remains long in one spot, for unless precautions are taken this small beast is likely to introduce himself into all the receptacles in which provisions are kept. This, however, is a small matter, for the intruders can be removed from such places without difficulty. But when they swarm upon your blankets, either because you have made your camp too close to their nest or have incautiously dropped some fragments of food in or near the tent, it is a difficult matter. It is an unquestioned fact that ants make very undesirable bedfellows, and we have seen a sad-eyed lot of campers fairly driven from their tent by the insects, and obliged to spread their blankets, as best they could, at a distance from the canvas where they had originally sought repose.

We have spent many a month in camp with an enthusiastic ornithologist, and when at night he would come into the tent and spread out before us the treasures that he had collected during the day, we have shared his delight and his enthusiasm. It has more than once happened, however, when we were lying in camp for several days, that some of his specimens had been overlooked and had slipped behind some article in the tent. Then, after it has lain there for a day or two, the burying beetles begin to assemble. Where they come from it would be hard to say. The first intimation of their presence is given by one of them sneaking to cover when the fold of the blanket under which he has been concealed is turned down. If he be found by an old hand, much profanity follows and a thorough clearing out of the tent. As soon as the decaying specimen is removed, the trouble ceases. The beetles having been expelled do not return. While they are with us, however, they are very disgusting.

SNAP SHOTS.

IN the current discussion of the Behring Sea seal fishery question, many curious notions come to the surface. Here is the Washington correspondent of the New York *Herald* gravely asserting that the State Department is disposed to adopt the theory that British captains must keep their hands off because the seals breeding in America's territory are "American property," no matter where found. As set forth by the correspondent the contention is this: "The seals have a habitation and breeding ground in-shore and absolutely within the jurisdiction of the United States. Our government could well maintain that they did not lose their character as the property of the United States by venturing into the high seas." As a matter of fact seals are *ferœ naturæ*; if they leave American territory and take to the high seas we have no more control than the Canadians have over wild geese which breed in Canada and are killed in North Carolina. Protection of the seals from water-killing in Behring Sea is of the highest importance, but it will never be attained by any such violation of first principles as is this notion of "American property" in them.

The formidable list of fifty-nine exempt counties named in the Tennessee game law might give the impression that the law must be restricted and local; but the State has ninety-six counties, and there still remains wide scope for the law's application. Tennessee's neighbor, Georgia, has no general State law, but each county is the subject of special legislation. It is a large State, and its climate is diversified. In the north and west end are the mountain ranges, where it is cold; in the east and south the coast line and Florida borders. To the south, for instance, the open season on quail and summer duck is a month earlier than at Augusta.

The communication from "Podgers" may be accepted as fairly representing the sentiment of American holders of Canadian fishing leases. The feeling against the system is by no means universal; and we hear of one club, now made up of Canadians, which is ready to enlarge its membership by admitting Americans. This is the Laurentides Club, which holds some very fine trout lakes within a few hours of Quebec by rail and controls a tract where there is good bear and caribou hunting.

The Sportsman Tourist.

CAMPS OF THE KINGFISHERS.—IV.

ECHO LAKE, ONTARIO, CANADA.

OLD SAM and I went on our way down the shore, so intent in admiring the bold rocky hills on the further side, whose scarred and ragged fronts rose skyward to a height of 200 and 300ft. above the lake, that I doubt if anything less than a 40lb. maskinonje would have awakened us to a realizing sense of our whereabouts or our mission, which was to hunt up the fishy-looking places and get some fish for the camp.

The shore along which we were now pulling was fronted by a wall of rough, very black rock that rose straight out of the water to a height of ten or twelve feet and extended back to the foot of the sloping hill twenty or thirty rods away, the intervening spaces covered with a growth of small trees and bushes with here and there a cluster of luscious red raspberries peeping and laughing at us from the top of the bank, because, we had a notion, we could not climb the rocky wall to get at them. A few rods further along, the wall terminated in a bold point of black, bare rock, from whence the shore swept in a deep curve around to the left to the very foot of the wooded hill, forming a quiet little bay backed by a cedar swamp and lined in front with a heavy fringe of dark green bulrushes that followed the shore line as far as we could see down the lake.

A pickerel fisher would have followed the rushes around the bay, tolerably sure of picking up a few long-snouts, but we were after better game, and kept straight on down the lake to a small island, a quarter of a mile below, that reared its rocky front lakeward fifteen or twenty feet above the water. Landing at the upper end we wedged the boat in a fissure of the rock which was here nearly on a level with the waterline, and got out to stretch our cramped legs and have a look at this little beauty spot, the only island in Echo Lake. The side facing the mainland on the southerly side was low and flat, two or three feet above the water for half the length of the island, and except at the upper end and the high bare rock looking out on the lake, covered with a thin soil that supported a growth of good-sized bushes, a few young birches, patches of soft gray moss and a few scattering, stunted huckleberry bushes from which we picked just enough berries to whet our appetites for more. Two or three fair-sized pines standing guard at the extreme lower end, one dead and grim, their roots laced and intertwined in the crevices of the rock in curious shapes and contortions, completed the pleasant picture, and the half hour or more we spent in poking around the little rocky islet, picking huckleberries, peering into cracks and crannies and writing our names with a chip of sharp stone in half a score of places on the smooth, weather-worn rock—as any other pair of schoolboys might have done—was duly chronicled in old Sam's mental note-book as "one o' the pleasant episodes o' the trip." A few yards from the boat we found "sign" that a camper had been there at some time; it was a well-flattened bed of old hay sheltered from the sun and night dews by an overhanging clump of bushes, a mildewed, dilapidated old shoe, a fragment of a decayed old sock—"evidently a one-legged man," old Sam said, "or he would have left the other shoe and sock"—a few strips of birch bark, curled and crinkled and warped by the hot sun, and the remains of what had been a very small fire. We looked in vain for an old tin can lying around, and Sam figured it out that the camper "must hev been a one-legged Injun."

At last we climbed, with some "slip backs," up the side of the rock to the top, where, looking out on the lake we got a glorious view from near the camp clear around down to the Ruttle farm and back up the other shore, less than an eighth of a mile away, to the rocky point above, and a good view at a glance of the whole island. It was not more than 50 or 60yds. long by nearly half as wide, irregular in shape and almost a solid rock, seemingly upheaved by some convulsion of nature from the depths below. Beneath us a rough rocky bottom sloped away a few yards and was lost in the blackness that denoted deep water; how deep we could only conjecture, as we were too lazy to fasten a stone to one of our fish lines and sound for bottom.

All around the lower end and along the side next the shore was a belt of grass and rushes; and we got back in the boat to try for a bass or two; but after fishing carefully around it twice without a nibble we agreed that it was wrongly named, Ruttle having told us it was called Fish Island on account of the great fishing to be had around it at certain times in the season. As this did not seem to be one of the "certain times," and it was too late in the day to go on down to the foot of the lake, we pulled across to a low rocky point less than a mile away, from which the low densely wooded land stretched a half mile or so to the foot of the high hills.

The shore front along here was almost solid rock, in places rising straight up from the water, but for the greater part sloping abruptly down from heights of 3 to 10 and 15ft. In many places we noticed little sharp wavy ridges ½in. to 1in. high and 2in. to 6in. apart, running laterally with the shore, that looked like a black corrugated roof put on the wrong way, but old Sam expressed it more clearly, perhaps, when he said "it looked like some feller had been pourin' hot pitch on the slopin' rock an' the little waves had cooled before they reached the water." Our education bearing on geological formations in general having been somewhat neglected in our youth, "Snakeroot's" way of settling the origin of the little sharp ridges was "good enough for the Joneses," and we kept on our way around the shore into a wide bay, reaching deep into the woods on the left, which we found to be comparatively shallow, 8 to 20ft. deep, and well grown up with "mus'rat" grass, bulrushes and patches of great "bush weeds," so familiar to us in some of the lakes of northern Michigan. As we passed one of these 50 or 60ft. in shore Sam stood up and cast his frog within a yard of it, and had hardly resumed his seat, when he was up again with "got another bite at last, b'gosh!" and by the time the skipper had reeled up and taken the oars in hand again he struck the fish; and after a fierce surge that sorely tried the temper of his rod, a handsome specimen of the tribe of *Esox* shot fully six feet in the air and fell back with a loud splash that made our hearts stand still till the line tightened again. "Another confounded pickerel," said Sam, as he swung his rod around to the left with a hard pull to keep his lordship away from the bush weeds, for once he should get a turn around one of these angler's abominations it would be certainly good-bye to Sam, with a part of his line besides.

"Maskinonje, Sammy, as sure as you're a sinner," said the skipper, "didn't you note the markings on his side while he was in the air."

"Pickerel all the same," insisted Sam, and the fight went on. The fish started toward the boat, but two or three quick strokes on the oars shot us up lake into a trifle deeper water, clear of rushes, the line slipping out from under Sam's thumb with sufficient pressure on to keep a taut line.

Suddenly the fish took a wide sheer to starboard, and before Sam could "pull himself together" was stuck fast in a patch of grass near the bottom, but we could tell he was still on by the twitching of the rod tip. "Well, if that aint the beatinest fish ever I hung; wants to dig a hole in the bottom of the lake with his snoot, I reckon," said Sam, as he held his rod well up with one hand and scooped the sweat from his forehead with the other, the skipper meanwhile holding the boat steady in place and waiting for the fish to "saw loose" or break hook or line and go his ways. But it was a trusty little thread of braided silk, and after a minute or two of intense waiting, long, narrow blades of grass, cut by the line, began to come to the surface till the water was covered with it for a yard or more.

All at once the line slackened, the rod flew up; and Sam came near losing his "equibilerum" and going overboard. "Great Scott! he's gone and done it," from Sam, in a tone that moved the skipper to tears—of hilarity, and in the same breath, "Hooray! there he goes again," as the line tightened and the rod bent to its work once more. Ten minutes more of hard, stubborn fight in open water, where "the odds were even," and *Esox* came to the top of the water with dorsal out in token of surrender, and was led alongside, as Sam said, "pullin' sideways like a hog goin' to war," where the skipper jerked the gaff in him just "abaft his fo'castle" and lifted him in the boat. "A sure enough maskalonge after all," said Sam, as he kneeled and pushed a stringer needle through the lower jaw and knotted the other end of the cord firmly to make sure of his captive, and then he was hooked on the pocket scale and held up with another "hooray!" when he registered just 7½lbs. "A mighty small fish to cut sich a big swath in tall grass," remarked Old Kentuck, swinging his prize over the side of the boat and tying him securely to the seat rail.

The taking of this youngster was highly gratifying, for it was a sign that more of his tribe might be found lurking in the rushes and bush weeds around the lake; mayhap his ancesters were yet living, hale and hearty pioneers, who could claim the waters by preëmption.

During the excitement of the past few minutes the skipper's frog had been allowed to hang unheeded in the water, and now, aided by the sinker and the easy working of the reel, was quietly reposing on the bottom a dozen yards away, stiff and dead from over-exertion in trying to get to the surface for a breath of fresh air. On reeling up to make a cast, and when the frog was just at the top of the water, a fish that looked as long as Sam's maskinonje came with a rush from the depths below, seized it with wide open jaws, and with a flirt of his tail that made the water fly, turned and went out of sight in the direction of the rushes, leaving us so astonished at his open-faced impudence that 20 or 30ft. of line had run slowly off the reel before we realized that the skipper had at last got a run; the first of the day and the season.

With a trifle of nervousness, being somewhat out of practice, the fish was struck, and the old rod that had done yeoman service in many similar encounters showed up its good qualities in a way that made old Sam's eyes snap, coupled with a few mild suggestions from him as to how a "beginner" should hold his rod, handle his fish, keep his head "flat" and cool (with the blazing sun slanting in his face with a fervency that made his mustache curl), etc.: all of which was lost on the skipper, who was "busy as a dog in a yaller jacket's nest," trying with might and main and rod to keep the fish away from a small forest of great bush weeds rearing their tops near the surface off to the right, which had escaped our notice.

The fight was short and desperate, and in four or five minutes the fish was pulled alongside within reach of the gaff; but as Sam raised it to give him a paralyzer the fish went under the boat with a dash which sent a shower of water in his face. We had been looking for a move of this kind, and when he went under the boat the rod was whipped around the bow, the tip a couple of feet under water to clear the line, the fish going at a pace that soon had the old rod on its good behavior again.

After a stubborn rush of 20 or 25yds., the rod prevailed on him to stop and take a rest and he was coaxed back to within a few feet of the boat, when old Sam with a grunt of satisfaction dealt him a whack just back of the eyes with the gaff handle that set his fins to quivering; and reversing it, lifted him in the boat with, "There! consarn yer ugly picter, I guess ye won't throw water in my face agin, ye sneakin' varmint."

He was a "sure enough pickerel" and weighed less than 6lbs. by the mental process, as we did not think him of enough account to hang on the scale. We took four more of these Canada pike in a quarter of a mile of fishing along up the shore of the bay, and then, as the sun had dropped out of sight behind the mountain, it was time to start for camp if we were to make it before dark.

We had hoped to get another maskinonje or a few bass, but it was not to be; and we reeled up and laid the rods in the boat, content with our measure of success, but trusting to find them in better biting mood another day.

A mile further up we got out on a great flat, partly submerged stone, lying in the water some few feet from the rocky shore, to get the "hump" out of our backs and straighten with sundry jerks and kicks our cramped and stiffened legs. Before us, the base a few rods from the water, rose a cliff of bare, ragged rock 300ft. above the lake, the sloping space between covered loose broken rocks, from the size of a cobble stone up to great masses weighing hundreds of tons, that had been loosened by time and the elements from the giant wall frowning in grim, silent grandeur above us, the rock on which we stood having evidently once been a part of the cliff that had fallen from above and rolled down the slope to find a resting place at last in the waters of the lake. After resting a while and puzzling our brains over this weather stained, inscrutable page of the Great Author's manuscript spread before us, we turned to have a look at the water round about, and the prospect looked so inviting for sport that old Sam was moved to hook on a frog and feel of the water for a bass.

The rocky bottom, free of rush or grass as far as we could see, looked as though it might be the abiding place of some of the early settlers of the *Micropterus* family, but a half dozen casts by old Sam in as many different directions failing to get a response, we got back in the boat and took our way along shore up lake to camp.

Another mile, as we guessed it, took us around a rocky wooded point and in sight of the little warehouse a matter of a half mile away, but it looked so unlike the usual camp of the Kingfishers that Sam "reckoned we uru t be lost, strayed or on the wrong trail." But there was the "old flag," the ever glorious Stars and Stripes 30ft. above the outer end of the little dock, flapping lazily in the light breeze that was too feeble to blow it clear of the staff, and with a cheer that was directly answered by four yells, pitched in as many different keys, we—that is to say, the skipper—bent to the oars and in a few minutes the boat was alongside the dock and the boys eagerly looking over our catch, for on this in some measure depended the prospects for future sport.

"One maskalonge, one bass, six snakes, and thirty or forty bass and five or six maskalonge that got away; fair day's sport," said the Jedge, as the fish were passed out and laid on the dock.

"I'll take my oath," said old Knots with his usual perversity, "if I couldn't catch a bigger maskalonge than th t I'd stay in camp and fish off the dock for bluegills."

"Bet old Sam chased him on shore and killed him with the gaff, see where he hit him?" chipped in Charley, pointing to the gaff wound, at the same time dodging behind old Knots that he might be out of reach in case Sam's good nature lost its balance.

"Bigger maskinonje in lake than him," said Louis, who had been quietly looking on, "see um so long," holding h s hand above his head to indicate he had seen them as long as from his hand to the dock on which he stood.) (Mem.—I may note that Louis and Tom, one of the Indians that took us to the lake, are the only persons whom I have ever heard call this fish a maskinonje, nor can I give on paper the peculiar sound of the four syllables as pronounced by them.)

We were however, too tired and hungry to heed the fishy jokes of the boys, and in a very short time the bass and one of the pickerel were cleaned, cut up and sizzling in the frying pans, and as the last shadows climbed the highest point of Knots' landscape across the lake we sat around the table to our first fish in camp.

Jest, and joke, and laugh mingled with the noisy hum of the multitudinous mosquito, old Knots worked off on us his annual and ancient story of "the old darky and his shrunken catfish," a yarn that we had come to look forward to as one of the inflictions of the yearly camp, but at which we were bound to laugh from a sense of courtesy and force of habit. We would have been as happy as a colony of beavers with a new dam had it not been for the blackfly, that terror of the north woods when the season "hits." The Jedge said "they had been coming the most of the afternoon in delegations from every province and back county in Canada to pay their respects to us in honor of our first visit to the Queen's dominions, and were only waiting the coming in of old "Snakeroot and James Mackerel" to begin the festivities of the evening." In the midst of a discussion as to the merits of the Canada pike and the dogfish as a food fish, the last delegation from the upper Nepigon put in an appearance, accompanied by a small army of "no see ums," and then the fun began in earnest.

The fishy discussion was suddenly dropped and is not settled yet, and one at a time, but with a surprising unanimity of purpose, we left the table and sought the bushes a few yards away for a "bresh" with which to beat off the invaders. By a masterly flank movement old Knots succeeded in reaching the warehouse and a box of "Jumboline" that he had brought along in his "pie-box" (his name for his trunk) with which he smeared his hands, face and neck, and with this temporary protection we finished supper in comparative peace.

While down at the farm next morning I told Mother Ruttle about our experience with the pestiferous insects, and she at once set about preparing a simple mixture that she said was the only thing they had found that was a sure defense against the attacks of the blackfly. An old empty tin can was nearly half filled with grease from the grease pot in the cupboard, an equal quantity of tar from the tar bucket back of the house was added, and the can placed on the stove, where the contents were heated and stirred until thoroughly mixed. That was all, but back at the camp a half-ounce of oil of pennyroyal was added, and the whole brought to a simmer, well stirred and allowed to cool, making a mixture about the consistency of flapjack batter—this for lack of a better comparison. We found this to be a sure protection against the blackfly, the mosquito and the punkie (Dick Macauley's "croppie"), and although not quite as cleanly as some of the much advertised and worthless "insect repellants," it is better to bear the small discomfort of its use than be "eat up blood raw by the bloodthirsty varmints." When well smeared with it we might have been easily mistaken for full-blooded Chippewa Indians, but an application of soap and warm water before going to bed restored our natural color, and a new coat was only put on when needed; we did not allow it to form the famous "Nessmuk glaze."

For the benefit of the brethren going to this region or northern Michigan during "fly time," which lasts some seasons as late as the middle of August, I beg to give the formula, which I trust will do away with the necessity for "a heap o' plain and ornamental cussin'." Take of tar—just the plain, old-fashioned tar of our fathers—half a pint; lard—vaseline is better—half a pint; oil of pennyroyal, half an ounce; creosote three drops; mix with heat, and can or bottle for future use. Leave your other smears at home, for they afford only temporary relief at best, and old Sam solemnly avers that "a black fly will laugh his wings loose at all such flimsy shams jest as soon as he reads on the bottle or box that it's a sure enough fly-killer."

With darkness the blackflies and punkies took their departure, leaving us only our old friends the mosquitoes, for whose better entertainment we built a big camp-fire, around which we gathered to smoke, "swap reminders," and relate the experience of the day.

While Sam and I were out on the lake the others had

put the finishing touches on the camp, caught some minnows and young perch with hook and line off the dock, and Louis and the Jedge had taken a rod a piece and gone up the little rocky stream on a hunt for trout. In a shallow pool a few rods from camp they had seen five or six fine ones lazily fanning the bottom with their fins, but their careless approach had scared them and they flashed out of sight under a slightly shelving bank, from which all arts and lures failed to coax them.

Not to be outgeneralled in this manner, these two worthies hit on a scheme that soon brought the hapless trout to an untimely end. A long-handled landing-net was procured from the camp and Louis hunted up a light pole, with which he poked and punched under the bank till the trout were routed out into open water, whence by dint of much "shooing" and "thrashing" with the pole two of them were driven to the riffle at the lower end of the pool in the shoal water and among the half-submerged rocks, where they floundered around in utter bewilderment till ignominiously scooped out with the landing-net in the hands of the Jedge.

Three or four more drives netted three more, and then the vandals strung them on a twig and marched into camp, where they told Charley and Knots a great story about the sport they had in taking them with rod and line. We had them for breakfast, but none but the Jedge and the Indian knew how they were taken for nearly a year after, when the Jedge in a shamefaced, penitent sort of way told the story of their capture with a request that it never find its way into the columns of FOREST AND STREAM.* It was an unfair and unsportsmanlike way of getting a mess of trout, but those of us not in the secret found them possessed of the same old flavor as though lured to the pan with the most cunningly devised fly, and our "trout tooth" was appeased.

The very last touch had been given the camp in the afternoon by Charley and the Jedge, when they cut a long, slim pine sapling, fastened a small pulley at the top, rove the halliards, braced it firmly at the outer end of the little dock, and run up "the old flag," under whose stars and stripes every man in the camp save the Indian had marched and tramped a thousand miles further south than where we now sat around our peaceful camp-fire—some of them where the Minies were thicker and more "multitudinous" than our present enemy, the blackfly, and where the "song of the bullet" was as familiar a sound as the melody of our pestiferous friends, whose high treble "*whee e-e*"—more annoying than their bite—had been our camp lullaby since building our first camp-fire in the North Woods.

It was not, perhaps, a very marked token of respect to the Kanucks to hoist the American flag on their territory, but we had become so accustomed to seeing the glorious old bunting flying from some prominent point in front of our different camps, that it were doubtful if the boys would have rested easily o' nights without it. In fact, Charley and the Jedge, not realizing at the time that they were out of the United States, had lost sight of the seeming discourtesy; but now as the flag was up, and there was no probability that we would have visitors in this out-of-the-way place, the "old rag of beauty" was allowed to flaunt its length in the breeze or hang listless down the staff as the wind god willed to the end of our stay on the lake.

An hour or two of reminiscences of former camps, "reminders" and yarns, and the circle broke up for the night, greatly disappointed over the non arrival of old Dan, for whom a lookout had been kept down the lake all the afternoon. A note had been left for him at the Chippewa House, where we were tolerably sure he would stop over night in case he followed us up, with instructions how to find us; but now, after various conjectures as to what had happened to the old pelican, he was given up, and we turned in for a night of dreamless and restful sleep in our new camp. KINGFISHER.

* Alas! poor Jedge, he's dead now, and every man of us grieved over his death, for he was a big-hearted, open-handed, kindly comrade, whose place in the mess may not be filled, and whose memory will grow green in our hearts till we answer to the final roll call.

Natural History.

NEST BUILDING OF THE SUNFISH.

BY THEODORE GILL.

A RECENT article on the "Hatchery of the Sunfish," in *Nature* (for June 27, 1889), shows that the characteristic habits of that beautiful favorite of juvenile anglers are not as well known as might be thought. It has impelled me to consider the matter, and I find there are several deplorable gaps in our knowledge of its habits, which could be readily filled up. I have recently made several visits to ponds where the fish abounds, but have not found any nest, either because the season of nesting has passed or because the water was too muddy to enable observations to be made. The habits of the common sunfish and all its relatives are probably similar, and as it belongs to the same family with the noble black basses, and what will throw light on one will reflect it on the other, the interest of observations made on any species may be realized. It is widely known, at least in the New England and Middle States, that the sunfish makes a rude nest and cares for its eggs, but exact details still remain to be gleaned. The observations already published are not numerous; and as they will doubtless prove of interest to all lovers of nature, the two longest accounts are here reproduced.

The first detailed statement of the nidification of the sunfish appears to have been published by Dr. John D. Godman, a physician of Philadelphia, well known as the author of a work on the Mammals of North America, and also favorably known to a less number through his "Rambles of a Naturalist."† These contain some charming sketches of animated nature in action and are redolent of country life. "These beautiful sketches appeared originally in a weekly journal published in Philadelphia," we are told in a biographical sketch of their author, but in what particular journal or what time we are not told. It is only stated further that "they were composed while the author was confined to a bed of sickness, and from which he was removed in a few weeks to the tomb. The series was consequently left incomplete." Dr. Godman died on the 17th of April, 1830.

The observations on the habits of the sunfish purport to have been made by Dr. Godman in "Curtis's Creek, a considerable arm of the Patapsco," in Anne Arundel county, Maryland. He premises that "during the spring months, and while the garden vegetables are yet too young to need a great deal of attention, the proprietors employ their blacks in hauling the seine," but "as the summer months approach, the aquatic grass begins to grow, and this fishing can no longer be continued, because the grass rolls the seine up in a wisp, so that it can contain nothing."

"At this time (he says) the spawning season of the different species of sunfish begins, and to me this was a time of much gratification. Along the edge of the river, where the depth of water was not greater than from four feet to as shallow as twelve inches, an observer would discover a succession of circular spots cleared of the surrounding grass, and showing a clear sandy bed. These spots, or cleared spaces, we may regard as the nest of this beautiful fish. There, balanced in the transparent wave, at the distance of six or eight inches from the bottom, the sunfish is suspended in the glittering sunshine, gently swaying its beautiful tail and fins; or, wheeling around in the limits of its little circle, appears to be engaged in keeping it clear of all encumbrances. Here the mother deposits her eggs or spawn, and never did hen guard her callow brood with more eager vigilance than the sunfish the little circle within which her promised offspring are deposited. If another individual approach too closely to her borders, with a fierce and angry air she darts against it, and forces it to retreat. Should any small and not too heavy object be dropped in the nest, it is examined with jealous attention, and displaced if the owner be not satisfied of its harmlessness. At the approach of man she flies with great velocity into deep water, as if willing to conceal that her presence was more than accidental where first seen. She may, after a few minutes, be seen cautiously venturing to return, which is at length done with velocity; then she would take a hurried turn or two around, and scud back again to the shady bowers formed by the river grass, which grows up from the bottom to within a few feet of the surface, and attains to twelve, fifteen, or more feet in length. Again she ventures forth from the depths; and if no further cause of fear presented, would gently sail into the placid circle of her home, and with obvious satisfaction explore it in every part."

Dr. Godman availed himself of the knowledge of the habits of the sunfish resulting from these observations to obtain fish for his table in a very unsportsmanlike manner. He was tired of country fare. "It was either broiled bacon and potatoes, or fried bacon and potatoes, and so on at least six days out of the seven. But, as soon as I became acquainted with the habits of the sunfish, I procured a neat circular iron hoop for a net; secured to it a piece of an old seine, and whenever I desired to dine on fresh fish, it was only necessary to take my skiff and push her gently along from one sunfish nest to another, myriads of which might be seen along all the shore. The fish, of course, darted off as soon as the boat first drew near, and during this absence the net was placed so as to cover the nest, of the bottom of which the meshes but slightly intercepted the view. Finding all things quiet, and not being disturbed by the net, the fish would resume its central station, the net was suddenly raised, and the captive placed in the boat. In a quarter of an hour I could generally take as many in this way as would serve two men for dinner, and when an acquaintance accidentally called to see me during the season of sunfish, it was always in my power to lessen our dependence on the endless bacon. I could also always select the finest and largest of these fish, as while standing up in the boat one could see a considerable number at once and thus choose the best. Such was their abundance that the next day would find all the nests re-occupied. Another circumstance connected with this matter gave me no small satisfaction; the poor blacks, who could rarely get time for angling, soon learned to use my net with dexterity: and thus, in the ordinary time allowed them for dinner, would borrow it, run down to the shore, and catch some fish to add to their very moderate allowance."

Another account of the nidification of the sunfish was published many years later interjected in the midst of an article on "The Glanis of Aristotle," printed in 1857 in the Proceedings of the American Academy of Arts and Sciences (v. 3, pp. 325 (329, 330)–333). Agassiz fortified the statement of Aristotle that the *Glanis** cares for its young by the results of his own observations or of hearsay on several American fishes. Most of these accounts he had been unable to verify. "But," he continues, "I have had ample opportunity to watch the *Pomotis* in the breeding season every spring for the last eight years. At that time it approaches in pairs the shores of the ponds in which it lives, and selects shallow, gravelly places, overgrown with *Potamogeton*, water lilies, and other aquatic plants, in which it begins by clearing a space of about a foot in diameter, rooting out the plants, removing with violent jerks of its tail the larger pebbles, carrying away with its mouth the coarser gravel, and leaving a clean spot of fine sand, in which it deposits its eggs, surrounded and overshadowed by a grove of verdure as presented in the following wood-cut [not given here]. In this inclosure one of the parents remains hovering over its brood and keeping at a distance all intruders. The office of watching over the progeny does not devolve exclusively upon either of the sexes, but the males and females keep watch alternately. The fierceness with which they dart at their enemies, and the anxiety with which they look out for every approaching danger, show that these are endowed with stronger instincts than have been known heretofore in any of their class. Their foresight goes so far as to avoid the bait attached to any hook, however near it may be brought to them, and however lively and tempting it may be. *Pomotis* do not build their nests singly; hundreds of them may be seen along the same shore, within very small distance of one another, forming, as it were, temporary settlements, two nests sometimes hard by each other, or only separated by narrow partitions of water plants. However near to one another, the pair of one nest do not interfere with those of another, but like good neighbors they live peacefully together, passing over each other's domain when going out for food without making any disturbance. But whenever an unmated single fish makes its appearance among the nests, he is chased away like an intruding libertine and vagabond. The development of the egg is very rapid. In less than a week the young are hatched, and the parents soon cease to take any further care of them."

The most recent account of the nidification of the same fish has been communicated by William L. Stone, of Jersey City, to *Nature* (v. 40, p. 202). That gentleman's own words are as follows: "I have thought that an example of the intelligence (instinct?) of a class of fish which has come under my observation during my excursions into the Adirondack region of New York State, might possibly be of interest to your readers, especially as I am not aware that any one except myself has noticed it, or, at least, has given it publicity.

"The female sunfish (called, I believe, in England, the roach or bream) makes a 'hatchery' for her eggs in this wise. Selecting a spot near the banks of the numerous lakes in which this region abounds, and where the water is about 4 inches deep, and still, she builds, with her tail and snout, a circular embankment 3 inches in height and 2 inches thick. The circle, which is as perfect a one as could be formed with mathematical instruments, is usually a foot and a half in diameter; and at one side of this circular wall an opening is left by the fish of just sufficient width to admit her body, thus: [A diagram is given.]

"The mother sunfish, having now built or provided her 'hatchery,' deposits her spawn within the circular inclosure, and mounts guard at the entrance until the fry are hatched out and are sufficiently large to take charge of themselves. As the embankment, moreover, is built up to the surface of the water, no enemy can very easily obtain an entrance within the inclosure from the top; while there being only one entrance, the fish is able, with comparative ease, to keep out all intruders."

It need scarcely be noted here that the sunfish of the United States, although called roach and bream in some places, is not at all related to either of those fishes, but is the representative of a special family (*Centrarchids*), peculiar to and characteristic of North America, but related to the perch family. As will be noticed, the account of the nest does not harmonize with those of Godman or Agassiz, nor do they agree with my own observations.

Such are the principal detailed accounts of the nest-building proclivities of the common sunfish. It will be noticed that in all it is assumed that the female fish is the principal or only one concerned in the care of the eggs. The statement that the female is the guardian, is, however, merely the result of an assumption based on our knowledge of the economy of the higher vertebrates, and at least requires verification. I am myself inclined to believe that the chief or the sole guardian of the eggs after their deposition is the male. This I judge to be the case from analogy also, but from analogy among the kindred of the fish. The cichlids of South America and Africa are very like the sunfish, and, in fact, have often been mistaken for such, and, so far as observed, the males are the sole guardians of the eggs. So are the males of the catfishes and the sticklebacks the custodians of the products of their females' ovaries. Instead, therefore, of the assumption of the female being the care-takers of the nest being the probable one, the reverse is more likely. The real facts in the case are so easy to ascertain in the proper season that no longer delay should supervene. Certainly, with all the piscicultural establishments in the country, and the large appropriations they enjoy, it is strange that the facts are still unknown, especially as the black basses have been the subjects of long attention and extensive cultivation. I note a few desiderata of our information respecting the species:

1. Time of nest building.
2. Exact manner of preparing the nest, especially how far the tail and mouth are used in clearing the chosen site.
3. Exact size and character of the nest.
4. Mode of oviposition.
5. Subsequent care of the eggs, whether by female and male together or alternately, or by female alone or male alone.
6. Size and age of the young and their movements when abandoned by their guardian.
7. Does the guardian fan or agitate the eggs, and in what manner?
8. Is a vacated nest really taken charge of by another fish, or is the new occupant simply an interloper that avails itself of a suitable resting place?

These questions ought to be easily answerable by one to whom the nests are accessible, and, for the credit of American pisciculture and natural history, we may hope they soon will be answered.

* The *Glanis* of Aristotle was universally supposed to be identical with the *Silurus glanis* of Europe, and although the identity was denied by Agassiz, not a single character was mentioned by Agassiz to distinguish the two.

A HARD TIME OF IT.—It is not to be supposed that any one will think much of the birds in these times of rains and floods; but the birds have their uses, and we may give them a passing thought. They are having a hard time of it just now. It is well that they are feeding their second brood, where the number of mouths is not apt to be so large as in the first nesting. We have been reminded of this by a wood robin (*Turdus mustelinus*) that has a nest just outside our window, on the branch of a tulip tree. She is dreadfully troubled this morning over the heavy rain that is now falling. There is one young one in the nest nearly ready to fly, and as the nest is filling with water (from three or four overhanging leaves that shed the rain directly into it), the poor bird is almost beside herself. The young bird has crawled up near the edge of the nest. Here the mother sits above it with her wings and tail spread out covering her home, while the rain is bedraggling her plumage. We should judge she was "wet through."—A. H. G. (Sing Sing, July 31).

SPARROWS VS. ELECTRICITY.—For the extermination of the English sparrow pest I suggest the use of uninsulated electric light wires. The wires should be situated near the favorite breeding places of the birds and should be in short sections connected with the regular electric light wires. This method of killing sparrows will be most effective in late fall and early spring, during which seasons sparrows congregate in towns and cities.—DEACON.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

X1836

FAUNA OF THE YUKON DISTRICT.

WE quote from the report of Dr. George M. Dawson on an exploration in the Yukon District, Northwest Territory, and adjacent northern portion of British Columbia, some interesting facts concerning the animals of that little known region:

"The fauna of the region traversed by us does not differ notably from that of other parts of the northern country which are already moderately well known. There are, no doubt, many interesting points yet to be determined in respect to distribution, but our opportunities for obtaining information of this kind were very limited. The smaller black-tailed deer (*Cariacus columbianus*) occurs on the islands of the southern portion of Alaska and the adjacent mainland coast, but is nowhere found on the island side of the Coast Ranges. The mountain goat is moderately abundant in the Coast Ranges, and is also found in the mountainous inland regions, probably throughout. The bighorn or mountain sheep occurs, together with the last mentioned animal, on the mountains about the head of the Lewes and other parts of the inland spurs of the Coast Ranges, but does not inhabit the seaward portions of these ranges. It is also found generally in the mountains of the interior, including the Rocky Mountains.

"The moose is more or less abundant throughout the entire inland regio , and together with the caribou, which is similarly ubiquitous, constitutes a great part of the food of the Indians. We found the moose particularly plentiful along the Upper Liard River, and it is stated that the country drained by the White River is noted among the Indians as a moose and beaver region. The caribou is everywhere common, but is scarcely seen in the valleys or lower country during the summer, when it ranges over the high, alpine moors and open slopes of the mountains.

"The black and grizzly bears roam over the entire region and are often seen along the banks of the rivers in the latter part of the summer when dead or dying salmon are to be obtained with ease. Wolves are not particularly abundant, but the cross-black-and silver fox are more than usually common.

"The smaller fur-bearing animals, being similar to those found generally in the northern parts of the continent, do not require separate enumeration. The entire upper Yukon basin, however, yields furs of exceptionally high grade. * * * Among a few skins brought back by us is that of a mouse which Dr. C. H. Merriam has found to be a new species, and has described under the name of *Evotomys dawsoni*.*

"The salmon ascend the Lewes River as far as the lower end of Lake Marsh, where they were seen in considerable numbers early in September. They also, according to the Indians, run almost to the headwaters of the streams tributary to the Lewes on the east side. Salmon also run up the Pelly for a considerable distance above the mouth of the Lewes, but their present limit on this river was not ascertained. The lakes and rivers generally throughout the country are well supplied with fish, and a small party on any of the larger lakes would run little risk of starvation during the winter, if provided with a couple of good gill-nets and able to devote themselves to laying in a stock of fish in the late autumn.

"As might be anticipated from the interlocking of streams tributary to the Mackenzie and Yukon in this region, the fishes in both drainage areas appear to be identical, so far as I was able to observe, with the exception of the salmon, which is, of course, confined to the Yukon tributaries. The principal fishes noticed are whitefish (*Coregonus nelsoni*), lake trout (*Salvelinus namaycush*), grayling (*Thymallus signifer*), pike (*Esox lucius*) and sucker (*Catostomus catostomus*).

"The names above given are on the authority of Dr. T. H. Bean, of the U. S. Commission of Fish and Fisheries, who has very obligingly examined for me the photographs of fishes which were taken. No photograph, unfortunately, was obtained of the salmon seen on the Lewes, etc., but Dr. Bean informs me, from my description of its size, that he has little doubt it was the king salmon (*Oncorhynchus chouicha*)."

* American Naturalist, July, 1888.

DELAWARE NOTES.—Nearly every farm in Kent county has its covey of partridges. The partridges which were purchased in the South and freed in this State last year by the Delaware Game Association have certainly come up to the expectations. The Association will endeavor to get 4,000 more partridges this season. This is an excellent year for squirrels and nuts, and in a few more weeks the squirrels will be in prime eating condition, when our sharp rifle shots may treat themselves to a delicious squirrel pie. This has been a disastrous season for cottontails (rabbits), as it has been so rainy many of the young were drowned in their nests. The employés of the Delaware Railroad have a pet. Near Blackbird station a wild duck has built her nest in a dead tree within a few yards of the railroad, where undisturbed by the roar of passing trains she is sitting contentedly on a clutch of nine eggs, much to the curiosity of passengers and watched with interest by her railroad friends.—DEL A. WARE.

WOODCOCK AND WORM.—Montreal, Aug. 2.—*Editor Forest and Stream:* I was an interested reader of the late article concerning the woodcock's method of getting a supply of worms for food. I once had a brood of ducks led by a favorite drake that had been a pet around the farm several years and had evidently gained some knowledge from experience. After a rain the brood would go out on the lawn and employ tactics very similar to those of the woodcock; *i. e.*, they would go through just the same movement a man would in stamping the ground alternately and rapidly with either foot, then place the ear close to the ground and listen. A worm deftly billed from the ground usually followed this move, or the old duck sampled another spot a few inches distant. I have watched the performance by the half hour and laughed at the knowing way it was accomplished. I have great faith in the woodcock story.—LAURENTIDES.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

Game Bag and Gun.

PATTERN AND PENETRATION.

Editor Forest and Stream:

With the completion of the test of the Greener gun on the 24th inst., your trials of shotguns had reached ten and gave an opportunity for some comparative figures which I have made. Of course, shooting as you do, each gun with the charge most likely to bring out the best points of the weapon, there is a seeming variation which to some may appear confusing, but bringing each result down to a basis of percentage of results from charge used and there is at once a fair basis of comparison. I have made a table of these percentages for each barrel of each gun and for each gun as a whole. In doing this, in order to eliminate all the uncertain and variable factors of wind, bad aiming, etc., I have taken the figures for pattern from the average of the struck circles instead of from the average of aimed circles. This is better for the gunmakers, but shooters and buyers must remember that it is the aimed circle wich tells the story of how the gun will act in the field and not the circle struck for best patterns on the sheet after the shot is fired.

40YDS. PATTERNS.

Average		94	543		16	15	7½	7

Regarding the results in the way I have indicated, we find that the average percentage of shots getting into the circle at 40yds. was about 60, and that curiously enough the left barrel showed a slight advantage. The best record is that made by the 10-gauge Parker gun at its first trial, running up to 72 per cent. Yet the same gun with another charge on another day ran only up to 66 per cent. The lowest per cent. on the list was that of the Colt gun as treated by Dr. Merrill, with the Schultze powder charge in the Remington gun coming in a close second for low place. The Greener gun in its double test struck very near the average. What there is in careful loading and skillful manipulation of the arm is shown in the high percentage of the Parker gun, shot as it was by an expert from the factory and provided with cartridges specially loaded for exact work. I am surprised at the poor showing made by the Schultze powder cartridges, but as they were loaded by the gun owners and perhaps not in a manner to bring out the best points of the powder, perhaps it was not an altogether fair trial. It should be good enough, however, to convince the gentleman who owned the gun that his best policy would be to use black powder instead of the expensive imported patent article.

Now let us take a look at the 60yds. test. Perhaps you are giving the arms too severe a test in requiring them to do work at this range, yet we always hear so much of the extra long shots which sportsmen are making, and the dealers are so glad to quote them and claim so much for the arms on the strength of them, that it is well to have an exact showing of just how the weapons do act at the distance of 180ft. It will be seen that about a quarter of the shot manage to group themselves in the selected circle, and in some cases the run is far below that. Here again the Parker with its careful manipulation and care in shooting leads the list and makes a very creditable showing at the long distance. It would be interesting in view of your showing of just where the shot does not go at this range, to see where it does scatter, and if a sheet of paper could be secured large enough to mark off a pattern, showing just where every shot of the entire charge did go.

In studying the penetration pads, the comparison can only be by seeing how such and such an arm carries itself as compared with the average of all the guns. There is less exactness about this, because just why the Dennison pads run light and heavy, with their tough sheets and heavy porous ones intermingled, is one of the things I have never been able to discover. However, they are as fair for one gun as another, and so they are useful in making comparisons. I have made a table of the proportions of powder and shot by weight. Of course, the proportions run high in the case of the white powder, but the black powder charges run very even. The little Remington 16-gauge held its own here, as on the pattern sheets, and the English-loaded cartridges in the Greener gun proved to be hard hitters. The tables tell so much, and tell it so well, that I will leave them for the examination of your readers, convinced that if rightly studied they will be of large value in telling not only how to load, but, more important still, in acting as warnings what not to use in the charging of a shotgun. NICK.

[A typographical error last week made the Greener gun 40yds. total for left barrel 368 pellets, when it should have been 253.]

NOTES ON THE WOODCOCK.

THE spring budding yellow pea green was cast all over growing nature on Good Friday, and the charming sun rays and delightful temperature, with summer zephyrs, were truly a fitting recognition of the holy day at the gates of Easter. As evening fell, in the dreaming twilight shadows of that glorious day, we stood spell-bound, watching the towering love movements of the cock of the wood.

Arden and the writer walked over to the homestead of my wife, on the brow of the hill near Turner's, and took to the low meadows of its broad acres, skirted by the backwoods, wherein runs a babbling brook, tributary from Rumsey Pond to the Ramapo River, forty-seven miles from your office sanctum. There for upward of an hour we stood spell-bound, entranced by the love movements of some woodcock domiciled in the lone, secluded woods.

Here for years and years have we watched and studied the habits and nature of this grand, delicious game bird; at this season of the year mated and happy indeed in the same towers of love and contentment as seen by us this beautiful spring eve, forty years ago, the hermit of the wood which in due season fell to our old Joe Manton (blessed be the name, for great indeed was his sporting bore above all others of his day in penetration and range) in years passed, that have now, alas! left old "Canonicus" a wreck of his former self in the field and covert side—

> Time is passing on, John,
> Yes, years are telling on;
> Eyes are growing dim;
> And alas! we do not shoot with former vim.

In the month of July the old birds, with their young, resort to dells and glades where the dense foliage of the trees excludes the scorching rays of the sun. In such places there are generally found springs and small streams not absorbed by the heat of the season; these keep the ground moist and afford places at which the young birds can procure their natural sustenance without quitting their concealment and security. Living springs are found to be their natural resort in dry, sultry weather; equally so during frost, and for the same good reason the ground contiguous, being kept open and soft so as to make the birds prosecute their natural search for worms. The interior depths of large pieces of woodland will seldom be found the resting place of the young brood of woodcock, or indeed of scarcely any of the feathered game birds. It may be their place of refuge, but not of general abode.

The experience of many years has taught us to look for game in the skirts and outlets of woodlands. On being disturbed the birds may retreat to the intense shades and shadows of the dense wood; but they will otherwise seldom be found there, more especially in the early part of the season, on being routed and shot at. Detached pieces of woodland, where the ground is broken in ridges and undulating hollows, the rougher and more uneven the better, where water springs ooze out of the hillsides, will be found the haunts of the woodcock, and the surest finds and trysting places of this most delicious bird at all seasons of the year and through all winds and weathers. The reason for this is obvious. A choice of almost every kind of ground is offered him in his hunt for food; be the weather what it will, without traveling any distance in search of it. If the season is dry, parched and sultry, cool springs and moist shady glades are at hand; if the wind blows hard from any quarter the opposite side of the knoll affords a screen from its blast; should rain descend in such quantity as to inundate the low bottoms between his chosen little hills, a shift of ground can be had at once by taking post on the side or even top of the ridge; if the weather become cold and tempestuous, there are thickets for shelter and protection; and if frost should bind and render obdurate the general surface of the ground, that which borders upon the springs will remain open and penetrable.

Although we cannot too much reprobate the custom of beginning to shoot in the early part of July, even when allowed by law, yet if this must be acceded to, low, moist, mellow ground bordering upon a copse of wood will prove a sure find, provided the grass has not yet been mown for hay, nor recent rain rendered the low ground too wet.

We have frequently fallen in with numbers of young birds congregated in like situations upon the farm at this stage of the game season, when the adjacent woods and bottoms afforded few to the working of a well-trained, sensitive-nosed dog of high breeding and true field blood.

Now, so strong has ever been our detestation of July shooting, that in 1858 we had our old friend, the late Henry William Herbert, draft a bill to put a stop to it and place the open season so far back as October. We presented the draft to the Sportsmen's Club, and by dint of strong talk had it indorsed and approved and sent to Albany in care of Mr. Van Buren, the member from Oswego county; and passed. The July shooting of that year the unfortunate Herbert did not live to partake of, nor to participate in the defense of "the Herbert game law." Yet so determined had the sportsmen of Orange county become against July sport, and so assured of its necessity, that when on the 4th of July of that year, the then president of the "New York Sportsman's Club" was detected in shooting in the confines of the county and over grounds adjacent to my county home, this necessitated my presenting the facts to the club at its next monthly meeting, then held at the old "Woodcock Inn," situated on the north side of Houston-street next to Bellow's stables, between Broadway and Crosby street, which presentation forced his resignation from the high office and his deposition from the club.

When the long meadow grass is all raked up and cleared off, the shady nooks of woodland standing on bottom or moist ground somewhat springy, covered with long coarse grass or bogwood and skunk cabbage, will be found to afford the most sport. Toward the first of September, or soon after maize corn becomes in bloom and tassels out, it affords a field of good cover. The woodcock then takes to the cornfield for the double purpose of shelter and feeding ground; if there should be frequent falls of rain or if the soil is sufficiently moist to permit worms to approach to the surface he will quarter there; if otherwise he is seldom found there. Here he will continue for several weeks or until the tops of the stalks are cut; this operation so much alters and diminishes his protection that he in his wisdom immediately deserts the

maize field and takes himself again to the woodland and thicket, which become his abode for the residue of the season, shifting from low to high ground as the weather changes. Toward the latter part of September and October he will have become more shy and much wilder than when found in the earlier part of the season.

The young birds having attained their full growth in size and strength, are with difficulty distinguished from the old parent birds. All now rise strong on the wing and take long flights, and for the most part will be found in strong cover and more dense woods than heretofore; and it requires more exertion and assiduity on the part of the dogs to discover them. Nor will they be so tenacious of lying in their feeding places or the immediate vicinity of the ground; their attention being more directed to retreats of safety than contiguity to their food, they will be found more dispersed over the various beats.

Toward the latter part of October they will have become very fat and plump, fully one-quarter heavier than in either July or August. Should it now be unusually dry for the season, you may look for them in strong thickets which skirt swampy ground, and rough, uneven places, rendered impervious by briers and the like. After a heavy rain storm or a repetition of showers, the woodcock at this season takes to the high, dry woods, and if any such have in the neighborhood strong and extensive patches of blackberry bushes, although in other respects somewhat free from underbrush, you will there be sure to find him. November having arrived, accompanied by a bitter frost, the woodcock begins to think of winging its way southward; his time of departure is expedited at this period or retarded two or three weeks, depending on the holding off or setting in of cold weather.

At about this date the birds are found in perfection, and are very different from the meager fledglings of July or the moulted birds of August in gamy flavor and flesh. To fall in with them at this period is highly gratifying to a keen sportsman. What can exceed the rapture of delight of hearing one rise with its strong, loud, whizzing noise, going off with the strong flight velocity of a hawk? Then to hit him full, and as he falls fully sixty yards away, his bounding sound upon the ground tells surely he is down.

As the frost becomes more sensibly felt, he will resort to the springs for a week or ten days, but upon being pinched rather too severely seeks more temperate quarters for the winter, and by the last of nut-brown November or the first week in December scarcely a woodcock remains north of the Potomac unless the season is like that of 1869–70, or that of 1887–88, and this of 1888–89.

North New York.

SMALL-CALIBER RIFLES.

Editor Forest and Stream:

I agree with the suggestion that the new rifle ought to be of larger caliber than .25, say .27. In fact, I thought of suggesting the same, but did not do so for fear that if opinions were not unanimous nothing would come of it. As to killing large game with the .22-caliber, I know of more than one instance in which deer have been killed, but they usually ran some distance; and much smaller animals will often do the same, even escape when hard hit. The cheapness of the .22-caliber ammunition is a great argument in its favor, however. AZTEC.

Editor Forest and Stream:

For the benefit of those seeking a first-class .22cal. outfit for all purposes that they can possibly be used for, let me say that if they would follow "Iron Ramrod's" suggestion, which I have done, and procure a Maynard rifle, sighted with Lyman's rear and front sights, using two barrels, one barrel 24in. long, chambered for the ordinary .22cal. short rim-fire cartridge, and one barrel 26in. long, chambered for the Winchester center-fire 15–45 cartridge, they will have the best, most convenient and most accurate .22cal. outfit to be had. There are others, but they do not combine with their other good qualities the convenient principle of using a number of different barrels on the same stock. With my .22cal. barrel, using the ordinary short rim-fire cartridge, I find it perfectly accurate up to 100yds. or more, shooting remarkably close and hard, in one instance shooting it 200yds. and penetrating a 1in. pine plank, not the soft northern white pine, but the hard yellow pine of the South.

The .22cal. barrel using the Winchester center-fire 15–45 cartridge is the most remarkable shooting iron I have ever seen or used for so small a caliber. I have never used it on deer, but think that under favorable circumstances by making two splits in the bullet down to the shell, taking care not to destroy the shape of the bullet, making the splits cross each other at right angles in the center, it would do fine work.

I intend trying this, and in the meantime would be glad to hear through your columns of any one trying it, also would beg "Iron Ramrod" to let us have some more of his valuable information in reference to the .22cals.

Greenville, Texas. TWENTY-TWO.

Editor Forest and Stream:

During the summer of 1888, while I was building a house about 1½ miles down the Indian River, we saw a deer in a small clearing. My companion, Mr. Arnell, took his .22cal. short Stevens and when within 85 steps dropped the deer so dead that it never even kicked. He struck the neck bone about 5in. from the head. Soon after, some boys hollered that there was a bear swimming across the river. We both ran, he for his gun and I for a rowboat. When within about 60ft. of the bear, though the waves were high, he told me to stop and soon after crack went his gun; the bear made some flounces but soon was in the boat. Since then I have bought me a .22cal. repeating Winchester, and for daylight hunting at not over 100yds. I ask but little odds.

We go bear hunting here at night, with a bullseye lantern on the head, or on a bright moonlight night on the ocean beach where the turtles come out and lay their eggs; the bears are very fond of turtle eggs and travel the beach to get them. I was over there about four weeks ago and came up to one that was eating eggs out of a nest with his head down in the hole. I got up within 30ft., and as I had a shotgun for night hunting, I fired. It surprised the bear, but off he ran, I after him and tried to fire the other barrel, but the old muzzleloader it would not go off, as usual; so having a revolver I pulled that and shot him three times while running down the beach in the sand about 100yds.; then he ran off into the thick scrub; and as I was by myself with no light, and being a little bashful, I came home after a light. I found him about 50yds. in the scrub. While skinning him I found my revolver bullets first under the hide as they had all gone in the upper part of his shoulder; but the buckshot struck him just behind the foreshoulder very low down. I also found while skinning him eight to ten other buckshot and bullets. He was very fat. It took three loads of two strong men to carry his flesh a short distance; and finer meat I never saw or tasted.

For sport the Indian River county near here is second to none I know of in the United States. There are bear, deer, panther, wildcats, coons, possums, quail, turkeys, ducks by the acre in the fall, and fish and oysters by the mile square and of the very finest kind. The early fall or late spring is the time to come here, or a good time can be had at most any season. M. C. M.

Orchid, Florida.

RECESS-BORED SHOTGUNS.

Editor Forest and Stream:

In the FOREST AND STREAM for July 25 and Aug. 1, are the published results of a gun trial that you kindly had made on your range. As the recess system of boring is apparently but little understood in this country, perhaps you will allow me a little space to describe its advantages. It is not really a choke, but an enlargement of the barrel, commencing about 2in. from the muzzle and extending toward the breech for from 2 to 4in., the last 2in. of the barrel being practically of the same diameter as that part on the breech side of the recess; there is, therefore, no obstruciton to the passage of a ball. Without reference to the use of the latter, some English gun makers adopt the recess method of boring in all their guns, and obtain with it as close a shot pattern as with the more common form of choke. It is much used by sportsmen for jungle shooting in India where game can only be seen at close range, at which the effect of a 12-gauge round ball is found to be quite as deadly as that of a .45 or .50 express bullet.

Many know from experience that in thickly wooded countries, as in some parts of the South and of the Northwest, such would be a most useful gun, as in collecting birds or shooting grouse or ducks, one is always liable to run across a bear or other large game, which is certainly lost unless shot can quickly be changed for ball cartridges. In watching at night over bait for a bear such a gun is quite as deadly as a rifle and much more convenient. The "Paradox" gun, made by Holland, is a successful device for obtaining similar results, which, in my opinion, is more than can be said of the various three-barreled guns and inserted rifle tubes. The boring of my gun was experimental, and had not been tested by the gun maker. The shot patterns were, of course, very unsatisfactory, but this may easily be remedied by deepening the recess, which at first was purposely made shallow. Targeting balls at 100yds. was an extreme test, and as such the results were by no means bad. Sixty yards may be considered as long range for accurate work from such a gun, and at 40 or 50yds. I believe the results would answer all reasonable expectations. Creasing instead of crimping the shells would probably give better results, and it should not be forgotten that only the usual round shotgun fore sight was used, there being no rear sight on the gun. The object of using type metal was to reduce the weight of the ball as much as possible. That used for the tests gave a ball weighing 524 grains, but another lot gave balls averaging only 484 grains, an important reduction of eighty grains, as compared with those cast from pure lead. It may again be repeated that this method of boring can be made to give a very clear pattern with shot, and in addition permits the safe use of a round ball with reasonable accuracy up to 50yds. It is not intended as a substitute for a rifle for general hunting purposes, but for the uses indicated above, and in its proper sphere is a very useful "all-around" gun.

Philadelphia, Aug. 3. J. C. MERRILL.

HOW TO TRAP OTTERS.

A CORRESPONDENT writing from Louisa county, Virginia, wishes to know how to trap otters. Possibly the subject may be of interest to others also. The writer, having served an apprenticeship in trapping the wild animals formerly found in the lake regions of Minnesota, Dakota and Iowa, respectfully offers a few suggestions for the benefit of our Virginian friend, hoping that they may call out from "J. G. R." and others a statement of their methods, as the subject is of interest to every old trapper, and few of us are too old to learn.

Among my trapper friends the otter was regarded as a much more difficult animal to trap than either the fox or beaver. His habits are peculiar and his cunning a surprise to many a young trapper. He will travel for miles up and down streams or across country from one lake to another with an interval commonly of several days between his journeys. The trapper, consequently, visits his otter traps at intervals of three or four days.

A narrow-necked peninsula in the bend of a creek or river is almost certain to be crossed by the narrow path of the otter, and a point of land extending out into a lake is a favorite romping place. Where the slide of the otter terminates at the edge of the water is the safest place for the new beginner to set his trap, provided that the slide shows that the animal always enters or leaves the water at the same place. If the water is shallow at the bank of the lake or stream the trail often spreads out on approaching the water, showing that the otter enters the water at any one of half a dozen places. Such a spot is to be avoided.

Get a Newhouse trap, No. 3 in size, go to the spot, either in a boat or by wading along in the edge of the water from a point on shore three or four rods distant from the otter's trail, having the trap opened ready for setting, and a strong stake well sharpened inserted in the ring of the trap chain. Now we are ready to set the trap without making any disturbance above water. Arrived at the spot select the point where it appears that the otter will step when next he comes that way, and in water about six inches deep smooth the bottom to make a good place for the trap; place the trap so that the jaws will spread out on each side of the otter's line of approach, extend the chain full length up or down the stream, and, with a hatchet brought for the purpose, drive the stake firmly into the bottom with the top of the stake driven below the surface of the water.

Then if the top of the stake is bright in color like green timber, gather some mud from the bottom and smear over it. Now gently sift some mud in the water above the trap, until a very thin coat of soft mud hides any brightness of the trap from view.

Wade back to where the stream was first entered, having been careful not to touch the bank, and the trap is set in the manner known as the "water set." Another good water set may sometimes be obtained in the center of the channel of a narrow stream, on shallow rapids. Two things must be carefully noted here. First, that the otter does not travel on the shore at this point, and secondly, that a point be selected for the trap where the channel is narrow and the water shallow.

Sometimes, however, open waters cannot be found, and ice covers the surface of both lake and stream. And again, a good water set is sometimes impossible when the otter does not enter the water in any particular place, as for instance along shallow sloughs. Here the "land set" must be used. This is much more difficult, yet if done properly is much the better set of the two. A careful study of one very peculiar habit of the otter enables the trapper to outwit him, cunning as he is. At some certain point on the otter's line of travel on the land, and commonly near the top of a bank down which he has a regular slide, is a spot selected by this strange animal for voiding excrement. He will travel for long distances to reach this spot rather than do so at any other place. Sometimes it is deposited all in one heap, and sometimes scattered over a space a rod or so in diameter. If it is not in one pile, the trapper, making as few steps as possible, must gather the dried accumulations and deposit them on the greatest heap already formed, and having a perfectly clean trap ready (some trappers prefer having the trap well smoked with the smoke of dried grass), together with the stake for fastening, proceed to dig a hole in the ground with the blade of the hatchet, in front of the heap of excrement, and about a foot distant from the edge of it, on the side next the otter's trail, using the fingers as little as possible to avoid leaving scent. Dig just deep and wide enough to hold the trap, and use all possible skill in covering the trap, to have just as little matter covering it as may be and have it well hidden, in order that the trap jaws be not hindered from gripping firmly when sprung, and to leave the general appearance of the ground the same as before the trap was set. Be careful also to set the trap so that the jaws lie open on each side of the otter's line of approach. Now drive the stake below the surface of the ground and cover it and the chain carefully.

The job is now complete, and the trapper—who of course will have been careful not to blow his nose or spit tobacco juice near the trap—walking carefully away, and on afterward coming to visit it once in two or three days will only approach near enough to see that the trap is all right, stands a very good chance to make the acquaintance of the sleek brown creature with the much coveted overcoat, provided his work has been well done.

The otter when next he comes to the spot, if the excrement be piled in one heap and everything else apparently undisturbed, will, almost inevitably, approach the heap walking backward and dancing around until it would be difficult to find room for a silver quarter between his tracks. No fear of him getting loose if once well caught and the trap hold. His foot is a mass of bones and sinews as tough almost as wire, and impossible for him to gnaw in two. The beaver with his chisel teeth will often cut off a forefoot to free himself from the trap, but the otter never. I never knew but one to get loose from a trap. He was caught only by the little dew claw or fifth toe on the side of the foot, and this held him all right and until he had whipped two dogs in the morning, when it pulled out of his foot, and in spite of the charge of small shot sent after him the plucky animal escaped into the lake, while a certain dejected trapper about my size, stood on the shore gulping down his disappointment as he watched the circling waves that rose above the disappearing otter. ORIN BELKNAP.

Thetis, Washington.

TWO BEARS IN ONE DAY.—On June 12 I received a letter from Emmett Harris, of No. 4, South Branch of Beaver River, Herkimer county, N. Y., saying that on May 13 "he caught a female bear in a trap, and while on his way home from the trap he killed the largest male bear he ever killed or ever saw; it weighed 300lbs. and was twice as heavy as the female caught in the trap." Two bear in one day is pretty good work for a man of 65 years. But Mr. Harris is an old hand at it, as the many skulls of panthers, bears, wolves, beaver and other animals that hang upon the rafters and roof poles of his camp attest. I made the acquaintance of Mr. Harris during a tramp through the Adirondacks from Northville, Fulton county, to Lowville, Lewis county, last September and October. Since then I have sent him (as he states it) "a good deal of reading," among which were a number of copies of FOREST AND STREAM, and for which he says "he does not know how he is ever to pay me;" but adds, "if I live and nothing happens I will send you a deer head next fall to put up," and for the balance which he considers he is indebted to me, he invites me to come about the middle of October and still-hunt deer for a couple of weeks. All this I am offered (and I have assured him I would like nothing better) for a few copies of FOREST AND STREAM. Verily, it is a valuable paper.—J. L. DAVISON.

NORTH CAROLINA.—Rockingham, Aug. 1.—We have had a very heavy rainfall for the last few weeks, and I fear that the young birds—*Perdrix virginianus*—have fared badly, especially in the lowlands. About July 1 the prospects for an abundant supply of Bob White in most of the central counties of this State were excellent. Where birds are generally plenty, I was told, there seemed to be very few. Though not migratory, as are the quails, ducks, snipe, etc., Bob White now and then shifts his usual haunts and takes to the woods, or other places where he escapes observation, returning to his native fields later in the season.—WELLS.

KANSAS.—Uniontown.—The quail crop is short in Bourbon county this season on account of heavy rains. Prairie chickens are scarcer than ever known before.—H. E.

IOWA GAME NOTES.

MANSON, Iowa, July 20.—The season here has been all that could be desired for game birds to breed. Prairie chickens were never more abundant since the country has been settled. Fine broods three-quarters grown are to be found in every field, and frequently a brood is seen that are very small. Contrary to law the guns can be heard from the city limits every evening and morning, and it is a wonder so many reach maturity. A person driving along any of the much traveled roads is almost sure to flush several flocks. How long the abundant supply lasts depends altogether on the future observance of the game laws.

Last winter I did not notice a single quail, although driving most every day. When spring came the quail returned and can be seen and heard every day. I have noticed probably forty pairs, but have seen no young accompanying any of them, which leads me to believe they did not breed or have not brought forth their broods yet.

A few Canadian geese still breed here, and the nest is usually placed on a muskrat house in a large slough. Very few of the young reach maturity, as the nests are closely watched and the eggs taken or the young captured soon after hatching. There are numbers of them domesticated among the farmers. They breed among themselves or usually mate with the tame geese. The few young that grow up wild are almost always killed by the hunters in August. A few red-headed ducks remain here during the summer and must breed. Mallards and bluewing teal are now accompanied by fine broods of young, and they are already being killed for the table. They breed more abundantly than any of our waterfowl, and while young fall an easy prey to the small boy and army musket.

The sickle bill curlew, avocet and dow bird are most extinct here, and will soon be numbered with the good things that were. Jacksnipe are still to be found in large numbers, especially in the fall. The upland plover is not near as plenty as it used to be. Not being very hard to approach, they too fall an easy prey to the gunner. Golden plover are probably more abundant in spring on the burnt prairies than any other of the small game. Thousands are killed annually and stored in the ice houses at Laurens and other points. Men from the Eastern cities come here every spring and hire all the gunners they can get; some are paid by the day and ammunition furnished, while others furnish their own ammunition and receive ten cents apiece for all black-bellied and upland plover, dow birds, curlew and jacksnipe. A man at Pocahontas Center using a Spencer repeating shotgun told me he usually killed from 50 to 125 plover a day through the season. These birds are all stored and carried over for the fall and winter trade. We have had and still have excellent wildfowl shooting, about which more anon. H. A. K.

A WORD ABOUT MARKET HUNTERS.—St. Joseph, Mo., July 29.—Have just returned from a trip through part of "Sunny Kansas." Chickens seem to be quite plenty. Last Saturday I saw at one of the leading hotels in Kansas City a party of men whom, from certain ear-marks, I "sized up" as Eastern "sportsmen" (?) They were supplied with guns and the usual baggage, and were seeking information relative to the westbound Santa Fe trains. About Sept. 15 I shall look for a glowing account of "a recent shooting trip in Kansas," also the customary "cussing" of the "market hunters" in the columns of our sporting publications. I am acquainted with several men who shoot for the market, and after many years spent in such company in rush "blinds" and "stubble," I am impelled to the belief that their success depends on their intimate knowledge of the habits of the game they seek, and their dexterity with the gun, and not on the pot-hunting and untimely murder of half-fledged birds. In fact, I have never seen a market hunter shoot at a sitting bird, and I honestly believe that the greater part of the game killed in close season or by pot shots at resting coveys can be justly charged to those who make the most ado about the market hunter. No one regrets more than I the steady diminution of our game supply; though I have never been and am not now a market hunter, I should like to see stringent game laws rigorously enforced. We need a national law making spring shooting a criminal offense. We also need a deal less twaddle about market hunters.—HOODOO.

MISSOURI.—Alexandria, July 31.—Last winter having been unusually mild, quail are very numerous and are successful in raising their young, despite the regularity and frequency of rains. While mowing along a rail fence during the second week in June, I discovered two nests of the quail, which were the only ones I have found for years. In both cases the birds were absent, and my curiosity caused me to investigate the number of eggs. The first nest was lined with a layer of eggs reaching two-thirds of the way to the top, thus affording a sure and easy numbering of the eggs, which amounted to fifteen. The second nest was an object of wonder to me, for I have never seen the equal. It was about 5in. across, and very deep, and such a pile of pretty white eggs. I wanted to know their number, but how could I take the census of Bob White's home when I know he is so very careful about his premises? The eggs were piled about three layers in depth, and it was a puzzling undertaking, yet by careful counting and recount I ascertained that the nest contained twenty-two eggs. Passing by the nest frequently, I always found the lady quail quietly sitting on her eggs, never being uneasy at my close presence. Like the American eagle on our silver dollar, the quail had to spread itself to cover such a large number of crystals which promised to develop a flock of lively little Bob Whites within a few days. As early as June 20 I saw a fine flock of young quail which were large enough to fly.—JASPER BLINES.

GAME BIRDS OF VANCOUVER ISLAND.—The prospects for the September shooting near Esquimalt are very bright. A gentleman estimated the number of grouse that he saw in one day's stroll through the woods at 150 brace. Blue grouse abound on the hills and willow grouse in the swamps. The mountain quail and the valley quail, introduced from California, have multiplied enormously. We have recent information from Nanaimo to the effect that golden pheasants, brought over from China and protected for several years, have increased greatly and afford rare sport.

WHATCOM, Washington, July 13.—Several cougars have been killed in the last four weeks. Black bears are often met with and several have been captured. Ruffed grouse are promising to be numerous. I have the promise of a fine specimen of a four-pronged spotted buck, when the proper season shall return; spots about as large as a quarter-dollar. There are several yet of that kind of white and spotted deer upon some of the islands of Puget's Sound, but they are getting scarce.—J. Y. C.

MEXICAN GAME.—San Luis Potosi, Mexico, July 24.—We have had capital dove shooting for a week or two. They bred somewhere in the mountains, I suppose, and suddenly appeared in the plains hereabout in great numbers. A kind of wood pigeon with a white spot on his wing is abundant in some places also, and gives excellent shooting. Jack rabbits and cottontails there are for those who want them. Have not been to the quail cover as yet, supposing them too small.—AZTEC.

TENNESSEE GAME LAW.

AN ACT to be entitled an Act for the better protection of game in this State.

SECTION 1. Be it enacted by the General Assembly of the State of Tennessee, that it shall be and is hereby declared unlawful for any person to hunt, kill, or trap deer for profit in the State of Tennessee; provided, however, that all citizens of Tennessee be allowed to hunt, or kill or capture deer for their own consumption from the first day of August to the first day of January of each year; and provided further, that all citizens of Tennessee may kill or capture deer for profit on his own land, but not elsewhere, from the first day of August to the first day of January of each year.

Sec. 2. Be it further enacted that it shall be and is hereby unlawful for any person to hunt, kill, net, trap or capture quail or partridges for profit in the State of Tennessee; provided that any citizen of this State may hunt, kill, trap or capture quail or partridges for profit on his own land, but not elsewhere, nor at any other season of the year than from the first day of November to March the first of each year within the time limited; provided that it shall be unlawful for any person or persons to net partridges or quail at any season of the year.

Sec. 3. Be it further enacted that any person violating the provisions of this act shall be fined for the first offense not less than five nor more than twenty-five dollars, and for each subsequent offense not less than twenty-five nor more than fifty dollars and imprisonment, at the discretion of the Court, not exceeding three months.

Sec. 4. Be it further enacted that the constables and justices of the peace of each county be game wardens to prosecute violators against the provisions of this bill.

Sec. 5. Be it further enacted that grand juries shall have inquisitorial powers of all violations of this act. And the Circuit and Criminal Judges shall give the same in charge to the grand juries, and the killing, hunting or capturing in any wise the game protected by this act.

Sec. 6. Be it further enacted that the following counties are hereby exempted from the provisions of this act: Carroll, Benton, Henderson, White, Cumberland, Van Buren, Smith, Cannon, Dyer, Cocke, Sullivan, Unicoi, Grundy, Sevier, Fentress, Lincoln, Putnam, Pickett, Johnson, Carter, Franklin, Humphreys, Hickman, Lauderdale, Crockett, Lewis, Perry, Decatur, Green, Grainger, Hawkins, Jackson, Polk, Warren, Robertson, James, Meigs, Rhea, Weakly, Hardin, McNairy, Campbell, Union, Bledsoe, Sequatchie, Overton, Claiborne, Chester, Marion, Williamson, Marshall, Morgan, Bedford, Moore, Lawrence, Wayne, Macon, Clay, Gibson.

Approved April 2, 1889.

Camp-Fire Flickerings.

"That reminds me."

270.

A FRIEND of mine, John D., tells me a joke which he has kept to himself for a year or more past. He was sitting in his boat among the weeds and rushes along the margin of a small lake about four miles from here, patiently waiting for the ducks to come in. He had sat until late in the afternoon without a shot, when suddenly he noticed a flock of about forty mallards come down from the north and drop into the water close in shore, some 200yds. down the lake, and behind a point of flags and tall weeds which extended into the lake. Laying his gun down in the bottom of the boat, he dropped on his knees and commenced poling carefully down the shore, the water being about 18in. deep, with a foot of mud at the bottom.

After going a short distance the gun under his knees in the bottom of the boat began to bother him, so he picked it up, and carefully deposited it behind him without looking around. In due time he worked up to the point of flags behind which the mallards had alighted. Cautiously pulling aside some weeds, he discovered the whole flock bunched together in a little cove, not over 30yds. distant. "Great Scott!" thought John, "here is what I have been looking for all these years, a pot-shot at mallards." Pushing his pole into the mud and holding on with his left hand, he began to feel behind him with his right for the gun. Somehow he didn't just seem to fetch it, and after a little nervous fumbling he turned his head to locate it. Horror of horror! the gun was gone. John says his feelings at this juncture may be imagined to some extent, but can never, never be described. The discovery so surprised him that he made a miss-move of some kind and away went the ducks. Upon slowly retracing his way toward the point of starting, he found the gun with about 4in. of the muzzle sticking out of the water just where he had carefully stuck the butt in the mud when he put the gun behind him. John always looks now where he lays things, but the visions of that flock of mallards haunts him to this day. C.

271.

On a pleasant summer's day in one of the 80s, two well-known gentlemen of Attleboro, Mass., who were enjoying a short vacation at the summer resort called Menauhant, located on the south shore of Cape Cod, were taking a sail in a small catboat, on an inland bay known as the Eel Pond. One of the gentlemen had been endeavoring to work the boat to windward with but little success, so that the other took control, but with the result that in a few minutes he had capsized the boat. After having clung to the boat and yelled themselves hoarse, a fisherman bore down toward them and called to them to throw him their painter. Then the least frightened of the two answered back:

"We haven't any painter with us. We are only two Attleboro jewelers."

During the remainder of their stay in that vicinity watch chains and cuff buttons were freely distributed by them. ZENAS.

Sea and River Fishing.

CAMPING ON THE SUSQUEHANNA.

AT the close of a successful day's fishing in the summer of 1887, on that part of the Susquehanna in Wyoming county, Pa., locally known as the "Neck," where the grand old stream sweeps around the projecting mountain that obstructs its way and flows five miles to gain one in its onward course to the bay, Sharpe and I mutually agreed that when the rolling year again brought the vacation season around, there we would pitch our tent and spend a week in the way so dear to every lover of camp life. And so it came to be talked of whenever we met, with all details arranged; and Aug. 13 was finally fixed upon as the day of departure. But during the night of the 12th the long-protracted drouth was broken by such a fall of rain as I have seldom known. Roads were washed until almost impassable, fields gullied and disfigured, every rivulet turned to a boiling, seething torrent, and the river became awe-inspiring in the powerful onward rushing of its boisterous waters. Storm followed storm at short intervals, which, with the consequent high water, kept us at home until Sept. 3, when a start was made. My team took me with my boat and camp kit to the river at Meshoppen, where I launched the boat, and the current, with but little assistance from the oars, soon carried me over the three miles to the rambling little village of Mehoopany, where I expected to find Sharpe awaiting me. But it was not until the next day that, with duffle packed aboard, we were at last off in the boat. The river had risen several inches during the night, which argued ill for good fishing. A few strokes of the oars shot the boat out into the current, and we floated gently away to our destination. We ran through some rough water at the old dam, but our buoyant little boat carried us safely through, and soon we shot through Horse Race Rapids and glided out upon the stretch of placid water that was to be our fishing ground.

The gleam of a white tent among the trees and smoke rising skyward showed that others, like ourselves, had been drawn here by the many attractions of the place. After a careful exploration of both banks, a favorable site was selected, and our boats quickly unloaded. Here the "grub box" came to the front; and our hunger satisfied, we turned our attention to camp building. Drawing my little "Nessmuk," the white chips were soon flying, the shelter cloth stretched and the sides thickly woven with leafy branches. Crossing to the mountains opposite I climbed the almost perpendicular ascent and cut from its rocky hold a bushy topped hemlock that, falling, rolled to the water's edge. The branches were lopped off, piled into the boat and transported to camp, where, at our leisure, we stripped them of their brouse, the finest of which went into two sacks to form pillows, the remainder making our bed at least a foot deep, elastic, fragrant and inviting to sound and restful sleep. Over it our blankets were spread. Water was brought from the spring near at hand. In front the fire was built; and the kettle suspended from the long pole was soon boiling; the coffee simmered on the coals at one side; and the picture was complete. At supper the potatoes were of the whitest, and the boiled ears of corn were sweeter even than those we so well remember "on mother's table," while the aroma of the coffee filled the camp.

Then followed the hour of lounging and story-telling so dear to all who go to the woods and streams for relaxation and rest. As the twilight deepens the fire burns brighter, the wreaths of white smoke drift out of the circle of light, and sparks fly up among the trees overhead. The fire shines directly into camp, and coupled with the fatigues of the day soon produces drowsiness; and replenishing the fire we turn in for the night. Sharpe's heavy, regular breathing soon tells he sleeps soundly, but I lie awake for some time listening to the many voices of the night—the wind as it softly rustles the leaves of the oak, hickory and birch that overspread the camp, and my thoughts fly away back among the hills of the Susquehanna, and I think of the little fellow I left there, and how his eyes would shine with wondering delight, and what a frolic we would have about the fire were he but here to-night. A few more years and I will take him with me and teach him lessons in woodcraft, and by intimate associations fill his young heart full of admiration and love for all the wondrous and beautiful works of nature. A heart thus filled is strongly fortified against the many corrupting influences he must meet in the years to come; and although he may spend hours with rod and gun that might be otherwise usefully employed, who will say that such time is wasted. My reverie at last ends in oblivious sleep, and the next of which I am conscious Sharpe rolls over and nestles closer, the night being somewhat chill, and the fire having burned low. I rise, replenish the fire and go out from the shadow of the trees upon the river bank. The night is clear and still. Numberless stars sparkle overhead. The tall pines on the mountain's crest—sentinels standing guard on the world below—are dimly outlined against the sky. The waters of the river are obscured by a heavy curtain of fog. The roar of the rapids comes faintly to my ear. Peace broods over all.

It was late when we opened our eyes next morning. The sun was shining brightly, and a squirrel, perched in the hickory in front of the camp, was earnestly coughing and scolding in wonderment at the scene below. After our meal, rods were jointed, leaders put to soak, and we were ready to try the fishing. The water had fallen several inches during the night and our hopes rose correspondingly. After fishing till nearly noon we returned to camp with twelve bass towing behind the boat. Nothing remarkable as to number or size, yet we were satisfied. No large ones were taken and no big ones got away, for the reason, perhaps, that none were hooked. Sharpe dressed the fish while I kindled the fire and got the potatoes and coffee on to boil; and any one who had seen the pile of bass I fried would have thought the camp contained at least half a dozen hungry men. We were in no such haste to begin the fishing of the afternoon as we had felt in the morning, but went about it leisurely and caught a fair string that were placed in a box in the water to be drawn upon as occasion required.

Supper over, we paid a visit to the camp we had noticed among the trees on the picnic grounds at the foot of the island. The party consisted of four, three of Elmira and one of Laceyville, all of the hardware trade. As we approached the vicinity the camp was enveloped

in a cloud of blue sulphurous smoke, and an odor of burning brimstone filled the air. There was no fire in the camp and some phenomena must account for the state of the atmosphere. The disturbance was apparently volcanic. We met two of the party at the landing returning from a visit to Mehoopany. Walking with them up to the tent we learned the cause of the disturbance as told by the occupants in language abounding in forcible adjectives. Early in the afternoon they had gone up the river a short distance to fish, bribing a boy to watch the camp by the promise of a much coveted rod. After the departure of the fishermen Tommy found it rather dry business, and finally wandered off on the beach and amused himself with wading in the water and digging mussels in the sand; and the sun was low in the west when he returned to find that a herd of cows had taken possession and wrought ruin in his absence. All the edibles had been piled on one of the large tables and the cows had made a clean sweep. Bread, bacon, potatoes, onions, corn, salt, all had disappeared. A box of pepper alone remained. Tommy drove them away, and upon comprehending the damage they had done, fled the camp. We arrived just in time to hear the expletives of the fishermen as they came to realize the state of affairs. Many and awful were the threats of vengeance against unfortunate Tommy. Many methods of torture were suggested, but none decided upon as equaling the offense. A party was detailed to visit the farmhouse back from the river and soon returned with a loaf of bread and a peck of potatoes, and in the cooking of the supper and the more than real interest aroused by the finding of a case of beer in the boat that had been to town, both their loss and revenge were forgotten. Tommy did not get the coveted rod, but we learned later that he managed to get away secretly with a valuable reel belonging to one of the party.

The night was exceedingly chill for the time of year; but a good fire kept burning the entire night flooded the tent with both light and warmth. Thursday morning dawned bright and beautiful. At breakfast the amount of toast that Sharpe devoured was far more noticeable than his catch of bass the day before. Breakfast over, a consultation was held, at which it was decided to devote the forenoon to exploring the river for some distance below. For me the locality has a double interest. On the opposite shore and a little below our camp, something over sixty years ago stood the old log cabin in which my father was born; and we put up our tent on the farm where his early boyhood was spent. Often have I heard him tell of the game and fish to be found here in those early days—of the wild turkeys that flew across the river to feed in the cornfields, the big flocks of ducks that passed up and down, of the deer pursued by dogs that swam the river, and of the many fish caught. Although great changes have taken place in the past fifty years, still the locality is a charming one, and offers many inducements to the camper. The Vosburg tunnel now used by the Lehigh Valley Railroad leaves five miles of river undisturbed by the screech of locomotives and the jar and rumble of heavy trains. The mountains are grandly beautiful, the fishing good, and the farmers who occupy the pleasant houses a little back from the river will welcome you heartily, and if you are the gentlemen all campers should be, will do all in their power to make your stay a pleasant one.

So we drifted about that bright September morning, landing often to explore the shores, visited the cemetery and found many familiar names on the mossy tombstones, and finally accepted an invitation to dinner from a hospitable farmer. The broad and fertile acres he tills have passed from father to son for three generations, and no doubt at least one of the five manly boys we met there will follow the occupation of the father. We found Mrs. B. a charming lady, and the hour we spent in that hospitable home will long remain a pleasant memory. Dinner over we took leave of the farmer in the midst of a melon patch where the fruit lay thick upon the ground and we were asked to help ourselves to all we could use.

We fished in the afternoon with good success. The following morning the leaden sky and south wind spoke plainly of an approaching storm. We had proposed staying another night, but wishing to avoid the storm we broke camp early, packed the boat and started up the river. The wind being astern a large umbrella was made to do duty as a sail and good progress was made. Landing Sharpe at Mehoopany I pulled along to Meshoppen, where I found my team awaiting me. A ride of nine miles put me at home again. My vacation passed with a pleasant memory. That night and the following day as the rain fell steadily I was glad to be at home, but already had I begun planning for another outing another summer with the same congenial companion along the same grand old river. BON AMI.

AUBURN, Pa.

AS TOUCHING WALTON.

ACCORDING to Allibone, Walton's "Compleat Angler" has gone through thirty-four editions in England, two or more in the United States and one in Germany, and has been called "the angler's Bible." In some respects it is treated by the votaries of the rod and reel as the sacred volume is by some Christians—it is much quoted and little read.

Some angling writers are in the habit of referring to this author as "Sir Isaac Walton." If they had diligently studied the life and writings of the plain citizen of London, who carried on the trade of linen draper, in half a shop, in Fleet street, A. D. 1624, they would not have made the mistake of knighting him.

Walton belonged to that respectable middle class of Britons who have been for centuries the strength and glory of old England, and who settled the newer and greater England beyond the Atlantic.

And one of his sayings is quoted, "I had rather be a civil, well governed, temperate, poor angler, than a drunken lord," which meant something at a period when the English nobility seemed to rule by divine right, and like the King; could do no wrong.

Although the "common father of all anglers" was a plain and unassuming man, he was on terms of intimate friendship with many of the literary men and clergy of his time, the lives of some of whom he wrote. The anglers of the present day cannot do better than to study the life and writings of their prototype. S. C. C.

MARIETTA, Georgia.

AMERICAN CLUBS IN CANADA.

LAKE EDWARD, Quebec, Aug. 1.—*Editor Forest and Stream:* By the mail last evening I received the FOREST AND STREAM of July 25. I had just had a late "snack" after a day's fishing with good success, and cocking my feet at the regulation angle, a habit our English friends never tire of ridiculing (the reason they never do it is, I imagine, their modesty in exhibiting the size of their feet), and with the proverbial brierwood well filled and lighted, I proceeded to open the paper and see who had told the biggest lie—fish story, I mean.

The first item my eye encountered was a short editorial headed "American Clubs in Canada," which referred to the alleged prejudice of Canadians against the leasing of lakes and rivers and formation of clubs by Americans.

The complaint that we are monopolizing their fishing has, as you say, two sides to it.

Firstly—If the Canadians wanted these lakes and rivers themselves, why did they not secure them in accordance with their own laws? They had the same and better opportunities, living on the ground, as it were; and they knew that the Canadian Government was offering these privileges, which have been in the market for years, and only within the last two have Americans availed themselves of the opportunity.

Secondly—There is a plenty of lakes and rivers that we have not taken up, a little more remote, perhaps, but available with a moderate outlay for trails to give access to them. Mr. Canadian don't propose to spend any money for his pleasure. He wants all fishing free, which is not in accordance with the laws of the mother country, which Canada takes as its authority. The American clubs spend money for these privileges. They pay a rental to the Government. They build houses, cut roads and trails give employment to guides and mechanics, travel on Canadian railroads, patronize Canadian hotels, in fact, spend ten dollars in the country for fishing privileges where the Canadians spend one. Why, then, should the Government withhold these privileges from Americans to give resident grumblers free fishing? And again, the men composing the membership of these American clubs are true sportsmen, and do not believe in indiscriminate slaughter. They do not go in for depleting. They catch a moderate number and waste none, and become really the best protectors of game and fish Canada could have, for they prevent the pot-hunter from unlimited destruction of fish, regardless of numbers they can preserve or use.

As an instance, when up here last fall, a party of five from Quebec camped on the Jeanotte River, at its outlet from Lake Edward, for a week. The number of trout they caught they did not state; but they brought up four barrels, and one of the party confessed that they had thrown away twice that quantity. From my own observations I should say they caught over a thousand pounds of trout, more fish than any club would have taken in two years. And this was not the only instance of slaughter. Another party, camping on the same river, went into a regular fish curing business, smoking and carrying away probably 500lbs.; and all these gentlemen were Canadians, residents of Quebec and Montreal, not an American among them. These are the people who are howling against the granting of fishing privileges to us Americans. They want the Government to keep the rivers and lakes open for their benefit, and never a penny do they propose to pay for this murderous system of cleaning them out.

The Canadian Government is acting wisely in granting privileges to Americans and American clubs, as it thereby insures a perpetuation of the attractions Canada presents to sportsmen, the preservation of its fish, and the continued business for hotels, railroads, mechanics and laborers, for not a club established that does not expend thousands of dollars in buildings and expenses, every dollar of which is a local benefit. Can the people or the Government reap an equal benefit from the pot-hunter? At the rate they are now ruthlessly wasting the fish all along the line of the railroads, these pot-fishermen will in a very few years denude Canada of its fish and fishing, and make it no longer attractive to sportsmen; and as a consequence there will be less expenditure in the remote localities where people live who never saw a dollar in coin until the railroad brought American sportsmen to them. This may seem a wild statement, but there are plenty of men fifty years of age in the wilds of Canada who never saw a dollar in cash (coin or paper) until the advent of the railroad in the midst of them. They say missionaries and railroads are great civilizers. Very true, but give me the railroads every time. I have been where it was only the missionary; Christianity and whisky were having a tight race, with whisky considerably ahead, which was, of course, not the teachings of the missionary, but the natural result of civilization; whisky follows close on the heels of enlightenment. I heard a converted native once say, when asked if he was not glad he had been rescued from his heathen condition and been made a good christian, "Yes, me heap sorry missionary man not come sooner; me lose heap time, no whisky."

As I am up here in the land, or rather waters, of the trout, I suppose you would like to hear how the fishing is. Well, as they say, it is fair to middling. The trout learn to seek the deep waters of the lakes during the hot spell, and it can be hot up here as elsewhere, when it gives its mind to it. The fishing in the streams (fly-fishing) is not bad, but the mosquitoes are. The pestiferous blackfly has departed, leaving the mosquitoes in possession. To fish on the shores of any stream in Canada at the present moment with any degree of comfort one should wear a veil and long gloves that protect the wrist. In an hour's fishing yesterday I caught four trout, averaging 2¼lbs. each, fair and actual weight, and a dozen or so of a size that would have been accounted large for brook fishing at home. With this string I quit fishing, as being entirely unprotected and unprepared, the zeal manifested by the blamed insects was greater than my enthusiasm for fish, and I abandoned the ground.

At Lake St. John they are taking a goodly number of ouininish or ouininish (you can spell it either way you like, there being no recognized authority except the unreliable pronunciation of Mr. Indian). The fishing privilege at the Grand Discharge, the place to fish for them, has been leased by a Canadian party, who has a comfortable camp house on the ground, where fishermen find accommodations by paying $5 per day for board and the privilege of fishing. To get there you take the steamboat Peribonca at Roberval, the terminus of the Quebec and St. John's Railroad, on Wednesdays and Saturdays. By leaving New York on Monday or Thursday from Forty-second street depot, you will arrive at Roberval Tuesday evening, or Friday evening, fare $16, tourist ticket. Board up this way $2 per day, guides $1.50, boats $1, at which prices you get fair equivalent, but not the gout. The wininish are great fighters and you want good sound tackle, but of course not heavy for good sport. Double or heavy gut flies and leaders make a surer thing of saving your fish, skill and science do the balance. It is the next thing to salmon fishing. The fish do not run large just now, from 3 to 5lbs., but what there is of them is very animated; they differ with you as to views of who is master, and it requires considerable skill in the argument to convince them that they are going home with you and not you with them, a discussion that all true fishermen delight in. PODGERS.

TROUT AND LEECHES.

ROCHESTER, N. Y., July 29.—*Editor Forest and Stream:* Reference in a recent issue of FOREST AND STREAM to leeches preying upon trout by destroying the young fry and fastening themselves to the adult fish, should elicit further information. So far as my observation goes, I have not found leeches destructive to speckled trout, at least in the manner stated by your Montreal correspondent, by preying upon the adult fish.

Some fifteen miles from Flesherton, in Grey county, Ont., there is a deep spring fed lake, about seventy acres in extent. This, known as Brewster's Lake, has far more than a local reputation on account of the size and numbers of its fish, though they are at all times extremely difficult to take with hook and line, whatever lure be employed, or whatever the season or time of day or night they may be angled for. Although continually netted, the lake still maintains its reputation for large size and numbers of its speckled trout. Indeed, I have never seen such fat, well-fed and red-fleshed fish as those taken from this lake.

Some twelve miles distant in another direction in Grey county there is a large mill pond formed by the headwaters of the Noisy River. This, until it became hopelessly fished out, was also noted for its numbers of large, highly colored fish. In both of these waters the leech exists in great quantities; and that it is a favorite of the trout I have repeatedly verified by noting the contents of the fishes' stomachs. The pond has a muddy bottom, but its fish are among the sweetest I have ever tasted. I never noticed any crustaceous food to speak of in this water, and I came to the conclusion, whether warranted or not, that the extremely brilliant flesh of the fish in both the waters specified was due to the leech diet they so abundantly supplied.

The pond mentioned was originally stocked by a pailful of fish placed in it from an adjoining lake, and the young fry, it would seem, found no difficulty since then in avoiding the multitudinous leech. This with reference to the statement quoted from the London *Field:* "The most deadly enemy to young fish I believe to be leeches, and in some streams it seems to me to be a puzzle how any of the small fry when just emerged from the egg can escape them." Naturally, in warmish, sluggish waters where the leech exists very numerously, and where the hiding places of the young fry are restricted, the latter must necessarily suffer.

With reference to a remedy for the trouble complained of by your correspondent, possibly stocking the waters with speckled trout that have been accustomed to a leech diet would prove the easiest and most efficacious. But may not the case he refers to of the leech fastening themselves to the adult gray trout be owing to a disease of the fish which invites the enemy and renders the fish less able to rid themselves of their persecutors?

GEORGE H. ELLWANGER.

CHANGES OF COLOR IN FISHES.

Editor Forest and Stream:

An exchange says: "There is a hot-tempered little fish, known as *Betta pugnax*, and kept as a sort of domestic pet by the Siamese, to display its prowess for the Mongolian amusement. When in a state of quiet, its dull colors present no remarkable sight, but if two be brought together, or if one sees its own image in a looking glass, the little creature becomes suddenly excited, the raised fins and the whole body shine with metallic colors of dazzling beauty."

This fact, if it is one, is important to science in determining that the iridescence and complexion of fishes, at least of some fishes, is to a degree emotional or voluntary. The blush may not be peculiar to the human face alone. The finer the organization, the keener the sensibilities. In coarse species the colors appear fixed. In higher grades they are evanescent, or at least variable, especially in the scienids, red mullets and dolphins. The fact that coloration is heightened by anger, fear, delight, or apprehension, or by emotional excitement of any kind, indicates a suffusion of blood to the surface of the body.

A study of the phenomenal effects may assist in throwing some light upon the venous circulation of fishes, which has so long been an interesting subject of investigation. Fishes may not be as cold-blooded as philosophers have represented. The chromatophers or pigment cells in the skin of a fish are extremely sensitive. Guenther demonstrates how easily they are excited by external irritation. When they are expanded intense colors prevail; when they contract the fish becomes paler. A mere change from darkness into light is sufficient to induce them to contract and *vice versa*. In trout which are kept in dark places, the black chromatophers are expanded, and consequently such specimens are very dark colored; when removed to the light they become paler almost instantly. Fish which do not see must naturally have less sensibility than those which have sight, because they have fewer media of perception. Blind fish are always of a neutral tint, no matter where they are, or whether their companions are light-colored or not. It would be interesting to experiment with blind specimens of the Siamese fish, and ascertain whether they become brilliant by excitation. CHARLES HALLOCK.

VANCOUVER ISLAND FISH AND FISHING

DURING these hot days of the middle of July the markets of Victoria, apparantly as destitute of ice as the Clay street fish market of San Francisco, are supplied with about the same kinds of fishes as one finds in California—several species of flounders, including the halibut, whiting (*Microgadus proximus*), cultus cod (sometimes incorrectly styled black cod), rock trout (species of *Hexagrammus*), rock cod (several species of *Sebastichthys*), perch (various genera of the viviparous *Embiotocoids*), salmon, salted eulachon and fresh sturgeon.

In the dry dock at Esquimalt many of the harbor fishes enter while the water is running in, and sometimes fail to escape when the pumping is done. At one time a supply of black bass (*Sebastichthys melanops*) more than sufficient for all the town, was captured, and the removal of the surplus caused a good deal of trouble. Anchovies, locally known as sardines, are swimming about the wharves, continually expanding and closing their capacious gills, wandering gregariously in undulating lines or imperfect circles, frequently breaching out of water in silvery dashes to escape the attacks of concealed enemies, and gradually showing a state of decimation which foreshadows their approaching end. Lazily loafing in the shadow of a landing may be seen the despised ratfish, or rabbit fish (*Chimæra colliei*), whose only functions seem to be to look grotesque and annoy the expectant angler. The diligent small boy is here, but he is not catching sunfish and catfish, nor cunners and eels; his string, when he carries one, contains sculpins (*Artedius*), viviparous perch (*Embiotocoids*) and rock trout (*Hexagrammus*). His older brother is out in a boat, fishing with annelides and tube worms for what he calls whiting, but we would name it tomcod, for it is the *Microgadus proximus* in California and northward to Alaska. Or he may be trolling for silver salmon, which means any of the large-scaled species in the sea-run condition; we bought a fine chinnook, or quinnat, from a fisherman who supposed he had a genuine silver salmon. We were assured that salmon will not take the fly about Esquimalt, and that smelt will not accept bait.

Nanaimo River at this time is lined with dead salmon. Speckled trout are said to be very scarce in the river, but the chain of lakes through which its headwaters flow is well supplied with trout. Anglers who drive out about nine miles from Nanaimo report excellent fishing. Some of the fishermen use grasshoppers or fresh beef or mutton for bait; others tie their own flies, using grouse feathers. It is said that almost any kind of artificial fly will prove successful. The Nanaimo is a rapid stream, with many rocks intermingled with sand.

AN OFF DAY ON THE BOARDMAN.

DURING the latter part of May last I shouldered rod and creel and started down the North Branch of the Boardman River. I had not been down the stream and knew nothing of its fishing grounds. I started in just below the village of Kalkaska. My first dip in the stream rewarded me with a 15in. trout. "Well, now," thought I to myself, "why have I not come down here before to-day?" I went on down the stream through the thick growth of willows; so dense were they that I could get to the stream only at intervals of ten to twenty rods apart. The water was high from the recent rains, and I found it a difficult task to fish along the stream through this patch of willows, so I walked on down to the cedars. Here I struck in again, taking out a nice trout here and there; but I found it very hard work to get through those cedars that had blown down or washed into the stream, and at some places completely damming the stream by a jam of driftwood and cedar trees, forming a mass so dense one could wade the stream only here and there. But I wanted to explore this fishing ground further down.

I came to one of these places filled with driftwood and attempted to climb over it. I had got near the top, which was about twelve feet high, when a limb I was standing on broke, letting me drop some four feet between the logs. I was climbing over when a stub of a limb caught hold of the seat of my pants, and there I was suspended in mid-air; and yet I was firmly wedged in between the logs, my feet within three or four feet of the water, but touched nothing, and when I attempted to draw myself up by my hands there was a snag that caught my back and prevented me from raising my body. Here I was, all alone except for my dog; he walked out to where I was imprisoned and seemed to want to aid me if possible. The mosquitoes seemed to know I was in a trap, and accompanied by a dozen or more sand flies they just pecked in to me as though that was their only and last chance. But what could I do? I laughed as I struggled to free myself from the prison I was in. At last the limb that held me by the seat of my pants gave way, and down I went into the water up to my arms, besides nearly losing one of my eyes by a limb gouging me as I dropped between the logs.

Of course I did not attempt to get any trout there, as I had frightened them so badly they would not show themselves for some time. But just below this place was another mass of driftwood and brush, and here I got ten beautiful trout. I followed on down and came to a jam of cedars and driftwood some fifteen or eighteen feet high, and just below it was a grand place to catch some nice trout, but there was no way to get to it, only to get up on top of the huge pile and fish off from it. I succeeded in climbing up to the top. My boots were full of water, which makes any one so clumsy in climbing over a mass like this. Standing on the very top of this pile and letting out a long line, I dropped my hook in between some logs and succeeded in fastening to a pound trout. I got him out of the water and nearly up to where I stood when the snell broke and down went my prize into the stream again. Putting on another hook I drop in and get another trout equally as large and beautiful as the first; but he was not so securely hooked and he got away. Again I dropped into the same place and felt a wriggling at the hook. I struck, and I think had a very large trout from the way he pulled, but just then I lost my balance and had to jump right into the very place I was fishing in. I could only shut my eyes and not try to save myself, as there was nothing to grasp hold of. I landed in this mess of logs, sticks and leaves, barking shins, bruising my knees and legs, scratching my hands and face and breaking my rod. I thanked my stars that I was not killed. I crawled out of this jungle, and after fixing my rod started on.

I came to a marshy place where there were no logs in the stream, but a dense growth of willows on either side of the river; and as the river was out of its banks on both sides there was only one way to get to a deep dark looking hole a few rods below and that was to get into the stream and wade down to it. This I did, and at the first cast a big fish took my hook, which caused the tip of my rod to bend almost double. I could not fetch him to the top of the water for a long time, and when he did come it was with a fearful rush, springing about two feet out of water. Then he dashed back and forth, to one side of the stream, and then down, then up. I played him for fully ten minutes, when he seemingly gave up and I stretched forth my hand to take him in. With a mighty rush he started up stream, then whirled and went down like a streak of lightning. I checked him and he dove down and succeeded in winding the line around a projecting root out of my sight about two feet under water and snapped my line in two. Oh, what luck I was having. I put on a fresh hook and dropped in again, and I either hooked eight different large trout and lost all but two or else I caught the same one more than once. However, two of those I lost were 18 or 20in. long, and the two I got were 15in. long and 8in. around.

I was disgusted with the luck I had all day, and started for home determined to try them big fellows again, of which I will tell you some future time. On arriving home my wife was surprised to see such a nice basket of trout; the 40 weighed 12lbs. What would she have thought had I saved all those big fellows I lost? The next day I was so lame I could hardly move; my legs were black and blue where the skin was not knocked off; and yet all this is sport to me or to any lover of trout fishing.

I have been fishing about 25 times this spring and have had extremely good luck in getting large trout. We fish here in the Boardman River and Rapid River and its several branches; Rapid River has more trout in its cold waters than any other stream in this section. I am going to Manistee River soon to try my luck catching grayling; if I have any luck I may write you about it.

Kalkaska, Mich., June 26. BROOK TROUT.

CHICAGO AND THE WEST.

CHICAGO, July 22.—Mr. Alex. T. Loyd, retiring president of the Grand Calumet Heights Club, mentions in his report one thing of especial interest to sportsmen in general. This is in connection with a sad accident which occurred three weeks ago on the river near the club house. I quote from the report:

"On last Sunday, I regret to say, we had the first serious accident on our grounds. An invited guest and a young friend were in some way, probably through changing positions in their boat, upset. The gentleman succeeded in clinging to the boat until rescued by Drs. Harlan and Reed, who fortunately heard his cries for help. The young man, unable to reach the boat, was drowned. The body was recovered some six hours later, but the efforts of Drs. Harlan and Reed to restore animation were unsuccessful.

"In this connection, I would impress upon every member the absolute necessity:

"First—Of rendering his boat not only unsinkable, but buoyant, by fastening within it a number of sealed tin cans."

"Second—To provide a rubber boat seat, or a tin box for a boat seat, with cords attached, so it can be quickly and easily secured to one's person. This is especially valuable when on the lake, permitting one to reach the shore at times when he could not do so if he were unable to quit the overturned boat.

"Third—Never to suffer the anchor rope to be fastened to the boat except when in actual use. A neglect of this precaution contributed in a marked degree to the fatal results attending the late accident."

Mr. Loyd has his own boat provided with ten air compartments, which buoy it perfectly when the boat is filled with water. Such an arrangement is simple and inexpensive, and adds so largely to fancied and actual safety that it would be well if all shooters and fishers followed it. It alone would not perhaps have saved this poor boy's life, for he fell away from the boat and drowned within ten feet of shallow water, but his companion could have thrown him a rope had he himself been secure upon a strongly floating boat. The blame here rested in that fatuous ignorance and carelessness by which an unskilled and ignorant man took an equally unskilled and ignorant boy out in a boat with him. The boy's parents blame the man for this, although he meant it only in kindness to the boy, whom he loved as his own son, and took on this little vacation trip because he was the brightest of his young clerks. The blame lies deeper yet. Any grown man should know enough of outdoor sports to be able to handle a boat safely on a tranquil stream, and it had been better kindness had this boy's parents taught him the use of boat and water instead of keeping him away from them in timid fear, as they always did. There was no perfect rounded manhood in that boat, nor the beginning of any such, when so trivial an accident resulted in death. In justice, however, it should be added that the gentleman who escaped had one artificial leg, which prevented his swimming even the few feet necessary to be passed to reach the drowning boy.

Grand Calumet has put an addition of 22×24ft. at the east end of the club house, and fitted it up with twenty-two lockers. These will be sold at $3 to $4 each to members, and will be a source of slight revenue. A boat-house for fourteen boats is also building on the lake shore, tiers in which will be sold at $2 to $5. An attempt will be made to put the sandy flat in front of the house down in grass, although this may be difficult. The purchase of twenty acres of surrounding ground is under consideration still, bonds having been issued in $2,000, but remaining partly unsold. It is to be hoped the wealthier members will take hold of this. This young club shows steady increase in membership. It is one of the very pleasantest clubs for summer, being right upon the lake and in delightful surroundings, easily accessible from the city.

E. HOUGH.

THE revised and abriged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

FLY-FISHING FOR STEELHEAD SALMON.

DURING the spring of 1889 for the first time in tributaries of the Columbia River the steelhead salmon or Gairdner's trout have been taken in large numbers with artificial flies. These trout spawn in the small branches of the Clackamas, whose waters reach the Columbia through the Willamette. They ascend to their spawning grounds early in the spring and begin running down in May, increasing in numbers during June. In April a rack is placed in the Clackamas to stop the ascent of the chinnook or quinnat salmon for the purpose of securing females to furnish eggs for the salmon-breeding station of the U. S. Fish Commission. This rack prevents the descent of the steelheads and becomes a center of abundance for the spent trout as well as for the gravid salmon. The enterprising anglers of Vancouver and Portland were quick to utilize this opportunity for their favorite pastime. There was almost no limit to the number of trout which were thin, but clean, silvery and perfectly ravenous after their arduous journey and protracted fast. The majority of those who had eaten the fish spoke favorably of their edible qualities. Nearly all the flies seemed to be killing. The fish averaged fully 30in. in length and were sufficiently gamy to suit the most exacting angler. An expert could be fully occupied the whole day long and every day in the week, landing perhaps twenty trout daily. Major Canby and Major Lee, of Vancouver Post, on the Columbia; Mr. John Cran, of Portland, and Mr. Reed, owner of the Bunker Hill mine, are among the enthusiasts whose skill was rewarded with almost a surfeit of success. Gradually, but surely, the salmon and trout of the West are becoming fascinated by the attractive devices of the fly-fisherman, and new sources of enjoyment are continually being discovered, where at first the disciples of Walton met with many discouragements.

LIVINGSTON STONE.

RHODE ISLAND BASS.

NEWPORT, R. I., July 27.—I inclose you list of striped bass taken with rod and reel by me for the week ending July 27. Flounders are biting very freely; I am taking from 15 to 40 a day. The outlook is very good for a good catch of bass. This season they have been late in showing up, but I have as good a show of fish at my place as I have had for a number of years. There have been but few bass taken as yet. Graves Point Club reported one last Monday morning, the first of the season. The West Island Club two for the season. Pasque Island Club the last time heard from had taken one. Easton's Point fished by H. A. Robbins two.

Bluefish are quite plenty and are biting both at buoy and chum bait, but not as freely at chum as they will later on. Bass taken week ending July 27: Monday 22d, four weighing 11½lbs., 8½lbs., 6lbs. and 5½lbs. Tuesday 23d, three weighing 14½lbs., 10½lbs. and 6½lbs. Thursday 24th, four of 11lbs., 8lbs., 6lbs. and 5½lbs. Friday one of 5½lbs.

W. M. HUGHES.

BLACK BASS FISHING IN THE POTOMAC.—Washington, D. C., Aug. 5.—Anglers met with very good success during the ten days ending July 29, in the Potomac between Cabin John's Bridge and the Great Falls. Messrs. Godey, Daw, Carroll, Jackson and Coburn made fine catches. Mr. Godey caught seventy-six in one day, with eighty-four minnows, casting from rocks into eddies near the falls. This was the second string of fish caught this season that was too much for one man to lift. Mr. Godey says his largest bass weighed 6lbs. Mr. Daw also fished with minnows, Mr. Jackson with shiners, Mr. Coburn with mill roaches, and Mr. Carroll with worms caught from ten to thirty bass in one day's fishing. These gentlemen claim that the Potomac is the finest river for black bass fishing in the world, and their scores seem proof of the assertion. Fishing here has been unusually good this season. There has been so much rain, flood and muddy water that when the angler casts his hook the fish seem to like the novelty and immediately catch on. Experienced fishermen say that the river is alive with bass. This is accounted for in various ways: some think the floods have brought the fish down from up river, and others say they come from the canal, which has been completely wrecked and emptied. I think the latter explanation largely correct, as I have been informed by parties living along the canal that many bass were found in its bed after the waters of the Potomac had receded. If the water become clear and stay in that condition we may expect some grand sport in the Potomac during August, September and October. The two last months are the best for bass when the conditions are favorable.—BAB.

A NEWSPAPER THIEF BROUGHT TO BOOK.—When the *Republic-Times* boasts, as it delights of all things to do, of its superior news facilities, its meaning is now easily understood. The principal article in last night's issue appeared under the heading, "A Fishing Experience: An Every-Day Romance of a Clark County Stream," purporting to be the work "of a member of the *Republic-Times* staff who has returned from a two-days' outing on Mad River." The article, excepting the introductory paragraph, was faked bodily and *verbatim* from FOREST AND STREAM, the issue of July 11, 1889, beginning about one-third from top of the last column of page 506, the article being under the title "Trouting on the South Boardman," the name of the river being changed to "Mad" to suit circumstances, and the word "trout" to "bass," as anybody can see by glancing at the page. That's one way of gathering local news. Getting out on the turf and hustling is another. Plagiarism in the pulpit or oratorical contest is attended by severe penalties. In some newspaper offices it passes for enterprise and ability, and is something to be boasted of in print.—*Springfield Gazette.* [The fellow who perpetrated that fraud wouldn't be bashful about stealing another man's fish and then bragging that he caught them himself.]

PENNSYLVANIA HIGH WATER.—Clearfield, Pa., August 5.—Born in the mountains and having spent many years of my life in the woods, I appreciate your weekly visits, and only wish you were in the hands of every true lover of nature. The heavy rains and floods of June and July have interfered materially with the trout and bass fishing in central Pennsylvania, and even now in mid-summer the river is so muddy that bass fishing is out of the question.—H.

SEATTLE, Wash., July 26.—I arrived here from San Francisco on the 18th inst., and being a lover of the rod and gun, I immediately sought all the information in relation thereto. Two and one-half miles from the post-office is Lake Union, a beautiful body of water of ten miles area and teeming with trout and whiting, which are being killed in large quantities by sawdust, which is dumped into the lakes by sawmills on the banks. There is a wanton destruction of fish and game in this State, and I sincerely wish you to call the attention of the people to this fact. We have many beautiful lakes, rivers and creeks, which in the past were teeming with fish, but what with seining, netting and other unlawful practices the fish will soon be gone. Seattle is rapidly being rebuilt with brick and stone.—W. P. C.

COLORADO FISHING.—A friend writes from Denver: The fishing in the Grand River, in Middle Park, was not so good as usual, owing to low water. My best was 1¼lbs.: of these I landed three all told; but ½ and ¾lb. made up the catches as a rule, and lots of sport in it. Some of the members of the United States Fish Commission are on a tour through the State, and it begins to look as though the fishing interest might assume importance. The increase in the number of people who go a-fishing is something wonderful. Ten years ago it seemed to exc te old Hunks's anger and disgust, but even old Hunks has got the notion that he has been wasting his life. I found several of him enthusiastic.

A HANDSOME TROUT.—Worcester, Mass., July 31.—Last Wednesday Mr. Fred N. Cook, of this city, took a brook trout which excited the admiration of the local fishermen, who examined it with much interest. Besides being an "old lacer" (1lb. 9oz.), it was pronounced by all who saw it to be one of the most perfect specimens of brook trout it had been their good fortune to see. Perfectly symmetrical in shape, brilliantly marked and handsomely colored, he was indeed a beauty. Mr. Eben Harrington, a local artist who has made quite a reputation by his fish pictures, will reproduce him in oil.—HAL.

Fishculture.

FISHCULTURE IN NEW HAMPSHIRE.

THE Boston *Journal* has published an interesting account of the new fish hatching station belonging to the States of New Hampshire and Massachusetts, and located about 2½ miles from Holderness. The hatchery has room for 2,000,000 fish annually. The troughs are made of Michigan pine, the inside painted with two coats of a mixture of paraffine varnish and brown oxide of iron and then with two additional coats of the varnish. Brown oxide of iron and oil cover the outside. By this treatment the growth of fungus is prevented. The egg-screens are 12in. by 18in. by one inch in depth and contain 6,000 eggs. The wire bottom has 12 wires to the inch for general use and 7 to the inch for salmon eggs. The screens receive several coats of paraffine varnish. The water supply enters a receiver at the end of the room, from which it passes into the troughs through faucets placed about half way up the side of the receiver to secure water as free as possible from vegetable sediment. The eggs are kept in darkness during the period of hatching, which continues from 120 to 150 days according to temperature.

The following young fish were hatched during the past season:

Penobscot salmon	600,000
Landlocked salmon	125,000
Loch Leven trout	30 000
California trout	40,000
Brook trout	800,000
Golden trout (*aureolus*)	12,000
Lake trout	200,000

From eight to twelve weeks were required for developing the fry. The spawning season of the California trout was from March to May; for the other salmonoids the season continued from the last week in September to the last week in January.

Col. Hodge has obtained a fertile hybrid between the saibling and brook trout. This cross has the back mottled as in the brook trout and the parr marks of the saibling on its side.

The results of restocking streams are very gratifying, the fishermen making the best catches of brook trout known for twenty years. Newfound, Squam and Winnipesaukee lakes are furnishing the largest yield of lake trout recorded. Fish of this species weighing 20lbs. are reported from Newfound and Winnipesaukee. The Sunapee Lake hatching station has 75,000 landlocked salmon from eggs of fish native to the lake, also 100,000 brook trout, 140,000 golden trout, 10,000 California and 30,000 Loch Leven. All of these will go into Sunapee Lake. The total cost of the Fish Commission work, exclusive of building expenses, was about $3,000.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 7 to 11.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary. Entries close Aug. 28.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary. Entries close 11 A. M., Sept. 9.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary. Entries close Aug. 31.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Company, Toledo, O. Chas. E Rowland, Secretary, Box 423.

Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Secretary.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y. Entries close Sept. 7.

Oct. 7 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club, P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

THE CROPPING QUESTION.

BELOW will be found a report of the discussion of the cropping question at the meeting of the English Kennel Club, July 10, for which we are indebted to the *Kennel Gazette:*

Mr. Shirley, on rising, said this was a meeting to consider a resolution brought forward by Mr. J. S. Turner on the question of cropping. We all remember that Mr. Turner brought this forward at the general meeting held at the Alexandra Palace show last February. We considered then that it had not been sufficiently discussed, and it was referred back to a committee. Since then voting papers have been sent out to all members and associates of the Kennel Club, and to all owners and breeders of Great Danes, black and tan terriers, English terriers, Irish terriers, and toy terriers. The result of this had been that the Kennel Club committee now think the question ripe for discussion.

Mr. J. S. Turner: In introducing this resolution I will not detain you long, as no doubt most of you have made up your minds upon the subject. I do not know whether this meeting is convened simply to receive the proxies or voting papers which have been sent out, or whether it is to come to a decision by taking the votes of those present; whether, in fact, the Kennel Club is to lead or to follow. Are we to be guided by abstract principles of right and justice, or to truckle to their perversion by misguided men? Any man with a properly equipped conscience can give but one answer—that we should be afraid of nothing that is recommended by reason and justice. Cropping is a fraud and a villainy which is not intelligible to the ordinary nature-loving mind, and is perpetuated only by thoughtless and selfish interest. Why discountenance plucking coats of wire-haired and Bedlington terriers and allow the cropping of ears—in fact put a premium upon the act. Is it logical to condemn one man for improving a fox-terrier's ears, or making a collie's face resemble a picture in the *Stock-Keeper* and allow others to cut and carve their dog's ears as they will. In last month's *Kennel Gazette* appears an apologia by Mr. Arkwright, in which he made no attempt to deny the cruelty, nor did he advance any argument as to the utility of cropping. He contented himself simply with the contemplation of the beautiful, as modified by the art of the cropper. I certainly cannot follow him when he says that the pain of having the ears cut into fancy shapes and being rubbed for several days when still sore is nothing compared with what human beings are subjected to by doctors for abscesses and other maladies. Surely he has not suffered from a gumboil or else this is not written seriously. He says one class of dogs, Irish terriers, would be improved because they own naturally a small, neat ear. But this, I think, is against the weight of evidence. A second class, says Mr. Arkwright, Great Danes, would be half spoiled, but would have size and color left. But the third class, bull-terriers, if left with their natural ears, would become so hideous to contemplate, that a stolidly impressive being could hardly repress a shudder. They would most certainly disappear from the face of the earth, destroyed by sentiment of well-meaning meddlers. Does Mr. Arkwright mean by this that bull-terriers have nothing to recommend them but their cropped ears? No color? Well, no! unless it be at the back of the ear and cropping has removed it. No size? No! sans everything! Poor bull-terriers! How little did we know that "Auricula et preterea nihil" was to be inscrolled on your hatchment! Perhaps a better motto would be "Save me from my friends." For Class III. Mr. Arkwright says that large stiff ears have been a feature of the bull-terrier from the beginning. What beginning? I maintain that large ears are produced by cropping. I should incline to the belief that bull-terriers, being a cross between the bulldog and terrier, have, like most aggressive animals, comparatively small ears; but as the coarsest were selected to cross with, the large ears have become to a great extent fixed as a feature of the breed. The Great Dane Club has passed a very curious resolution, which in effect says we shall have all or none. By this means they hope, I suppose, to have none. The members of this club assert by implication that docking, rounding and cutting off dew-claws are to be condemned, and eventually they hope to

> Compound for sins they are inclined to
> By damning those they have no mind to.

Personally I have no objection against this sweeping reformation, but I do not think the doggy world is yet prepared for it, and I cannot see that docking and removing of dew claws are such cruel and useless practices as cropping of ears. I consider that this is a question that calls for some immediate action on the part of the Kennel Club, and it is to obtain this end that I propose the resolution.

Rev. G. F. Lovell: Might I ask Mr. Turner what resolution he proposes to submit to the meeting?

Mr. Turner: This question has been mentioned by me several times. I brought it forward at the Kennel Club show held at the Alexandra Palace, and it has been before several committee meetings and adjourned from time to time. The resolution proposed is, "To consider the advisability of taking into consideration the question of cropping."

Mr. Herbert: I take it that this meeting is to consider whether this question of cropping shall be referred to a committee meeting or not, and that it will not decide the whole matter now.

Mr. Shirley: I think Mr. Turner's resolution is quite in order, and that it would be impossible for the committee of the club to ignore Mr. Turner's resolution if this meeting passed it.

Mr. Herbert thought there should be no rule, but that the various specialist clubs should be allowed to follow their own choice in the matter. If members were for cropping let them crop; if they were against it let them stop it.

Rev. G. F. Lovell was of the same opinion.

Mr. Herbert did not consider this meeting was competent to deal with this matter, and he thought, and in fact all Great Dane men thought, and he spoke as representing the Great Dane Club, that this meeting was simply convened for the purpose of considering the advisibility of advising the committee to take into their consideration the question of cropping and not for the purpose of finally disposing of the question. He was distinctly in favor of cropping, and in fact considered it a necessity in Great Danes, as adding to their general appearance and smartness, and that if cropping was to be stopped he thought that classes for Great Danes might be dropped.

Mr. Shirley thought it might be convenient now to state the figures and results of the voting papers sent out to the members, associates, and different breeders of Great Danes, black and tans, bull-terriers, toys, Irish terriers and white English terriers, whose names appear in the last three years Kennel Club Stud Book. He said he had gone carefully through these votes and counted them. There were 942 papers sent to breeders; 41 were returned through the post, we received 406 answers, and this leaves 495 that have not been accounted for. Of these answers, Great Dane men sent in 20, 14 for cropping, 6 against; or rather more than two to one in favor of cropping. Bull-terrier men 41 for cropping, 7 against; which is about six to one in favor. Black and tan terrier men 23 for cropping, 21 against. White English terrier men 21 for cropping, 16 against, or a slight majority in favor of the practice; the Irish terrier men were about four to three, or 23 against 17 in favor of cropping; and toy terrier men were a small majority in favor of the practice, 6 in favor, 4 against. Now, as to the members and associates, he did not attach as much importance to their opinion as to that of the breeders, as a good many of them had, perhaps, never bred a dog in their lives; 407 papers were sent to the associates; one was returned, 192 answers received, 214 not accounted for, the great majority of votes were against the practice of cropping; 136 against cropping Great Danes, 46 for cropping; bull-terriers, 139 against, 56 in favor; black and tan terriers, 138 against, 46 for; Irish terriers, 159 against, 28 for; toy terriers, 150 against, 36 for. He said that he did not think the uncropped classes provided at this show were a success. The entries in Great Danes were 4, black and tan terriers 9, Irish terriers 9. A good many letters had been received on the subject, and he thought that the Kennel Club ought to consider the matter, and not again have it postponed.

Mr. Turner thought the entries in the uncropped classes satisfactory, considering the short time (four months) which has elapsed since the classes had been given, and the majority of breeders had only cropped dogs to exhibit.

Rev. O'Callaghan: It seems that many of the associates and members are against cropping.

Mr. R. Herbert wanted to know how many of the gentlemen out of the 136 voting as associates on the question of cropping Great Danes belonged to the Great Dane Club, or had ever bred one. Mr. Shirley explained that no papers were sent to those associates who received a paper as exhibitor of any one of the breeds affected.

Mr. Vicary, as frequent judge of Irish terriers, was opposed to Mr. Turner's resolution. He considered that uncropped Irish terriers were generally wanting in the "varmint" expression which should characterize the breed, and that the best dogs were nearly all cropped. Moreover, he did not admit that a small drop ear is a true characteristic of the breed.

Mr. J. C. Tinne was in favor of Mr. Turner's resolution. He upheld the practice of removing the dew claws, as he considered it was an act of kindness, and where dogs were kept for working purposes it was a necessity, but he was certainly much opposed to the cropping of ears.

Rev. G. F. Lovell: The question as I understand is to consider the advisability of advising the committee to take into consideration the question of cropping, and for this I am quite prepared to vote, but I certainly do not think that this meeting should finally dispose of the question. I consider that cropping is not a cruelty, but it is a saving of great pain to a dog when fighting. You must remember that many of our terriers are sent over to India for hunting purposes, and if their ears were not cut this would be one of the first things that the hunted animal would bite, thus causing great pain to the dog, and spoiling his chances of success. He contended that cropping of ears was only going back to nature, as all the ancient breeds had prick ears. He thought that the Kennel Club would suffer materially if they took Mr. Turner's view of the cropping question, as owners who now cropped their dogs would not show at Kennel Club shows, but would support those that were not held under Kennel Club rules, and this was a sort of thing that he thought the Kennel Club did not wish to encourage.

Mr. P. C. Reid said he did not agree with Mr. Lovell. He had himself tried terriers in India, and had not found that they suffered any extra pain through having natural ears, as while the hunted animal had hold of the ear it would not be able to do any further mischief. He did not quite agree with Mr. Turner's resolution, but he was in favor of discouraging the extensive practice of cropping.

Mr. Shirley read out the opinions of some of the most prominent breeders who had sent in voting papers, among whom were Messrs. Pratt, Soulter, Buller, Spelman, Hutchings, and others.

Mr. Herbert: Are we to vote for this question as a whole and settle the matter forever, or have the committee of the Kennel Club power to set aside any decision arrived at by this meeting?

Mr. Shirley thought they had no such power; they were voting on Mr. Turner's resolution.

Mr. Reid asked if Mr. Turner could be allowed to amend his resolution so as to take the breeds separately. Mr. Lovell objected to this, as they had no legal right to accept an amendment, but were bound by the notice on the paper, although he himself did not understand what they had to vote on.

Mr. Shirley: I have ruled over and over again that Mr. Turner's resolution is perfectly in order.

After some further discussion between Mr. Lovell and Mr. Shirley the former gentleman left the committee room. Mr. Shirley now put the question, when there voted: For Mr. Turner's resolution, 10; against, 7; majority, 3.

Resolution carried.

TOLEDO DOG SHOW.

THE premium list of the first annual dog show of the Toledo Kennel Company is ready for distribution. The show will be held in conjunction with the Tri-State Fair at Toledo, O., Sept. 10 to 13. Mr. John Davidson will judge the sporting, and Mr. H. W. Lacy the non-sporting classes. Mr. Geo. H. Hill is the superintendent. The list provides 82 classes. Mastiffs, St. Bernards (each variety), English setters, Irish, black and tan setters, cocker spaniels (any color), collies, bulldogs, fox-terriers and pugs, each has one challenge class with prize of $10; open, dogs $10 and $5, bitches the same, puppies diploma and ribbon. Pointers have a challenge class for each sex, prizes the same as in other classes. In beagles there is one challenge class, with prize of $8, and $8 and $4 in open classes. Great Danes, deerhounds, greyhounds, foxhounds, field spaniels (any color), and Irish water spaniels have two classes each, dog and bitch, with $10 and $5 each. Bull-terriers, two classes, with $8 and $4. Newfoundlands, dachshunde and whippets have one class each with $10 and $5. The remaining breeds have one class each with $8 and $4. Kennel prizes of $15 each are offered for mastiffs, St. Bernards, deerhounds, pointers, English setters and Irish setters. Upward of fifty specials are already offered and more are promised. Entries close Aug. 26. The address of the secretary is C. E. Rowland, Box 423, Toledo, O.

A LARGE ST. BERNARD PUPPY.—Andover, Mass., July 30.—*Editor Forest and Stream:* One of the St. Bernard puppies from my Essex—Mora litter, born March 24, weighed at four months old just 65lbs. He is a smooth-coat and the smallest of the litter. He is not fat but in fine condition. He is the property of Mrs. Edward Frothingham of Boston. I have never known a smooth puppy to weigh as much at that age.—E. L. HANDY.

BOSTON'S VAGRANT DOGS.

Editor Forest and Stream:

I take pleasure in replying to your inquiries as to the management of Boston's dog pound, giving a short account of the system originated and carried out by me for the past twelve years in my capacity as special constable, appointed by the city "to rid our streets of mongrel, mangy, uncared for and unlicensed dogs."

Some time ago I myself inquired into the methods in vogue in other cities, with a view to improve my own, and found that those adopted in most places were more brutal than was necessary, even affording curious onlookers an opportunity of witnessing the manner in which the dogs were disposed of. I trust through the general inquiry made by you to shortly read in your valuable paper reports from the larger cities showing that more humane methods have been adopted for the capture and disposal of this unfortunate class of dogs.

My investigation (if I may call it so) failed to show me any more merciful or more instantaneous method than that adopted by myself, of which I give a description.

A covered light wagon is used for impounding. This is well ventilated at the bottom, sides and rear, allowing a free circulation of fresh air. The plan of attack in the thickly settled portions of the city proves most successful in the early morning hours, when the dogs come out for an airing and when their owners are not so suspicious; for as a rule a certain class of owners are greatly attached to them—but rather more so to the license fee.

Two assistants accompany me on the team and scour the alleys and back yards, returning often with a vagrant under each arm. These are passed through an aperture in the front of the wagon or cage which closes with a spring. It is not long, however, after the capturing season sets in than every one is on the lookout for "Dr. Al. Watts" and the dogs themselves seem to know by instinct the sound of his approaching vehicle which, by the way, is kept out of sight of the "suspected" places as much as possible.

The dogs are by this time (those which are not concealed) on the alert, and in this dilemma I find the use of the "lasso" of the greatest advantage, for where they can dodge and outrun the boys the lasso in trained hands will do the business.

Several trips are made in this way in the course of the day, as I make it a point never to crowd; thus avoiding any snarling or howling and, strange to say, any fighting among the prisoners. This is of benefit too in the case of small dogs, many of whom are unavoidably captured through the neglect of their owners in not having collars on them, and who would fare sadly from the results of overcrowding.

Arriving at my repository, the freight is unloaded into a boxed elevator and is carried to a large room in the upper story and extending the length of the building. Here they are detained one day and then dispatched. The finer specimens are, however, first separated from the crowd and conveyed to an adjoining room to await the call of their master or mistress who pay a fee of $1 for their "unfortunate friend," having first been to the station house and obtained a license.

The revenue accruing to the city from this source is of no small dimensions. The destroying agent used by me in dispatching those uncalled for is a deadly poison, a combination of acids in powder form. It is instantaneous, a few grains being sufficient for the smaller dogs and less than one-fourth of a spoonful for the larger. The victim is held firmly between the knees of an assistant at the door of the elevator, who forces the jaws open; the poison is then administered, the muzzle held for an instant while it is swallowed, and the animal released in the elevator, where he falls dead, almost before he can lick his chops; the whole performance lasting less than one minute. The elevator is then lowered and the carcasses delivered to the tanner's team in waiting below; the tanner finding it sufficiently profitable to remove them gratis.

It may be well to observe that much has been done by this means of late years to elevate the standard of dogs in this community, and that in propagating a higher breed of dogs in general, I have received assistance and encouragement from many lovers of the animal and the people generally.

Nevertheless it is surprising the way worthless curs multiply annually, the number captured every season (July 1 to Oct. 1) being almost incredible, averaging about 1500. I can only account for this great influx during the remaining nine months of the year by the fact that the same stringent measures are not adopted in the towns in the immediate vicinity, and am confident if my authority extended to Somerville, Chelsea and other suburban surroundings, Boston would before long be well rid of vagrants of this class, and a more well-bred and intelligent class of the "noble dog" prevail.

DR. AL. WATTS.

BOSTON, Mass., 1888.

DISEASES OF THE DIGESTIVE ORGANS.—II.

VERY few diseases are found in the structures forming the mouth of the dog, excepting the common results of injury. Decay of the teeth, as it occurs in man, and sometimes in domestic animals, is unknown in the dog. When those organs suffer at all, the disease is inflammation of the membrane covering the fang of the tooth, sometimes complicated with abscess in the jaw and a tender and spongy condition of the gum. The teeth become loose, saliva flows from the mouth, the dog ceases to bite his food, and the breath is fetid in the extreme.

Dogs which have been kept on stimulating food and prevented from taking exercise are most subject to this disorder, which is only one phase of the generally disturbed state of the digestive system. Canker is the name given to the disease of the mouth above described, probably with the idea that it is of a malignant or cancerous nature. There is no reason for this belief, however, as the affection, so far as its local manifestations are concerned, does not spread to other parts, and will yield to general and local treatment, excepting in the case of very old and plethoric dogs which cannot stand the necessary remedial measures.

Removal of the loose teeth is absolutely required at the commencement of the treatment, and in bad cases the whole of these organs will have to be taken away—not at one time, but as quickly as may be without causing serious irritation. Dogs suffer a good deal, not only from the pain of an operation, but from fear; and a debilitated subject may be rendered prostrate by a prolonged operation. Astringent lotions of sulphate of zinc and tannin are very useful in cases of canker, and may be applied immediately after the removal of any of the loose teeth. A soft brush or a piece of soft sponge on a stick is the best instrument for the purpose of mopping the gums well over. Constitutional treatment will consist of laxatives and alteratives, followed by tonics. Carefully adjusted dietary is perhaps of more consequence than medicine.

A dose of aloes in the form of pills should be given at once. The dose will be from five grains to a dram, according to the size of the dog. The object, it must be remembered, is not to purge, but to produce a laxative effect only; and small doses, which may be repeated, are better for this purpose than large ones.

Occasional emetics are always useful in case of disordered digestion in the dog, even if the animal is in poor condition, but still more beneficial if the dog is over fat.

Regulation of the diet is the most difficult part of the treatment of disease in dogs. No sentiment is ever in the way of the adjustment of the dietary of the horse, ox, sheep or pig; but the dog, like his master or mistress, has fancies which must be consulted, and in either case the stern directions of the doctor as to the daily food become subject to modifications.

So far as circumstances will permit, the dog's diet should be changed. Generally it will be found that animals affected with canker in the mouth have been fed irregularly on the choice morsels from the owner's table, and the substitution of a meal twice a day of vegetables with a little gravy, or an allowance of rice with milk or gravy, will be most effectual in alleviating the condition of the system. No alarm need be felt if the dog for some time obstinately refuses the uninviting provisions. In time the stimulus of appetite will tempt him, and it is a good sign to see the animal reconciled to simple food.

Injuries to the mouth occur under various conditions. A sting from a wasp or bee which has been snapped up by the dog, or the puncture of the gum or lip by a spike of bone which the animal was engaged in gnawing, will cause very peculiar symptoms. Saliva runs from the mouth, and the dog makes strong efforts to dislodge something from the mouth by the aid of the paws, running meanwhile from one point to another in the utmost alarm. This state of excitement is much like one phase of rabies, and the dog runs considerable risk of being dealt with as a rabid animal. A careful inspection of the mouth would enable the veterinary surgeon to detect the injury, but no one is much inclined to open the mouth of a dog suspected to be mad to see if any other cause for the symptoms exists.

Impactment of a piece of bone in the back part of the throat, or its lodgment between the molar teeth will give rise to symptoms of extreme pain and alarm, but the discovery of the cause of the excitement having been made the cure is easy, as the removal of the offending body is followed by immediate relief.

Choking sometimes occurs from the attempt to swallow an unusually large or a particularly hard portion of food, or sometimes from the accidental passage into the œsophagus of a stone which the dog has run to retrieve at his master's bidding.

Symptoms of choking are so well understood, that the tyro will at once realize that the dog has something in its throat. The animal makes constant efforts to expel the body, and, failing to do it, exhibits signs of distress.

If the symptoms of choking are misunderstood, and nothing is done for the relief of the animal, swelling of the neck may occur; the tongue becomes enlarged and hangs from the mouth, and the inflammation extends to the lining membrane of the mouth. Fish bones, or pins or needles, or any pointed bodies which the dog may pick up, will sometimes get fixed in some part of the throat or swallow, and cause the formation of an abscess; and when the discharge takes place, the body will most probably be discharged at the same time. But there is always the danger that the symptoms may give rise to a suspicion that the dog is affected with dumb rabies.

Cases of choking are not adapted for amateur treatment; much tact and skill are necessary for the removal of an obstruction from the throat, and the dislodgement of any substance from the swallow must be effected by the aid of instruments, which are effective only in practiced hands. In some instances it is necessary to cut down upon the substance which is retained in the œsophagus, and remove it, the wound being stitched up afterward and treated by antiseptic dressing. The operation is not difficult, nor are there any serious consequences to be apprehended, but it is obviously beyond the reach of the amateur.

In connection with the surgery of the mouth, it is necessary to allude to the old-fashioned operation of "worming," which consists in the removal of a small white thread from the fold of mucous membrane beneath the dog's tongue. Modern veterinary books do not refer to this operation, except as a piece of ancient barbarity, which was justified on the plea that it prevented dogs from going mad. It cannot be said that the superstition has died out, because the operation is still performed, and the difficulty in the matter is that the scientific man, while he may contend that the removal of the "worm" from under the tongue cannot have any protective effect against rabies, is quite unable to offer any explanation of the use of the small body, and therefore his objections have small weight.—*London Field.*

ELMIRA DOG SHOW.

WE have received the premium list of the first annual dog show of the Elmira Poultry and Pet Stock Association, to be held at Elmira, N. Y., Sept. 17 to 20, in conjunction with the Interstate Fair. The show will be held under A. K. C. rules. Messrs. John Davidson and H. W. Lacy have been appointed judges. The prize in the challenge class for mastiff dogs is $15; bitches, the same; open dogs, $10, $5 and diploma; bitches, the same. Each variety of St. Bernards, same as mastiffs. Newfoundlands, one class, $10, $5 and diploma. Deerhounds, challenge dogs, $10 and $5; bitches the same; open, same as mastiffs. Foxhounds, each sex, $10, $5 and diploma. Pointers (two classes), English setters, Irish setters, Gordon setters, beagles, collies, bulldogs and bull-terriers, challenge dogs, $10, $5 and diploma; bitches, the same; open classes, same as mastiffs. Spaniels, over 28lbs., challenge (one class), $10; open, black, same as mastiffs; other than black, the same. Clumbers (one class), $10 and $5. Irish water, the same. Cockers, challenge (one class), $10, $5 and diploma: open, black, same as mastiffs; other than black (one class), $10, $5 and diploma. Fox-terriers, challenge (two classes), $10; open, same as mastiffs; wire-haired, $10. Irish terriers, challenge (one class), $5 and $3; open, same as mastiffs. Yorkshire, challenge (one class), $10; open (two classes), $10 and diploma. Pugs, challenge (two classes), $10; open, same as mastiffs. Black and tan, Bedlington, Scotch, Dandie Dinmont and toy terriers, Japanese spaniels, Italian greyhounds, Mexican hairless and Siberian wolfhounds (one class esch), $10, $5 and diploma. Skye terriers (two classes), the same. King Charles and Blenheim spaniels (one class each), $10 and diploma. Great Danes (two classes), the same. Miscellaneous, large and small (one class each), $10, $5 and diploma. Kennel prizes of $10 each are offered by the club for mastiffs, St. Bernards, deerhounds, greyhounds, pointers, English setters, Irish setters, spaniels, beagles, collies, bulldogs, bull-terriers, fox-terriers and pugs. Entries close Sept. 7. The address of the secretary is Geo. M. Robinson, Elmira, N. Y.

TORONTO DOG SHOW.

WE have received the premium list of the dog show to be held at Toronto, Canada, Sept. 16 to 19, under the auspices of the Dominion of Canada Kennel Club and the Ontario Collie Club, in connection with the fair of the Industrial Exhibition Association. Seventy-one classes are provided for, the premiums amounting to nearly $1,200. The show will be held under the rules of the Canadian Kennel Club. Mr. John Davidson will judge setters, pointers, collies, beagles, foxhounds and spaniels, and Mr. C. H. Mason the remaining classes. Entries close Sept. 4. The address of the secretary is Capt. C. Greville Harston, Public Library Building, Toronto, Can.

FOXHOUND LOST.—Mr. H. C. Graff, Kensington, O., has lost his foxhound dog Roller: he is black and tan with small white spot on breast and throat. One ear is slit at point. He is six years old and strayed or was stolen on the night of July 13. Any one learning his whereabouts will confer a favor by informing his owner.

DOG TALK.

THE stud book committee of the A. K. C. at a meeting held July 19, considered the Meersbrook Maiden and Meersbrook Girl muddle, and decided that the proofs as to their identity offered by Dr. Foote were satisfactory. The committee declined to recognize all awards received by these dogs while shown under wrong names. The committee investigated the charge of Mr. J. Shelley Hudson against Mr. G. W. Ewing for giving wrong pedigree to the English setter bitch M'liss C., and found that Mr. Ewing was right, as the dam of M'liss C. and her litter sister were both of the same name. The committee also investigated the charge of Mr. J. E. Isgrigg against Mr. P. T. Madison, that he wrongly advertised his English setter dog Rush Gladstone as a champion. Information from Mr. Madison showed that the dog had twice won a champion prize at small shows not held under A. K. C. rules. The committee adopted the following resolution: "*Resolved*, That notice is hereby given that the advertisement of Mr. P. T. Madison, which states 'The English setter champion Rush Gladstone (A.K.C. S.B. 3522), unbeaten on the bench,' is misleading, but it is the sense of this committee that it has no power in the premises other than the publication of the fact that the dog did not win a championship under the American Kennel Club rules."

The *Fanciers' Gazette* says of cropping: "If cropping is to be stopped, the order would come better from a legal side. Supposing that the Society for the Prevention of Cruelty to Animals took the matter in hand, and said that if any dog from after Aug. 1, 1889, was shown cropped, the case would be inquired into, and a prosecution ordered; then we are certain that in 1890 the puppy classes in all breeds which are accustomed to be cropped would be classes of uncropped dogs, and in due time all the classes would be so."

Bench show managers will find it to their interest to forward to this office for distribution, copies of their premium lists and entry blanks. It is often the case that we have calls for them on the day that entries close. We should also have early advice of date when entries close, which will be published in our "fixture" column.

The managers of the Toledo dog show offer a special prize of $50 to the exhibitor scoring the greatest number of points, the winnings of each exhibitor in the various classes to be added together. The points will score as follows: First prize 5, second 4, vhc. 3, hc. 2, and c. 1 point.

We are advised that a large number of valuable special prizes have already been offered for the Toronto dog show, and that many more are promised. The management expect that the show will be the best yet held by the club.

Dr. M. H. Cryer, who has been enjoying the honeymoon abroad, is expected home next week.

We hear that Mr. F. F. Dole is coming out strong at the dog shows next spring.

THE DOGS OF BATH.—Bath, Me., July 1.—In an article on dog license laws I notice a statement "We have no unlicensed or stray dogs in Bath, Me." It is true in no sense of Bath, Me. The licensing of dogs is optional with the cities and towns in this State, some taxing and licensing them, others not. In this city, like many others, the good for nothing mongrel curs are largely in excess in numbers to the useful ones, and efforts have periodically been made to devise some method of abating the nuisance, with little success, until now it has been determined that all unlicensed dogs must go. To date there have been 226 dog licenses taken out in this city. Is is estimated that there soon will be 300 dogs wearing that little metal medal that licensed dogs must carry about with them. Unlicensed dogs are to be slain.—GEO. E. NEWMAN.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Chispa. By A. C. Johnson, Mechanicsville, N. Y., for black, white and tan beagle bitch, whelped June 12, 1888, by Ross (A.K.R. 2116) out of Spot (A.K.R. 3339).

Rustic Prince, Rustic Joe, Rusticoat and Rustic Ruby. By Geo. W. Fisher, Catawissa, Pa., for fawn pug dogs, whelped July 6, 1889, by Rustic King out of Rose (Bradford Ruby—Gyp).

Ada. By W. A. Wheatley, Memphis, Tenn., for white and orange English setter bitch, whelped June, 1889, by Samuel of Posen out of Col. Wood's bitch.

Duke VIII. By G. A. Goddard, Worcester, Mass., for black cocker spaniel dog, whelped May 10, 1889, by Black Pete (Obo, Jr.—Phonsie) out of Phyllis (A.K.R. 5293).

BRED.

☞ Notes must be sent on the Prepared Blanks.

Naso's Belle—Spot Dash. H. L. Rice's (Boston, Mass.) pointer bitch Naso's Belle (Naso of Kippen—Belle Randolph) to Fleet View & Reading Pointer Kennels' Spot Dash (Sir Philip Sydney—Topsy), Aug. 1.

Portland Lilly—Sir Anthony. Geo. W. Lovell's (Middleboro, Mass.) pointer bitch Portland Lilly (Glenmark—Zanetta) to his Sir Anthony (champion Graphic—Zitta), Aug. 2.

Loo—Peek-a-Boo. C. G. Hinckley's (Lee, Mass.) pug bitch Loo (Othello II.—Street's Loo) to J. H. Seeley's Peek-a-Boo (Bradford Ruby—Susie), April 27.

Daisy—Rustic King. G. W. Wenck's (Northumberland, Pa.) pug bitch Daisy (Tom Thumb—Bijou) to G. W. Fisher's Rustic King.

Julie—Othello. Geo. W. Fisher's (Catawissa, Pa.) pug bitch Jule (Tom Thumb—Bijou) to Dr. M. H. Cryer's Othello, July 20.

Schats—Ben Hur. Tracy Gould's (Vineland, N. J.) St. Bernard bitch Schats to his Ben Hur (A.K.R. 6727), July 29.

Zora—Ben Hur. Tracy Gould's (Vineland, N.J.) St. Bernard bitch Zora (A.K.R. 6899) to his Ben Hur (A.K.R. 6827), July 3.

Novice—Sir Herbert. C. H. Marshall's (Leominster, Mass.) St. Bernard bitch Novice (champion Hermit—Irma) to Chequasset Kennels' imported Sir Herbert (champion Plinlimmon—champion Queen Jura), July 22.

Duchess of Heathfield—Sir Herbert. C. H. Spring's (Newton Lower Falls, Mass.) St. Bernard bitch Duchess of Heathfield (Rip Van Winkle—Recluse) to Chequasset Kennels' imported Sir Herbert (champion Plinlimmon—champion Queen Jura), May 24.

Nesta—Sir Herbert. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Nesta (champion Merchant Prince—Lys) to their imported Sir Herbert (champion Plinlimmon—champion Queen Jura), June 2.

Marvel—Sir Herbert. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Marvel (champion Hermit—Alma) to their imported Sir Herbert (champion Plinlimmon—champion Queen Jura), May 30.

Rudolphia—Sir Herbert. Chequasset Kennels' (Lancaster, Mass.) St. Bernard bitch Rudolphia (Rudolph II.—Maria) to their imported Sir Herbert (champion Plinlimmon—champion Queen Jura), July 9.

Lys—Sir Herbert. H. S. Pitkin's (Hartford, Conn.) St. Bernard bitch Lys (champion Hermit-Sombre) to Chequasset Kennels' imported Sir Herbert (champion Plinlimmon—champion Queen Jura), June 20.

Bessie—Sir Herbert. G. W. Schenk's (Burlington, Ia.) St. Bernard bitch Bessie (Duke of Lancaster—Kron) to Chequasset Kennels' imported Sir Herbert (champion Plinlimmon—champion Queen Jura), July 4.

Jessie—Locke. T. H. Welch's (Newburyport, Mass.) Gordon setter bitch Jessie (Argus III.—Lowell's Nellie) to J. T. Johns's Locke (Bailey's Tom—Pansy), June 25.

Julia—St. Cloud. St. Cloud Kennels' (Mott Haven, N. Y.) Irish setter bitch Julia (Duke II.—Peg II.) to their St. Cloud (champion Elcho—champion Noreen), July 29.

Fan—Buffalo General. L. Wister's (Philadelphia, Pa.) black and tan terrier bitch Fan to A. W. Smith's Buffalo General (Halifax General Lady Lottie), July 30

Lady Fidget—Tick Tack. E. C Ray, Jr.'s (Mamaroneck, N. Y.) fox-terrier bitch Lady Fidget (Music—Thistle) to W. M. Barnum's Tick Tack (Bacchanal—Miss Tackler), July 20.

Flo—Bradford Harry. C. N. Symond's (Salem. Mass.) Yorkshire terrier bitch Flo (Bright—Fan) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Aug. 2.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

May B. Geo. W. Lovell's (Middleboro, Mass.) pointer bitch May B. (Glen Granbic—Jeanette), July 25, ten (four dogs), by his Beaufort H. (champion Beaufort—Zuba).

Rose. Geo. W. Fisher's (Catawissa, Pa.) pug bitch Rose (Bradford Ruby—Gyp), July 6, five dogs. by his Rustic King.

Snowflake. Geo. W. Lovell's (Middleboro, Mass.) English setter bitch Snowflake (Prince Noble—Cassandra F., Aug. 2, seven (five dogs), by his Phil Warwick (Cid—Victoria).

Miriam. H. B. Young's (Montreal, Can.) Irish setter bitch Miriam (A.K.R. 6274), July 16, nine (five dogs), by his Sakta (A.K. R. 5558).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Budge. Stone fawn pug dog, whelped April 27, 1889, by Peek-a-Boo—Loo, by C. G. Hinckley, Lee, Mass., to Mrs. A. L. Fraleigh, Troy, N. Y.

Thimble. Stone fawn, black points, pug bitch, whelped March, 1889, by champion Dude out of Tresa, by Chequasset Kennels, Lancaster, Mass., to Mrs. W. McGee, Clinton, Ont.

Rustic Knottie. Fawn pug bitch, whelped April 6, 1889, by Rustic King out of Tra-la-la, by Geo. W. Fisher, Catawissa, Pa., to G. W. Wambach, Baltimore, Md.

Rustic Anna. Fawn pug bitch, whelped April 6, 1889, by Rustic King out of Tra-la-la, by Geo. W. Fisher, Catawissa, Pa., to A. F. German, Louisville, Ky.

Rustic George. Fawn pug dog, whelped April 6, 1889, by Rustic King out of Tra-la-la, by Geo. W. Fisher, Catawissa, Pa., to Chequasset Kennels, Lancaster, Mass.

Essex (A.K.R. 931)—Mora (A.K.R. 6148) whelp. St. Bernard dog, whelped March 24, 1889, by Essex Kennels, Andover, Mass., to A. M. Jenkinson, Pittsburgh, Pa.

Sancho. Orange tawny and white St. Bernard dog, whelped March 24, 1889, by Essex (A.K.R. 931) out of Mora (A.K.R. 6148), by Essex Kennels, Andover, Mass., to G. H. Millin, Boston, Mass.

Cato. White and orange St. Bernard dog, whelped March 29, 1889, by Essex (A.K.R. 931) out of Mora (A.K.R. 6148), by Essex Kennels, Andover, Mass., to E. Frothingham, Boston, Mass.

Mora. Orange and white St. Bernard bitch (A.K.R 6148), by Essex Kennels, Andover, Mass., to John Keevan, Brooklyn, N. Y.

Chequasset Peeress. Orange brindle, white markings, St. Bernard bitch, whelped May 7, 1889, by champion Ben Lomond out of Lady Hanley, by Chequasset Kennels, Lancaster, Mass., to E. H. Moore, Melrose, Mass.

Chequasset Parthia. Orange, white markings, St. Bernard bitch, whelped May 11, 1889, by Monte Rosa out of Kleine, by Chequasset Kennels, Lancaster, Mass., to E. C. Freeman, Cornwall, Pa.

Heidel. Orange, white markings, St. Bernard bitch, whelped March 16, 1884, by Cæsar out of Nun, by Chequasset Kennels, Lancaster, Mass., to E. Scott, St. Paul, Minn.

Phil Warwick. Black, white and tan English setter dog, whelped Dec. 10, 1883, by Cid out of Victoria, by G. W. Lovell, Middleboro, Mass., to F. L. Usher, Potsdam, N. Y.

Vortigern—Meersbrook Maiden whelps. Black and tan terrier dogs, whelped May 28, 1889, by Rochelle Kennels, New Rochelle, N. Y., one each to A. W. Coates, Long Branch, N. J., and Miss L. Ballou, Brooklyn, N. Y.

Buffalo General—Meersbrook Girl whelp. Black and tan terrier bitch, whelped May 24, 1889, by Rochelle Kennels, New Rochelle, N. Y., to A. W. Smith, Buffalo, N. Y.

Dick. Black and tan terrier dog, whelped June 6, 1886, by Whitehead's Prince out of ——, by A. W. Coates, Long Branch, N. J., to Rochelle Kennels, New Rochelle, N. Y.

PRESENTATIONS.

Ada. White and orange English setter bitch, whelped June, 1889, by Samuel of Posen out of Col. Wood's bitch, by Col. John P. Wood, Fayetteville, Ark., to W. A. Wheatley, Memphis, Tenn.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. G. S., Newburg, N. Y.—I have a very valuable Skye terrier; he is five years old and has a touch of the mange. I would like you to tell me just what to do for it. Ans. Keep the bowels open by giving two or three compound cathartic pills at a dose. Apply zinc oxide ointment every morning. Give 4 drops of Fowler's solution daily in the food.

SUBSCRIBER, Toronto.—I have thoroughbred Irish setter dog about 10 months old. Lately what appears like a wart has grown on its upper lip just under the nose, about the size of a large pea, and I notice a small one now appearing just opposite on the under lip. Would you please say what I should do to remove them, or by leaving them alone will they go away? Your advice will be acted upon. Ans. See a surgeon or veterinary. The warts should be removed and the nose cauterized. They can be removed with the knife, snare or galvanic current.

H. A. P., Leavenworth, Kan.—Irish setter year old, always been troubled with weak eyes, although same continue of good color. Always been kenneled with his brother, and latter not affected. Symptoms weak and watery, and growing smaller and more deep set, and hair adjacent fallen out. Keep both dogs in kennel, with moderate exercise daily, and feed nothing but cooked meat and scraps from hotel table. Never had mange nor distemper that I know of; have never dosed him excepting occasionally with sulphur, and rarely with Prof. Flint's condition powders. Has always since six months old been troubled with weak appetite, but it don't seem to affect his vitality, as he is still the more active dog of the two. What ails the critter, and what should be done? Ans. Feed very little meat. What meat is given may be cooked with corn meal and served cold. Give 5 drops of Fowler's solution morning and evening for three weeks. Keep the bowels free with teaspoon doses of syrup of buckthorn. Exercise regularly.

A. W. T., Dorchester, Mass.—My pointer dog, 8 years old, has what I think is rheumatism. When lying down he moans with a low, piteous whine at frequent intervals, and does not like to rise up when down, and when moving around yells at times as though something had hit him. I first noticed something wrong with him on Saturday last when he got wet, and at night seemed to be chilled; for that I gave five drops tinct. aconite and repeated next night. The chills are passed, leaving above symptoms with nose slightly hot. Please prescribe in next issue if possible. Ans. It is rheumatism, which is not uncommon in dogs of his age. Use the following:

R Ext. colocynth co.....grs. 45
Ext. colchici acet.....grs. 30
Ext. hyoscyami.....grs. 10
Hydrarg chlorid mit.....grs. 10
Mix. Div. in pills No. 30. Sig. One three times daily hidden in a small bit of meat.

Rifle and Trap Shooting

RANGE AND GALLERY.

OUR TEAM ABROAD.

THE members of the Massachusetts rifle team are now on the ocean, very near this port, and within a few days will be on land receiving the congratulations of their friends. They have done more than well, and bring back with them only pleasant memories and the respect of every shooting man abroad. On the last Friday in the Wimbledon camp, Major Hinman and other members of the visiting team were entertained at the dinner of the London Scottish Corps. "The dinner was a most successful one, and in the course of the evening Major Alexander gave 'The Visitors,' coupling with the toast the name of Major Hinman. Major Hinman, in responding, acknowledged the great kindness which had been extended to the Massachusetts riflemen during their visit to England, and alluded to the pleasure with which they would remember the many friendships they had made, and especially those in the mess tent of the London Scottish. Speaking of the meeting generally, he suggested a reduction of the bullseye at the ranges where ties were most frequent, and also expressed a hope that, if the visit of the American team did no other good, it would at least be of service to the English Volunteers in inducing the authorities to place a more useful sight upon their rifles. As an inspector of rifle practice in the United States, and speaking from experience extending over a considerable number of years, he had no hesitation in asserting that the sights of the Martini-Henry rifle might be very greatly improved without in the least degree impairing the serviceable character of the weapon. Concerning the members of the American team, they were extremely pleased with the cordiality with which they had been greeted, and felt much indebted to the Council of the Association for all they had done to make their visit a pleasant one. They were quite content with the results of their shooting with the Martini-Henry rifles, and were very glad to have had the opportunity of here and there making an impression on the prize list."

Many of the team men visited the Bank of England and also the English mint, and feasted their eyes on the well-guarded funds. They also looked in at the House of Commons.

"On Saturday morning a parcel arrived from Cornwall containing a 'blower' for each member of the team, which had been made by Quartermaster-Sergeant Burns out of the cases of Springfield cartridges which had been discharged at Wimbledon. The blowers were fitted with amber mouthpieces, and the kindness which dictated the gift was much appreciated. Captain Stohwasser, on behalf of the team of the H. A. C., who were the first to compete with the Massachusetts riflemen in England, presented to Lieut. Bumstead, who made a score of 100 points, a very handsome representation of the badge of the H. A. C. in silver. The present bore a suitable inscription, and gave much pleasure to the recipient and the team. On Saturday afternoon the entire team attended the distribution of prizes, after which they quitted the camp, and proceeded by the 9 o'clock train to Paris, via Newhaven and Dieppe. As we have already mentioned, the team won all the matches previous to the Wimbledon meeting. At Wimbledon itself, several of the team entered for the individual competitions, and the success they gained was gratifying to themselves. Altogether they carried off nearly £80 worth of prizes, the chief being the telescope, value £28 10s., given by Mr. Steward for shoulder shooting, and won by Corporal Huddleston. In the same competition the following were also winners: Private Farrow £4, Sergeant Bull £3, Lieut. Edes £1, Sergt. Doyle £1, Major Hinman £1, Sergt. Johnston £1, Sergt.-Major Merrill £1, Lieut. Bumstead £1. Major Hinman won £5 in the Alexandra, £5 in the Alfred. £2 in the All-Comers' Aggregate, £3 in the Duke of Cambridge, and £1 in the Perinet & Fils. Corporal Huddleston won £5 in the Alfred, and £2 in the Windmill series. Sergt. Bull won £3 in the Alfred, and Private Farrow £5 in the Albert. At Paris, the team, who were accompanied by Major Durrant, of the H. A. C., and Miss Durrant, as also by Mrs. Frost, devoted the week to the sights of Paris and the Exhibition."

The team set sail in the City of Chicago on July 31, after several final courtesies in England, and on their arrival here will pay a formal visit to the mayor of New York prior to their being taken in hand for receptions, etc., by their Boston admirers.

In writing from Wimbledon to a Boston friend, Major Frost said: "Well, here we are at Wimbledon just about settled, and the rain pouring down in torrents. We are well satisfied with our work of last week. We have done what we hoped to do, viz., won every match. Some of our scores were not brilliant, but when you consider the Englishmen on their own range couldn't touch us, we ought to be satisfied. Rain, gales of wind, etc., the worst I ever saw. The galling part to the Englishmen is that we beat them handsomely at 500 and 600yds. in their own positions, when they certainly expected to wipe out our lead. At Brighton, where we were beaten at 200yds. for the first time, we couldn't stand up in the gale against the beef of the Englishmen and they beat us twelve points, but how we did wipe the ground with them at 500 and 600yds. The whole secret of our success is working together and good coaching. The Englishmen don't know how to coach a team. Every team we met was made up of English and Scotch '20 men,' the best that could be raised."

NEW JERSEY'S BIG SHOOT.

THE rifle range at Sea Girt promises to see a fine team contest early in September when the men entered for the Inter-State shoot appear for the match. This will be the first match of the kind ever shot in New Jersey. The match was projected by and is under the direct management of Brig.-Gen. Bird W. Spencer, Inspector-General of Rifle Practice, the conditions briefly stated being as follows:

Open to one team from each State and Territory in the United States, and one team each from the Army of the United States, stationed within each of the three military divisions, Atlantic, Pacific and Missouri (three teams in all), consisting of twelve members of the regularly organized and uniformed National Guard or Militia of such State or Territory or of the Army of the United States. Each team must be provided with a certificate from the Adjutant General of the State it represents, or the Adjutant General of the Division of the Army which it represents, certifying that each of its number is a regular member of the uniformed Militia or Division of the Army which he represents, in good standing, and was such on June 1, 1889. Competitors shall appear in the uniform of their corps. Distance, 200 and 500yds. Position at 200yds., standing; at 500yds., prone. Weapon, any military rifle which has been adopted, authorized or issued as an official arm by any State, or by the United States. Rounds, 10 at each distance. To the team making the highest aggregate score a suitable trophy will be presented by the Governor and Commander-in-Chief, in behalf of the State of New Jersey, and to be held by the Adjutant-General of the State or Division whose team may win it. Also a medal to each member of the winning team. No sight shots will be allowed. No rifle shall be cleaned or wiped out, except between ranges. Teams making a tie score must shoot off the tie at the close of the match. The range will be open for practice twenty days prior to the match. The executive officer shall be the Inspector General of Rifle Practice of the State of New Jersey, assisted by a statistical officer and an assistant, a range officer and five assistants. The State of New Jersey will furnish camp equipage, quarters, cots, blankets and cooking utensils, for a period of twenty days, to all teams who regularly enter into the match, without charge, and will also supply, for the purpose of practice, ammunition suitable for the United States Model Springfield B. L. 45cal., at cost.

The entries closed on Thursday last, and Gen. Spencer said that he had entries from Massachusett, New York, Pennsylvania, Delaware, Division of the Missouri, U. S. A., Division of the Atlantic, U. S. A., Division of the Pacific, U. S. A., and from New Jersey, making eight teams in all. There is some doubt, however, in regard to the Division of the Pacific team, and the teams contesting may only number seven.

The General also expects a big attendance at the match on the part of officials of the several States, and states that the Governors of New York and Delaware, with their full staffs, have already signified their intention of spending a few days at the camp. One hundred and fifty-four wall tents, each one being provided with a fly, have been pitched directly opposite the main entrance to the camp, for the use of the several teams. The tents are arranged in seven streets, eleven tents being on either side of each street. The State will look after the comfort of all shooters. The members of some of the teams will be at the camp about the 15th inst., and will then remain until the match is finished. The Jersey team has not been chosen as yet, but will be carefully selected, and will be given plenty of practice, putting in all its time on the ranges after Aug. 15 up to the date of the match shooting on Sept. 2.

ST. CATHARINES, July 29.—A friendly shoot between picked teams from St. Catharines and Niagara Falls came off at the 12-Mile Creek butts this afternoon, in which the Saints were victorious by 47 points. The Niagara Falls team included two crack Wimbledon men, and the outcome was entirely unexpected by the home team. Nine men shot on each side, 7 shots each at 200, 400 and 500yds. Following is the score:

St. Catharines.	200.	400.	500.	T'l
C A Richardson	26	17	23	66
O Carlson	27	19	20	66
A Cook	26	19	20	65
W H Bradley	27	20	16	63
J Cawker	20	22	19	61

M Kelliher	28	5	17	50
W Parker	23	14	7	44
C Huggins	24	9	5	38
				496

The return match will be shot at the Chippewa ranges, Niagara River, early in August.

BOSTON, Aug. 3.—A good attendance of shooters were present to-day at the Massachusetts rifle range and entered the various matches. After the rain let up at noon the shooting conditions were very good, with a light wind from 6 to 8 o'clock. The fine scores of Messrs. Hill, Frye and Munroe are worthy of notice. Mr. Clarke won the gold medal in the 20-shot rest match, and Mr. Frye won the silver victory medal. Next Wednesday the trap-shooters hold their regular prize and sweep shoot. Following are the scores made to-day:

20-shot Rest Match.

WILMINGTON, Del., July 29.—After being closed during the State encampment, Headlmoor Rifle Range, Wilmington, Del., was reopened this afternoon with renewed activity. There was a fair attendance, and as a result of the generally good scores the sport was fully enjoyed. The event of the day was the fine pistol shooting by E. J. Darlington, who knocked "smithereens" out of all local records with that arm by rolling up a score of 92, which was also a clean score of bullseyes. I. P. Taylor also made two fine scores, one of which was a clean score and the other nearly so with the exception of one shot, which was a close 7. The work with the rifle was very good and even. Following are the scores. Standard American target, off-hand:

Pistol Match, 50yds.

E J Darlington	8	10	8	10	10	9	9	10	8	10	—92
J P Taylor	10	9	8	10	8	10	8	8	8	8	—87

CREEDMOOR, Aug. 3.—The sixth marksman's badge and sharpshooter's matches, were shot here to-day. The weather was stormy throughout the day, with a very unsteady wind, shifting from 6 o'clock to 3, and then back to 9 o'clock. The attendance was good in the afternoon, and some very good scores were made. Sergt. Frank Stuart, of the 69th Regt., took the gold marksman's badge with the elegant score of 49 out of a possible 50. Following were the winners of the match:

	200yds.	500yds.	Total.
F Stuart, N C S, 69th Regt	24	25	49
A C Saunders, Co H, 23d Regt	22	24	46
R M Kalloch, Co H, 7th Regt	23	22	45
J M Maconnell, Co H, 9th Regt	19	25	44
A L Ely, Co G, 7th Regt	20	24	44
E F M Wendelstadt, Co C, 23d Regt	19	24	43
A G Scranton, Co F, 7th Regt	19	24	43

Medal Winners.

J D Foot, Co F, 7th Regt	21	25	46
C A Jones, Co G, 7th Regt	22	24	46
R M Dunn, Co G, 7th Regt	18	25	43
A McDougall, Co C, 7th Regt	20	23	43

ST. LOUIS, Mo., Aug. 2.—Fodde and Alexander tied for the medal at the last meeting of the Pistol Club, but the former won on the shoot-off. For all shooting a 20yds. standard American target is used.

Fred A Fodde	10	9	9	8	6	7	8	10	10	9—86
G Alexander	10	7	9	8	10	10	10	7	7	8—86
E Mohrstadt	7	7	8	5	9	10	10	9	10	9—84
M Summerfield	8	10	7	8	10	7	8	6	10	10—84
L G Dorman	8	8	8	10	10	10	5	9	8	5	82
W Bauer	10	8	8	8	9	6	6	8	8	10	8—81
A E Bengel	10	5	8	9	7	8	9	6	7	8	—77
J Albach	10	6	8	7	8	4	9	5	7	9	—73
J A Lee	10	6	8	7	8	4	9	5	7	9	—73

NEWARK, N. J., Aug. 1.—The expert match at the Shooting Park did not draw a very large crowd this afternoon, and it is not surprising when the poor shooting weather is considered. The match has held its own steadily since April 4, when it was opened, and has fully met the expectations of the society members. At 2 o'clock it was clear while at 3 it was cloudy, and from that time to 7 it changed every twenty minutes. The wind blew from the right early in the afternoon, but later it whisked around to "9 o'clock" and got very "fishy." The leading scores in the expert match were as follows: H. Williams, 69, 64; A. Begerow, 68, 67, 62, 61, 60, 59, 59; C. H. Townsend, 68, 56; F. C. Campbell, 67, 63; J. Coppersmith, 67, 65, 61; C. E. Gensch, 64, 61; F. A. Freiensehner, 58; G. Snellen, 56, 55.

NEW YORK.—The Harlem Independent Schuetzen Corps' eighth annual tournament will occur at Washington Park on Aug. 12 and 13. At the tenth monthly practice shoot, held at the Morrisania Schuetzen Park, F. W. Kohring won the first class medal on the ring target, A. Hildebrandt the second class, Mr. Langbein the third class, and J. Hall the fourth class. First and second prizes at the figure target were won by A. Hildebrandt and E. Karl. In ten monthly shoots A. Hildebrandt made 1,558 points on the main target. The largest aggregate number of points made during the year at the ring target out of a possible 1,250 was E. Karl's, first class, 1,082; in the second class P. Zeugner made 953, in the third J. Gut, 1,022; in the fourth class C. Schaeffer, 882. A prize of $275 has been offered for competition at the ring target on Aug. 2, and $100 for shooting at the small target.

NEW YORK SCHUETZEN CORPS.—The New York Schuetzen Corps has decided to hold its autumn shooting tournament at Babylon, L. I., in September. At the last tournament of the club Capt. S. Wehrling, who, as is customary, fired the second shot in honor of the Governor of the State of New York, brought down the very undemocratic crown which adorned the eagle's head, a feat which has never been performed during the thirty-two years' existence of the corps. Secretary B. Kumm received instructions to send the crown to Gov. D. B. Hill, and received in turn a letter from his Excellency expressing his pleasure and appreciation of the kindly sentiments conveyed.

OTTAWA, July 27.—The greatest score ever made with a Snider rifle at the Rideau range, at 200, 500 and 600yds., standing position at 200yds., was made to-day by Capt. Gray, of the Gwards, who scored 32, 34, 32 -total 98—while practicing with several other officers. This speaks well for the man, for the weapon, and the Canadian-made ammunition used.

PETERBORO, Aug. 1.—The regular monthly match of the Rifle Association was held this afternoon, at 200, 400, 500 and 600yds. range. The leading scores were Capt. Miller 78, A. Mason 78, D. Cameron 76, Capt. Dennistwon 74. J. B. Pentland 74, Geo. Fitzgerald 73. The competition in these matches is very keen this year.

PAINE AT WIMBLEDON.—On the afternoon of July 17, when the American team gave its display of skirmish practice, the Chevalier Ira A. Paine gave a revolver exhibition. At 50yds., with an 8in. bullseye, he made 21 bulls and 4 inners with 25 shots. At 200yds., with a 2ft. bullseye and 25 shots, he made 13 bulls, 9 inners, 1 magpie, and 2 outers.

AMERICAN WINNERS AT WIMBLEDON.—Mr. Walter Winans, for the third year in succession, has been unbeaten in the revolver competitions, winning first prize in both the revolver competitions with Colt and Smith & Wesson revolvers. Mr. Louis W. Winans won the Purdey Cup at the "running deer" target.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 7, 8, 9.—Forester Gun Club Tournament, Davenport, Ia. For particulars address J. W. Howard, Davenport.

Aug. 8.—West End Social Gun Club, of Pittsburgh, Inanimate Target Tournament, Williams Grove, Cambria county, Pa. James Worden, Secretary.

Aug. 13, 14, 15.—Second Tournament of the American Shooting Association, Boston, Mass.

Aug. 13, 14, 15.—The Charlotte Gun Club's First Annual Tournament, Charlotte, Mich. E. W. Dolson, Secretary.

Aug. 13, 14, 15, 16 and 17.—Tournament at Leadville, Col.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Sept. 3, 4, 5.—Annual Tournament of the Rocky Mountain Trap Shooters, Denver, Colo., Broadway Athletic Park. Inanimate and live targets. Address C. M. Hampson, Denver.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati; $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 609 South Delaware avenue, Philadelphia.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

THE ST. CATHARINES TOURNAMENT.

ST. CATHARINES, July 31.—The annual tournament of the Peninsular Gun and Game Club of St. Catharines, under the auspices of the Dominion Gun Alliance, began here to-day. There were a large number of shots present from Buffalo, Cleveland, Toro to and other places, and a splendid day's shooting resulted.

The first match was at 10 "matchless" blackbirds, for a purse made up out of the entrance money. There were seventeen competitors. The following were the principal scores:

B Tolsma, Buffalo	9	E H Smith, Lasalle, N Y	8
J Wayper, Hespeler	8	J W Felsted, Toronto	8
D Evans, Port Colborne	8	Dr Charles, Toronto	8
E Andrews, Sardinia, N Y	8	J Koch, Buffalo	7
Dr Neff, Port Colborne	7	Mr George, Toronto	7
E A Clifford, Hamilton	7	C Kemp, Toronto	6
G Rogers, St Catharines	6	C Oehmig, Buffalo	6
W Emond, Toronto	9		

Tolsma and Emond divided first money, and in the ties Wayper took second, Koch third and Oehmig fourth.

Shoot No. 2 was at 25 "matchless" blackbirds, $100 guaranteed, divided into six prizes, E. H. Smith, Lasalle, N. Y., took first money, breaking 24; Dr. Charles, Toronto; C. Oehmig, and Paul North, Cleveland, broke 23 each and divided second, third and fourth; J. Koch, Buffalo, took fifth with 21, and Wayper, of Hespeler, won the tie of three 19's and took sixth money.

Shoot No. 3 for teams, open to members of the Alliance, was postponed until Thursday.

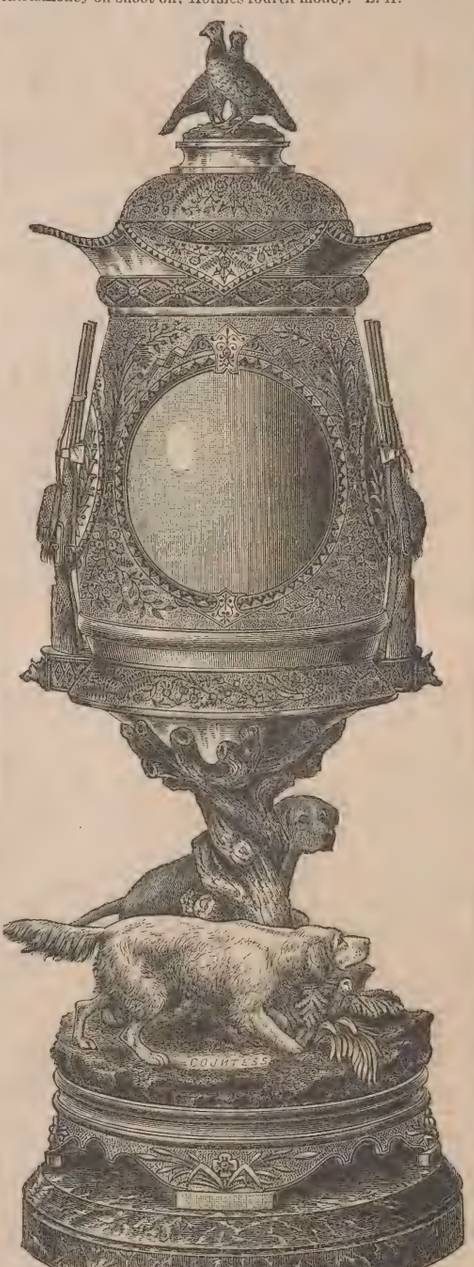
Shoot No. 4, open to members of the Alliance, was at 20 "matchless" blackbirds. The first prize was a gold watch, valued at $75, presented by Mr. Charles Stark. It was won by Mr. W. Emond, of Toronto, who broke 19 out of 20. The entrance money was made up into five prizes. J. W. Felsted, of Toronto, took first money with 17, George Rogers, St. Catharines, and J. H. Smith, Port Perry, divided second and third with 15 each, Dr. Charles, Toronto (22yds.), W. Reid, Port Dalhousie, and W. Wayper, Hespeler (24yds.), broke 14 each for fifth money. Charles won the tie, breaking eight out of nine.

The remainder of the time was filled in with sweepstake shooting, and a number of scores were made in the merchandise match, which continues during the tournament. Shooting will be continued all day Thursday, and a large number of additional visitors are expected.

Aug. 1.—The shooting tournament was continued to-day after the thunderstorm subsided. At 10 o'clock the crack, crack of the shotguns was heard, and continued up to 3 o'clock, when another downpour sent the shooters under canvas. The firmament cleared up in half an hour, and shooting was again resumed, continuing up to 7:30. Owing to these delays the day's shooting consisted of disposing of three items of to-day's programme. The remaining shoots will be taken up to-morrow.

The shoot opened with a match of 10 birds for entrance money stakes, and was won by W. Emond of Toronto, Andrews of Sardinia, N. Y., and Feistead of Toronto, who divided first money, Rogers of St. Catharines, Charles of Toronto, and E. H. Smith of La Salle, N. Y., divided second. Wayper of Hespeler, and Tolsma of Buffalo divided third.

No. 6 shoot was for a Greener gun, presented by Charles Stark and valued at $100; 25 matchless birds; Alliance scouts to handicap shooters. This was the most important shoot of the day. The following are the principal scores: D. Evans, Port Colborne, 23; Charles, Toronto, 21; J. Wayper, Hespeler, 19; E. H. Smith, Port Colborne, 18; W. Emond, Toronto, 17. Evans won the gun. Charles took first prize money, and the remainder in rotation, there being four money prizes.



In No. 7, $100 was guaranteed. This one was at 20 matchless birds. It was a keenly contested match and the money was divided into five prizes. E. Andrews of Sardinia, N. Y., took first with a score of 18. Charles of Toronto and North of Cleveland, with 17 each, took second and third, and Messrs. Koch, G. H. Smith of La Salle, White, Felsted, Tolsma and Rogers each scored 16. Tolsma got fourth, G. H. Smith fifth, and Koch sixth

SPRINGFIELD, Mass., Aug. 3.—Owing to rain and threatening weather there was a small attendance at the tournament of the Springfield Shooting Club, at Lake Lookout this afternoon. Keystone rules governed, and although there were a number of events on the programme, the only scores recorded were made by Z. C. Talbot of this city, who made 61 in the off-hand record score, and 84 in the rest score.

MINNEAPOLIS, Minn.—A good deal of interest was manifested on Wednesday, July 24, in the challenge team match between J. C. Joyslin and E. B. Walker, against L. Harrison and F. C. Lawrence. The conditions were 100 blackbirds each, 50 singles and 25 pairs, 3 traps, American Shooting Association rules, $100 a side and the suppers. A strong wind was blowing from the southwest which made the shooting exceedingly difficult, especially on the pairs, as the traps were throwing the birds from 60 to 70yds. Score as follows:

	Singles.	Pairs.		Singles.	Pairs.
Joyslin	42	28—70	Harrison	39	36—75
Walker	30	24—54—124	Lawrence	37	26—63—138

The defeated team are out with another challenge, same conditions, but the winners want them to "make a record" for themselves before they will accept another challenge. After the team contest live bird matches were in order; the programme was not finished, as the birds were such poor flyers. Shoot No. 1, 5 live birds, entrance $5, 3 moneys: Paine 5 Beiner 5, Dalton 3, Fox 3, Chandler 1, Edson 5, Joyslin 5, Walker 5, Jones 2, Sumner 4, Stone 4, Holmes 3, Lawrence 1, Webley 4, Cutter 5, Catamaran 4; all ties divided. Shoot No. 2, 7 live birds, entrance $5, 4 moneys: Paine 7, Reiner 7, Joyslin 5, Jones 5, Webley 6, Catamaran 6, Cutter 5, Fox 6, Chantler 5, Barnes 6, Rockey 7, Stone 6, Edson 6, Walker 7, Holmes 4, Lawrence 3, Sumner 3, Roxy 5. Paine, Reiner, Rockey and Walker divided first money; Webley, Fox, Barnes and Edson divided second money on shoot off; Cutter and Chantler divided third money on shoot off; Holmes fourth money.—L. H.

THE L. C. SMITH TROPHY.

To be shot for at the Corry Tournament, August 21.

TORONTO, July 27.—At McDowall & Co.'s grounds to-day the following scores were made for the McDowall gun: Charles 14, Rice 14, Winchell 13, Emond 13, Bales 11, Drassey, Maliet, Sawdon, Sawdon, Jr., retired. A number of sweepstakes followed.

The members of the Owl Gun Club held their eighth semi-annual shoot for the cup presented by Mr. J. P. Moore at McDowall & Co.'s grounds yesterday and to-day, at 25 artificial birds. Owing to the high wind on Friday the scores were not as good as they would have been. Considerable interest was taken in this shoot on account of the cup having been won twice by two members and it only requiring to be won a third time to become their property. It was won by J. Rice, it being the second time he has won it. Following are the scores:

J Rice (18)	1010011111111111111101111 21
C Kemp (18)	1110110011111111111101010—19
C Charles (24)	1011011111001011111010111—18
R George (18)	1101011110101011111010111—18
J Townsend (21)	1100110101111001111101011—17
J Felstead (21)	1100111101111111100001010—16
T Louden (18)	1101110011010101001011110—15

W. McDowall, J. Douglas, A. Elliot, A. Austin, F. Mallett, D. Black, C. K. Koune, W. Pearson retired.

MADISON COUNTY ASSOCIATION.—Eaton, N. Y., Aug. 5.—As quite a number of the gun club members are taking their summer vacation, no shooting has been done for some weeks. A meeting of representatives from the Cazenovia, Eaton, Canastota and Oneida gun clubs was held at Oneida, Friday, and the organization of a Madison County Association to combine them all, with perhaps one or to more clubs, was effected, with the following officers: President, John Maxwell, Oneida; Vice-President, E. C. Bass, Cazenovia; Secretary, E. B. Roberts, Canastota; Treasurer, A. E. Richardson, Eaton. Trophies will be owned by the association and contested for from time to time by the various clubs.

BLAUVELTVILLE, N. Y., Aug. 3.—The Spring Hill Gun Club had a shoot this afternoon on their grounds after the rain had let up some. The light was not the best for shooting, but the boys managed to get there just the same. This club holds the championship for Rockland county, and as such champions have been challenged by the Bergen County Club to shoot a match on or about Aug. 15 at 21 bluerocks, 12 men on each side. The same will be accepted, and may the best men win. The following are the scores of to-day's shooting, No. 1, 5 bluerocks, 5 traps:

E J Peck	11110—4	J Bogart	11101—4
C C Allen	01110—3	G Pierson	11111—5

No. 2 same:

Peck	11111—5	Bogart	11011—4

Pierson	1111111110— 8	Blauvelt	1011000111— 4
Peck	0111111110— 8	Post	1111110100— 7

The shoot-off of tie on event No. 15 between Pierson, Hathaway and Post was very exciting. Pierson dropped out on second bird, Hathaway and Post both missed their seventh bird, which was sprung from No. 5 trap while the shooters faced No. 1 trap, on repeating the shot Hathaway got his eighth bird and Post lost. Altogether we had one of the best shoots ever held on these grounds and the boys propose turning out next Saturday for more.—H.

NORTH END VS. UNION.—On Saturday, Aug. 3 the Union Gun Club, of Springfield, went down to Frankford, Pa., and shot a team match with the North End Gun Club and were defeated by the Frankford boys by a score of 187 to 199 out of a possible 250 Keystones. We left Elizabeth on the 9:05 A. M. train and ought to have reached Frankford at 10:45, but owing to a hot box were nearly half an hour late, not reaching there until 11:15. On getting off the train we found the genial secretary of the North End Club on hand to meet us, and just outside the depot railing W. Wolstencroft and W. Pack mounted on their mustangs to pilot us to the grounds. We climbed into the two stages provided for us, and in a very few minutes reached the grounds, where we found some of the boys practicing and seeing that everything was in working order. It did not take many minutes to put the guns together and get a sweepstakes under way. As soon as that was finished another one was started, and it did not take very long to shoot this out, although there were 15 entries. Just at this time a heavy thunder shower came up, and as it rained in torrents all hands stepped inside the club house and discussed the fine lunch served up for us by the caterer of the North Enders. By the time lunch was finished it had stopped raining and the main event of the day was started. Teams were divided into squads of three. Capt. Miller, of the Union team, having won the toss, decided to go to the score first. Each man shot at 5 targets every time he went to the score, and so it was not long before the first squad of each team had shot out their scores. Result, a tie. Then the second squad was called, and everything went nicely until after the first round, when a man appeared on the scene and informed us that we must stop shooting there as two people were lying at the point of death about half a mile away and the report of the guns disturbed them. Of course the only thing to be done was to stop, and a consultation being held between the captains it was decided to adjourn to another ground which we were informed was about ten minutes' walk from where we were. Guns were put in cases and shell cases picked up and the start made, and we walked, and walked, and walked, and after twenty minutes' pretty sharp work reached the cornfield where the new ground was. Here we had to wait over an hour and a half for the traps to be brought "only ten minutes' walk." At last the traps arrived, were spiked down, and all was ready, but nearly two hours had been wasted and it was decided to only shoot at 25 Keystones per man, instead of 50, as originally agreed upon. Everything now being ready, the second squad continued shooting their scores, and on being finished it was found that the Union boys were four ahead. Now it all lay with the third and last squad to hold their end up and the match would be won for the Unions, but just here all signs failed, and Johnson, the leader of the last squad, went all to pieces, closely followed by Sayre. These two good men were only following the lead of Collins in the squad before, but the result was disastrous for their team, as it lost them the race, the North Enders gaining 16 on this squad, and therefore winning the match by a handsome majority of 12. Three cheers were given by vanquished and victors, and a 10-bird sweep at once got under way. At 5:45 P. M. we started for the depot and left for home on the 6:19 train, having had a good day's sport and a right royal good time, for which we thank our hosts, the North End Gun Club, of Frankford. Another match will in all probability take place on some neutral grounds, and then it is to be hoped that our cracks will not all go to pieces. At any rate may the best team win. Following are the scores and conditions: Teams of 10 men each, each man to shoot at 50 Keystones (reduced to 25), thrown from 5 traps, American Association rules, losers to pay for the birds:

North End—First Squad.		Union—First Squad.	
W Wolstencroft	24	Miller	22
W Pack	19	Sigler	21
Lum	22—65	Williams	22—65
Second Squad.		**Second Squad.**	
Buckmaster	17	Collins	16
Ridge	22	Sickley	20
Richards	15—54	Brantingham	22—58
Third Squad.		**Third Squad.**	
J Wolstencroft	21	Johnson	16
W H Pack	18	Sayre	13
Penn	21	Lundsley	17
Russ	20—80	Grunderman	18—64
	199		187

12-BORE.

ERIE, PA.—Election of officers of the Presque Isle Gun Club resulted as follows: President, Chas. Siegel; Vice-Pres., W. S. Hunt; Secretary and Treasurer, Harry Abell; Captain, James Heydrick. Regular shoot, Aug. 2:

Abell	0100110001001110—6	Wm Siegel	0100010010010110—5
Heydrick	1010101011011011—9	Hirt	0100001001010000—4
C Siegel	1000101011010101—7	Cosper	1010100011011111—9

Ties: Cosper 5, Heydrick 6.—HEY.

ST. LOUIS, Mo.—The dates of of Fred Fodde's second annual amateur tournament have been set for Oct. 8 to 11.

CHICAGO, July 27.—The Government Pier shoot is held upon the breakwater which protects the Chicago harbor. It can only be reached by boat, and is over a mile from shore, where the water is over 20ft. deep. Still the attendance is good, three afternoons every week, as the shoot is open to all. Is there any town or city where there is more interest taken in trap-shooting? Recent scores are as follows: July 23, open to all, Keystone targets, 3 Keystone traps, 18yds. rise:

Long	1011101101—7	Scholtz	1101011010—6
Hoffman	1110111110—8	Ehringer	1001001011—5
McDonald	0110110111—7	Kurz	1010010101—5
Joe	1100111001—6	Povenz	1010010010—4
Trapp	1111111101—9	Wood	0111011011—7
Peasley	0101010111—6	Benson	0111111111—9
Kroell	0111010111—6	Dennis	1101000000—3
Smith	0010011010—4	Clemens	0110000001—3

July 25, same conditions:

Jean	0011101100111111111—15	Purvis	0111001110001101111—13
Joe	1011100111111101111—16	James	1101600101001011001—10
Kroell	1101011110101111111—16	Ward	1911001111000001010—10
Jones	0010100001100111100— 8		

July 27, same conditions, strong wind blowing:

Dement	100101010101— 6	Ross	000101100000— 3
McDonald	1101115011111— 9	Forbes	011000011000— 4
Phillips	1110111111111—11	Lester	001001100000— 3

Kroell	10 11 00 10 00 00— 4	Ludlow	00 10 11 11 10 11— 8
James	10 11 10 11 10 01— 8		

WORCESTER, Mass., Aug. 1.—At the regular meet this week of the Worcester Sportsmen's Club at the Coal Mine Brook range, the first event was a two-men team match. Open traps were used, the contest was for $25 a side, and each man had a possible 100 clay-pigeons. The score of Russell was the best ever made at this range. The contestants were G. W. Russell, of Fall River, and W. R. Dean, of this city, against Dr. W. P. Bowers, of Clinton, and George A. Sampson, of Lancaster. Gilbert J. Rugg and Charles H. Howe were judges and E. S. Knowles referee. The score in detail follows:

Russell	55544—23	Sampson	44444—20
	25355—21		55454—23
	55444—22		44544—21
	54555—24—90		35354—20—84
Dean	35443—19	Dr. Bowers	55324 19
	35453—20		32222—11
	35545—24		12353—14
	43555—22—85—175		43352—18—62—146

In the classification series, each man had in the class score a possible 30 birds and in the prize score 10 birds. All who break 22 or more in the class score form Class A; the remainder in Class B. The totals of each man in each score follow:

	Classific'n.	Prize.		Classific'n.	Prize.
	Class A.				
E T Smith	29	10	C H Howe	26	8
G W Russell	29	10	E T Snow	25	8
S S Knowles	28	9	A R Bowdish	26	7
A L Gilman	27	9	F M Harris	22	7
Dr W P Bowers	25	9	A B Franklin	22	7
G J Rugg	23	9	M D Gilman	23	6
C B Holden	27	8	Geo A Sampson	26	5
W R Dean	27	8			
	Class B.				
B E Jewett	19	7	C Forehand	16	5
V F Prentice	17	7	C R Holman	16	5
H Colvin	20	5	F Forehand	20	4

Ties divided.

ST. LOUIS, Mo., Aug. 1.—About 200 trap-shooting enthusiasts went to Compton Avenue Park yesterday, and were regaled with one of the prettiest shooting matches it has been their lot to witness for many a day. J. L. Winston killed 98 live birds out of 100, while his opponent J. E. Hagerty scored but 89. They were a good lot, and some might be classed as "corkers." It was a most interesting affair, and some money changed hands on the result. Match at 100 live pigeons for $100 a side, Hurlingham rules, except that Hagerty used a 10-gauge gun; 50yds.:

J E Hagerty	12201c2121— 8	J L Winston	1112112212— 10
	1211221121—10		1211112212—10
	1112212111—10		2112122210— 9
	1211122221—10		1112113011— 9
	2212202111— 9		1112222212—10
	1012 11211— 9		1112111211—10
	1222120211— 9		1212121211—10
	2222012201— 8		1221111121—10
	2210201210— 7		1111112211—10
	2111201211— 9—89		2111111111—10— 98

Summary: Hagerty—Tailers, 12; right crossers, 26; left crossers, 11; right quarterers, 15; left quarterers, 9; incomers, 27; used second barrel 42 times; best run of straight kills, 39; dead out of bounds, 1. Winston—Tailers, 18; right crossers, 31; left crossers, 8; right quarterers, 14; left quarterers, 11; incomers, 18; used second barrel 28 times; best run of straight kills, 62; dead out of bounds, 1. Referee, J. C. Addington. Time, 2.30.

Jule Sieminskie, after some little coaxing by his friends, consented to meet J. L. Winston in a match at the trap for $100, each to shoot at 100 Champion clay birds, but if he had ever possessed impressions that he was a world-beater, they have, now that the affair is over, been knocked into a cocked hat. Both scores are poor. A strong wind from the south, which blew directly from the shooter, made the targets fly irregular, and is principally the cause of the low scores. American Shooting Association rules, with 5 traps:

J Sieminskie	0111111111— 9	J L Winston	0111111111— 9
	0011011111— 7		1010110010— 5
	1111100111— 8		1111111110—10
	0111101111— 8		1110001011— 6
	0111110101— 7		1111110110— 8
	0001110111— 6		1010110110— 6
	1001101110— 6		1001111101— 7

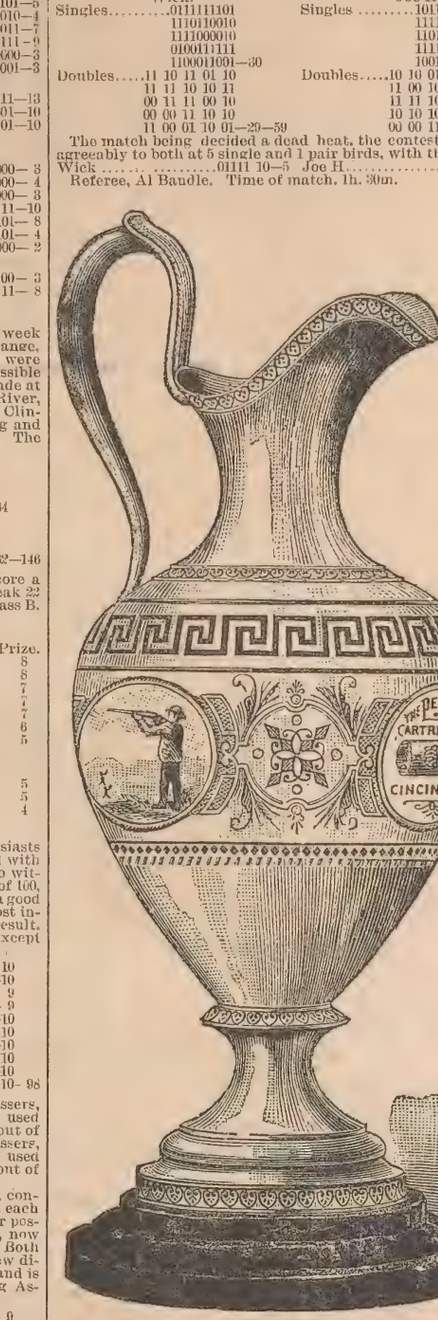
WELLINGTON, Mass., Aug. 3.—At the Wellington Gun Club's traps to-day in the race for the silver pitcher, Perry led the rest with a score of 14. He will do his best to defend it the next two races from 21yds. The other scores in this match for the day were: Bond, 13; Webster and Warren, 12 each; Bradstreet, 11; Pomphrey, Field, Sanborn and Gale, 10 each; Chase and Chapin, 9 each; Stone and Lang, 7 each; Porter and Savage, 6 each. In the merchandise match, four tied for the badge with 14, but by general consent Bradstreet was placed in custody of the same. The scores made were: Chapin, Bradstreet, Bond and Pomphrey, 13 each; Warren Stone, Field, Snow, 12 each; Sanborn and Lee, 11 each; Perry and Webster, 10 each; Chase, 9. In the sweepstakes the winners of first prizes were as follows: Six bluerocks, 18 entries, Bond, Stone, Sanborn and Chase; five pigeons, 18 entries, Savage, Gale and Chase; five pigeons, 15 entries, Bond, Webster, Lang and Chapin; five pigeons, 16 entries, Snow, Lee and Field; six bluerocks, 17 entries, Chase, Sanborn and Lee; five pigeons, 16 entries, Perry, Pomphrey, Warren and Bradstreet; seven bluerocks, 16 entries, Webster; eight pigeons, 17 entries, Perry; ten pigeons, 19 entries, Chase; Keystone target, 10 birds, Chase 10, Field, Lang, Perry, Webster and Warren, 9 each; Chapin, Bond, Pomphrey, Bradstreet and Snow, 8 each; Sanborn, Gale, Porter, Nichols and Lee, 7 each. The club will have a practice shoot at the Keystone targets next Thursday afternoon.



CINCINNATI, July 29.—From the opening until the close of to-day's pigeon match between Joe H. and Wick on the old Avenue Ball Park a constant rain fell, and in the first half of the shooting it did not rain, but poured, the referee, however, compelling both contestants to proceed with the match, which they did, the result being a thorough wetting and more trouble in handling wet guns, which explains the poor scores made. At the finish of the first half of the match (singles) Joe H. led his opponent 8 birds, and he was naturally looked upon as a sure winner. The score stood:

	Wick.		Joe H.
Singles	0111111101	Singles	1011110001
	1110110010		1111111011
	1111000010		1101101110
	0100111111		1111111111
	1100011001—30		10011 —35
Doubles	11 10 11 01 10	Doubles	10 10 01 10 10
	11 11 10 10 11		11 00 10 11 00
	00 11 11 00 10		11 11 10 10 01
	00 00 11 10 10		10 10 10 00 10
	11 00 01 10 01—29—59		00 00 11 00 10—24—59

The match being decided a dead heat, the contestants shot off agreeably to both at 5 single and 1 pair birds, with this result:

Wick ..... 01111 10—5 Joe H. ..... 11111 10—6

Referee, Al Bandle. Time of match, 1h. 30m.

PETERS CARTRIDGE TROPHY.

To be shot for at the Corry Tournament, August 20.

BREWER VS. WOLSTENCROFT.—A match has been made between John L. Brewer, the celebrated American trap-shot, and Wm. H. Wolstencroft, who is acknowledged to be one of the best trap-shots in America. Wolstencroft is the crack shot of the North End Gun Club, and believed to be the equal of any man in America at inanimate targets. For some time he has been practicing at live pigeons, and in a recent argument the point was raised that he didn't dare to face Brewer at the trap. Wolstencroft's friends declared that they were willing to have him meet Brewer, provided the latter would concede some handicap in rise. Brewer agreed to concede 2yds., if the match was shot under London Gun Club rules, at 100 live pigeons each. The match was immediately made, and $100 put up on each side to make it binding. Brewer wanted to shoot within three days, but Wolstencroft's backers demurred, and Aug. 8 was finally agreed upon. The articles of agreement were thereupon drawn up. It is stipulated that each contestant shall shoot at 100 live pigeons, to be trapped out of the same hamper; 12-gauge guns, 8lbs. or under, London Gun Club rules, Brewer to conceede a handicap of 2yds. rise, standing at 30yds., while Wolstencroft stands at 28yds., to be shot at Gloucester Baseball Grounds on Thursday, Aug. 8, rain or shine, play or pay, and the gun editor of the Philadelphia *Item* to act as final stakeholder, and also to officiate as referee; the first gun to be fired promptly at 3 P. M. The London Gun Club rules allow the shooter to hold the gun in any way desired after "Pull" has been called, otherwise they are similar to Hurlingham rules.

WATSON'S PARK, Grand Crossing, Ill., Aug. 3.—Match between A. W. Reeves and Sam Booth, at 25 live pigeons each, 5 ground traps, 30yds. rise and 80yds. boundary, Illinois State rules, $25 each:

A W Reeves	1111101210111221101111111—22
Sam Booth	1012121212002121101111121—21

RAVELRIGG.

BROOKLYN, July 31.—The Glenmore Rod and Gun Club had a prize shooting match at Dexter Park to-day. In shooting for the club's diamond badge there were four ties. Wm. Levens won the badge in the shoot-off by killing 6 straight. The prizes in classes B and C consisted of handsome pieces of silverware. Mr. C. M. McGee won the prize in class B, and R. Max won the prize in class C. In the sweepstakes Mr. A. Bothy was first and Mr. Levens second. Mr. A. G. Duryea was scorer.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Yachting.

FIXTURES.

AUGUST.

8. Great Head, Moonlight Sail.
8. Miramichi, Vice-Com. Stewart's Pennant.
8. N. Y., New London to Newport.
9. N. Y., Goelet Cups, Newport.
10. Lynn, Ladies' Day, Lynn.
10. Corinthian, Marblehead.
10. Monatiquot, 2d Cham., Ft. Pt.
10. Buffalo, Annual Cruise.
10. Hull, 2d Cham.
10. Cape Cod.
10. N. Y., Newport to Vineyard Haven.
11. N. Y., Vineyard Haven.
12. N. Y., Race, Vineyard Haven.
13. Detroit.
13. N. Y., Vineyard Haven to New Bedford.
14. N. Y., Rowing Races, New Bedford.
15. L. Y. R. A., Rochester.
15. N. Y., New Bedford to Newport.
16. Monatiquot, Ladies' Day, Fort Point.
16. Great Head, Cham. Sail off.
16. N. Y., Citizens' Cups, Newport.
16-31. Quaker City, Cruise, Chesapeake Bay.
17. Great Head, Open.
17. Quincy, Ladies' Day.
17. Beverly, Marbleh'd, 3d Cham
17. Hull, Special Outside Race. 30 and 40ft.
17. American, Around Plum Island, go as you please.
17. Chelsea, Ladies' Day.
17. So. Boston, Mosq., Pen. Sail off, City Point.
19. American, Open.
19. Detroit, 3d Pennant.
19. L. Y. R. A., Hamilton.
21. Pleon, 3d Cham.
21. L. Y. R. A., Toronto.
24. Lynn, Excursion, Lynn.
24. Beverly, Mon. Beach, 3d Open.
24. Larchmont, Oyster Boats.
24. Corinthian, Marblehead.
24. Hamilton, 20, 25, 30 and 35ft. Class, Whitewings Cup.
24. R. Can., Skiff Class, Toronto.
26. L. Y. R. A., Belleville.
26. Rhode Island, Open.
28. Pleon, Sail off.
29. L. Y. R. A., Oswego.
29. Cedar Point.

31. Sippican, Club, Marion.
31. Hull, Cham. Sail-Off.
31. Quincy, 3d, Cham.
31. Chelsea, Club.
31. West Lynn, 2d Cham., Lynn.
31. So. Boston, Mass., Cham. Sail off, City Point.
31. R. Can., 20ft. Class, Toronto.

QUAKER CITY Y. C. CORINTHIAN RACE.

ONLY twelve yachts put in an appearance on July 27 at the first gun was fired to start the second Corinthian race of the Quaker City Y. C.

The wind was blowing from the northeast with heavy rain, but at the time the race started, 2:40 P. M., it died away into gentle zephyrs and at times was a dead calm.

The race was open to yachts belonging to the Trenton and Riverton yacht clubs, governed by the rules of the Quaker City. There was no time allowance and no time limit to the race. The course was as follows: Starting across an imaginary line between the committee's boat and the pier at Riverton, to and around a station boat off the pier at Delanco, keeping it on the port; thence to and around a station boat off Bridesburg, keeping it on the starboard; thence to point of starting, finishing across an imaginary line and the committee's boat and pier, keeping to the east ward of Hen and Chickens both ways.

The distance was ten miles, and the wind was so light that only two boats finished, the Osceola and Mohican. The schooners Helen and Flossie concluded not to start, as the channel was very narrow for such large yachts and the wind almost too light. The boats were classified as follows:

Sloops, Cutters and Yawls.—First class, Over 35ft. l.w.l.; second class, 32ft. and less than 35ft; third class, 26ft. and less than 32ft.; fourth class, less than 26ft.

Open Yachts—Cats.—Class A, 26ft. and over; Class B, 20ft. and less than 26ft.; Class C, less than 20ft.

The following yachts started: Sloops, Q. C. Y. C., Osceola and Agnes; cutter, Nannie; cats, Mohican, Coronet, George de B. Keim, Riverton Y. C., Josephine, Nettie, Olga and Curlew.

At 2:40 P.M. the Osceola crossed the line closely followed by the Agnes and Nannie. Five minutes later a second gun started the catboats, and the Mohican taking the lead soon forged to second place, following the Osceola who was now well in the lead. The tide was flood, but before half the fleet had rounded the stakeboat at Delanco ebb tide set in and with the light air the laggards had a hard time to round. The Osceola gradually increased her lead and was soon a mile and a half ahead of the Mohican who led the Coronet, the rest straggling behind. The tide with a little wind carried the boats down the river pretty fast, and the Osceola, rounding the stake at Bridesburg, commenced to buck the tide which was very strong and there was scarcely enough wind to give steerage way. She finally got a slant and crossed the line far in advance of the other boats in the race.

The Mohican, with Coronet in the meantime had rounded the stakeboat and hauled sheets aft for home but the wind dying out she, with the Coronet, Nettie and Keim was forced to come to an anchor until flood tide. The Mohican did not finish until 10:20 in the evening, and therefore wins first prize in class A of the catboats. Altogether the race was very unsatisfactory. The yachts were restricted to the following sails: Sloops and yawls, mainsail, forestaysail, jib, jibtopsail, gafftopsail and spinaker. Open yachts to mainsail. The following is a summary of the race:

THIRD CLASS SLOOPS.

	Length.	Start.	Finish.	Elapsed.
Osceola, Brereton Pratt	29.01	2 40 00	6 23 00	3 43 00
Mamie, R. K. Neff, Jr	27.06	2 40 00	Did not finish.	
Agnes, Lewis K. Crump	22.02	2 40 00	Did not finish.	
CLASS A—OPEN CATS.				
Mohican, Clarence B. Kugler	26.09	2 45 00	10 20 00	8 35 00
Coronet, H. Yale Dolan	26.04	2 45 00	Did not finish.	
Josephine, D. A. Waters	26.04	2 45 00	Did not finish.	
Nettie, C. M. Biddle	26 06	2 45 00	Did not finish.	
Olga, A. W. Hansell	26.00	2 45 00	Did not finish.	
CLASS B—OPEN CATS.				
Geo. deB. Keim, G. deB. Keim	22.00	2 45 00	Did not finish.	
Curlew, L. C. Cook	16.00	2 45 00	Did not finish.	

Curlew was in Class C, less than 20ft., but having no competitors, went into the class above. Osceola takes first prize in her class, also the "Riverton Prize," donated by the Riverton Y. C., open to competition by the yachts of the Quaker City Club only, which was awarded to the yacht making the fastest actual time over the course, irrespective of class. Personal prizes will also be given to members of the winning crews. Mohican takes first prize in her class, also individual prizes. Judges: Addison F. Bancroft, Charles L. Wilson, Newkirk N. Wentz.

PLEON Y. C.—The 16th regatta of the Pleon Y. C., of Marblehead, was sailed on July 27, starting in a light S.W. wind followed by a heavy squall. The times were:

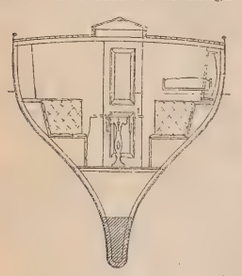
The club held its second assembly at Nanepashemet Hall in the evening.

LAKE MAHOPAC.—Second Dean House cup race for 1889, sailed July 27; Mahopac Y. C. course; distance, 10 miles. Weather cloudy, with slight rain. Wind N.E., very strong at start, dying out almost entirely before finish:

	Length.	Elapsed.	Corrected
Vida, David Hunt	22.10	2 19 15	2 19 05
Flora, E. S. Ponvert	21.07	2 20 45	2 19 20
Mattie, E. Britton	22.00	Dropped out.	

The Vida, having also won the first race of this series, takes the cup for this season. Regatta Committee—Wm. A. Nash, A. Ammerman and J. H. Jacquelin.



THE FORTY-FOOT CLASS.

We called attention last week to the fact that the sail area is a very fair gauge of the cost of yachting, and though some may be inclined to differ from us at first, a careful consideration of the subject will show the correctness of this view. Of the attendant disadvantages apart from the expense in hard cash the most serious one is certainly excessive draft, and this is to a very large extent regulated by the sail area, as our sketches and tables show. As to the various items of money outlay, the first cost, depending upon the amounts of lead, canvas and spars used; the renewals, more expensive to make and more frequently required with an extravagantly large rig; the running expenses, including the number of crew; and the lessened life of the yacht; all vary in proportion to the sail plan as soon as this assumes abnormal dimensions. The following table gives the sail areas of a number of well-known yachts, with their principal dimensions. The figures are the official measurements by the method used in common by the New York and Seawanhaka clubs, and are taken from the club books. The sail area is considered as a triangle having a base equal to the length from the intersection of the line of jibstay or luff of jib with bowsprit to the end of boom, with ¼ of gaff added; while the perpendicular is taken from the upper side of main boom when on the saddle to the under side of gafftopsail block to sheave. While this is but an approximation, the error is nearly the same in all cases; so that the result is sufficiently accurate for all practical purposes of measurement, or for such a comparison as ours.

		L.W.L. Ft. In.	Beam. Ft. In.	Draft. Ft. In.	Sail.
Cinderella	C.B.	52.00	16.09½	6.08	3900

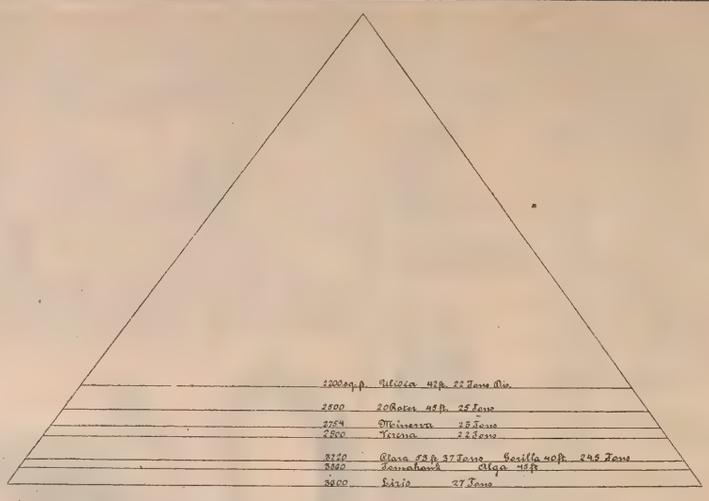
Ulidia	K.	42.06	7.03	8.09	2190

The difference in the sail areas is more clearly shown in the accompanying diagram in which the relative size of the sails of some of the leading yachts are contrasted, each sail plan being represented by a triangle. The greatest work done in proportion to the power is in the narrow or medium cutters. Clara's sail, of 3220ft., driving a displacement of 375 tons, while Liris, with 3600ft., has but 27 tons or less to move. The centerboard forty Gorilla, with 13 tons less displacement, carries it much slower than Clara does her 37.5 tons, and has a little more sail. The twenty-rater carries about the same displacement as Gorilla, and probably would be nearly as fast, but she has 750ft. less sail.

To yachtsmen familiar with the above craft below deck and knowing the accommodations which each affords, the table tells a very plain story. At the head of the list is Cinderella, a fast centerboard of the compromise type, 52ft. on l.w.l.; but the next boat, with almost as large a rig, is the new forty, Liris, 12ft shorter. The next is the design for a wider Clara which we

20-RATER.

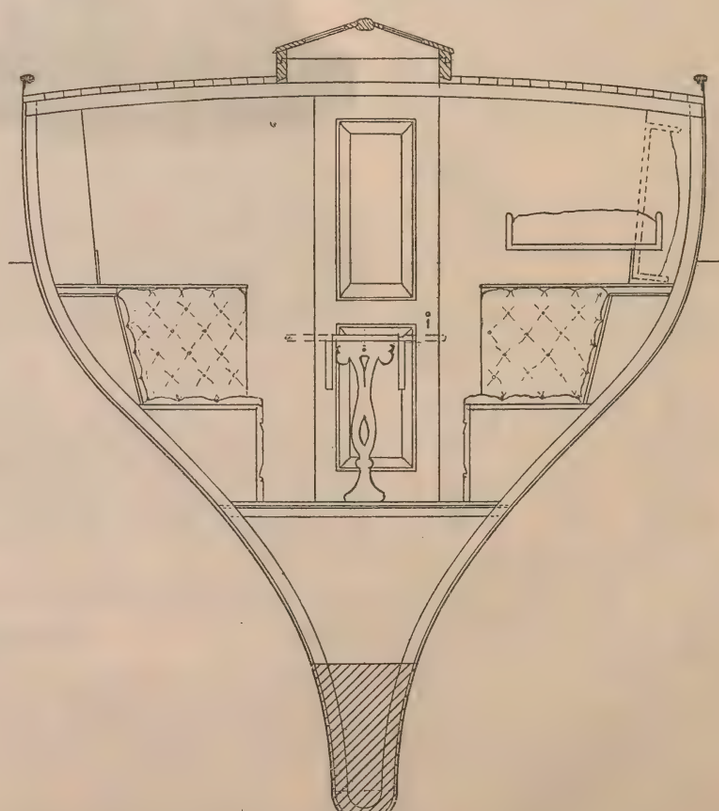


CLARA.

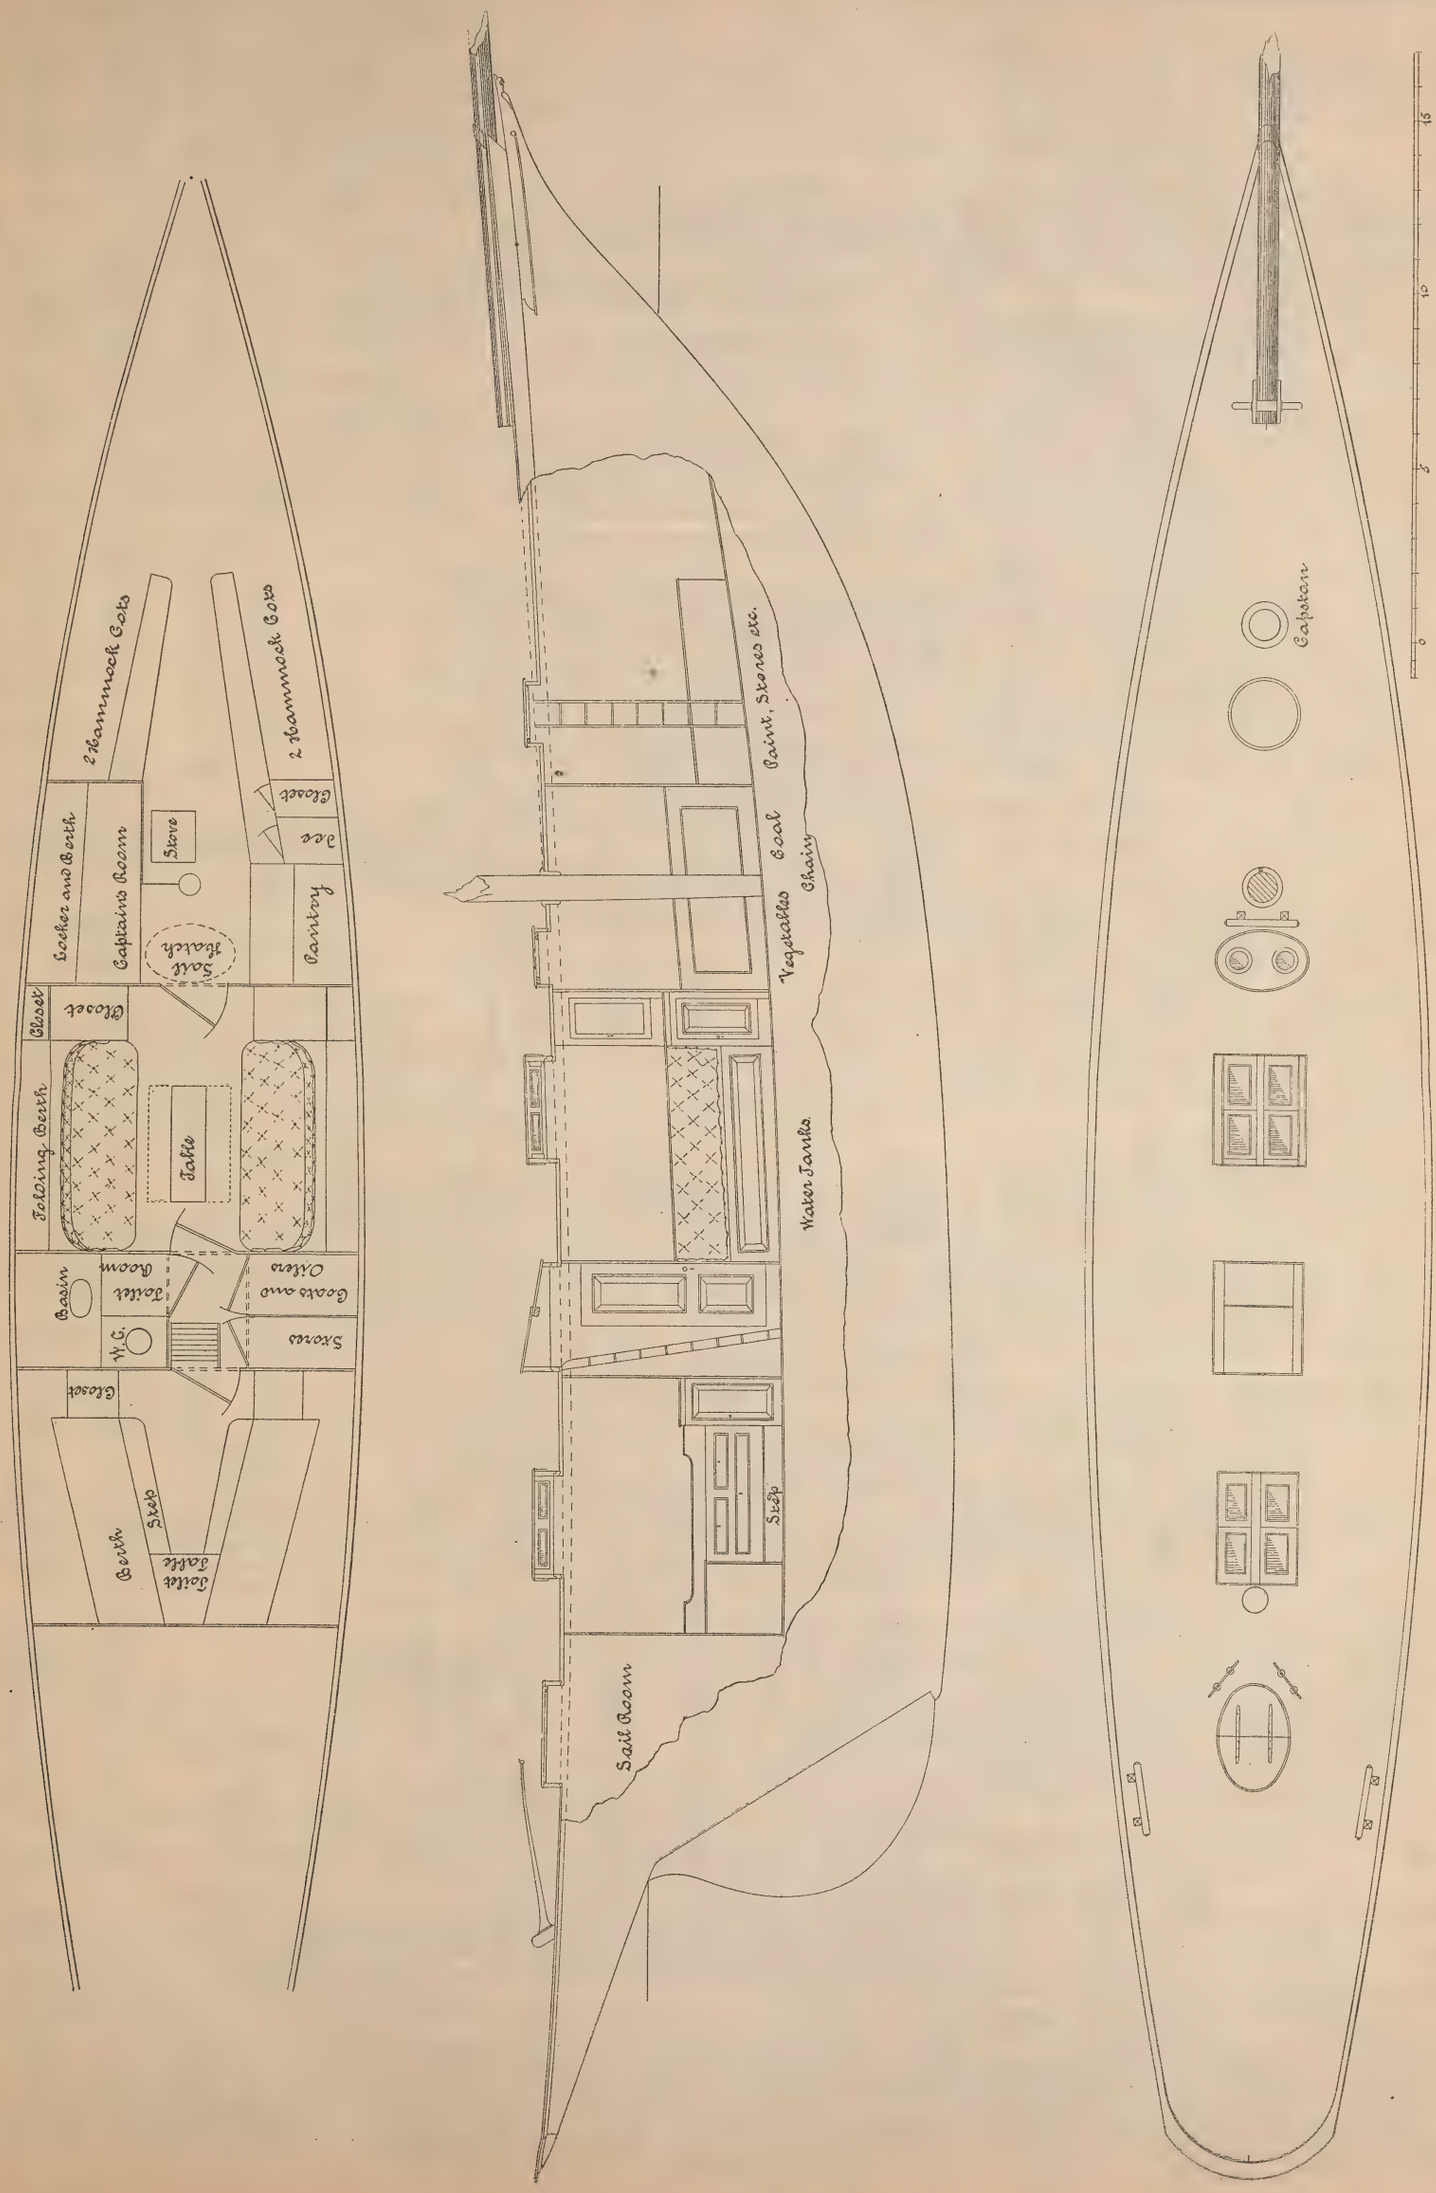
spoke of last week, and which has never been built from. Going down the list it is a long way before the fastest of the whole lot is reached, the narrow Clara with her rig of only 3220ft. Above her are the new forties Tomahawk, Maraquita and Gorilla, the sloop Daphne, of 46ft., as well as Liris and Cinderella. In the matter of speed, after several seasons' racing Clara has found none of the lot to beat her, and though it is possible that Cinderella might be made to do so, she has never yet done it. Clara can easily save her time off of the best of the forties, and she has just beaten the 45ft. Alga very easily. For a given sail area then it must be conceded that Clara has proved herself faster than the rest of the fleet in a range of three classes from 40 to 53ft.; but in spite of her speed we should never recommend Clara, of six beams, as a desirable model, especially in American waters. The necessity for extreme narrow beam no longer exists, and there is every reason on the score of comfort on deck and below, and especially in working ship in a race, why more beam is desirable. Clara's interior plans, published in FOREST AND STREAM of Nov. 8, 1888, show that in the matter of ample space and convenient arrangement she is a very fine boat, but with a moderate increase of beam from 9ft. to 11ft. 4in., the deck room and cabins would be materially improved, as shown in the plans published Dec. 9, 1886, the angle of heel being at the same time lessened. The speed of this last boat is merely problematical, but in view of the success of Minerva and Clara it seems certain that she would be very fast. Her sail area, as will be seen, is but little greater than Tomahawk's, but her interior would be incomparably superior.

For the purpose of further comparison we have plotted the outline of Liris's hull and sails over the sail plan of Clara. In the matter of room Liris is certainly a wonder on 40 t. Her section, given last week, shows the main cabin, a wide room 8ft. long, with a very wide locker on each side, the inclined back folding up to make a berth at night, giving room for four in the cabin. The table is large, and there is ample width of floor. A space of about 3ft. is set off for the companion, on the port side being a passage to the after cabin, as well as lamp locker, closet for coats, and a set of drawers beside it. On the starboard side is a toilet room opening from the after cabin. This latter room is nearly 8ft. long, with two permanent berths and a seat in front of each. Forward of the main cabin is a second toilet room, abreast the mast opposite to it, is the ice-box and pantry, on the port side is a naphtha stove, while forward are the berths for the captain and crew. Compared with the other forties, or with most centerboard yachts up to 50ft., the accommodations are very superior, but judged on their own merits there is a great deal too much crowded into the limited length. To race her successfully with her big spars requires two hands besides a captain and mate, making five with the steward, a crew as large as Clara's, but there is not length in the forecastle for so many; the captain is berthed in a hammock cot among his crew, and the cooking and sleeping quarters are brought very close together.

The centerboard boats, such as Nymph and Verena, naturally have rather less room, there being the big trunk in the center and limited depth at each end under the deck. The cabin is aft, as usual, there being an owner's room on starboard side of trunk, with toilet room forward, the headroom here being much less than in the keel boats. Gorilla has a very good cabin and also plenty of headroom forward, being flush decked. Verena and Nymph have permanent berths on each side in the main cabin, as shown.



Going now to the smallest of the class, Minerva, the arrangements are similar to Liris, but the width of the main cabin is less, there being narrower sofas and no berths above, though there is space for them if desired. Both main and after cabins are roomy and comfortable, there is ample room for two in the after cabin, two in the main cabin, and her captain, two hands and steward forward; while her rig of 2.754ft. can be easier handled by a crew of eight than the 3,600ft. of Liris by twelve men. We have naturally taken Liris as the basis for comparison as she is the most



RELATIVE PROPORTIONS OF SAIL PLANS.

COMPARISON OF SAIL PLANS OF LIRIS AND CLARA.
Dotted lines Liris, full lines Clara.

MIDSHIP SECTION OF 20-RATER.

20-RATING CUTTER, 45FT. L.W.L., 10FT. 4IN. BEAM, 8FT. 8IN. DRAFT. DESIGNED BY G. L. WATSON, 1889.

COMPARATIVE DECK ROOM OF 40FT. YACHTS.

extreme of the class, but the case is the same with Tomahawk, Maraquita and Gorilla; as a class they are huge, unwieldy brutes, with sail plans out of all proportion to the return in the way of speed, accommodation or convenience. In comparing the very wide boats with those of moderate or even narrow beam, it must be remembered that while the difference in the breadth of main cabin is greatly in favor of the wide boat, the comparatively fuller lines of the narrower boats give as much or more room in the after cabin and forecastle.

Directly opposed to the latest developments of our 40ft. class is the corresponding class of 20 raters now coming into use in England through the influence of the new length and sail area rule. The accompanying plans, for which we are indebted to Mr. Watson, show the arrangement of one of his latest twenties, such as Vreda of last year. The dimensions are: Over all 58ft., l.w.l. 45ft., beam 10ft. 4in., draft 8ft. 8in., displacement 25 long tons, ballast about 13 tons. The free-board is very low, only 27in., and as the reduced midship section shows in comparison with those given last week, the boat is small in every way compared with the forties. How she compares with them in accommodation is shown in the plans; the main cabin is 7ft. 9in. long, with 6ft. 3in. headroom under deck and sufficient breadth for a comfortable sofa locker on each side with a folding berth as shown above. This berth may be pivoted so as to lie close against the side when closed, but to give room beneath for one to sleep on the sofa when it is open, so that four can be berthed in the main cabin. The floor space is not so great as in Liris and Chispa, nor is the extreme width above the lockers so great, but there is plenty of room for sleeping, dining or lounging. The steerage, just abaft the main cabin, has a good toilet room to port and two large closets, one for coats and oilers and one for stores, to starboard. The after cabin is as large as in the wide forties, being 7ft. 4in. long with 6ft. 4in. headroom. There are two permanent berths, with a closet at the end of each, a dressing table and mirror against the after bulkhead and drawers below the berths. Forward there is a separate room for the captain on port side, with icebox and pantries on starboard.

While the arrangement of the cabin is practically as good as in the wide boats, that in the forecastle is infinitely better. In the first place, owing to the greater length, the forecastle proper, with its hammock cots, is not crowded quite so close to the steward's department; in the second place, a separate room is made for the captain, a very great advantage in preserving discipline, and having a beneficial influence on both the captain and his crew. In the third place the captain's room and adjoining passage are available in racing for a most convenient sail room, the oval hatch in deck giving easy access to it and keeping the main cabin clear of sails. This type of boat, the moderate beamed cutter, permits of the most economical arrangement of space that is possible in a yacht, the advantages in the way of fore and aft accommodation being far in excess of the lessened breadth in the wings in the main cabin or a little narrower floor. The breadth of 10ft. is enough, as she will stand straighter on her feet than the wider boats with larger rigs. There is room abaft the after cabin for a large cockpit if desired, the sail room being fully as large as in the forty-footers, while the canvas is much less in bulk. The greatest point of difference between her and the American forties is the sail area, only 2,660ft. being allowed by the English rule, and as this includes the clubtopsail, the equivalent area by New York rule would be only about 2,550ft., or even less than Minerva's.

As to speed, such a yacht would probably be unable to save time in the ordinary weather from the 40ft. class in American waters, being designed under very different conditions, but the same design is capable of some modifications in the way of increased sail, which, if we can judge from Minerva, would put it on an equality with the wider boats in point of speed. The cost, always a important point, compares favorably with the wide boats, as a wooden 20 rater can be built in England with hull of oak, elm, mahogany and teak, polished hardwood in cabins, with all fitting and racing outfit for $5,500 to $6 000, or with 30 per cent. added for difference in cost here, about the same as a keel 40 of very ordinary wooden construction.

It is probable that an imported 20 rater with these dimensions and so small sail plan might not prove successful here, either in racing or as a popular type of boat, but the great difference in point of sail and power between her and the latest forties point strongly to the direction in which improvement must be looked for. The 20 rater is an evolution from one extreme, the very narrow cutter, made under certain conditions. Working on this side from the opposite extreme of the very wide keel boat, and under altered rules and conditions, the result would naturally be different. A medium between the two extremes, the present design and such forties as Maraquita, Tomahawk, Liris and Gorilla, would be found in a boat of about 43ft. l.w.l., 11ft. beam, 9ft. draft, and with a sail area of about 2,900ft. Such a yacht should cost no more than the wide forties of the same quality; she could not well heel to a greater angle than some of the latter; she would be a far better and safer sea boat, her accommodations would be greatly superior, the draft would be less by a foot, and it would depend on the skill of her designer as to whether she could win from the rest.

It is too soon yet to say what the results of the season will be, or to draw any final conclusions, but if the big rigs on Liris and Tomahawk and Gorilla should win, still bigger rigs must be used next year to beat them, if any further extreme is possible. In view of this the experiment of such a yacht as we have indicated, of less cost and power, and smaller in all ways save length than the present machines, would be a most valuable one; but unfortunately it is not possible under present conditions. The only resource at present offered to the designer is to take the maximum length allowed him and to build the largest possible boat, regardless of cost, sea-going powers or moderate draft. It may be that Minerva will yet prove that the reverse is possible, that a small boat can be built to win under the present rules, but even if she do, the present tendency backed by custom and prejudice, is to force men into the largest possible craft on a given length rather than into such a moderate boat as she.

If we were dealing with steam it would be an easy matter to make a man understand that for a given speed the more room he could get for a certain expenditure the better boat he would have. Coal bills and repairs to machinery have a far more direct way of appealing to a man's pocket than the corresponding expenses due to a big sail plan, but the latter are felt just as heavily in the end. The question is precisely the same in both cases, the economic utilization of power, whether in the form of coal or canvas, and the vessel which gives the best return, not in one item alone, but in a general average of speed, adaptability, accommodation and cost of running, is the best and most worthy of the encouragement of the clubs. If the length rule in any form will give such a vessel, then it is as good a rule as any; if the present measurement and conditions favor such boats there is no necessity for a change, but there is good reason to doubt whether such is really the case, and whether the whole matter of measurement is not in urgent need of a thorough overhauling before any more building is begun in the winter.

CORINTHIAN Y. C.—The race of July 27 was sailed in a strong northeast wind and heavy sea, topmasts being housed. The times were:

FIRST CLASS, 27 TO 30FT.

	Length.	Elapsed.	Corrected.
Saracen, W. P. Fowle	38.03	2 05 37	2 04 54
Elf, W. H. Wilkinson	36.01	2 19 38	2 17 11

SECOND CLASS, 24 TO 27FT.

Agnes, W. E. Cummings	31.02	2 33 42	2 27 37
Trudette, L. M. Haskins	30.11	2 34 04	2 27 45

THIRD CLASS, 21 TO 24FT.

Swordfish, J. B. Paine	31.06	2 42 48	2 36 59
Marguerite, T. Skinner, Jr.	27.10	2 54 57	2 45 50

FOURTH CLASS, 18 TO 24FT.

Wanda, R. C. Robbins	21.07	1 35 50	1 23 23
Mosca, C. H. W. Foster	20.03	1 31 58	1 24 24
Annie, Palmer	Not measured.		

CORINTHIAN Y. C. SWEEPSTAKES.—The sweepstakes race of the Corinthian Y. C. of New York will be sailed on Aug 10 off Newport, at the conclusion of the New York cruise, over a 25 mile triangular course, starting from Brenton's Reef Lightship. The entries are: Alice, P. D. Wheatland; Chiquita, A. Hemenway; Gorilla, Royal Phelps Carroll; Helen, C. A. Prince; Liris, Messrs. Wetmore, Hoyt and Mather; Maraquita, August Belmont, Jr.; Minerva, Charles H. Tweed; Pappoose, Bayard Thayer; Tomahawk, E. D. Morgan,

BEVERLY Y. C.

THE 149th regatta was sailed at Marblehead on Aug. 3. This was a sweepstakes race and all the first and second class boats were frightened off by Saracen and Swordfish; these two boats were ready to start but having no competitors did not do so.

The day opened about as disagreeably as possible, a pouring rain with a succession of calms and thunder squalls, but just before the start it cleared off and a good wholesail southerly breeze struck in.

Only Kathleen, Mosca and Kiowa had formally entered; Dolphin put in an appearance but as no one wished to start against her in that breeze, Kiowa's owner asked Mr. Robbins to start Wanda instead, which was done; Wanda being 21ft. l.w.l. is in second class, but her sail measurements are so small that Kiowa allows her. Wraith came up at the last moment and started, but forgot to enter.

The start was a pretty one, the boats going off with wind well on starboard quarter. Kathleen got a second or two the best of the start, then Kiowa, Wanda and Mosca with Wraith a trifle astern. Kiowa drew ahead a trifle with Wanda close on to her; Kathleen luffed across their stems and took some of their wind. Selman's was passed in a bunch, Kiowa a trifle ahead; here Wanda got her wind and closed up, the two boats running neck and neck for awhile, with the others so close that one photograph would have covered them all.

Kiowa kept off a little to get a clear wind and slowly pulled out a trifling lead, jibing round No. 3 ahead. Wanda second with the others in a bunch.

From 3 to Curtis wind was on port quarter, Kiowa increasing her lead a little. At Curtis Point they jibed again and had a beam wind to Bowditch, whence they had a beat home. There was a heavy sea rolling in and it was a good test of the boats. Kiowa gained faster than before, while Wanda dropped the jib and mainsails, of whom Kathleen led Mosca a trifle. Once on the wind Mosca got in irons and lost time, while Kiowa gained more rapidly, outpointing and outfooting her completely and seeming to have the race in hand. It was now breezing up and a heavy head sea was met. The course required boats to go to leeward of red buoy 3; Kiowa was pointing to westward of it, but bore off a little, going to leeward. Kathleen, however, who had stood on further than the others before tacking and was to windward of Kiowa's wake, did not bear off, but passed to windward of buoy. The others did not fetch it. Had Kathleen kept off she would have lost more time than she beat Wraith by.

Soon after passing buoy Kiowa's headstay parted with a loud report, the masthead sagging aft and to leeward. This spoilt the set of her sail; she was unable to lay as good a course as before, and it was a question if her mast would not go, as it was buckling badly.

Wanda and Kathleen at once began to gain on her, and her chances looked very poor. At the mouth of the harbor Wanda had closed up till she was dead astern and inside her allowance; inside harbor, however, the smoother water allowed Kiowa to trim sheets flatter, and gave her some chance to outpoint Wanda, which she did to such purpose that she was able to luff over line just clear of leeward stakeboat, while Wanda had to make a short tack. Summary as follows:

	Length.	Elapsed.	Corrected.
Kiowa, W. G. and W. L. Jeffries	22.03	1 27 07	1 15 44
Wanda, R. C. Robbins	21 10	1 28 03	1 16 16
Kathleen, R. S. Peabody	25.07	1 29 41	1 21 14
Wraith, H. Benson	22.03	1 33 32	1 21 50
Mosca, C. H. W. Foster	24.06	1 38 15	1 28 54

It was an exciting race, and a triumph for the cats over the jib and mainsails. Wraith protested Kathleen for cutting Buoy 6. Judges ruled that prize go to Mosca on account of Wraith's neglect to enter properly, but Mr. Foster refused to take it, so prize goes to Wraith.

Judges: E. M. Parker, Bancroft C. Davis. X. Y. Z.

[In the report last week of the regatta of July 27 the times in fourth class were too great by one hour.]

INDIAN HARBOR Y. C., AUGUST 3.

THE first annual regatta of the Indian Harbor Y. C. was sailed off Greenwich, Conn., last Saturday. This club is a new one, and is made up principally of members residing in Greenwich for the summer. On account of the valuable prizes offered and the $25 sweepstakes in addition, a brilliant array of entries were obtained. At 2 o'clock the steamer Vulcan, Capt. Lenox, with the judges, C. E. Jenkins, George E. Gartland and William J. Jones, and the regatta committee, Richard Outwater, H. O. Asten and F. B. Jones, on board, took up her position at the starting line, a line drawn between two stakeboats anchored about half a mile east by south of Rockport Point. The course was thence to the red spar buoy off the west end of Great Captain's Islands to a stakeboat anchored about one-quarter of a mile south of Captain's Island to the black spar buoy off the east end of Little Captain's Island, to the starting line, to be sailed over twice, a distance of ten miles. The race was under the rules of the N. Y. Yacht Racing Association, the Herreshoff time allowances being used.

The preparatory signal was given from judges' steamer at 2:14 P. M., and the signal to start at 2:19. All crossed the line within the stipulated time of five minutes except Jennie Willis and Dot, which were handicapped 30 seconds and 20 seconds respectively, the handicap time being 2:24 P. M. At the start and throughout the race a southwest wind was blowing of moderate strength, with the ebb tide. Shortly after the start Tattler took the lead and was never headed, winning easily. From the start to the first turn was a dead beat to windward; the rest of the course was a lift sheet and off the wind. Tattler did the best work to windward in the third class, and Ida K. in the fourth class. With lifted sheets most of the other competitors seem to hold their own. The following is the summary of the race:

CLASS 1—JIB AND MAINSAIL.—20FT. AND UNDER 27FT.

	Length.	Elapsed.	Corrected.
Jennie Willis, J. A. Willis	25.07	2 17 40	2 17 40

CLASS 2—JIB AND MAINSAIL.—20FT. AND UNDER 23FT.

Ramona, H. Jennings	21.00	2 18 40	2 18 40
Coyote, H. Bucknall	20.05	2 24 45	2 23 56

CLASS 3—CAT-RIGGED—23FT AND UNDER 27FT.

Dot, C. T. Pierce	26.06	2 31 53	2 31 33
Zanth, P. C. Ralli	25.00	2 49 26	2 47 52
Sirene, H. E. Doremus	24.07	2 20 44	2 18 42
Tattler, J. H. Cornwell	24.07	2 08 45	2 06 43
Edna, Grieve & Neubold	24.04	2 13 36	2 11 17
Frou Frou, Doc Merrill	24.00	Withdrew.	

CLASS 4—CAT-RIGGED—20FT. AND UNDER 23FT.

Lassie, H. O. Asten	19.11	2 49 50	2 49 50
Ida K., C. W. Voltz	19.11	2 22 44	2 22 44
Rival, Bert Hart	19.11	2 43 00	2 43 00
Zelda, J. H. Williams	19.04	2 27 40	2 26 47
Giggle, Leonard Jacob, Jr.	19.03	2 31 02	2 30 01
Ione, H. A. Sherman	18.06	2 44 05	2 41 52

CLASS 5—CAT-RIGGED—UNDER 20FT.

Belle, John Williams	17.00	3 11 55	3 11 55
Alpha, W. F. Gilmore	16.08	3 29 34	3 28 57
Vitesse, Percy Hicks	16.03	2 48 14	2 46 49

Thus in Class 1 the Jennie Willis had a walk over. In Class 2 the Ramona wins, beating the Coyote 5m. 11s. In Class 3 the Tattler wins, beating Edna 4m. 34s. In Class 4 Ida K. wins, beating Zelda 4m. 8s. In Class 5 Vitesse was the winner, beating Alpha 25m. 6s. Second prizes, club signals, were given to Edna and Zelda. The prize for fastest corrected time was given to Tattler. Shortly after the race a match was made between the Tattler and Edna for $1,000.

HULL Y. C., LADIES' DAY.—Rainy weather, little wind and a collision helped to spoil the ladies' day of the Hull Y. C. on July 31. At 3 P. M. the rain fell steadily, but at 5 o'clock it stopped, but there was no wind. Troubadour, Com. Whitten's flagship, was in collision with a collier, losing her main boom. In the evening a dinner and hop took place at the club house.

RIVERSIDE Y. C.—The regatta of the mosquito boats of the new Riverside Y. C., at the mouth of the Miamus River, on Aug. 3, was hardly more than a drift. Twelve yachts started, the winner being D. B. Hill, with Ripple second.

QUINCY Y. C., OPEN SWEEPSTAKES, AUG. 3.—The open sweepstakes of the Quincy Y. C. was sailed on Aug. 3, the summary being:

SPECIAL CLASS.

	Length.	Elapsed.	Corrected.
Eureka, E. R. Rogers	20.08	1 26 13	1 00 01

SECOND CLASS.

Mabel, F. L. Dunne	19.11	1 29 20	1 02 32
Peri, Frank Driscoll	18.10	1 30 44	1 02 36
Atala, E. F. Linton	19.10	1 29 48	1 02 45
Hester, P. R. Blackmur	19.11	1 29 58	1 03 00
Undine, A. H. Doole	19.06	1 33 56	1 06 31
Drift, A. Morse	18.08	Withdrew.	

THIRD CLASS.

Flora Lee, Lanning & Bockus	16.10	1 28 39	0 57 57
Mirage, John Dearborn	17.05	1 31 52	1 01 44
Wave, T. P. Willey	17.06	1 42 38	1 12 56
Guenn, E. M. Horton	17.08	1 45 04	1 15 35
Mabel D, R. D. Ware	16.03	1 54 46	1 03 27
Wildfire	17.02	... ...	... ...
Rocket	Time not taken.		

The judges were Geo. G. Saville and John W. Sanborn.

PLEASANT BAY Y. C.—The Pleasant Bay Y. C. of Chatham, sailed a regatta on July 29 in a strong S.W. breeze. The summary was:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Surprise	25.05	Withdrawn.	
Chatham	26.08	1 23 22	1 17 16
Muriel	25 02	1 22 55	1 15 52
Victor	25.09	1 21 45	1 15 06
Jumons	25.04	1 22 51	1 16 56
Echo	25.04	1 23 03	1 16 08
Fenesta	25.01	1 23 25	1 16 21
Lillian	25.00	1 26 19	1 19 11
Volunteer	25.03	Withdrawn.	
Flash	26.06	1 20 47	1 14 35
Sachem	25.00	1 25 25	1 28 17
Hector	25.06	1 29 40	1 22 31

SECOND CLASS.

Playmate	24.06	1 24 16	1 16 48
Haha	23.03	1 26 55	1 18 56
Vivian	23 05	Withdrawn.	
Triton	24.06	Withdrawn.	
Etta	23.07	1 24 02	1 14 42
Althea		Withdrawn.	

TAPPAN ZEE SAIL AND ICE Y. C.—The first regatta of this club was sailed on Aug. 3, on the Hudson River, the courses being from the start off Grand View, around a markboat off Sing Sing, then down around a markboat off Dobb's Ferry and home, 20 miles, for classes E to 8, and around the Sing Sing mark and return, 16 miles, for class 9. The wind was strong from S.W. with a violent squall just after the start. The times were:

CLASS E—CABIN SLOOPS.

	Length.	Elapsed.	Corrected.
Gleam, R. E. Prousser	25 03	Time not taken.	

CLASS 2—OPEN SLOOPS.

Thorn, Wm. E. Kinzey	24.05	Did not finish.	
Ella G., C. E. Gilson	19.02	Disabled.	

CLASS 5—CABIN CATRIGGED YACHTS.

Whileaway, Robt. Underhill	27.01¼	4 35 54	4 35 54

CLASS 6—OPEN CATRIG BETWEEN 27 AND 32FT.

Madge, Com. Brandreth	28.00½	4 45 34	4 45 34

CLASS 7—OPEN CATRIG BETWEEN 23 AND 27FT.

May F., Com. Copeland	24.09¾	4 29 21	4 18 07
Alma, H. Cheney	25.00¾	4 29 18	4 27 44
Aller, P. F. Sanstag	25.09½	4 36 36	4 28 36

CLASS 8—OPEN CATRIG BETWEEN 20 AND 23FT.

Pauline B. James Smith	22.06¾	4 53 32	4 33 27
Columbia, J. T. Washburn, Jr.	22.06	4 42 16	4 42 06
Orient, A. R. Osborne	22.02	4 38 30	4 37 30
Amy, E. C. Weeks	21.04½	Time not taken.	

CLASS 9—OPEN CATRIG UNDER 20FT.

Echo, G. R. Bradley, Jr.	19.06	4 14 26	4 12 23
Ermine, C. A. Preston	17.06	4 03 24	3 57 10
Maud S., W. D. Kelley, Jr.	16.06	4 48 55	4 38 54
Juliette, E. A. Holdimann	16.01	4 32 17	4 21 48
Commodore, J. Osborn	16.00	5 17 55	... ...

The winners and prizes were as follows: Whileaway a handsome cabin light; Madge a cabin clock; May F., special prize, gold stop watch, and class prize, an aneroid barometer; Ermine won a anchor light; Pauline B. won a pair of marine glasses, and Gleam a pair of side lights. Col. B. S. Gibson, Sing Sing Y. C., was judge, and the regatta committee were Thomas B. Williams, M. Gooderson and George B. Meyer.

HAMILTON Y. C. LOCAL REGATTA, JULY 27. Course once around Hamilton Bay, distance 15 miles. Weather fine, wind east.

FOR WHITE WINGS CUP.

	Length.	Start.	Elapsed.	Corrected.
Coquette		2 15	4 32 37	2 17 37
Echo		2 15	4 36 15	2 21 15
Cyprus		2 15	4 37 15	2 22 15
Alert		2 15	4 50 55	2 35 55
Aideen		2 15	4 51 40	2 36 40
Schemer		2 15	... ...	... ...

25FT. CLASS.

Hadia	25.00	2 15	4 43 40	2 28 30
Stella	22.00	2 15	5 01 25	2 42 35
Greyhound	24.10	2 15	5 05 25	2 46 25
Neptune	24.10	2 15	Did not finish.	

White Wings cup won by Echo on time allowance of 3m. 50s., Coquettte second, Cyprus third; 25ft. class, Hadia first, Stella second, Greyhound third.—EMILIUS JARVIS, Capt.

SOUTHWARK Y. C.—Sweepstake Regatta, July 28. Courses Glouster Ferry wharf to Rhuign Point buoy and return to start point. Distance 8 miles. Weather cloudy and rain. Wind southeast. Tide ebb.

SECOND CLASS.

	Start.	Finish.
James Dailey	2 00 00	3 43 00
Emma Ruff	2 00 00	3 49 00
Harry Bordman	2 00 00	3 44 00
David Ryan	2 00 00	3 43 31
Emma H	2 00 00	3 42 56
Harry E	2 00 00	withdrawn
James Irvin	2 00 00	3 45 07
Bradshaw	2 00 00	3 45 00

FIFTH CLASS.

Calaway	1 45 00	3 40 00
Lee	1 45 00	3 42 00
Mischief	1 45 00	3 41 09

Winner first prize, class two, Emma H.; class five, Calaway. Prizes class two, $10, class five, $5. The Emma H. was sailed by Chas. Dunley, champion swimmer of the Delaware. Judges, Jilet Wilson, John Gest.

CAPE COD Y. C. REGATTA.—The postponed regatta of the Cape Cod Y. C. was sailed on Aug. 3 in a light S. wind, the summary being:

FIRST CLASS.

	Elapsed.
Bessie, Edward Penniman	1 26 32
No Name, Wm. Wareham	1 37 08
Wave Crest, D. L. Young	1 37 33

SECOND CLASS.

Pemmegewassett, W. M. Crosby	1 43 32
Little Brave, E. E. McKerson	1 42 20
No name, R. E. Oliver	1 33 33
Carrie L	Did not finish.

THIRD CLASS.

Imp, J. P. Knowles	1 25 10
Lillian, A. O. Hurd	1 21 50
Sachem, P. A. Doane	1 33 11
Mischief, E. L. Snow	1 36 02

The judges were S. K. Kingman, Albert Smith and H. J. Smith

GLEAM.—The American catboat Gleam, whose races in English waters gave rise to quite a discussion several years since, capsized in a race at Southampton two weeks since. She is now owned by Mr. C. P. Clayton, who has fitted a lead keel to her in place of the board.

THE SWEEPSTAKES RACE OF 20FT. CUTTERS.—The sweepstakes race between the little cutters Nanita, Madge and Tadpole along the south shore of Long Island, was sailed on July 6-7, the summary being as follows. Nanita was built from the lines of the Windward, and is 18ft. by 6ft. on the L.w.l. Course: From imaginary line south of Norton's Point, Coney Island, to and around Montauk Point to Fort Pond Bay, Cullenden Point bearing south, distant not more than one mile; distance, 110 miles. Weather generally fair, slight local showers in vicinity of Montauk Point. Wind southerly until sundown, then hauled to S.S.W. until 12 M., running until it reached S.W. finally at 10 A. M. Sunday; from 10 it held W.S.W. until we hauled round Montauk Point at 7 P. M., then died out. Tide, middle ebb at Norton's Point, last of ebb at Montauk Point:

	Length.	Start. July 6, P. M.	Turn. M'nt'k Pt. July 7. P. M.	Finish. Cul'nd'n Pt. P. M.	Elapsed.
Nanita	18.03	4 45 00	7 15 00	11 57 00	36 12 00
				July 8, A.M.	
Tadpole	19.00	5 10 00	7 14 00	2 00 00	38 50 00

Nanita is owned by C. Coughtry, and Tadpole by C. Dunn and C. Wyant. Nanita's log gives the following details: With Capt. Coughtry and Mate Mowton passed Norton's Point 4:45 P. M., Saturday, July 6, under plain lower sails, close hauled, and heading to weather Rockaway Buoy. Passed to southward of it at 6 P. M. Then steered E.S.E. until 1:20 A. M., with Fire Island Light north 12 miles distant. Then steered N.E. until under the beach abreast of Moriches. Passed Shinnecock Light at 11:45 A. M., and turned into Gardner's Bay at 7:30 P. M. From Montauk to Cullenden Point had light head winds and tide, and made slow work of it, passing finishing line at 11:57 P. M. Tadpole's log says she passed Norton's Point at 5:10 P. M. Ran over southern end of Duck Bar at 7:15, and passed Nanita at 7:30. Sighted Fire Island Light at 11:25 P. M., and had it due north, distant 12 miles, at 2:10 A. M. Spoke Nanita at 3:30 A. M. Wind steady, S.W. Made Shinnecock out to the eastward at 10:10 and passed to southward of it at 11:40 A. M. Sighted Montauk at 3:30; Nanita off shore one-half mile. Met the ebb to south and west of the Point at 7 P. M., and ran through heavy tide rips for 20 minutes. Stood in on the wind for Cullenden Point, which we passed at 2 A. M. Monday, July 8.

BUZZARD'S BAY Y. C.—The first regatta of the Buzzard's Bay Y. C. was sailed off Onset on Aug. 3 in a sharp S. W. wind. Eina came in second after breaking her boom, and Bertha lost her gaff. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Ocean Belle, Inbow	31.08	2 20 07	2 10 32
Mollie, Hill	31.07	2 10 15	1 41 40
Mattie, Stockton	33.03	2 05 46	1 58 52
SECOND CLASS.			
Starling, Berse	31 03	2 18 44	1 49 42
Adelaide, Sherman	31.02	2 20 34	1 51 32
Melisse, Jones	31.02	2 45 23	2 16 21
Mist, Lyman	31.01	2 06 30	1 37 28
Crawl, Phinney	30.03	Broken mast.	
Gymnote, no owner	32.06	2 18 14	1 50 31
Defiance, Perry	30.05½	2 12 57	1 43 27
Gilt Edge, Whittemore		No length. Broken boom.	
THIRD CLASS.			
Ulala, Winship	25.04	Gave up.	
Bertha, Hulkins	24.10	2 31 57	2 27 56
Dassy, Stockton	25.01	2 26 28	2 22 23
Eina, Parkinson	26.05½	2 26 10	2 23 14

SIPPICAN Y. C.—Eighth (club) regatta, Aug. 3.—Course No. 2; weather, cloudy with showers; wind, southwest, single reef; tide, ebb. Summary:

	Length.	Elapsed.	Corrected.
Creole, L. Bacon	19.04	1 45 50	1 28 22
Laura, F. R. Wing	19.02	1 56 55	1 39 22
Edith, J. Chapman	17.02	2 00 30	1 40 03
Trump, J. Whiting	19.01	Disabled.	
Mattie, W. H. Davis	15.07	1 54 00	1 35 45
Red Wing, T. Hemenway	16.02	Withdrew.	
Hebe, A. Shepley	16.01	Withdrew.	
Wide Awake, J. C. Pegram, Jr	14.09	Withdrew.	
Reba, W. Perry		1 09 45	0 47 34
Whisper, J. S. Whiting		1 30 05	
Fairy, J. H. Clark, Jr		Withdrew.	

Winners: Class Three, Creole first, Laura second; Class Four, Mattie first; Class Five, Reba first, Whisper second. Trump, when in a leading position, carried away her tiller and was forced to withdraw. Regatta Committee: J. Whiting, chairman; F. R. Wing, F. H. Luce. Judges: Messrs. Luce and Wing.

ST. LAWRENCE Y. C.—Sailing skiff race, July 20, twice around the regular skiff course; distance, 10 miles. Weather very changeable. Wind, light to fair northerly:

	Length.	Start.	Finish.	
Yukwa, W. J. Wallace	20.05	3 55 00	6 03 00	
Vreda, G. H. Duggan	20.07	3 55 00	6 04 10	
Jean A., G. H. Labbe	20.05	3 55 00	6 05 20	
Tara, C. Scott	20.00	3 55 00	Did not fin'h	

This was the fourth race of the series for Rear-Com. Paton's cup, and though only four boats started, they were all of the first class. A shower came up and killed the wind when the boats were rounding the first buoy, but it afterward freshened and held for the remainder of the race. Yukwa got the best of the start and was never caught, though her lead of 4m. at the western buoy was reduced to 1m. 10s. at the finish. Jean A. sailed very well, and was second boat when the wind was light. Duggan and Wallace have each scored two races in the series, of which only a postponed race remains, for which Duggan is not entered. Judges, J. Simmons and J. H. Howard.

NEW ROCHELLE Y. C.—"JULIA" CUP.—The postponed race of July 27 for the silver punch bowl offered by Mr. August Kron in the 35ft. class was sailed on Aug. 3 in a good S.W. breeze. The course was from the club house to West buoy, off Execution Light; thence to Matinnicock Point; thence to the start; thence to East buoy, off Execution Light; thence to West buoy, off Execution Light, and home, 17 miles. Eurybia led over most of the course, but was finally passed by Elephant. The times were:

	Start.	Finish.	Elapsed.
Elephant	2 03 30	5 11 28	3 07 58
Eurybia	2 03 15	5 13 32	3 10 17
Phantom	2 04 00	5 33 04	3 29 04
Amazon	2 04 30	5 36 28	3 31 58

The corrected time was not computed, but as Elephant is smaller than Eurybia she wins.

THE MOSQUITO FLEET of South Boston sailed its second cup race on Aug. 3 in a reefing breeze from S.W., Course, 5 miles triangular, Dorchester Bay:

	Length.	Corrected.
FIRST CLASS.		
Skipper, J. R. Tufts, Jr	14.11	1 09 45
Minnie, J. Bertram	14.10	1 06 39
Nellie, J. O'Leary	14.11	1 10 43
Victor, C. A. Borden	14.10	1 04 39
Enigma, J. F. Small	14 04	1 07 56
Lucy, W. H. Ranson	14.11	Disabled.
Sprite, H. M. Wells	15.00	Disabled.
SECOND CLASS.		
Grace, Fred Borden	12.02	1 26 10

SAVIN HILL Y.C.—The 4th club race of the Savin Hill Y. C. was sailed on Aug. 3 in a strong S.W. wind, the summary being:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Ethel S., L. Spalding	23.01	1 42 22	1 16 39
Merlin, H. G. Patten	22.03	1 35 40	1 09 34
Helen, W. Shaw	25.02	Withdrawn.	
SECOND CLASS.			
Jester, W. H. Besarick	19.02	1 17 18	0 52 31
Siko, A. H. McInness	19.10	1 14 39	0 49 23
Avis, I. H. Ouell	18.09	1 17 15	0 51 02
Elsie, W. B. Bird	17.04	Withdrawn.	

NEW ENGLAND Y. R. A.—Eight clubs were represented at the special meeting of the New England Y. R. A. at the Parker House on July 31. In the absence of a president, Sec'y-Treas. G. W. Mansfield, of the Salem Bay Y. C., called the meeting to order and occupied the chair till Mr. H. L. Parker, vice-commodore of the Lynn Y. C., was chosen chairman for the evening. The minutes of the previous meeting were read and approved, after which the secretary stated the object of the meeting, the election of a president, President W. Lloyd Jeffries, of the Beverly Y. C., having resigned on account of his not being able to undertake the duties of the office. A committee to nominate a candidate was appointed as follows: Capt. T. D. Bagley, Monatiquot Y. C.; Fred S. Clayton, Chelsea Y. C., and Sec'y Mansfield. They submitted the following names: Louis M. Clarke, Dorchester Y. C., for president, and George G. Saville, Quincy Y. C., to fill the vacancy upon the executive committee, which Mr. Clarke's election to the presidency would cause. Both candidates were unanimously elected, after which the meeting adjourned.

ALICE—ZIGEUNER.—These two cutters were in collision off Kittery, Me., on July 27, both being damaged. The blame is laid to Alice.

ROYAL YACHT SQUADRON.—The following telegram was received on Monday: "Cowes, Aug. 4.—James D. Smith, America Cup Committee, New York Y. C.: Your interpretation of deed, and suggestion that objection in our letter of June 27 can be overcome alters case. Challenge holds good provided cup can be held subject to challenges under Volunteer-Thistle conditions and provided necessary extension of time granted. Cable reply that Valkyrie may prepare.—GRANT." Secretary Oddie replied as follows: "Aug. 5.—Richard Grant, Secretary Royal Yacht Squadron, Cowes, England: Cablegram to Smith received. When you withdrew your challenge, America Cup committee was discharged. Meeting of club cannot now be called until its return from squadron cruise.—ODDIE, Sec'y."

SEA FOX.—On July 31 Sea Fox, Com. Canfield's steel schooner while bound from Boston to Newport, went ashore on the Shovelful Shoal, off Monomoy Point, in a fog. Mr and Mrs. Canfield were on board, with a party of friends. The ladies were landed in the small boats, while a party of wreckers went to the aid of the yacht. She was finally floated off and proceeded to New Bedford, where she was docked. It is reported that she sustained no serious damage, and will be ready for the New York cruise. Com. Canfield paid $1000 to the wreckers for their assistance.

THE WESTERN CANOE ASSOCIATION MEET.

BALLAST ISLAND, JULY 13-29.

THE Ballast Island meet for 1889 is a thing of the past, and as the last man toppled his tent and, like the Arab, silently stole away, he dropped a regretful tear that meets could not last forever, and that a long, cold winter and raw spring must intervene between the next gathering, July, 1890.

It being the first meet in four years the writer has attended without a canoe, he probably saw the racing and working of a camp from a more placid standpoint than ever before, and should some of his ideas clash, remember they are the views of but one man as they presented themselves.

Canoeically the camp was not a success. Socially it was a howling one.

Two causes detracted from the all absorbing interest there is generally felt in a canoe meet, first too many women—the squaws were more numerous than the braves, for every man who had a wife or sweetheart had the same and her friends on Ballast.

The statement that there were too many of the fair sex may sound strange, coming from one who generally passes most of his leisure moments during a meet at Squaw Point, but nevertheless it is an undisguised fact that canoe meets and the ladies don't go well together. The men become indifferent alike to cruising and racing. They dress too much and dislike wetting their new flannels for the sake of a glorious dash through the whitecaps of Lake Erie. Instead of rigging and pumicing canoes they are off on the yachts with mandolin, guitar, banjo and ices. Instead of the old time gatherings on the docks and around the campfire discussing their various hobbies, they are away till the wee sma' hours with steam launches to the ball room floors of the neighboring hotels.

It's pleasant, but alas it is not canoeing, and so long as the W. C. A. stay in the close proximity of cottages and club room, and enjoy the refining influence of charming women they cannot have the old time never-to-be-forgotten barbaric meets of years gone by.

A movement is on foot to hold the camp of '90 in the primitive way with a mess tent and no squaw camp, and we sincerely trust that it may be tried for one year at least.

The second cause for the small attendance was that the W. C. A. has not been kept before its members through the papers and otherwise, so that interest has been lost by many who have departed for new fields of pleasure to pass their vacation. Only the old faces put in an appearance; no new racers of the dark horse character led the fleet to the windward buoy.

A new departure has come, however, in the shape of Class C, and interest centered in the Longworth cup race for that class. Thirteen new boats entered the arena. We cannot call them canoes, for although sharp at both ends they are not "capable of being efficiently paddled by one man," and are therefore fitted with bow-facing oars. They are nearly all 16x40, and are rigged in various ways. There was the miniature schooner, that when crated took four men to lift; the catrig man whose 18ft. boom would have capsized him surely had he been compelled to sail free; the leg-of-mutton, with enormously tall sticks to spread his limit of 140 sq. ft.; the balance-lug man, who when it freshened had to reef and hike out his best or take a ducking, and close sailing sloops that could run away from the rest in light winds, but played a luffing match to keep right side up when the wind increased.

Strange as it may appear, each and every man built his Class C for comfortable sailing and cruising only (?), yet with one exception every cockpit was filled with a trunk for a plate board, and each carried unlimited bags of ballast to aid their weight on the windward rail to keep their craft from capsizing.

In no race in which these comfortable cruisers participated did the wind blow other than light, and much regret was expressed by a disappointed audience that their seaworthiness was not tested, but from the swampy condition in which some returned to the dock, it may be taken for granted that the "life-saving crew" would have demanded salvage, had there been anything like the sea in which the Class B sailed for the Gardner cup.

It was conceded that the smaller canoes were faster, the races proved it, and some enterprising mug-hunter will build just outside the Class B, and win the trophy next year.

For a canoeist living upon open water a Class C is no doubt a good craft—but though is more comfortable, and a 50ft. yacht still more so—but for a river or small lake man to own a boat that he cannot paddle or lift alone, and still consider himself a canoeist, makes it appear that the old original spirit of perfect independence had departed.

A new rule was made last winter by the executive committee, abolishing standing rigs, and requiring all sails to be capable of lowering and reefing. The committee did this, believing it was the popular opinion of the Association, that it was unsafe to use the lateen, sprit and Pecowsic sails, but it was amusing to see the dummy reef lines on some of the racers who risked (?) their lives regardless of laws, and who were as helpless to shorten sail as ever a standing sail man was. It does seem like carrying authority a little too far when the kind of sails a canoeist shall use is dictated, and a petition from the Class B men will be presented and accepted by the executive committee at their next meeting to rescind the rule.

We have seen the light standing sail live through a blow, when the baggy water-logged boom of the reefed sail, and heavy spurs of the hoisting rig, have capsized their skipper. We have seen the canoe with standing rig capsize in a gale, and then without assistance be righted, sail on and finish the race—a feat almost impossible in a heavy sea with a hoisting rig and mass of tangled lines. We have always regretted to see that the "get there" qualities of the standing rigs have such a galling effect upon the minds of some would-be mug winners.

The annual business meeting was held on Tuesday afternoon and the following officers for the ensuing year elected: Commodore, Chas. J. Stedman, Cincinnati C. C.; Vice-Commodore, T. J. Kirkpatrick, Jabberwock C. C.; Rear-Commodore, Thos. S. Gates, Columbus, O.; Secretary-Treasurer, J. B. Keogh, Tippy C. C., Chicago; Executive Committee, Col. J. R. Bartlett, Freemont, O.; Hon. G. W. Gardner, Cleveland, and D. H. Crane, Chicago.

As there were but nine Class B canoes to contest for the W.C.A. trophy the entries necessary to start were reduced from ten to five.

The commodore was instructed to appoint a flag committee to present designs for officers' flags.

A committee of three, Skipper Longworth, D. H. Crane and T. P. Gaddis were appointed to arrange for a mess tent and camp for '90.

The conditions for the Longworth cup were presented as follows:

First—The cup shall be known as the Longworth Challenge Cup, to be competed for by Class C canoes only.

Second—It shall be sailed for at each annual meet.

Third—Only active members of the W. C. A. in good standing can enter

Fourth—At least five canoes must start to make a race.

Fifth—The course to be triangular, distance not less than six miles, and the course must be completed in less than three hours or no race.

Sixth—The cup can be held by the winner, who must give bonds for its safe return, for one year, when it is to be returned to the regatta committee in good order to be raced for again. At the end of ten years the person winning it the greatest number of times shall become its owner. In case of a tie the ownership shall be decided by another race at the same meet.

These rules can be changed or amended if it is thought advisable by the executive committee at any annual meeting by a vote of two-thirds of the members present.

The Longworth cup is a beautiful solid silver tankard costing $150, designed and made by Dubme & Co., of Cincinnati. A vote of thanks was extended to the skipper for his generous gift.

The annual canoe hop was held at Rehberg's on Thursday evening, and was a grand success, netting about $50 to the Association. The "annual blow" succeeded in preventing steamers from Sandusky bringing a large party to the dance.

The carnival on Friday evening was postponed for a year on account of rough water, and the twenty tents of the camp were decorated by hundreds of laterns. Fireworks, a camp-fire, music, singing and stories entertained 200 people for several hours.

THE RACES.

First race, free for all, twice around Ballast: B. W. Wood first, O. A. Woodruff second; 25 starters; wind light, no sea.

Second race, Class B, on triangle, 3 miles: B. W. Wood first, N. B. Cook second; 10 starters; wind fresh, no sea.

Third race, passenger, 3 miles: Nat Cook and J. H. Ware in sloop-rig ed Class C first. N. B. Cook and J. R. Bowie second; 7 starters; wind light.

Fourth race, Class A, paddling, ½ mile: R. P. McCune first, O. H. Root second; 5 starters.

Fifth race, Class 3, paddling: R. P. McCune first, Thos. S. Gates second; 4 starters.

Sixth race, sail and paddle, ½ mile: B. W. Wood first, J. W. Hepburn second; 6 starters; wind fresh; one capsize.

Seventh race, Class 1, paddling, ½ mile: R. P. McCune first, Thos. S. Gates second; 3 starters.

Eighth race, paddling upset: Clough Anderson first, R. P. McCune second, O. A. Woodruff th rd.

Ninth race, sailing, novice, 1½ miles: H. F. Groesbeck first, T. P. Daniels second; 3 starters; wind light.

Tenth race, Gardner Cup, 6 miles: O. A. Woodruff, Dayton, O., first; J. B. Keogh, Chicago, second; J. O. Shiras, Cincinnati, third. Nine starters, 3 finished; wind fresh, heavy sea at first buoy; three capsized, J. W. Hepburn, T. P. Daniels and N. B. Cook.

Eleventh race, consolation, 3 miles: J. B. Keogh first, J. R. Bartlett second; 6 starters; wind strong.

Twelfth race, man-overboard: H. D. Crane first, J. B. Keogh second; 10 starters; wind light, no sea.

Thirteenth race, W. C. A. trophy, 7½ miles; 9 starters, 4 finished; wind light, no sea: B. W. Wood first, O. A. Woodruff second, N. B. Cook third, J B. Keogh fourth.

Fourteenth race, Longworth Cup, Class C, 6 miles; 10 starters, 7 finished; wind light and steady, no sea: D. H. Crane, Chicago, first; J. R. Bartlett, Fremont, second; Geo. A. Warder, Springfield, third. This was the closest race ever sailed at a W. C. A. meet, and the last leg being the windward one, all canoes finished closely bunched.

JABBER.

PROPOSED CHANGES IN THE A. C. A. RULES.

Editor Forest and Stream:

I have four little matters to present for the consideration of the Association in general and for the executive committee in particular.

The first is the proposition that I made in the shape of a recommendation to the executive committee at the Atlantic Division meeting, and which I simply presented, so that our boys would do a little thinking. I understand thoroughly that there are objections to the change, possibly sufficient to prevent its passage, but it will do the Association no harm to consider why its growth in certain directions is so inconsiderable.

The second is the suggestion that we adopt some practical insignia to designate the flag officers at the meets, etc. The present "uniform" as described in Article X. of the By-Laws is not practical for the reason that the final clause nullifies all that precedes it. How would it do to make that article read as follows:

"The commodores shall wear embroidered on the front of the hat or cap two crossed paddles in gold, with the letters A. C. A. in gold in the three lower corners. The commodore in addition shall wear three stars in silver, one above and one on either side of paddles. The vice-commodore's, same as commodore, omitting star above, and the rear-commodore's the same as commodore, omitting stars at side. The secretary-treasurer shall wear a quill in silver supporting the letters A. C. A. in gold. The pursers will substitute quill in gold for one in silver."

This would give the officers an insignia which would be unostentatious and at the same time would indicate to the members their official character. To have a camp of about three hundred carried on successfully, and by that I mean for the greatest pleasure to the greatest number, the few in authority should be distinguishable in some manner. If necessary we might discard the tiller and retain only the cap device, which all officers would surely get.

The third is that I would suggest the following amendment to Article IV. of the By-laws, viz., by adding "The signal by whistle shall be three long blasts followed by one short one." This has been the official signal for seven years, although it has never been so recorded.

The fourth, and for the present the last, is that we change the subdivisions of the by-laws from "articles" to "chapters." It should be article of the constitution, chapter of the by-laws, and rule of the sailing regulations.

I have just shot these out for consideration and discussion, not supposing that any action will be taken before the executive committee in October, if at any time. Some one must do it or we would jaunt along in the old rut and never improve. Are there any other changes suggested?

ROBERT J. WILKIN.

BROOKLYN, N. Y., Aug. 3.

LAKE ST. LOUIS C. C. REGATTA, JULY 27.

THE regatta of the Lake St. Louis C. C. at Montreal, on July 27, was a success as far as the racing went, though a heavy rainstorm made the day very unpleasant. Messrs. Leys and Jaques, who held the challenge cup, did not defend it. The summary of the races is as follows:

Open canoe sailing race, 2 miles, commodore cup—W. L. Jamieson's Daphne won, Mr. Sanderson's Point Claire second, F. Stuart's Pauline third, W. Charles's Ino fourth.

Punt race, handicap, for boys under 14 years of age, distance 1 mile—A. Amos won, H. Baby second, G. Boyer third.

Tandem race (green), distance 1 mile—F. Riley and A. Irvine won, H. Jenner and T. E. Ames second, Howard and Jackson third, A. E. Noad and H. Danforth fourth.

Hand-panddling, distance 100 yards—Norman Fletcher won, L. Girdwood second.

Tandem challenge cups—J. Morris and J. Irvine (St. Lambert) won, F. Shearwood and G. H. Guggan (Lachine) second, N. E. Grassett and A. E. Nash (Lachine) third, F. Stuart and F. Fairbanks (Lachine) 0, Johnson and Wright (Toronto) 0, H. Routh and C. Routh (Lachine) 0.

Boys' tandem race—Davidson and Drinkwater won, Ames and Levine second.

Single paddle, ¼ mile with turn, commodore's cup—W. Robertson (Lachine) won, Alex. Irvine (St. Lambert) second, L. Girdwood (St. Anns) third, F. Johnson (Toronto) 0, F. J. McClure (Longueuil) 0.

Four in a canoe, distance ½ mile—Fairbanks's crew (Lachine) won, McClure's crew (Longueuil) second, Nash's crew (Lachine) third, Routh's crew (Lachine) fourth, Irvine's crew (St. Lambert) fifth.

Dugout canoe race, thirteen in each canoe—Ste. Rest crew won.

The officials were: Referee, J. G. Ross; starter, Duncan Robertson; timekeeper, C. R. Christie. The judges were Dr. Andreas, S. O. Shorey and A. Boyer.

AN UNKNOWN QUANTITY.—The canoe Alle, built by the St. Lawrence Skiff Co. for Mr. J. Graham Fraser, and fitted with the Martin centerboard steering gear, will be entered for the races at Stave Island. There is no question of her ability to outmaneuver anything afloat, the movement of the helm and canoe being simultaneous. As to speed her fine lines and extraordinary stability are marks of promise. She has been sailed alongside of the Aldeck, sister of W. S. Grant's Pappoose, and outweathered and outfooted the plateboard boat handily. Her 5ft. of unobstructed cockpit allows her a place in the cruiser class. Mr. W. S. Grant will sail her.

A. C. A. MEMBERSHIP.—Northern Division: John B. Turner, W. B. Fullerton and T. P. Richardson, Gananoque, Ont.; W. E. Christie and B. T. Kirkhouse, Montreal; W. J. Millican, Galt; G. R. Baker and G. P. Scholfield, Toronto. Atlantic Division: T. Knight Durham, of Red Bank.

THE A. C. A. MEET.

WE have just received the following report for publication, it having been delayed by a mistake:

Commodore H. C. Rogers, American Canoe Association:

The Committee on Camp Site and Arrangements for 1889 beg respectfully to report that they have held several meetings at the site of the proposed camp, and that the western end of Stave Island has been selected as the most desirable place. The island is located about two miles N. E. of the old camp at Grindstone Island, is just over the Canadian boundary line and is an ideal place.

The ground slopes evenly toward the S. W. and S., and most of it is well shaded. The surface is cleared and the landings, while somewhat stony, are good.

The ladies' camp, or rather "Paradise Park," will be located about half a mile north of the general camp, and is so situated that while within easy reach of the general camp, both camps will be free from interference.

The camp store will be located to the N.N.E. of the general camp, and can be reached from both camps by water or land.

Arrangements have been made for a general mess, and the usual price of three tickets for $1 will be charged. The same party will run the camp store.

The Deseronto Ferry Company will have their steamer stop at the camp four times each day, and the rates will be: To Gananoque, Ont., 10 cents, to Clayton, N. Y., 15 cents. Canoes and camp kits free. Steamer's name is Deseronto.

Notices have been prepared, under your supervision, to be posted in the hotels and on river steamers, etc., informing the public that the camp is not open to the public except on Aug. 21, when visitors may land without badges.

Members' friends may be permitted to land on any day, but they must wear the regular "guest" badge. Your committee would respectfully recommend that this provision be strictly enforced.

A very capable man has been secured as chief carpenter, and as he has had considerable experience in the line of building wharves and landing stages at several meets at Stony Lake, we feel he and his associates will give general satisfaction.

A member of the site committee, Mr. J. G. Edwards, will go to the camp on Aug. 5 and will attend to general matters, while the remainder will report at an early day.

In conclusion, Mr. Commodore, it is but fair for the chairman to say that all, or nearly all, of the committee's work has been done by yourself, and the other members of the committee, namely, Col. J. Z. Rogers, of Peterboro; Mr. J. G. Edwards, of Lindsay; Ford Jones, of Brockville, and C. E. L. Porteus, of Kingston, while the chairman has done very little. It is proper for the members at large to know this so that they will give credit to those who have worked so well for the success of the 1889 meet.

Trusting that our report will prove satisfactory to yourself and the Association, I am, sincerely yours,

ROBERT J. WILKIN, Chairman, etc.

BROOKLYN, N. Y., July 22.

Mr. C. H. Porteous, of the Camp Site Committee, sends the following information:

Time Table of Steamer Deseronto.—Leaves Clayton for camp 11:45 A.M. and 5:15 P.M. Leaves Gananoque for camp 7 A.M. and 3:45 P.M. These hours give close connection with express trains at Clayton and Gananoque.

Fare for Members.—From Clayton to camp or return 15 cents. From Gananoque to camp or return 10 cents. Canoes and kits free.

Camp Address.—For American letters: "A.C.A. Camp, Clayton, N. Y." For Canadian letters: "A.C.A. Camp, Gananoque, Ontario." Letters thus addressed will be delivered daily at camp.

The distance from Clayton to camp by way of easterly end of Grindstone Island about 6½ miles. Steer for Gananoque Narrows Light, 1½ miles northerly from eastern end (camp site of 1886) of Grindstone Island. Distance from Gananoque to camp 4½ miles. Steer for Jack Straw Light and then for Gananoque Narrows Light.

Mr. Geo. C. Forrest, of Hartford, writes us inclosing the following letter:

DEAR SIR—I have yours of the 26th and 29th ult., and note fully what you say. Upon reflection, I have decided to make a special arrangement with the canoeists who forward their canoes to Clayton by freight over our line and reship same to original point of shipment over our line, and to give them a one-half rate on the return. So, if you will kindly convey this information to the members of your organization, advising them it will be necessary to preserve the paid freight bill or receipts which they get in paying charges at Clayton, to present same to our agent when they wish to make return shipment. Same to act as evidence that the shipment was received at Clayton by freight over our line.

We shall apply the above rule as far as possible, but cannot do so where we have through tariffs to points outside of New York State. The only existing through tariffs we have are from Clayton to the West via Suspension Bridge, also Clayton to New England via Norwood and the O. & L. C. road. So any shipments being returned via Utica, Rome, Syracuse or Oswego will come under this special arrangement all right, and we have no interstate tariffs to conflict.

So, for the general rule, I will agree to return canoes under above condition from Clayton to Utica, Rome, Syracuse and Oswego at one-half tariff rate, provided we have received our full tariff rate to Clayton, same as in your case.

I trust this will be entirely satisfactory.

F. W. PARSONS, G. P. A. Rome, Watertown & Ogdensburg R.R.

LAKE HOPATCONG C. C. CHALLENGE CUP.—The second race for the Breslin challenge cup, won by L. B. Palmer on July 4, was sailed on Aug. 4. The contestants were Mr. N. H. Smythe, of the Brooklyn C. C., in the canoe Vagabond, and Mr. D. D. Gessler, of the Hopatcong C. C., in the canoe Sylph. Mr. Palmer did not defend his cup. The race was sailed over the 4-mile triangular course of the Hopatcong C. C. in a heavy wind. L. J. Pilcher gave the signal for a flying start at 2:38. Sylph crossed the line first at 2:38:09, followed by Vagabond at 2:38:19. Catching a wind Sylph increased her lead by 50ft. and pointed away for the first buoy with the wind very fresh. Vagabond followed. First buoy rounded, Sylph 2:39:02, Vagabond 2:40:38. Distance between start and first buoy, one-half mile. On the long stretch between buoy No. 1 and No. 2 with the wind astern Sylph gained steadily on Vagabond. Buoy No. 2 was rounded, Sylph 2:48:04, Vagabond 2:51:19. Sylph still gained and crossed the finish at 3:00:01, followed by Vagabond, who, while not crossing finish, arrived in at 3:06:31. The full times were:

	Start.	1st Buoy.	2d Buoy.	Finish.	Elapsed.
Sylph	2 38 09	2 39 02	2 48 04	3 00 01	0 21 52
Vagabond	2 38 19	2 40 38	2 51 19	3 06 31	0 28 12

The Breslin challenge cup was offered by the Lake Hopatcong C. C. at its second annual regatta, held July 4, 1889, at which time it was won by L. B. Palmer, of the Ianthe C. C., but the race of yesterday gives it to Mr. D. D. Gessler, thus bringing it back to the Lake Hopatcong C. C.—L. P. P.

A COMPANION WANTED.—*Editor Forest and Stream:* I intend to take a canoe trip to Boston the last of August or the first of September, and would like to get a canoeist from Lowell or Lawrence to go with me for a week or so. If any who would like to take the trip will write to the address below I will make arrangements with them. This is my first cruise, and any points in regard to camping out and the tides will be thankfully received. Some of the Puritan C. C. of Boston took the trip last year, and were well pleased with it.—BURT W. KELLEY, Lowell, Mass., Box 385.

PHOTOS OF THE ATLANTIC DIVISION MEET.—Mr. W. R. Tobias, of Perth Amboy, N. J., has for sale the following views of Atlantic Division camp, Cheesequake Beach: No. 1, group of A. C. A. men. No. 2, the camp from the west end. No. 3, tents of the Red Dragons and Washington. No. 4, cooking breakfast; Vaux. No. 5, start of the cruising race. No. 6, Hobart "all over" cruising race. No. 7, winning canoe passing home buoy; cruising race. No. 8, on the beach, after the morning races. No. 9, unlimited race; the start. No. 10, unlimited race; out at sea. No. 11, sailing; upset race. No. 12, coming in from the upset races; Vaux. No 13, on the beach during the upset race. No. 14, tandem paddle race; the start. No. 15, hurry-scurry race; in the water after the boats. All of these views are cabinet size except Nos. 1 and 2, which are 7x9 size. Price for whole set by mail, $2. Single copies, cabinet size, 15 cents; 7x9 size, 35 cents.

CRUISING TO THE A. C. A.—Vice-Com. Tyson, Mr. A. M. Rice and Mr. J. W. Sparrow, members of the Toronto C.C., started July 27 from Toronto to cruise to Stave Island, in canoes Isabel, Dixie and Idler. Their route covers a hundred odd miles on Lake Ontario; then through the Murray Canal, three or four miles; through the Bay of Quinte, about forty miles; Adolphus Reach and the North Channel, about thirty-five miles; then the St. Lawrence River, twenty odd miles. They intend to take things in a leisurely manner, and expect that ten days will be sufficient to make the trip, allowing for probable detention by heavy weather on such open water.

Answers to Correspondents.

BLUE BELTON, New York.—The blue belton is an English setter. The standard and points for judging all breeds can be obtained at this office. Price, 50c.

L. H., Ohio.—The Ohio law relating to hunting rabbits with ferrets reads: "Whoever, upon the premises of another, uses or employs, or attempts to use or employ, ferrets for the purpose of catching rabbits, or driving them from their burrows or hiding places, shall be fined for the first offense not more than twenty nor less than five dollars, and for any subsequent offense not more than one hundred nor less than fifty dollars."

W. C. C.—1. Is not the Colt Lightning the fastest shooting gun there is? 2. Concerning the propellant force of gunpowder, could you not obtain good results by mixing Schultze or E. C. with gunpowder, or by putting in the black powder first. I don't of course mean just to prime the cap. 3. Would it not be a good plan to mix fine and coarse gunpowder, or to put in half the charge fine and the other half coarse; for instance, in loading 12s, put in a dram of fine and then a dram of coarse? Ans. 1. In tests of speed familiarity with the arm generally counts more than style of weapon. The fact that it is not necessary to remove the arm from the shoulder makes it very quick. 2. No; such mixtures are not satisfactory. 3. No; better to shoot a homogeneous powder.

F. P., Saugerties.—Will you be kind enough to give me some information as to where I can procure a quantity of wild rice from a reliable dealer, when and how to plant it, and cost per bushel? What would be the probable chances of successful growth in the bays along the Hudson River at this point and in small lakes here? Will it grow in sluggish, dirty streams, and if so, does it tend to improve the quality of those waters? Will it drive out other aquatic vegetation? Ans. It will be supplied by Chas. Gilchrist, Port Hope, Ont., or Richard Valentine, Janesville, Wis. Cost, $2 per bushel. Sow it in the late fall; soak over night and scatter broadcast in shallow water. It should do well in the Hudson, as it has in the Connecticut. It will grow in sluggish streams and in lakes, and in some places, notably in a Long Island stream, it has not only overcome other vegetation, but choked the stream channel as well.

DODGE'S PATENT
Collapsing, Folding, Landing and Minnow Net Frame.

No. 1 represents the frame unfolded and expanded, ready for use. Can be unfolded and expanded with the net on the ring (in 30 seconds) by the same motion that is used to open an umbrella. The ring is 12in. in diameter, made of steel, round and strong where it joins the stalk, and narrow and light at the outer side. The other working parts are made of brass, nickel plated. Nos. 2 and 3 represent the frame collapsed and folded, staff unjointed ready to pack. Can be carried in tackle box, trout basket, grip sack or pocket.

PRICE COMPLETE, $4.00.
J. N. DODGE, 278 Division St., Detroit, Mich

No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa
Is Absolutely Pure, and it is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.

W. Baker & Co., Dorchester, Mass.

LOG CABINS
AND
HOW TO BUILD THEM.

By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

Increasing Sales Attest the Popularity of THE GENTLEMEN'S CIGARETTE.

SPECIAL FAVOURS.
Manufactured only by
KINNEY BROS.
(KINNEY TOBACCO CO. Successors). Also manufacturers of the Old Reliable
SWEET CAPORAL.

SPORTSMEN SMOKERS
SHOULD ALL SMOKE OUR CELEBRATED

Hand-Made Havana Cigars.
MADE IN TWO STYLES AND SIZES.
LONDRES PERFECTO, 5in. long @ $7 00 per 100
COCHAS ESPECIALS, 4½in. @ 6 00 "

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

A. W. FOOTE & CO., Sole Manufacturers,
125 Maiden Lane, New York.

The Diseases of Horses;

Their Pathology, Diagnosis and Treatment. To which is added a complete dictionary of equine materia medica. By HUGH DALZIEL.

A very complete, concise and intelligible treatise, conveniently arranged. Every horse owner should have such a book. Paper, 102 pages. 75c.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

Wanted.

WANTED.—TWO YOUNG FELLOWS TO make up a party of four, to spend two weeks in the Adirondacks; deer and trout; start Sept. 1; expenses less than $35 each. Address MATHIAS COMBES, Amsterdam, N. Y. 1t

For Sale.

TROUT STREAM.

For Sale—1000 acres of land within four miles of the city of Cheboygan, Mich., on which there is five miles of the best stocked trout stream in Michigan; hatching house, two dwellings, ice house, barn, stables, etc., which cost over $3000, and forty acres of cleared land, all for $10,000; $6000 in cash, balance in five or eight years at 7 per cent. Ill health is the owner's only reason for selling. Apply to WM. ELLIOT, Box 204, Cheboygan, Mich. may16,3mo

FOR SALE.—ONE FINE REMINGTON match rifle, .32 40, one Smith & Wes on .32-cal. target revolver, new, one Stevens bicycle rifle, .22-cal., 10in. barrel. These arms are guaranteed accurate, in first-class condition, and will be sold very low. Address I. S. WEAVER, 212 East German st., Baltimore, Md. 1t

Chester White, Berkshire and Poland China Pigs, fine setter dogs, Scotch Collies, Foxhounds and Beagles, Sheep and Poultry, bred and for sale by W. GIBBONS & CO., West Chester, Chester Co., Pa. Send stamp for circular and price list.

LIVE WHITE HARES (*Lepus Americanus*), captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at $3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner. J. G. RICH, Bethel, Me. dec16,tf

LIVE QUAIL. SEASON CLOSED. Re-open Sept. 1. Send orders early. Other specialties, live deer and English pheasants. Also English partridge and pheasant eggs.
E. B. WOODWARD, Commission Merchant, 174 Chambers street, New York.

WILD RICE.—THE GREATEST WILD-fowl food. Send your orders now for fresh seed. R. VALENTINE, Janesville, Wis. aul,tf

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 15, 1889.

VOL. XXXIII.—No. 4. No 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

PUT THE DOG IN CONDITION.

THE hunting season will soon be here, and the sportsman should see to it that the companion, upon whom he depends for so much of his pleasure while enjoying his outing, is in suitable condition to perform his part in a satisfactory manner. Nothing is more disheartening and disgusting in shooting than to see one's dog quit after an hour or two of work, fagged out and done for. A long hunt with little or nothing to show for it may yet have compensations if man and dog have worked together sturdily and faithfully, each doing his part. But there is no bright gleam amid the gloom when before fairly warming up to the day's work, one's pointer or setter gives out from simple inability to go on. And it is all the worse when the shooter knows that his own negligence is to be charged with the dog's lack of condition. The poor animal that lies panting at your feet, or with drooping head and stern slowly drags himself along at heel, you well know would go if he could; and when you reflect that he would hunt if he had only been properly treated, you resolve that the next time you will attend to the matter and see that he has the necessary preparation, forgetting that the same thing happened last year, and that this same resolve was then made.

It is comparatively an easy matter to put a dog in proper condition for work if he is in good health. Get out of bed at break of day, whistle up your companion and take a tramp with him through the fields or on the road. A mile out and back will perhaps be sufficient the first day, the distance to be gradually increased as your judgment dictates, until you can easily do at least five times the distance. A couple of weeks of this work, with proper attention to diet, will bring out both dog and man in better condition for opening day than would be believed by those who have not undertaken such a preparatory course.

Many a good field dog has been put down for a "quitter," when the owner was much more to be blamed than the dog. It not infrequently happens that the sportsman who joys in the possession of a bench winner, and fondly dreams that he has a canine paragon, takes the poor brute into the field and puts him through a half day's hunting, which should be pleasure, but is actually hard punishment; and all because not the first thing has been done to condition the animal for the field. One encounters scores of sportsmen who are ready to decry bench shows, and to pooh pooh bench show form and bench winnings, because they have known some famous bench winner to be "all beat out" by a homely, ungainly dog that would be hooted off the bench; and this simply because the bench show dog's master has foolishly been content with his prize records, and has paid no attention to conditioning his dog for field work. The biggest pile of bench winnings ever accumulated could not make a pointer nor a setter a stayer in the stubble, but there is no reason under heaven why the bench winner, if properly cared for, should not be a field winner also.

BITS OF TALK.

IX.—FIRST LESSONS.

"HE was the first one I ever saw shoot on the wing, and over a dog," said the Famous Shot, "and he gave me a cue that day to the best sport in the world. I have often thought that I owed that man some acknowledgment, but, as a matter of course, he was my instructor only by the purest chance; he was out after a bag of birds, and a pile of fun; and never dreamed that the country boy perched on the top rail of that old Virginia fence was taking it all in as a new and joyous revelation of what partridges, as we called them, were made for. I have tried to hunt him up, but he must have been dead for years; he was white-haired then, and that was twenty-five years ago."

"One does feel a peculiar gratitude toward the shooter who initiated him into the mysteries of the craft or the angler who first showed him the knack of throwing a fly," said the Fisherman, "they are our fathers in sportsmanship, and for all you know you yourself may even now be an object of such tender regard on the part of some urchin to whom you have 'all unbeknownst' taught the art."

"I took my first lesson," said the Major, "from that rare sportsman, Ethan Allin, whose death was recorded in FOREST AND STREAM only a week or two ago. One day when I was out, I came across Ethan. He was shooting with an old dog and a puppy, which he was putting through a course of sprouts. I don't remember whether he asked me to go along with him or not, but I joined him anyway, for youngsters don't always wait to be asked; and by and by the old dog came to a point. Ethan sent me in to flush the bird. I could go right to the spot now with my eyes shut, though it happened forty years ago."

"Your photographic memory is as good as an amateur camera for reproducing field scenes," put in the Fisherman.

"At any rate it's worth more to me than a thousand cameras. Well, I flushed the bird, which flew from me out of the cover into the open across Ethan's left. He deliberately raised his gun and dropped her, slick and clean. I started for the bird, 'broke shot' so to speak, for according to all the light I had had up to that time the approved thing was to get to the game as soon after the charge of shot had got there as was possible; I had never heard of a dog retrieving. With a yell, 'Hi, hi, there!' and frantic gesticulations Ethan held me back, and sent the puppy in to point the bird, and then the old dog to show the young one how to retrieve it according to Gunter. When I saw Ethan drop his bird so easily and calmly, I said to myself, 'If he can shoot partridges flying I reckon I can do it too, and I will.' I went home that night, cleaned out my old flintlock, and went down to the store for a quarter of a pound of powder and a pound of shot, the regulation allowance in those days. I had No. 8 shot this time, for Ethan had told me that the BBs I had been using were not the right sort for birds. The next morning early I whistled up my yellow and white rabbit dog Carlo."

"The one you tell the tears-and-sobs story about?"

"Yes, the same cur. We started out for glory or the grave. I posted myself at a rock ledge, near a ravine, where I knew well enough there were sure to be pa'tridges, and I had studied them enough to know that when they broke cover they would fly my way. Then I ordered the dog to go in, he had been through it many a time before for rabbits; and I clutched the old gun and waited. It was not long before sure enough a cock grouse came out of the brush and made directly toward me. I waited as long as I could, then banged away, and the bird tumbled down as dead as a stone. That was the first bird I ever aimed at flying and I could not do better to-day. 'There,' said I, 'I knew I could do it. It's easy enough to kill pa'tridges flying.' Before I could load up four or five more birds had gone out, all good easy shots, which I confidently reasoned would have been mine had I been ready for them. I went on, and when the next grouse came in range it did its part beautifully, and I went through the motions too, but at the shot it did not stop, but sailed right on, only a bit faster. At this I was simply dumbfounded; and in my astonishment I forgot all about loading, and the rest of the birds got away without a shot.

"I tried another one, and a fourth; and kept it up until powder and shot were gone, but not another bird was added to the victim of my first lucky shot. The next day I took another quarter-pound of powder and pound of shot and set out for some more of it. That ammunition was all fired out of the flintlock before night; but there were just as many pa'tridges flying around alive and well in that part of the country at night as there had been in the morning. My blazing at them was a perfectly healthy and invigorating course of treatment for the grouse tribe. Before the last charge had been fired, I came to the conclusion that it was not, after all, so beautifully simple to kill pa'tridges on the wing; and I decided, too, that a flintlock gun could not get there; it took up too much time in getting started, and the shot could not catch the bird. So I resolved to have the arm converted into a percussion lock.

"The next morning I took the gun and a dollar, and walked seven miles to the shop of Graves the gunsmith. 'Could he alter the gun?' 'Yes.' 'What would it cost?' 'A dollar and a quarter.' My jaw dropped. A dollar was big in those days, and it was just the size of my pile. Graves was a man of feeling, he recognized the disappointment of the small boy with the big gun, and he bargained to fix over the lock for the dollar and two pa'tridges to be delivered at some future time. Joy reigned again; but there was another damper when Graves told me to come back in three days for the gun. Again my jaw dropped; there were pa'tridges to be shot, I must shoot them, and I did not see how I should ever wait three days before trying it again. But this time again fortune favored the boy with the gun. A man who was in the shop said to Graves, with a laugh, 'Let my job wait, and fix the boy's gun; I can wait; he can't.' And Graves took hold of it. I watched every motion, every movement of hammer and file; and by night I was home again, with a percussion gun, another supply of powder and shot, and a box of G. D. caps. I left my dog home in the morning, for I had come to the conclusion that I could do better without him. To make a long story short, before the end of the season, by sticking to business pretty close, I could kill about one out of every three grouse flushed; and if you think I cannot shoot on the wing now, come up next month, and I'll open your eyes. But what I started out to say was that I have always had a kindly feeling toward the man who first showed me that the thing could be done."

THE terrible drouth which has prevailed in the Park this summer has resulted in an unusual number of forest fires, but by his energy and promptness Captain Boutelle, the Superintendent of the Park, has succeeded in subduing or limiting them in every case except one. This fire, which is still raging between Yellowstone and Shoshone Lakes, was not discovered until it had been burning for some days and was entirely beyond man's control. Only a rain storm can put it out.

A WISE game law reflects the intelligence of a community; a foolish one its want of sense. The North Carolina law protected deer from the first of January to August fifteenth. It having been repealed, with respect to that portion of the State lying east of the Wilmington and Weldon Railroad, any one who is mean enough to do such a thing can now kill deer at any season, even in the Florida style of butchering does heavy with fawn.

THE index to Volume XXXII. is contained in this issue.

The Sportsman Tourist.

SHOOTING ON MOUNT OLYMPUS.—II.

(Continued from Page 22.)

I LAY awake a while meditating on my fortunate shot and on the prospects of bringing bruin to final account in the morning, but soon a black pall clouded my vision, and weary with the day's march I slept the sleep of the just. I had taken only a short nap, at least so it seemed to me, when I felt the chill night air creeping into my bones, and rousing myself to wrap the covering closer around me, I caught the sound of voices with the morning freshness about them, and springing up in bed I saw the first faint roseate hues of dawn in the eastern sky through the open portals of the serai. The voices were on the other side of the yard, and going to the door I saw that Timayanes was already astir and kindling a fire on the outdoor hearth. Half a dozen powerful dogs, apparently half-bred greyhounds, contrasting strongly with the street dogs of the East, were prowling about the yard, and one of them sighting me, set up a deep bay. He was promptly called to order by Ahmed Khan, who was one of the speakers I had heard, and at that moment the arrival of another party with half a dozen dogs, diverted attention of men and dogs alike from me.

The business of the toilet did not occupy me more than ten minutes, but in that short interval day had broken, and a perfect Babel of voices in salutation or conversation, mingled with the occasional growling of dogs and the reproofs of their keepers. Ahmed Khan presented me to the assembled village head men, and this ceremony performed, every one sat down to a hasty meal, which consisted principally of bread and dates and sparkling spring water, but Timayanes, knowing my weakness, had prepared a savory omelette for me. This was soon disposed of, and long before the sun had risen above the horizon, the order of procedure had been decided on, although not without some excited discussion, and by means of Timayanes I understood that I was to take up my first position about 500 yards down the southern slope of the mountain, and that the beaters would drive the game toward me, or rather toward a line of marksmen of whom I would be one.

They had certainly allotted me a promising spot. It was on a spur of the mountain forming a sharp bend in the bubbling brook which washed its base. There was a huge granite boulder near the point of the spur, and right in front of it a large cedar tree, which apparently had prevented its rolling into the brook. Behind me the mountain rose several hundred feet, densely covered with dark cedar and fir trees on ridge and slopes, while in front of me, across the stream, was a considerable fringe of open grass, and between it and the forest on the opposite slope was a clearing nearly a hundred yards wide, on which the wild box had recently been cut out for market, and as I learned afterward the exploitation of this timber for engraving purposes is the principal source of livelihood of these mountain villagers. There were two or three marksmen between me and the village, but not in a direct line nor in sight, and as soon as I was left to myself I lighted my pipe, knowing that it must be at least a quarter of an hour before the beating would begin, and as I puffed leisurely away, with my Winchester and the smoothbore loaded with ball at hand, the first welcome but distant bay of one of the hounds broke on my ear. Now another and another took up the strain, and grasping my Winchester I stood against the cedar in eager expectation.

At first the sounds drew nearer and nearer, but very soon it was evident that the dogs were not coming my way, and laying down the weapon I sought a more easy posture.

As I seated myself commanding a view of the stream downward for a hundred yards or so before it was lost in a bend of the hill, there stood facing and watching me a large buck deer with a grand pair of branching horns. He was on my side of the brook, about sixty yards from me, and had evidently come down to drink without observing me, and as I was to leeward of him he could not have scented my tobacco.

He must have raised his head from the water at the sound of my changing posture, for, as I looked, the water dripped from his mouth. We eyed each other for an instant, then my hand stole round toward my smoothbore, but ere I could grasp it there was a wild plunge through the forest, and springing to my feet I brought the gun round to bear in the direction of the sound, but the deer was gone. Those who have been there can imagine how fit I was to kick myself.

Soon the baying of the hounds was heard again, and, although at a great distance, it appeared evident that they were coming in my direction. I heard a shot which sounded at least half a mile off, and a minute later a second somewhat nearer. The game was evidently being beaten up along the line.

Standing motionless against the cedars, the smoothbore grasped in both hands, I stood prepared for action when the opportunity arrived, but, impelled by some instinct, I turned my eye across the brook to the left, and there, just emerged from the forest, and listening to the distant baying of the hounds, stood a grizzly wolf. Oh, that I had the Winchester in my hand, or that I could exchange without attracting his notice!

At that moment there was another shot; the dogs bayed in chorus evidently nearing us, and while this was in progress I noiselessly changed weapons, and drew a bead upon the wolf. At that instant he sighted me, but before he could move I had him between my sights, and drawing trigger, I saw him drop on his haunches, and heard the angry yelp telling that the ball had struck home.

From the moment the last shot had been fired down the line, the baying of the dogs announced that they were closing in on their wounded quarry, which I concluded was a bear or a boar, but which afterward proved to be an old wolf. Another shot was fired, which appeared to have given the quarry his quietus, for the baying of the dogs ceased, and distant voices were heard distinctly.

Presently from the opposite forest came the low sharp yelp of a dog on trail, and at the same moment a pair of pheasants, started by the dogs, came flying toward me, and I heard, but did not see them, alight in a tree immediately behind me.

The pack took up the cry and the dogs were soon giving tongue in lively chorus; a shot rang out some 200yds. below me, and still the dogs came yelping on. Presently a black object came out of the forest and plunged into the grass on the other side of the creek, making almost straight for me.

The dogs came baying on some 50yds. behind, and as the quarry approached I made him out to be a boar, and seeing that he would certainly pass me at close quarters I noiselessly exchanged my Winchester for the smoothbore. By this time he was about 80yds. from me and, shaping to cross right in front of me, and being sure of my shot, even if he now should swerve, I stood motionless, letting him pass me at about 30yds., when I pulled trigger, and the ball going clean through both shoulders he fell heavily forward and the dogs were soon in upon him.

The first beat was over. The whole party of huntsmen and beaters were advancing on the scene of my last exploit. The dogs were driven off the now dead boar and my nearest neighbor claimed the quarry, or rather the score, on the plea of first hit, which he made good, his ball having lodged in the boar's haunch; the quarry itself was not much in demand among Mussulmen for their own pot, and Timayanes, who soon arrived upon the scene, looked perhaps more regretfully upon the sturdy hams than I, but he had been too well brought up and I too well instructed for either of us to claim a portion of the unhallowed food. The wolf skin was mine by indisputable law of the chase, and as the whole party came together it transpired that another wolf, a two-year-old buck deer, a doe and the boar constituted the bag of the first beat.

The sun was now more than an hour high, and no time was lost in arranging the second beat, which was a further advance on the previous lines. Beaters and dogs were detached to take up their positions along the line, and the marksmen started to cross the beat. My own course was round the base of the hill on a spur of which I had been stationed. I crossed the brook in front of me, and again at 200yds. distant, and plodded westward through the forest for more than a mile, uphill and down, crossing three ravines and taking up my position on the slope, about a hundred yards above the bed of a ravine through which a tiny stream trickled. The timber was open, consisting of oak and box and chestnut and some other trees with which I was unacquainted.

Seated on a ledge of rock I commanded a good view of the slope below me, and of that across the ravine, and lighting my pipe I began to amuse myself judging distances, but had scarcely entered on the task before the distant hum of voices informed me that the beating had commenced.

Presently a doe and fawn came trotting up across the ravine, and paused to listen just opposite to me. I drew a bead on the dam with my Winchester, but not with any intention of firing, and while so engaged a whiff of my pipe must have reached her, for starting suddenly, she wheeled around, caught sight of me and plunged up the ravine, followed by her fawn. A few minutes later a hare came climbing up the slope and had reached within 5yds. of me before she wheeled suddenly and plunged down the slope. Again a fox ran along the slope toward me and when about 50yds. off, turned round to listen, offering a fine broadside shot. I was unwilling to fire lest I should disturb bigger game, and the next moment he turned, sighted me, vanished behind a tree, and I saw him no more.

The dogs now began to give tongue, and very soon the whole pack was heard in full cry all along the line. A stag came plunging over the crest of the opposite hill and paused to listen, turning almost broadside on to me. He was about 250yds. off, as nearly as I could judge, and resting my elbow on my knee, I prepared for a steady shot. Before I could get him into line he wheeled toward me and trotted down the hill. This was bringing him nearer, and I reserved my fire until he reached the bed of the ravine, where for a moment I lost sight of him.

He soon reappeared, going up the slope at about 150yds. distant, and increasing his distance at every stride, but as I brought my Winchester to bear he glided partly behind a tree. My finger was already on the trigger, the shot rung out, and I heard the beast galloping away, and caught transient glimpses of him between the trees, but could not get another sight of him that gave any chance for a shot.

All this time the dogs were coming on in full chorus, and now shots were heard in rapid succession along the line. A wild sow and litter of eight or ten young ones crossed my station at about 70 or 80yds., grunting as they went, and I raised my gun to fire, but at that moment the yelp of an injured dog convinced me that there was nobler quarry afoot, and I reserved my fire, giving all my attention to the baying of the dogs which were held at bay by some animal about 200yds. to my right.

A shot rang out from the nearest station below me, and the quarry now made straight for me, the dogs closing in and making life miserable for him at every step. At length he came into view, a big brown bear, close pressed by the dogs, and seeing that progress was slow and that the villager of the nearest station, having reloaded, was hastening to take part in the fray, I felt like having a hand in too, and made good time getting over the intervening space. As I came up the turbaned son of the Prophet gave the bear a shot at close quarters, and while he was reloading I endeavored to improve upon his performance, but the way the dogs were dancing round him and getting on behind made it difficult. I got my opportunity at length, striking him in the neck and bringing him down, which was the signal for half a dozen dogs to close in and seize him at once, but rolling over he got one of the dogs under him, and was just getting a grip on his hindquarters when the villager and I both took him in the head at close quarters, and settled him, the dog escaping unhurt. The hunters and beaters soon assembled as at the close of the previous beat, and after a very wordy discussion I learned that there were two claimants for the bear's skin, both of whom had fired before we who gave him his quietus came on the scene, and I participated keenly in the investigation, hoping, as was suggested by Ahmed Kahn, that it would prove to be my bear of the previous evening. We found no indications, however.

Besides the bear, two wolves, a buck, three does and a fox had been shot by the villagers, and Timayanes coming on the scene I was asked what I had fired at. I reported the wolf and buck, and all hands starting to investigate, I pointed out the spot as nearly as I could recollect where the buck stood when I fired. One of the marksmen sighted the track of my bullet through the outer bark of the tree the deer had passed behind; in another moment the dogs were following on the deer's tracks, and to my surprise and delight came upon him dead about 120 yards from where the ball had struck him. The Mussulmen were not as happy when they found that he was already dead, but an old beater cut his throat and murmured a prayer over him that made the flesh good enough for the less scrupulous of the villagers.

Returning to the spot where the ball grazed the tree they stopped, pointed out my station, and evidently discussed the distance, which appeared to sustain my reputation in their estimation.

Although the sun was now high in the heavens, it was decided to have another beat before noon. Some of the beaters were detailed to gather up the game and carry it to camp, with instructions where to find us for the midday siesta.

The next drive was a great success; it covered a great deal of ground and occupied until high noon. Another bear was killed, together with five wolves, three boars, or rather two boars and a sow, three deer, two of which were females, the other a young stag, and a hare. My own share of this bag was two wolves and a hare, all of which fell to my Winchester.

This over we collected by the bank of a stream under the shade of a clump of three grand old oaks, and partook of a light meal, followed by a siesta for me and the headmen. Meanwhile some of the beaters were collecting the game, one of the pigs being allotted to the dogs, which soon disposed of him.

It was well on toward 3 o'clock before all had reassembled, and by the time they had eaten and rested it was nearly 4 o'clock; but it was only intended to have one more beat, and this being backward and nearly parallel to the ground beaten in the morning, was designed to bring us out above the village.

The marksmen having had their direction and goals indicated, it was explained to me that as soon as the dogs and beaters should be spread out in line the drive would commence, and that the marksmen would walk steadily on keeping their eyes open all around them, and not take up position unless some animal should come in sight, or the hounds come baying in that direction.

Timayanes accompanied me, and our course lay up a steep gully, at the head of which we had to pursue a zigzag course to climb to the crest of the hill. Long before we reached it we heard the distant baying of the dogs, far away below and to our left, but we pressed steadily on, sighting nothing but the solitary marksman about 200yds. distant on our left, by whom I endeavored to regulate our course. We paused a while on the brow of the hill, and while resting heard a shot far away on our left, but as all was again silent we pursued our course around the near brow of the mountain.

We must have walked at least two miles without seeing anything, when a shot rang out to our left over the crest of the hill and we paused to listen. All was still around us and we had just started afresh, when I heard some animal plunging through the forest above us and had scarcely brought my Winchester into position before a buck burst upon me through some undergrowth at about 20yds. distance. I fired as he caught sight of me and swerved, got in a second shot at his haunch as he galloped back the way I had come, and a third, a good broadside, as he reached the crest of the hill again at about 100yds. off.

This last shot hit him, I knew, for I heard the unmistakable thud of a ball striking living flesh, but before I could cross the crest of the hill I heard another shot, followed shortly by the shouting of my neighbor, who had dropped the wounded animal, and was now standing over him with his long knife dropping blood.

My ball had struck the beast behind the shoulder, rather too high to be immediately fatal, and after a careful examination it was evident that the villager's first shot had been a miss and that the buck was mine, or at least the kudos, and the extra portion allotted to first shot.

We sat down to rest here and I lighted my pipe, and very shortly we heard the baying of dogs again. The sounds grew nearer, and presently it was evident that the whole pack was coming our way.

Nearer and nearer came the music; Timayanes concealed himself, and the villager and I took up positions at about 100yds. apart, straining our eyes to get the first glimpse of the hunted quarry.

Now, along with the baying of the dogs, we heard the rush of what appeared to be a whole troop of wild animals tearing through the underbrush and scattering the stones with their hoofs.

The course was up the ravine we had ourselves climbed, but from the head of the ravine it swerved to our rear, and as they mounted the hill we obtained glimpses of a sounder of wild boar with the hounds in close pursuit. They were too far off and showed too indistinctly for a shot, but soon we heard music, which announced that the foremost dog had seized the hindmost boar, and that he held on to him until the pack closed in and tore him to pieces, the occasional yelping and savage growling of the dogs evidencing that the boar died fighting, succumbing only to superior numbers.

Meantime the herd had got away, and the dogs having finished their meal took up the trail again in full cry until the music died away in the distance in our rear.

The drive was over and the sun already low, and we were still some four or five miles from the village. He who had laid my deer low for me opened up communication with his next neighbor, who proved to be Ahmed Khan, and it was arranged that they should stand by the deer, waiting the advent of the beaters, while Timayanes and I pursued our way homeward.

But the day's sport was not yet over for me. We had trudged on hopeless of seeing anything, until at length we gained the brow of a hill from which we could look down over the village, nearly a thousand feet below. Our course had been too much to the left, and the country between us and the village was all cleared land, while above us rose a belt of forest, behind which the distant snowy peaks shone roseate in the setting sun.

Immediately in front of us was a buckwheat field with a brush fence, and as it was nearer to go through than around it, we looked for an easy place to get over the fence. Timayanes took the lead, but no sooner had he mounted the fence than he sprang back and motioned to

me to take his place whispering "bear" in a very excited manner.

The bear was there, some 200yds. from where I stood, and too busily engaged upon the business in hand to take much notice of what was going on around him, and as he was close to the fence, I took the smoothbore in hand and determined to stalk him, telling Timayanes to keep close to me with the Winchester.

When I thought we had about reached the spot, I peered over the fence; the bear had heard or scented us and had paused to take notes, and immediately my head showed over the fence, he slipped away at a pace which I would hardly have given him credit for.

Fortunately I had the smoothbore in my hand, and I gave him right and left in rapid succession, the second ball taking him in the back of the neck, and dropping him at about 60yds. I saw him still crawling away; and hastily exchanging weapons with Timayanes, I followed the beast up, and began pumping lead into him at close quarters, but it was not until the ninth ball had been lodged squarely in his brain that he turned over dead.

We now made the best of our way to the village, arrived at which we heard the distant voices of the returning huntsmen and beaters.

Some game was already in camp, and active operations in cooking were soon in progress, the whole party engaging in one common feed, before making a division of the spoils. Timayanes broiled a venison cutlet for me that I ate with gusto, following it with a cup of fairly good Mocha. This disposed of I was soon asleep, but the villagers hung about the fires feasting and smoking and recounting the events of the day until far into the night.

A.

KENNEBAGO MOUNTAIN CAVE.

IN 1850 the State of Maine placed on the market certain townships and parts of townships of public land in the Bingham West Kennebec Purchase, so-called. Most of these lands were remote from civilization, in which were high, rugged and precipitous mountains, deep ravines and rushing cascades, although in the valleys between the mountains there were beautiful lakes and smooth running rivers, also open meadows of tall grasses and reeds, where the moose, caribou and deer roamed in freedom and peace; also timber lands where the woodman's axe had never struck a blow. These lands were advertised for sale by the land agent of the State, and were situated in the northern part of Oxford, Franklin and Somerset counties, inland many days' journey from settlements or roads, or in the deep recesses of the mountain wilderness. In the year 1835—fifteen years after Maine had become an independent State—there sprang up a great excitement in timber lands, and speculation ran so high that the authorities found it necessary to township off the untrodden wilderness of wild lands belonging to the State. These lines were run by competent surveyors at that time. Many of these townships had been sold by the State to individuals and corporations, leaving the most remote and least valuable portions still in possession of the State. Many speculators were now on the *qui vive*, looking up township lines and making explorations. Among that class was Mr. E. S. Prentis, ex-mayor of Bangor, a prominent lawyer, and he employed the writer of this article to guide and assist him in exploring certain tracts of land situated in the counties named, more especially some parts of townships bordering on the Canada line.

It was in the month of August, 1850, that we started out in our light birch canoe well stored with camping outfit. The basis of our supplies was salt pork and hard bread, with pepper and salt, sugar and tea, a ball of butter, and a little flour. Our cooking utensils consisted simply of fry-pan, wire broiler and two-quart tin pail. Then we had each a blanket, also a light axe and a small gun. Our ammunition consisted of powder and bird shot No. 6, with bullets for bear, moose or other large game, should any come in our way. We started from Lake Mollychunkemunk and made our way up through Mooseluckmeguntick and Cupsuptic, sacking our canoe and camping kit across the carries between the lakes, and landed at the head of the last-named lake, where we hid our boat and made up our packs for the journey.

We had charts of the township lines as they were run out in 1835, and a good compass, and our plan was to make up our course every morning, and go entirely by compass. We allowed one mile an hour through the thick woods as an average progress, and kept a sharp lookout for old blazed or spotted trees, and when we found one we cut into it to see how many years old it was—counting each ring or grain of the tree since the blaze was made, as signifying a year's growth. Thus we distinguished between our township lines and lines made by Indians years before or after the survey of these lands. When we were sure we had struck a township line we followed it up to the corner, where the surveyor marked on a tree the number and range and whether it was the northwest, southwest, northeast or southeast corner; thus giving us our exact position in the forest, and on the chart, and making a true starting point for our next object.

As we struck into the thick woods from our canoe we soon saw marks and signs of wild beasts—deep paths—worn into the ground a foot or more, and fresh tearings on the bark of trees made by bears; also foot prints of denisons of the forest. The further we proceeded northward and away from the habitations of man, the thicker these signs became, until we not infrequently got a glimpse of some heavy animal just escaping out of sight. Partridges and other birds were extremely tame and abundant; indeed we did not pretend to shoot them except just before a meal; and we never lacked for game at our meals on this trip. We made our time pass pleasantly by each in turn relating some adventure either of his own or some one else's experience.

Two persons traveling together in the woods make much more noise than one, and I think if there had been but one, or in other words, if I had been alone, I should have got chances to shoot many large animals of various kinds. But we were not on a hunting excursion, still we were amid wild animals. On coming to a brook we would try for trout and soon catch enough for a good meal. I often saw them jump out of the water and take the hook before it touched the water. And all the streams and ponds on our way seemed to be just swarming with fish life. Camping at night we cut large trees and built big fires at our feet, spread fine-picked evergreen boughs on the ground for a bed, and stretched out in the open air covered with our blankets—with the starry heavens over our heads—minding well to keep up a good blaze, for we well knew that our best protection from wild beasts was our fire.

Everthing went on pleasantly for several days. We traveled about ten miles a day over swamps, mountains, streams, large or small, and this would have grown monotonous only for the spice of hearing the cries of wild animals every night, some of which seemed to come uncomfortably near, especially when we awoke to find our fires growing low and detecting in the howl not far away the well defined voice of the wolf. But after a few days our tired bodies would give way to slumber in spite of the varied noises all about us after nightfall. It stirs the blood of the fatigued woodsman to sit on a log in the early evening and listen to the calls of the denizens of the forest. They seem to take that time to try their voice and see what reply they can get. One unaccustomed to this manner of life would expect to be eaten up alive before morning.

After ten days steady traveling northerly we found mountains growing more abrupt, ravines deeper, timber shorter-bodied, and very little level ground, and the general face of the country rough and rocky, as if nature began to form an impenetrable barrier to our advance, the whole region looking cheerless and forsaken, imparting to us a forlorn feeling of hopeless insecurity. Often while reflecting in these woods we could not but realize the horror of our situation should either of us get injured by any accident, either with gun or axe or in any other way, so that he could not travel. Surely the sick one would have to be left to the mercy of the elements and wild beasts that even one of us might be saved.

Our object of exploration having been secured, we turned our faces homeward. The morning we started back was cloudy and ominous, the rising winds soughed through the treetops, the smothered roar of the distant waterfalls, and all nature seemed pregnant of some fearful uncertainty.

We had so crooked about in our wanderings, exploring various townships, and estimating their timber capacity and cash value, and other objects connected with our enterprise, that to make a comparatively straight course home necessarily took us in an entirely new course. The East and West Kennebago Mountains were all the landmarks we had seen that we knew since we left our boat, and our course must be made entirely by compass home, as it had been on our journey out. In setting our compass for a start a large high mountain not very far away loomed up exactly in our course, and somewhat dampened our ardor, as we had had a taste of climbing many such eminences on this trip. We had materially lessened in weight our knapsack, and so considered ourselves in light marching order, and started off as if every step carried us nearer home. The day grew darker as the afternoon wore on, but nothing of note occurred until two or three o'clock in the afternoon, when we found ourselves gradually ascending a mountain. We set our compass and found our course correct and traveled on, the ascent growing steeper as we advanced. I heard a subdued rumbling and called the attentions of Mr. Prentis to the fact. We had before heard the shaking of the ground under the heavy tread of wild animals, but this was different, and we unwillingly had to admit that a thunder storm was approaching, and we were with no protection from the elements except our common clothing. We held a council of war, and decided to go on and run our chances.

The mountain grew steeper and the storm nearer and the timber growth shorter, until as we emerged up and out of green woods into an open, ledgy, bare mountain top, and about the same time the storm broke on us in all its fury, with wind, rain and lightning. The duel of the elements was tremendous; no adequate description can be given of its fury. The play of the lightning below us on the mountain side and in the valleys, the flood of rain beating through our clothing to the very skin, the awful roar and reverberation of the thunder among the mountains, all gave us a feeling of awe, seeming more like something supernatural than a common storm.

It was growing toward night and we were on top of a barren mountain; but we had great hopes that by pressing on with our utmost speed we might cross the top and descend far enough on the opposite side to reach the timber, and so make a fire and shelter for the night. The short brush and vines spread out thickly under our feet and retarded our progress, and occasionally threw us sprawling upon hands and knees by entangling our feet. The whole top of the mountain was a ledge, having been burned over by fire, leaving an occasional stub of short wood or sharp stick stub to help trip us up. Reaching the top we found it comparatively level for half a mile or so; and as the storm cleared off we stopped, wonder-stricken with the majestic view before our eyes. To the south we could see one of the Rangeley lakes, and to the north Moosehead Lake, and intervening many ponds and sheets of water and high mountins in a wilderness of woods as far as the eye could reach on every side.

But we must push on, for the sun was lowering fast, and we knew not the distance we must yet travel to get to a comfortable place to camp for the night. As we descended the south side we found the mountain much more precipitous and dangerous traveling. The northwest side of our hills and mountains in Maine, as a rule, are very gradually sloped, and the southeast sides are abrupt and often perpendicular. Naturalists say this formation was occasioned by the drift from northwest to southeast in the glacial age of the world. Our drift was southeast, and we hurried on, often finding large seams or openings in the ledge well grown over by wild vines. A stifled cry caused me to stop and look around, as I was a little in advance of Mr. Prentice, who had fallen into a crevice or fissure a little on one side from the path I had taken; and in answering his call I found he had slipped down fifteen or twenty feet in a narrow seam in the ledge, and was sitting on a shelf of the rock that protruded out over a large, dark place, which appeared to be a room. I asked him if he was much hurt, and he said he had sprained his wrist—he guessed that was all. I worked myself down toward him with difficulty, and found it next to impossible for us to get up again that way; so, worming our way carefully down by stepping on and clinging to projecting spurs of the ledge, we soon found ourselves in a large room, and fearing to advance in the darkness, I gathered some dry sticks and leaves that had fallen or been blown into the crevice and lighted a torch.

And now my pen fails me to describe the beauties of that cave, with its stalactites of various hues hanging pendant from the roof, golden, silvery and all shades of the rainbow, as the fire cast its light against their tremulous sides. We have read of fairy tales, of mountain retreats and wonderful sights in the recesses of the earth; but I never imagined anything one-half so beautiful as I now saw.

The room itself was oblong, perhaps 20×40ft., and its irregular sides might be 20ft. high. We did not stop long to examine the beauties of this cave, feeling it possible that we were prisoners in this lonesome den, but began to search for some opening to make our way out; but what was our surprise and horror on looking about to find bones and skulls of animals scattered promiscuously about the place, some of which were very large and different from anything we had ever seen before, although we had hunted and killed all kinds of wild animals indigenous to this part of the country.

Going around the unequal sides of the room we discovered a passage way, long and narrow, leading into another apartment, through which ran a small stream or brook out of whose sands we brought away specimens having the appearance of gold; and listening we could hear the growling and snarling of some large animal, which appeared to be some distance further into the mountain. This gave us quite an impetus to escape if possible from our seeming prison.

Creeping along a well-worn pathway on the south side of the cave, we discovered a glimpse of daylight in the distance, and lost no time in following the pathway out to the light. We were not, however, one moment too soon, for the animal, whatever it was, had discovered us by scent or our talking, and came toward us fiercely growling and gnashing his teeth, until we had gained the open air through what appeared to be a common pathway for wild beasts.

We made the best of our way down the side of the mountain until we reached the timber, when we cut spruce and white birch and made a roaring fire, stripped ourselves of our outer garments, and commenced the process of drying our clothes and cooking our supper, after which we laid our tired bodies down to rest and sleep. Although the stream in the ravine beside which we were sleeping roared like the elements in a thunder storm, and the wind howled among the craggy rocks of the steep mountainside, and the proximity of wild beasts we had heard, all would, in the beginning of our journey, have kept sleep far from us, and a scary night of frightful visions before us, we slept on, and awoke in early morning refreshed and ready to devour our frugal meal. After breakfast, our courage being somewhat renewed, and the morning clear, I said to Mr. P., "Let us go back to the cave and look it over a little." "Well," said P., "if you feel like it, and have got some bullets left, I am willing, but we may have some serious business with that varmint that followed us out last night." "We must run our chances." I said, "but this is once in a lifetime, and too good to be lost." So we were soon climbing up the steep sides of the mountain on our back tracks again, with a good-sized roll of birch bark for a torch.

Arriving at the entrance we came out of the night before, we were amazed at the perpendicular height of the mountain over our heads, very near seventy-five feet, along the whole side as far as we could see. Had we not come down the crevice into the cave and out on the lower side, we should have had to go the length of the mountain around to get down its steep side.

We now cut a stick three feet long and split one end of it, and filled the split with the bark, touched a match, and started in. Watching for signs beside the little stream that ran along the passageway, we discovered in the golden sand a footprint of a large animal with long toenails or claws—a round foot pressed deeply in, as if the creature was a heavy fellow. We also saw lesser tracks in the sand of various animals; some we thought were of the loup cervier, others bear, wolf, badger; in fact it was a well-trodden path into the cave. The avenue we were following narrowed after leaving the brook, so that we had to stoop and sometimes crawl through narrow holes. After going 100ft. or more we came into another room, not so large as the first, but darker and covered over the top with small stalactites and on the bottom with bones and skulls much the same as the first.

Looking, with our torch in hand, we found another passageway leading further in, and on starting in a short distance we got a draft of air strongly impregnated with the odor of wild beasts, such as we had smelled in a menagerie. We hesitated; and, listening intently we heard the crying of what we thought was young panthers. After listening intently for some moments, I said to Mr. P., "Shall we go on or go back?" "Do as you like," said he, "but I think it foolhardy and dangerous." And I was as willing as he to retrace our steps.

On reaching the great chamber into which Mr. P. had fallen the night before, we heard the well defined growl of the animal that so frightened us before coming through the narrow passage from the outside; we involuntarily crept back to the further side of the cave. I cocked my gun, which was loaded with two bullets, and as the animal rushed along the narrow passage I fired. The sound stunned us both, and the effect lasted several days, feeling very disagreeable. As our torch was now almost gone out I hardly think I hit him, but he gave an unearthly yell as he leaped along toward the room we had left before. We only got a glimpse of his receding form, but that was all we wanted of him.

We took some specimens of what was in the cave and made our way out as fast as possible and down the mountain to where we had camped the night before, and packing up, again started on our journey homeward.

Our trip back was very much like the first, only we shot a fisher, a black wildcat and a martin, which we had mounted, and of which I still have a specimen.

When we struck out on the shore of the Cupsuptic we were not ten rods from our birch canoe.

This was thirty years ago last August, and I have never seen that cave since, but I have a great desire to once more visit the wild animal den of the Kennebago mountain cave.

J. G. RICH.

BETHEL, Maine.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

THE NATIONAL PARK.

[*From our Special Correspondent.*]

YELLOWSTONE NATIONAL PARK, Aug. 2.—*Editor Forest and Stream:* The National Park is shrouded with a dense cloud of smoke, objects but a short distance off are invisible. The tourists make the usual round, their view of the country limited to a narrow strip along the roads. The sun rises a copper-red disk, powerless to cast a shadow until high in the heavens; as it declines toward the west where the volume of smoke is more dense, it passes through all shades from a bright gold to blood red as it sinks below the horizon. Millions of acres of forest are on fire to the north, west and south of us. From every quarter reports come that prairie or forest fires are raging, with now and then the destruction of houses and other property. So far the Park has escaped any very extensive fires, except one on the divide between Yellowstone and Shoshone lakes. This was reported to Capt. Boutelle the morning after his all-night ride to the fire in the Alum Creek country; as soon as that fire was under control a march was made to the outlet of the lake; the next day, after a march of twenty-five miles through fallen timber, the command reached the scene of the fire, this was several miles in extent, in a section of country destitute of water. The officers and men stayed by the fire all night, not having anything with them for camping, and the next day they reluctantly resumed their march to the Upper Geyser Basin, their nearest point to supplies. Capt. Boutelle was convinced there was no use to attempt to check the fire; the men were willing to work, but their efforts would have been without effect. Since then the fire was mostly extinguished by a shower, except at the northern edge, where it is still burning.

July 27 a fire was reported on the mountain east of the Beryl Spring in Gibbon Cañon. Capt. Boutelle left the Mammoth Hot Springs by dark, the soldiers starting out at 1 o'clock A. M. The fire proved to be quite extensive, requiring an hour's fast walking to go around it. Owing to the nature of the country it was not spreading very fast and the air was calm. The men went to work as soon as they could get tools, and after great exertion cut a wide space around the fire, removing all the trees and mat of pine needles with shovels. This was very tiring and exhaustive work in the dense smoke and heat, with no water except what they had in their canteens. In a few hours the fire had been surrounded by a bare space, cutting it off from the rest of the timber. The fire is still burning, but inside the bounds watched by soldiers, who are relieved every few hours. This fire and the one on the divide between the lakes was undoubtedly started by lightning.

Capt. Boutelle gives the soldiers unstinted praise and thanks for the manner in which they have seconded his efforts to control the fires in the Park. They have cheerfully borne the hardships incidental to such labor, working cheerfully in the blinding smoke and heat, often without sleep for days, and with only such food as they could carry in their pockets.

This summer buffalo gnats and deer flies are very troublesome to horses and men, also keeping the game on the highest peaks or in the dense timber during the day. The roads are very dusty, ground to a powder by the great number of wagons. A tour through the Park will not be a pleasure trip until we have rain or snow to clear the air, lay the dust and kill the flies.

The Hotel Association have nearly ready for the water at Yellowstone Lake a 72ft. steam launch. This was brought from Lake Minnetonka, Minn., in sections. It required twenty-four horse teams to freight it from the railroad to the lake, a distance of sixty miles. This will be the first steamboat to disturb the waters of the lake; several sail boats have been built and launched there. The first two went down the river and over the Great Falls; the wrecks of the others are on the shore near the outlet. The lake is a very dangerous piece of water; it will require a careful crew to handle the steam launch with safety.

The working crews on the new wagon roads are busy on the road along the lake shore and from the Upper Geyser Basin. The new road through Gibbon Cañon is being pushed as fast as men and teams can do the work. A surveying party under the direction of the chief engineer of the Northern Pacific Railroad, is at work locating a road up the Clark's Fork Cañon to Cooke City. If built up that route a railroad can reach the mines of that district without touching the National Park. Interested parties have asked permission of Captain Boutelle, the acting superintendent of the Park, to run a survey to Cooke City from Cinnabar, as most of the proposed line lies within the reservation lines. Capt. Boutelle has referred the letter to the Secretary of the Interior for action. H.

CONCERNING CERTAIN WRITERS.

IF there is any one thing that is truly enjoyable above all others, it is "sporting literatoor." It includes all those graphic and soul-stirring accounts of exploits in field and by stream which fill the columns of would-be sportsmen's journals, as well as the no less graphic tales recounted by veracious individuals who do most of their hunting and fishing by mouth. Both oral and written "literatoor" of these classes have this one thing in common—they are produced for the entertainment and instruction of the public by those who do not allow the facts to embarass them, and who in treating of their subjects in a purely "literary" way, attempt to make up by imitation and drafts on their imaginations for any lack of actual experience. These tales fall trippingly from the lips of their narrators, and they run smoothly along the printed pages, to all appearances; but you have only to wait a little and sooner or later the pretended adept is sure to get the barrel of his gun between his legs, or tangle his feet in his landing net, and take an ignominious tumble.

Several samples of this kind of literature have lately come under notice, and are here jotted down for the edification of the readers of FOREST AND STREAM and the warning of those who think they can construct fishing and hunting experiences from their inner consciousness.

Only a few weeks ago an old college chum who has been living for a number of years in Colorada, re-visited his former home. Discussing the Western country, he chanced one day upon the subject of the trout fishing which he enjoyed annually in the waters a hundred miles west of his town. Naturally, a great many questions were asked him. "Did they fish with a fly?" "Oh yes, altogether." "And what kind of a rod do you use in fly-fishing?" "A very light one, I assure you; one that weighs only 16oz."

Fancy an experienced fisherman whipping the water for his favorite fish with a rod that weighed a pound!

Not a whit better is the case of a Long Island correspondent of the New York *Times*, who not long ago undertook, in a letter to that paper, to instruct his readers as to the proper outfit for trout fishing. Hear him on the right proportions of a rod for bait-fishing!

"A rod should be 14ft. long, about 7oz. in weight and so tough, strong and elastic as to bend almost double without breaking. A good reel fitted to it and a line of silk or linen with snells and hooks and a box of bait, a sinker on each snell heavy enough to prevent the current of swift streams from whirring the hook about too fast, and a creel to carry the fish in, complete the equipment."

Shades of Izaak Walton! Imagine this expert angler "yanking" a pound trout over his head into the adjacent tree tops with a rod 14ft. long and weighing 7oz. And this ingenious apparatus is built for bait, and not for fly-fishing. What kind of a rod must he use when he is daintily placing his cast of flies like the fall of snowflakes on the surface of the pool.

As a corresponding illustration of the effects of a vivid imagination, here is a pen picture copied from a Western paper, and written by a gentleman who is supposed to indulge in a quail hunt. The party are afield and everything is in a state of thrilling expectation for the covey which is to be discovered at the proper moment. "You give the dog the word," says the writer, "and he dashes in. Whiz, whirl, with the commotion of a rising hurricane the birds spring into the air and scatter with the speed of an arrow and the noise of a young cyclone. Quick now, you cannot wait for aim, or your birds are gone. Bang, bang go the guns. The trained dog following the line of your shots, is nosing the ground and presently has laid at your feet one, two, mayhap a dozen as the results of the hasty shots of the party of three."

In other words, an average of two birds to each of the six barrels. Isn't this a great deal more destructive than the snare or the net? By the time this covey was flushed once more under such circumstances, there wouldn't be a single bird left.

Sometime last year there was issued with the imprint of a well-known Boston house, a book describing the (supposed) adventures of a party on a Canadian salmon river. A "Colonel" who is fortunate enough to be the lessee of a river in the Province of Quebec takes a number of young gentlemen on a fishing excursion, and the author, who seems to know all about salmon fishing, details with great care their preparations, their fishing outfit, and their achievements in the way of capturing their prey. He evidently has all the fishing lingo at his tongue's tip (he even explains what it is to give a fish the butt), and yet occasionally he tells too much. For example: When the party have arrived at the fishing grounds the "Colonel" opens his tackle box which contains a number of flat paper packages, and we are gravely told that "in the upper one of these was a collection of coils of white cat-gut," which the "Colonel" explains as casting lines. When the author "crammed" for his book he evidently jumped at the conclusion that "gut" and "cat-gut" were one and the same thing. Of course they had a large assortment of flies, and it was decided to use a "Jock Scott" to begin with. It is described as "having a black and orange body, and a wing made up of feathers from the jungle cock, the blue macaw, the golden pheasant, and a number of other birds."

With this wonderful combination of feathers at the end of a catgut leader one of the boys named Jack hooks a 30-pound salmon. The fish goes through all the various maneuvers which well-trained and proper-minded salmon are supposed to undertake at such times, jumping, bolting and sulking in the most approved methods made and provided. Jack is using a greenheart rod, and the author tells us that "It is wonderful to him (Jack) to see how much strain it will stand. The tip is curved almost like a barrel hoop," when the rod is under the stress of a fish.

This kind of fishing "literatoor" needs no diagram for the man who knows from experience where the strain comes on a rod, and that it moves toward the butt instead of the tip with increasing tension upon the line. But this is doubtless enough of its kind, and the reader may make his own moral and apply it likewise.

TOLEDO, O. JAY BEEBE.

Natural History.

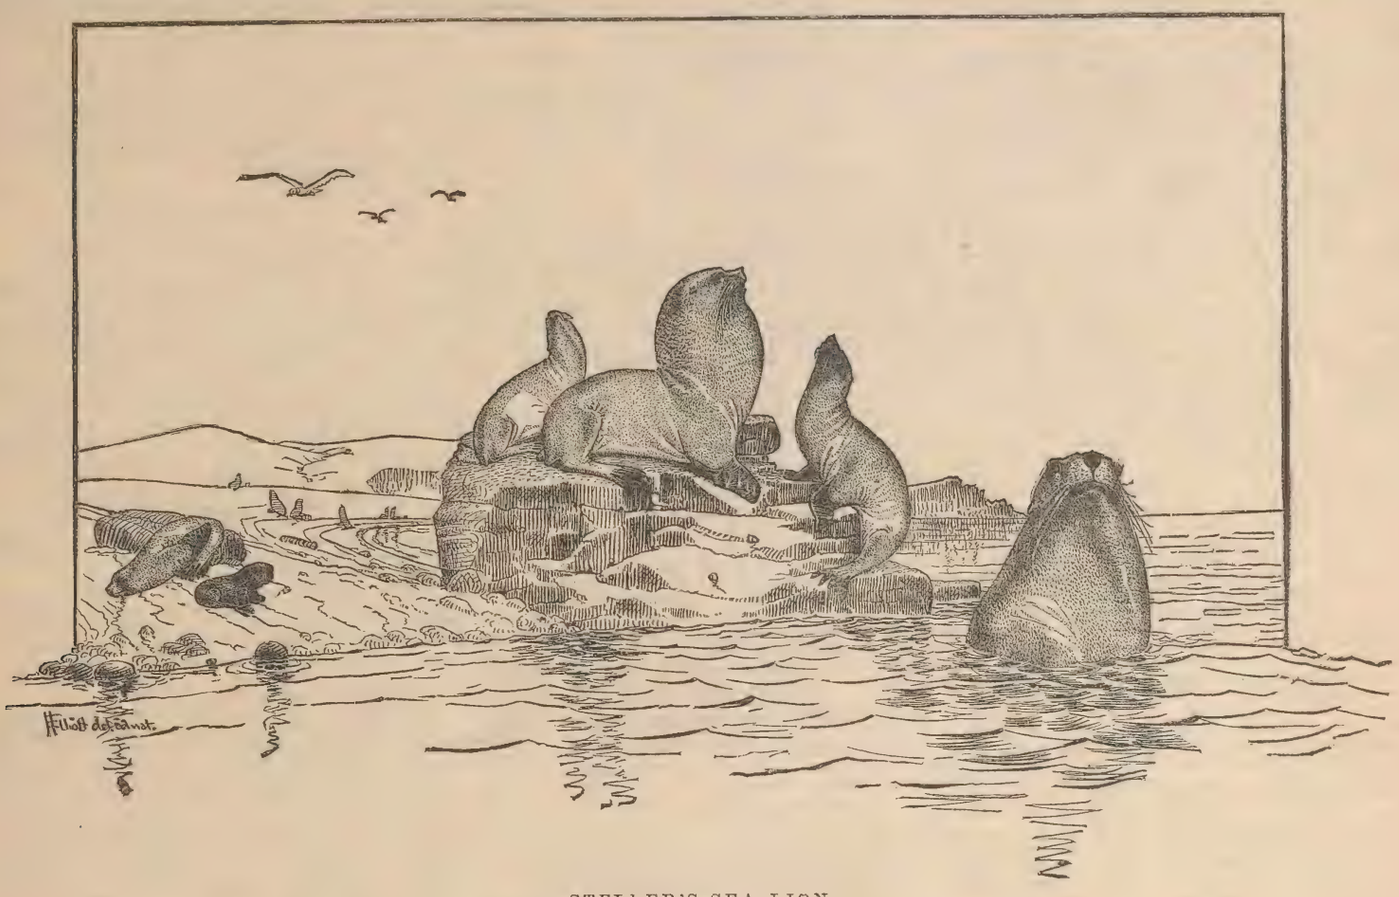
THE EARED SEALS.—II.

STELLER'S sea lion is the *Leo marinus* of Steller (1751) and the *Eumetopias stelleri* of Allen (1880), and is one of the largest of our existing North American mammals. Males have been captured measuring in total length 14ft. and weighing nearly 1,300lbs.; the females, however, rarely exceed one-third the weight of the males and less than two-thirds of the length. Limitations of space will prevent me from entering upon any detailed description of the external form of these animals, but an admirable idea of this can be obtained from Elliott's excellent sketches herewith presented.

It will be well to observe, though, that "the color varies with age and season. The young are of a rich dark chestnut brown. The adults on their first arrival at their breeding grounds in spring present no sexual dissimilarity of color, which is then light brownish-rufous, darker behind the forelimbs and on the abdomen. Later the color changes to bright golden-rufous or ocher. The pelage is moulted in August, and the new coat, when fully grown in November, is light sepia or vandyke-brown, with deeper shades, almost dark upon the belly. At this season the females are somewhat lighter colored than the males, and occasionally specimens of both sexes are seen with patches of dark brown on a yellowish-rufous ground." (Elliott).

This sea lion is not only found from the coasts of northern California to Behring's Straits on the north, but also occurs on the shores of northern Japan.

Through the labors of Dr. Murie, W. A. Forbes, F.Z.S., and J. A. Allen the comparative anatomy of this and other forms of the eared seals is fairly well understood, but there yet remains much to be done in the same direction, and fortunate indeed will it be for science if some day a morphologist of the genus who must write and describe under all manners of conditions, enjoy the opportunities that Elliott enjoyed early in the '70s. An unlimited amount of material of both sexes and every conceivable age, and with instruments, pen, paper and colors at hand and with a working field library! Even Allen was compelled to write of this specimen as late as 1880, that "The skeleton of the female is still unknown to me." ("N. A. Pinnipeds.")



Two facts seem to have earned for these animals the name of "lion;" one being their roar and the other the general contour of their head and shoulders. According to Captain Bryant, "At the fourth year of age the neck and shoulders thicken, from having a thick layer of fat under the skin, the skin itself being loose and flabby. When the animal is at rest on a rock, with its hind flippers folded under its body, its head erect and the shoulders thrown back, the loose skin and fat lies in folds, looking like the mane of a lion; hence its name sea lion. This thickening of the neck is peculiar to the adult male." It will be seen from our figure that the largest of the *Otariidæ* in reality possesses no long mane as we find in *Leo*. The several species of eared seals have much in common so far as their habits are concerned, and the products derived from them by man are much the same, with the exception that the hairless seals afford "hides," while the fur seals yield "pelts" of great value. The methods of capture, already referred to by me, also agree in many particulars, as do also the range and food of the several species. From Allen's "Pinnipeds" I obtain the following admirable account of the species now under consideration; it being contributed by Mr. Charles Bryant, who spent many years at the sealeries. Captain Bryant tells us that "from fifteen to twenty thousand sea lions breed annually on the Prybilov or fur seal islands. They do not leave the islands in winter, as do the fur seals, to return in spring, but remain during the whole year. They bring forth their young a month earlier than the fur seals, landing during the months of May and June. They advance but little above high tide mark, and those of all ages land together. The strongest males drive out the weaker and monopolize the females, and continue with them till September. They go with them into the water when they are disturbed, and also watch over the young. When in the water they swim about the young and keep them together until they have an opportunity to land again. The females also keep near, rushing hither and thither, appearing first on one side and then on the other of the groups of young, constantly uttering a deep, hoarse growl at the intruder whenever they come to the surface. When left undisturbed, they all soon land again, preferring to spend the greater portion of their time at this season on the shore. During the breeding season they visit the same parts of the shore as the fur seal, but the sea lions, by their superior size and strength, crowd out the seals, the latter passively yielding their places without presuming to offer battle to their formidable visitors. After having been disturbed the sea lions continue for some time in a state of unrest, occasionally uttering a low, moaning sound, as though greatly distressed. Even after the breeding season they keep close to the shore near the breeding station until the severe weather of January. After this time they are seen only in small groups till the shores are free from snow and ice in the spring.

"The capture of these animals is laborious and hazardous, and must be managed by the most skillful and experienced of the natives. They are so sensitive to danger and so keenly on the alert that even the screaming of a startled bird will cause the whole herd to take to the water.

"The only place frequented by sea lions that, by the nature of the ground, is practicable for their capture, is ten or twelve miles from the village where all the natives reside. They keep so near the shore that the favorable time to get between them and the water is when the tide is lowest; and they are so quick of scent that the wind must blow from them toward the sea, so they may not smell the hunters as they attempt to approach them. The chiefs select a party of fifteen or twenty of the best men, who leave the village prepared for an absence of a week or ten days, for the place selected for the hunt. Near this they have a lodging-house, where they wait for favoring conditions of wind and tide. Under cover of the darkness of night, the chief takes the lead and the men follow, keeping a little distance apart, creeping noiselessly along the shore at the edge of the receding tide until they get between the sea lions and the water. At a given signal the men start up suddenly, fire pistols and make all the noise possible. The animals thus suddenly alarmed immediately start in whatever direction they happen to be headed; those facing the water rush precipitately into it. These the hunters avoid, letting them pass them, and start at once after those heading inland, shouting at them to keep them moving until some distance from the shore. The sea lions, when once fairly in motion, are easily controlled and made to move in the desired direction till they reach some convenient hollow, where they are guarded by one or two men stationed to watch their movements and prevent their escape until enough have been obtained to make a herd for driving, numbering usually two or three hundred individuals. They sometimes capture in this way forty or fifty in a single night, but oftener ten or twenty, and many times none at all. As at this season sea lions of all ages and sizes congregate together, it often happens that females are captured while their cubs escape, or the reverse, but as the capture is continued for several successive nights at the same place, and the new captives are driven to the herd already caught, the mothers and their young are again brought together. They recognize each other by their cries long before they meet, and it makes lively work for the herders to prevent the herd from rushing to meet the new comers. When the recruits join the herd, mothers and cubs rush together with extreme pleasure, the mothers fondling their young, and the latter, hungered by separation, struggle to nurse them. After a sufficient number have been thus obtained they are driven to the village for slaughter, in order that all parts of the animal may be utilized.

"The distance to the village is, as already stated, about 10 or 12 miles, and the route lies near the shore. Along the way are several small ponds through which they pass and which serve to refresh them on their slow toilsome journey. The journey is necessarily slow and tedious, for the sea lions are less well fitted for traveling on land than the fur seals, which are able to raise their

bodies from the ground and gallop off like a land animal. The sea lions travel by bending the posterior part of the body to the right or left, extending their long flexible necks in an opposite direction to balance themselves, and then slowly raising their bodies by their fore limbs and plunging forward, by which movement they thus gain an advance of only half a length at a time. When they arrive in sight of the ponds they make a hurried scramble for them, and, rushing in pell-mell, roll and tumble in the water as though it afforded immense relief to their heated and wearied bodies. When it is convenient to do so they are allowed to rest over night in the water, by which they acquire fresh vigor for the completion of the journey. This severe and unnatural exertion overheats and exhausts these poor beasts and necessitates long halts to enable them to rest and cool. It usually requires five days to make the journey, averaging two miles per day. Three men conduct the herd, and camp at night with their charge. On starting they kill a young cub for their subsistence, using the flesh for food and the blubber for fuel in cooking it and making their tea.

STELLER'S SEA LION

"After two days' travel the animals become very tired, and as soon as they are permitted to halt they drop at full length with their limbs extended. But their rest is not peaceful, for some restless one soon starts up and flounders over the others as if seeking a better place. This disturbs the whole herd, which constantly keeps up a low moaning apparently expressive of sore distress. A most apt description of such a scene was once given by a military officer who was seated with me on the edge of a sand-drive watching a herd resting in this condition. After a long silence he observed, 'This is the first thing I have ever seen or heard that realizes my youthful conception of the torment of the condemned in purgatory.'

"When the herd is once fairly halted and at rest it requires from half an hour to an hour to get it moving again in marching order. The process is quite novel and worth describing. The sea lions have now become so accustomed to their captors that they will sooner fight than run from them, and they are too much deafened by their own noise to hear or fear any other sound. As they lie on the ground in a compact mass, one of the men takes an umbrella (before the introduction of umbrellas a flag was used), and goes twenty or thirty yards to the rear of the herd and approaching stealthily until he is quite near, suddenly expands the umbrella and runs with it along the rear of the herd: then closing it he retires to repeat the maneuver. This has the effect to rouse the rear rank, which thus suddenly alarmed, plunges forward and arouses those in front, which immediately begin struggling and biting. The return of the man with the umbrella communicates another shock and adds another wave to the sluggish mass. This is repeated at intervals of four or five minutes till the successive shocks have aroused the whole herd, when, with much roaring and bellowing, the whole mass begins to move, gradually extending itself in a long irregular line in open order, each animal lumbering along as best it can. By shouting and waving flags at the rear and on the flanks of the herd, they are kept moving until it is necessary to halt them again for rest. Seen when thus moving in a long irregular line, the slow heaving motion of their bodies and the swaying of their long flexible necks give a grotesque appearance to the scene, and suggest anything but a herd of lions. The islands, being composed of volcanic rock, is full of subterranean fissures covered thinly with soil and vegetation, and the earth so resounds with the noise of the tread of the sea lions that the sound may be heard to the distance of two miles. The approach of the herd to a village is always an occasion of interest and excitement to all of the inhabitants, who go out *en masse* to meet them and escort them to the slaughtering-ground, where they are allowed to rest and cool before they are killed.

"The sea lions are too formidable to be killed with clubs like the fur seals. When all is ready for the slaughter the herd is started up a sloping hillside; the hunters follow, armed with rifles, and shoot the full-grown males from behind, the back of the skull being the only part a ball can penetrate. After all of these have been killed, the head of the column is checked and turned back so that the animals become massed together, and piled on each other five or six deep. In this way those below are held by those above while the hunters, armed with short lances, watch their opportunity to rush up to the struggling mass and thrust their lances into some vital part of the doomed beasts. This is attended with some danger to the hunters, who sometimes receive serious wounds from being hit with the lances that the sea lions, in their death agonies, seize in their mouths and wrench from the hands of the hunters.

"Nearly every part of these animals is valuable to the natives, but they have no commercial value outside of Alaska. Their skins are indispensable to the sea otter hunters of the Aleutian Islands, for the covering of their canoes in which they hunt these animals. The natives also use them for covering their large boats used in loading and unloading vessels. * * * Its flesh is preferred for food to that of the fur seal, that of the full-grown animal being finer in texture, lighter in color, and of a sweeter flavor, and it dries more readily in preserving it for winter use; the flesh of the young at the age of four months is esteemed a great luxury by the natives, and is not easily distinguished from veal by educated palates. * * * Only the skeleton is left to waste.

The stomachs of the full-grown sea lions are found to always contain from six to ten pounds of stones, varying in size from that of a hen's egg to a large apple. These stones are the same as those found on the beaches, worn round and smooth by the surf. The natives say they take these stones into the stomach for ballast when they leave the breeding grounds, and cast them out again when they land in the spring. I have, however, had no means of verifying this, as the only season when they are taken is during the winter.

"As soon as the animals have all been killed the men proceed to remove the skins and blubber, and the other useful parts, which the chiefs divide and distribute among the several families. * * * Only a few of the skins are required for use on the island, the remainder being shipped to Ounalashka and other points, where they are sold to the sea otter hunters. The value of the skins at the island is sixty cents each. About eight hundred are annually taken at Saint Paul's Island, without apparently any decrease in the stock.

"There are many other places in the Territory where these animals bring forth their young, but as they resort mostly to outlying rocks and ledges, they cannot be captured in any considerable numbers." R. W. SHUFELDT.

THE WOODCOCK'S WHISTLE.

IT seems strange to me that the question as to whether the woodcock whistles with his wings or with his throat is still an open one. In the first place the *timbre* of the sound is certainly very wingy, and any one who has lived and loved among the birds is familiar with so many wing notes that are analogous to those of the woodcock that it would be hard to convince him that the loud clear twitter of the October cock as he springs from the yellow brakes over the tops of the sere rustling alders, is caused in any way except by his pinions.

My red setter Grouse—dear old Grouse, who is now in the happy hunting grounds where there is no close season—had a neat way of retrieving by holding the bird's head gently in his mouth, and while bringing me wounded woodcock in this way I have often heard the identical twitter when the bird fluttered, that he had made when trying to charm us on his first spring.

Whether the sound is made by the primaries or by the little stiff feathers at the pollex of the wing I would not try to guess, but as the European woodcock, which hardly whistles at all, has a larger development of the pollex feathers than has our woodcock, it seems probable that the sound is caused by the primaries. The little stiff feathers, by the way, are saved by hunters for artists' use in Germany, for when mounted for use as a brush very accurate delicate lines can be laid with them.

NEW YORK, Aug. 8. ROBERT T. MORRIS.

THE LOON'S FLIGHT.—*Editor Forest and Stream:* I have read with much interest "J. G. R.'s" letter on loons in your issue of July 11, and Mr. Ide's reply in that of Aug. 1. Now, loons have been the object of much careful observation and study with me, both as a sportsman and as an ornithologist, and I wish to confirm Mr. Ide's statement with a little good evidence of my own. I am quite certain that a loon can, under favorable conditions, rise from a body of water of very small size, provided there be wind to assist him. On one occasion I lay in a blind at the extremity of a slender tongue of land which projected into the lake, forming on one side a kind of small bay. In this a loon was fishing, in very shallow water filled with dense weed. He was very close in to the shore—I should say not more than 10 or 20ft. from it, and some 20yds. to the right and inside of my blind. There were no ducks flying, and I became very curious as to whether the loon could dive and get far away among such heavy bottom growth. Standing up I fired upon him, when instead of diving he at once rose easily toward the shore and away from me, clearing without difficulty some low bushes which lay before him. He rose then some 4ft. in 12; there was quite a strong wind off shore at the time, which of course helped him. I have another case in mind where a loon was shot flying, hard hit and crippled in the feet; in trying to escape capture he rose by a supreme effort when close by the boat, and passing over it dropped on the other side. These instances are to me conclusive; and I believe that while a loon's instinct teaches it to dive whenever possible, as the surest means of escape, yet it can and will on occasion rise in an extremely short distance. I am equally sure, however, that in an extremely small pond shut in by woods of great density, a loon cannot rise, as I know of one having been tired out and captured on such a piece of water.—CARYL D. HASKINS.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One sloth bear (*Melursus labiatus*) ♂, one caracal (*Felis caracal*), one Bauer's parakeet (*Platycercus zonarius*), two red-faced parrakeets (*Agaporius roseicollis*), one cock of the rock (*Rupicola crocea*), one green snake (*Cyclophis vernalis*), thirty-eight chameleons (*Anolis principalis*), four pine snakes (*Pityophis melanoleucus*), one king snake (*Ophibolus getulus*), two tree boas (*Epicratis anguifer*), one glass snake (*Ophiosaurus ventralis*), one whip snake (*Bascanium flagelliforme*), one ground rattlesnake (*Crotalophorus miliarius*), one hog-nosed snake (*Heterodon platyrhinus*), eight striped lizards (*Eumeces fasciatus*), and two red-backed salamanders (*Plethodon cinereus erythronotus*). Presented—Two raccoons (*Procyon lotor*), one opossum (*Didelphys virginiana*), one Fournier's capromys (*Capromys pilorides*), one purple gallinule (*Porphyrio martinica*), one mocking bird (*Turdus polyglottus*), one white-fronted parrot (*Chrysotis leucocephalus*) two barn owls (*Strix flammea americana*), one sulphur-crested cockatoo (*Cacatua galerita*), one Levaillant's amazon (*Chrysotis levaillanti*), one black-billed cuckoo (*Coccyzus erythropthalmus*), one spiny soft-shelled turtle (*Aspidoneches spinifer*), nine painted terrapins (*Chrysemys picta*), one box tortoise (*Cistudo carolina*), five alligators (*Alligator mississippiensis*), one pine snake (*Pityophis melanoleucus*), two black snakes (*Bascanium constrictor*), and four yuma spermophiles (*Spermophilus tereticanus*). Born—One red kangaroo (*Macropus rufus*), one fallow deer (*Cervus dama*) ♀, nine opossums (*Didelphys virginiana*), and seven red-headed ducks (*Fuligula ferina americana*).

Game Bag and Gun.

AN OUTING IN WYOMING.

WE left the pleasant little city of Blair, Nebraska, Nov. 4, on the 7:50 westward bound train on the F. E. & M. V. R. R., and at Arlington were joined by Cook, which made our party complete. Our destination was central Wyoming, where we were going for big game in response to a cordial invitation from Mr. W. J. Crane (a fellow townsman of Cook's), who is interested in a large tract of oil lands. In his letter urging us to come he wrote, "Come prepared for b'ar;" and we were. Jim's rifle was .45-60, model '76, Winchester; Cook had a Winchester, model '86, .45-90; while I carried a Sharps hammerless military, .45-70. We were all well supplied with ammunition; and among the rest each had about twenty-five cartridges loaded with explosive bullets for the said b'ar. We reached Casper at 11 o'clock the next night, and found Crane awaiting us. We spread our bedding on the floor of the depot and turned in, but not until after I had got a big rag stuck in my rifle in trying to clean it.

We were up bright and early Tuesday morning, and started for the town of Casper, which was about half a mile from the depot, for some breakfast and to get the rag out of my rifle. After a breakfast of elk steaks we turned our attention to the gun. I filled the barrel with kerosene oil and let it stand a while, then tried to punch it out, but could'nt do it. The rag was fast about three inches above the end of the chamber. Jim said: "Pull the bullet out of a cartridge, fill up the space with paper between the rag and powder, and blow it out." He said he had done it several times, and it came out easily enough. That appeared to be about the only thing we could do, but I did not like to risk it, for I remembered having read in FOREST AND STREAM a number of years ago an article headed "A Fool and a Gun;" perhaps some of you recollect it. But it was either take the chance or go home, as that was all the gun I had with me. From a cartridge I had loaded myself I removed the bullet, and in doing so spilled a very little of the powder, not more than five grains; put a paper wad in the shell and then filled the barrel from the rag to the mouth of the chamber, so I could just crowd the shell into its place, stepped out into the street, held the muzzle down toward the ground, and pulled the trigger. It snapped. I tried carefully to throw the lever down, but it did not start easily. I had hold of the barrel just forward of the breech action. The barrel suddenly became so hot that it burned my hands. The powder had burned, but it could not get out. I laid it down on the steps of a store where we were getting our supplies, went into the store and shut the door. The boys wanted to know what was the matter. When I told them they ridiculed the idea. There was no appearance of smoke escaping from either breech or muzzle. Brewster, the merchant, wanted me to go out and open it. I respectfully but firmly declined to monkey with it until that cartridge had had time to die. After waiting about five minutes Brewster said if no one else was going to open the thing he was. I begged him to be careful, as it would certainly blow out behind as soon as the slide was dropped. He went out, took hold of the barrel with his left hand, put the under part of the stock against his knee, and with his right hand yanked the lever down, when she went off, making as much noise as ever. The shell struck the ground, glanced and went across the street, over the opposite houses, whistling like a bullet. I then came to the conclusion that it was another case of a fool and a gun, and in this case there were several of us fools. There were at least 65grs. of good powder in the shell; it was a light military rifle, and why it did not blow all to flinders I can't see. Now this is no yarn, but strictly true.

I finally got the rag out by taking a three-eighths rod of iron, sharpening one end to a point, heating red-hot and burning it out. After I had got my rifle in shape, we loaded up our traps, laid in a supply of grub, also of baled hay and oats for the horses, and started for Crane's camp on Spider Creek, about forty miles northwest of Casper. There was about eight inches of snow on the ground, the wind was north, and cold was no name for it. We had a good span of horses and a lumber wagon; but it was loaded with about 1800lbs., the road was a mixture of sand and snow; and our fastest gait was a walk. We took turns driving, and when one got cold he would get off and walk. We wanted to get to the derrick that day, as it was the only house we should see on the road, and this was about twenty miles from Casper. It was late in the afternoon and we had got within two or three miles of the derrick when we saw the first band of antelope; there were about 150 of them; they were to one side of the road and ahead of us. Crane drove the team and Cook, Jim and myself kept behind the wagon out of sight until we had got as near as we thought we could come before they would leave, when we stepped out and opened up on them. They were about 400yds. distant; they ran across the road ahead of the team and then doubled back the way we had just come.

When the battle was over we saw one was down, we went up to it and found it was shot through the back. I shot it through the head to put it out of its misery; we then dressed it, and in carrying it to the wagon found the trail of another that was bleeding badly. Cook and I wanted to follow it, but Crane said no; we had not time. However, as he said it was only about a mile to our stopping place Cook and I started after it. Cook gave it up after he had gone about a quarter of a mile. I stuck to the trail for about two miles and came to where it had lain down in the snow. The bed was all bloody; but the snow must have stopped the bleeding, for I could find no more blood, and it was impossible to distinguish the track from the hundreds of others that covered the ground. I hated to give it up, but there was no help for it. I took my back track until I struck the wagon track and then pulled on after the rest. I found Jim waiting for me, and we finally got to the derrick a little after sundown, oh, so tired. The derrick, so-called, is where an Omaha company have been drilling for oil. In the house, half "dugout" and half log cabin, lives a Mr. Van Gordon with his wife and brother-in-law. One year ago they carried her there on a bed, and now she is the picture of health. They entertain travelers, she doing her own work with what help she gets from her husband and brother. She gave us a supper and breakfast that would shame many a swell hotel. May her days be many and happy.

Wednesday morning the wind was north, it was cold and snowing some but the clouds were thin and it looked as if it would clear up after a while. A Mr. Ayers had stayed at the derrick the night before, and as he had four horses and a light load, and was going our way, I rode with him. We shot at some sage hens, but did not get many. I shot a Jack rabbit on the run. The weather cleared up at noon; we reached Crane's camp about 4 P. M. After supper Crane showed us an Indian mummy, that they found laid away in a cavity among the rocks near his camp; the grave had been opened before Crane found it, but there was a cart load of stuff left that had been buried with him, blankets, tin pans, and cups, several of each, a long-handled frying pan, stone axe, arrow points, files, knives, spurs, saddle, saddle bags, bits, and a hundred and one other things.

We stayed at Crane's camp that night and the next morning loaded up for our hunt. It was Crane's intention to take us to Garfield's Peak, in the Rattlesnake Mountains, but there was so much snow he thought we could not get in there, so we pulled for Pine Mountain, on the opposite side of the valley from Garfield's peak, and distant about 10 miles from camp.

The day before, when about five miles from Crane's camp, we had met a party of five hunters on their way home. They were from Norfolk, Neb.; had been out a month and had a wagon load of meat, heads and other trophies. They were Dr. Hassen, John McClary, Geo. Iles, L. Sessions and P. F. Bell, all from Norfolk. We had the same team we came from Casper with, and in addition two saddle ponies; to be used for riding or packing our game into camp. One of Crane's men accompanied us, Jack Courrier, a fine fellow and a good hunter. He had been on the frontier for years and knew the ropes. He had a Sharps hammerless military which he called "Screaming Betsey," but he was carrying a Winchester that Crane had borrowed for him for the occasion. The sights of this were out of whack, which brought Jack to grief that day. Cook and Jack were afoot and a short distance behind the wagon, Jim was driving, and Crane and I were riding the ponies, when we discovered a large band of antelope, several hundred of them, near the east side of the valley and some way ahead of us. About opposite us near the east side of the valley was a swell or hog-back, and the antelope were near the upper end of it. Cook and Jack ran for the lower end of the pass, between the bluffs and the ridge, Crane rode over it into the hollow, while poor Jim had to tend to the team. I hurried up my pony and tried to head them off, and turn them down to where the others were waiting for them. Before I had gone far enough up the valley to turn them, four of them ran across in front of me and a fine buck stopped and stood broadside at about 200yds. I had plenty of time to get off and shoot him before he ran, but I was afraid that if I opened upon him it would drive the rest of the game on up the valley, and that the other boys would not get any shooting, so I paid no attention to him and kept on, and succeeded in driving about fifty down toward the boys. They nearly ran over Crane who was sitting on his pony looking the other way, and when he did see them he was too badly rattled to shoot at all. A moment afterward I heard the music of Cook's and Jack's Winchesters; they kept it up lively for a short time. In the midst of the shooting I saw Jim get down off the wagon in a hurry and get behind it. He remarked afterward that a .45 was all right in its place, but that he did not like them quite so close. I expected from the amount of shooting Jack and Cook had been doing that they had got lots of game; but when they came over the hill with Crane and I asked them about it, all I could make out was something about a thousand antelope and a blank blanked gun. They had not raised a hair, and Crane said they ran within 30ft. of him.

About a mile further on we again sighted the antelope, and the ground was very much the same shape as before. Cook and Jim took the lower end of the draw, between a long, high hog-back and the bluffs, Crane was out on the bottom with the team; Jack and I, on the ponies, succeeded in driving about half the band, I should say about two hundred, down the hollow to where Jim and Cook were waiting for them. Soon we heard the Winchesters going it merrily, and Jack and I beat the devil's tattoo on the ribs of our ponies to get into position to receive such as should run back past us. Just as we got there, Jack says, "Here they come." We had just time to throw the bridle reins over the ponies' heads, letting them drag, in which condition the ponies would stand as if hitched. I turned up my Lyman sight for 200yds., for I saw they would cross us at about that distance. There were about fifty of them, running in Indian file, and making good time, too. I pulled in just ahead of the leader, a big doe, and cut loose. She went on as if nothing had happened; and while I was loading I saw Jack shoot twice with the borrowed Winchester, and his bullets struck the ground about half way to them. I then shot at a fine buck, and had the satisfaction of seeing him turn a sommersault; he was up again in a second, and left the band and ran straight away from me. I let the rest go and shot at him again, but missed. Jack said, "You have got him, he won't go far." We went back and got on to the ponies. We could see my buck a short distance off; he had lain down; we rode up to within about 100yds. of him; he had his head up watching us. Jack said, "If you don't want a devil of a chase after that fellow, you had better give him one through the shoulders as he is."

I slipped off the pony and shot my antelope, hitting him in the heart, killing him instantly. Crane came up with the wagon. I dressed my game, and was about to put it on the wagon, when Crane said, "We don't want those forequarters; we can get meat enough, and we have got so much load now that we shall have all we can do to get up the mountain." So much against my inclinations I skinned out the forequarters and left them for the coyote and the raven. In a short time the boys came in sight, bringing the saddles and heads of four more that Jim and Cook had killed. They had several more down in sight, and Jim started after them, but a bunch of range cattle started for him, and he concluded he had got antelope meat enough for the present. The cattle will not often go for a horseman, but it is not safe for a foot man to get near them, for they are very apt to come for him, and if they do, the only thing to do is to get out of sight if he can, and if not, shoot, and shoot to kill. Jim got behind a point of rocks and the cattle left. We put our meat on the wagon and started, and over behind a swell, where the antelope had disappeared, we found my doe shot through the lungs, and dead. We saved the saddles and kept on.

Now, I suppose it will be in order for some one to rise up and call us game butchers and give us fits for wasting game. Well, we did waste some meat, but we could not very well help it. It was getting late, we had a big load and there was a pull of three miles up a steep mountain, but we made it, got our tent up and supper out of the way before dark. Our team was about played out, but a good feed and rest brought them around all right.

The principal reason that Crane decided to take us to Pine Mountain was, that about two weeks before, Jack had been up there and found a band of elk of about fifty. He killed two and wounded two or three more, and we expected to find them. Besides, there was plenty of deer there. The mountain is about four miles long and one mile wide; the top is like any other patch of rolling prairie, covered with a stunted growth of sage brush. All around the sides are cañons or gullies, narrow at the top and wide at the bottom or foot of the mountain, and in them near the top is more or less timber, pitch pine and cedar. While we were there the weather was fine, clear, and quite warm through the day, but it froze hard at night. We had a good tracking snow nearly all the time.

After supper we skinned our antelope saddles and cut the hams up into suitable pieces to dry, rubbed them with salt, and hung them up on the ridge pole of our tent. The rest we kept for camp use. We skinned and prepared for mounting some of the best antelope heads, then made our beds and turned in to be ready for business in the morning.

BLAIR, Nebraska. DR. E. A. PALMER.

[TO BE CONTINUED.]

A MAINE HUNTING GROUND.

Editor Forest and Stream:

Readers of the FOREST AND STREAM who are looking for big game next fall will be interested in a brief account of a hunting trip which Mr. A. S. Thompson and his brother made last fall in northern Franklin county, Maine. It is a region which is swarming with game, the most important being bear, moose, deer and caribou. The portion of the country over which our trip extended, says Mr. Thompson, lies about ten miles northwest of Phillips village, and consists of the large timber belt, extending from Jerusalem twenty-five miles north of Kingfield on the east to Rangeley on the west, at which point it is cut from the northwest forest by a buckboard road from Rangeley to the Kennebago Mountains; and embracing in its limits the townships of Mt. Abraham (or Million Acres), Jerusalem, Redington, Dallas, also townships 1, 2, 3. The most important mountains are Mt. Abraham range, which lies from the east to Redington, while Saddlerock and the Boil lie further west.

Small lakes and ponds and brooks abound and are full of trout, as are also the numerous streams which go to make up the Sandy River on the south, the Dead River on the north and Caribou Valley streams being the headwaters of the Carabassett on the east. I can say, after twenty years' tramping in the forests of Maine, that I never saw such a sportsmen's paradise.

We made our home camp at the home of our old friend, the veteran hunter, Cylas Wing, of Phillips, who, notwithstanding that he is on the shady side of sixty, drove us seven miles in the sparkling zero morning to the last clearing, where he headed the party for the day's hunt. A fine day was before us. The earth was enshrined with twelve inches of snow, with a crust sufficient to bear us on snowshoes, with two inches of recent snow on top of this, thus making it favorable to judge of the extent of the game in this wonderful winter pasture. At about 9 A. M. we entered the woods and within fifteen minutes' tramp the deer tracks resembled a sheep yard. At 11:30 A. M. we came up with a large buck deer, whose antlers showed us seven prongs; but our guns with buckshot failed to bring him down. At 1:30 P. M. we came upon a small one with equally bad result. Finding our guns inadequate, we returned home, where we arrived at 6:30 P. M.

The next day we provided ourselves with Winchester rifles, and with Mr. John Shepard as guide we started for the Abraham range in quest of caribou, making Redington our center, the camp being on Sluice Stream. At 9 A. M. we struck the tracks of five caribou, but wishing to ascend Mount Pisgah, the west arm of Abraham lying west of Caribou Valley, we at once made for the heights, where we found a most enchanting view. The scenery was charming and picturesque. Here we found the snow literally tramped down by large herds of caribou; twenty-two in one herd were easily counted, all traveling in one direction. After admiring the beautiful scenery spread out before us, and obtaining such knowledge of the hunting and fishing advantages of this section, we took the trail of our game, which we brought down at 2:30 P. M. It was a large blue buck caribou of 400lbs. weight and stood thirteen hands high. After admiring him we left him where he had fallen for the night, and starting for the settlement arrived at 6:30 P. M. On the following day with a sled and friendly aid we brought him out for the admiration of congratulating friends. Several foxes were also killed by our party.

For several years the forests far beyond bordering on Canada north of Rangeley and Kennebago have been the resort for sportsmen, and I account for the unusual amount of large game now in this region by the fact that they have been driven to this quiet home which has abundant pasturage. Convenient camps will be built the coming season on the above grounds, and I would recommend all sportsmen who contemplate a hunting trip next season to take this into account. Either for trout or game there is no more genial and reliable guide than John W. Shepard, of Phillips, Me., who will cheerfully answer any inquiries and will have every comfort in his camps for nimrods and sportsmen the coming season and for all who wish to visit this virgin hunting ground.

With our fox pelts and caribou I returned to my home and business. Mr. Thompson says he would be pleased to meet some lovers of the chase at the new camp in Caribou Valley in October next. W. H. ALLEN.

LIVERMORE FALLS, Me.

FOREST AND STREAM has illustrated circulars of G. O. Shields' new book, "Cruisings in the Cascades, and Other Hunting Adventures," which will be sent to any address on application. The book is pronounced by "P." T. S. Van Dyke, "Sillalicum," and other authorities one of the most entertaining and instructive works on big-game hunting ever published.

BEAR HUNTING IN NEW MEXICO.

TIERRA AMARILLA, Rio Arriba County, New Mexico, June.—*Editor Forest and Stream:* It is quite a long time since I gave you any information about the hunting in this vicinity, the fact is that we were "holed up" during the winter, only going out occasionally when a fresh track had been seen near camp, or for a deer or turkey; of which latter there are plenty. Deer were somewhat scarce on account of the numerous bands of Apaches who camped quite close. My horses and burros were so poor, owing to the amount of snow and want of grass, that we did not uncarth our camp till the beginning of May. A nice little run ending in a kill is the cause of this epistle, so I will proceed to give you the details.

About 4:30 A. M., one morning toward the end of May, one of the Mexicans in my employ came into camp and told us that the horses would not be driven past a little spot near camp, and of course we concluded that they had seen a bear or mountain lion near that spot. Accordingly we set forth as soon as breakfast was over. The Mexican (Fernandez), a Pueblo Indian, Andrés and I took four couples of dogs and left camp on horseback, the other two preferred going on foot, thinking they had a better chance of heading the bear by taking a short cut, where horses could not go. We met with a slight delay at the first which might have given our quarry a good start. It was thus: I had with me two puppies totally unbroken; no sooner did they smell the track than off they bolted, dragging the old dogs with them and howling at the top of their voices; being all coupled, however, they could not make very rapid headway. Quick as thought Andrés jumped from his horse, which by the way immediately left him and had to be caught. He secured one bunch of dogs and I the other. They had made such a noise that I decided to loose them at once, although I was not sure whether they had scented the bear or a passing deer. This was certain, that whatever it was, they must have startled it, and knowing only too well how soon both dogs and bear will run out of hearing in these mountains, when an animal gets a long start, I lost no time in uncoupling them, and away they went at racing pace and full cry, up the mesa, down into the wide valley in which is our camp, and up the opposite side; we could just hear the direction in which they had gone by an occasional faint yell in the distance. We got to the top very much out of breath, having led our panting plugs over the steep and rocky side.

Here the dogs would undoubtedly have been lost for a time had it not been for an old hound who came waddling along in the rear, with her nose on the ground and making no end of noise. This one we followed and soon came in hearing of the pack still going down the cañon at the back of the camp. We had a rough old ride after them over logs, holes, rocks, etc., for about a mile, when we dismounted, tied our horses and went down the side opposite to the one which we came up. Here at the bottom of another cañon was the sight that always tickles me most. At the top of a large pine sat a fine brown bear, looking down with evident concern at the dogs below, who all appeared to have gone mad, jumping, howling and biting the roots of the tree. Andrés, who had been left behind, had taken a short cut and got ahead of us, nothing unusual, for that wily Indian does not seem to exert himself much, but nevertheless he invariably gets there all the same. Being there first, he got first shot, but although an excellent hunter in the way of finding game, he is no marksman; and he promptly put a bullet in the old bear's foot, which made him loosen his hold, and down he came "thump." When you hear this thump there is always a decided sensation that you have shot something. The dogs seized him on all sides, but he not being at all dead, rose up and dispersed them without ceremony; but being unnecessarily close we were not desirous of witnessing any more fighting and lost no time in filling him full of express bullets.

He was a very short, stubby bear, weighing about 500lbs., and the cook rendered 85lbs. of lard from his carcass, a very unusual amount of fat for the time of year, most bears being so thin now that the dogs stand a poor show of catching them. The fur was a beautiful dark brown about 7in. long. We have every prospect of a good spring, for the bears a few miles off have killed lots of cattle and some horses.

N. B.—Since I wrote this we have killed seven more bears, two silvertips, two blacks and three cinnamons, also three bey lynx. At present we are fishing for the wily trout, which fishing, by the way, is hard to beat. My friend caught one of 4lbs. yesterday, and on a good day over a hundred fish can easily be caught if necessary. The new law prohibiting the sale of trout from the Chama and other rivers has already done much to improve the fishing. A. P. F. COAPE.

GEN. HENRY DU PONT.

GEN. HENRY DU PONT, the venerable head of the extensive powder manufacturing firm of E. I. Du Pont de Nemours & Co., died Aug. 8. Gen. Du Pont was born Aug. 8, 1812, in the family homestead where his long and useful career ended. He was the second son of Eleuthere Irenee Du Pont de Nemours, a distinguished Frenchman, who in 1800 sought asylum in this country from Jacobin persecution, and founded the famous powder works on the banks of the Brandywine River, Delaware. At seventeen he was appointed a cadet at the United States Military Academy at West Point, graduated in 1833, and on July 1 of that year was ordered to duty with the Fourth United States Artillery, at Fortress Monroe, as Brevet Second Lieutenant. During the succeeding fall and winter he performed frontier service with his command at Fort Mitchell, on the Creek Indian Reservation, Alabama. Resigning his commission at the request of his father July 15, 1834, he returned to Wilmington to assist the latter and his elder brother in the manufacture of gunpowder. The sudden death of the elder Du Pont in Philadelphia from cholera the following October made his connection with the firm continuous and important. At that time the powder works on the Brandywine were the most extensive in the country, and on the death of his father Henry Du Pont at once assumed a large share of the responsibility of the enterprise. In 1850 he undertook the chief direction, and from that year until the present his was the directing and decisive mind. From a capacity of 2,000 pounds a day during the second war with Great Britain, at which period they were the sole source of supply of the American Army, the daily output was enlarged to fully twenty times that amount. The product of the Brandywine mills has been an important factor in every American war since the Revolution, and likewise in several European conflicts, notably the formidable struggle in the Crimean, when large cargoes of Du Pont powder were shipped for the use of the allied armies. During the war of the rebellion the company, at the request of President Lincoln, sent one of its members to Europe to make purchases for the Union Army. The firm kept abreast of the powder manufacturing of the world, and in all its enterprises Gen. Du Pont was the dominating spirit. He proved equal to every hazardous demand of his business, and it is said of him that no man, perhaps, ever accomplished more for himself and his associates with less business exaction. Enterprise, courage, fair dealing and liberality were the characteristics of his business life.

Gen. Du Pont's diversion was agriculture. He was probably the most extensive land owner in Delaware, and his holding was the most valuable in the State. During the later years of his life his recreation consisted almost entirely in driving over his vast estate, inspecting crops and stock and planning improvements. The miles of well cultivated fields along the banks of the Brandywine were his pride and pleasure, and he spent thousands of dollars in enriching and improving them. Gen. Du Pont's personal estate is valued at $15,000,000.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 6.—Following is the assembly call for what will probably be the most important movement in fish protection in the State of Illinois. The Fox River Association has already drawn about it a considerable following of the angling clubs of Illinois, and there is little question that this movement will grow until it can assume a political importance which will enable it to dictate to some of our weak-kneed legislators. In a late letter to Mr. Geo. E. Cole, secretary of the Fox River Association, Commissioner Bartlett says that he has already received a large number of letters in regard to the proposed State organization, and is notified of the organization of two local clubs for the express purpose of joining the State movement. The State convention will in all probability be held here about next October, and it is in every way desirable that so worthy a movement should have the backing of every angler of this State. Something should be done, and it will be done. The call reads: "To Whom it may Concern: It is proposed by parties interested in the preservation and propagation of the fishes in the State of Illinois to form a State organization. In connection with above proposition, S. P. Bartlett, secretary of the Board of Fish Commissioners of this State, has suggested to the Fox River Fish and Game Association to issue a call for a convention for the purpose of forming such organization. Complying with the suggestion, the Fox River Fish and Game Association hereby calls on all fishing clubs, and all those interested, to correspond with John Wilkinson, 150 Kinzie street, Chicago, respecting the time and place for such convention; and, also, all other germane matters which might properly be of interest before such convention." E. HOUGH.

175 MONROE STREET.

PATTERN AND PENETRATION.

Editor Forest and Stream:

With interest I read of the trials made at your shotgun test, but I am not sure as to what conclusions you expect to arrive that will be of practical use to every one who uses a shotgun. Is it not about settled that no two guns, no matter how costly, or by whom made, allowing them to be as near as possible identical, will not vary in their performance? For instance: The writer knows of two made by an eminent firm—made of Damascus steel, same gauge, but differing about 8oz. in weight. The heavier gun, after years of trial, has been found to do its best work with less powder and more shot than the lighter one requires. That will do its best work with more powder and less shot. Commonly we would expect the heavier gun to require a larger load to excel. Again, when finer shot are used, another alteration in loading for each gun has been found best. It took a good deal of shooting to ascertain those simple facts, and even yet we are not fully settled as to a rule of exactly how hard to compress the powder, or how best to confine the wad on shot. Now if these guns, coming from same factory, costing the same, will not render the same performance with the same loading, how shall any rule be established for the thousands of shot-shooting guns except for each one to march up to your place of trial and have its weak and strong points brought out? Rifles of given weight and bore may be more uniform in their work, but of this I am not certain. We have watches which cost alike, and made for all the eye can discover exactly alike, but they will not keep time alike. I shall be sorry if these exacting trials at your test do not establish some fact or facts which will apply to every gun in the land; but my limited experience has caused me to regard our multitude of shotguns as like so many fiddles; can't tell what they will do until each one is tried for itself under varied circumstances. W. H.

SHOCKING TREATMENT FOR SPARROWS.—The suggestion of "Deacon" in last week's publication, to use uninsulated electric light wires, was always a pet theory of mine. I think it is the best way that has been as yet suggested. Poisoning, trapping, shooting all have their defects about a town, and it is noticeable that where the wires are, so are the sparrows, and vice versa. I originally thought of it as a good way to obtain birds, unhurt for stuffing.—W. C. C.

TOWANDA, Pa., Aug. 12.—A few summer woodcock hunters have been out in this neighborhood but report birds scarce. One party brought in two, the only ones that were seen or killed. Grouse and quail are reported doing well, many large broods being seen; and the prospects are that sportsmen will have fine sport when the season opens.—D.

MUSKET VS. DAMASCUS.—While shooting at a target a boy came along with a bored out musket, 19-gauge, 34in. long. At five rods he could put more shot into an envelope than I could with my fine Damascus 12-gauge 30in. long. We used No. 8 shot. How do you account for this?—S. (Caledonia, N. Y.).

Camp-Fire Flickerings.

"That reminds me."

272.

FLICKERING No. 270 puts me in mind. Fred Fuller, a cousin of the writer, was a most enthusiastic sportsman, and for some years resided near Detroit, Mich., where the extensive flats gave him a fine opportunity to follow his favorite pastime of duck shooting. He had a splendid set of decoys, and a number of half domesticated wild ducks, which he also used for that purpose. His guns and boats were the best of their kind, and his friends understood that they were at liberty to borrow his outfit when he did not use them.

A certain small creek which found its way into the flats became known as Fuller's stand, and so frequently was he found there, that gradually his fellow sportsmen came to recognize it as his own rightful shooting ground.

One morning Fred took gun, decoys and boat, and started for a day's sport. Shortly afterward Tom B., a friend, sportsman, and great wag, came to borrow Fred's decoys. Finding them gone he betook himself to his own boat, and rowed on to the flats.

Ducks were scarce; and after several hours' waiting for a shot, Tom picked up his oars and started for the aforesaid creek, in which Fuller's boat could be generally found with decoys nicely anchored just outside its mouth. Tom rowed carefully down to the spot, and peering through the tall marsh grass, discovered the decoys close at hand, bobbing serenely up and down, while an occasional quack from a live duck made things more realistic.

"By Jove, they look pretty!" said Tom. "I have a great mind to let into 'em," he added, as he raised his heavy muzzleloader to his shoulder. "How I could peck that old drake that Fuller thinks so much of." And as a bright idea struck him, Tom again raised his gun. "I'll shoot just over 'em! How mad Fuller 'll be. He'll think some one is blowing his decoys out of water." And with visions before his eyes of 6ft., and 220lbs. of excited sportsman towering up over the grass in sublime passion, and the subsequent hilarity of himself, Tom blazed away, once, twice. "Whew! Holy Moses!" A furious quacking, a mighty roar, and a hundred ducks rose from the water, and put for a healthier place. When Tom had angled for his gun some hours, and finally recovered it from its resting place in the mud, where he had rapturously thrown it, he started home, soliloquizing in a manner which, revised, was as follows: "By thunder! if I ever again shoot over a man's decoys, trying to be smart, I hope some one will fill my hide full of BB's. Some men are born asses." On that eventful morning my cousin was not within three miles of his usual stand.

OSWEGO, N. Y. ED. NOEL.

Sea and River Fishing.

A BASS STAND.

THE spot is frowned on by the highest and most inaccessible of a long line of cliffs. The matted turf has ventured a little over the edge and descends among the crevices toward a clump of weeds and scrub, but nothing ventures lower save the swallows that frequent the damp, rough-chiseled walls. The base is well buttressed against the ocean by a confusion of huge boulders, with a line of reefs extending out to break the attack. Here the unknown angler was wont to clamber out to a precarious footing, with his line reaching off beyond the breakers; but nothing now remains of his handiwork save a line of iron rods, well rusted and bent, that were drilled there between tides. At low water, with a fog to help the illusion, these boulders, half submerged, with their broad backs covered with a tenacious sea growth, greenish black, dripping and rank, appear a group of unclassified marine monsters, well harpooned and stranded.

The breakers that frequent this locality are mostly of a rough, boisterous nature, but sometimes they are disposed to loll about in lazy attitudes. At times a massive wave, with an indolent but irresistible movement, rises to engulf a great, low-lying rock, then suddenly disappears and a hundred rivulets are hurrying back, leaving the rock all dripping from its bath, with an isolated pool on top to simmer there until another tide. On sunny days they all assume an aspect of peaceful accord, rolling gently across the ocean in pursuit of curving lines of foam to harvest in winrows on the beach; but in cloudy times they come from the commotion at sea in a different temper. The smaller, frothing waves are all absorbed, and the advance is led by one, ponderous, opaque, mottled with seaweed and débris, and a presence like the front of ocean. The outer reef, potent to disconcert an ordinary breaker, only aggravates this into foam on the crest as the monster, rounding the point with the precision of infantry, sweeps on, preserving a perpendicular attitude, with the crest impending over an abyss that yawns ahead with rapidity. Destruction seems inevitable in its path, but the course is shoaling rapidly, the footing becomes insecure for one reared like this, beyond soundings, there's a stooping in the posture, a moment of tottering, a mighty roar and the giant expires in tons on the beach, giving birth in its dissolution to a ravenous progeny, springing far inland to return dragging back the reluctant gravel in sounding remonstrance.

But not all the breakers can thus pass the challenge of the outer reef. Some are deflected toward the distant shore; some collapse into seething maelstroms; others are betrayed into misleading channels, a tortuous journey, till, deprived of their headway, they all come together again in a deep place near the shore and get to rearing spires and steeples, till suddenly seized, drawn back and hurled among gloomy caverns with their trophies from the deep: rare shells, curious bits of living things and glistening flora. JEFFERSON SCRIBB.

PROVIDENCE, R. I.

A MINNOW LIFE PRESERVER.—An ingenious contrivance for aerating the minnow bucket consists of a rubber tube with a bulb. The end of the tube is inserted in the water and the pressure of the bulb forces in the air, which means life to the bait, and removes the necessity of frequently changing the water. The life preserver is manufactured by Messrs. A. B. Shipley & Son, of Philadelphia.

CHICAGO AND THE WEST.

CHICAGO, Ill., July 7.—Continuing the investigation set on foot by FOREST AND STREAM into the sporting resources of this region, I started about two weeks ago to explore a section of the country lying to the north of here, with an especial purpose of getting some accurate knowledge in regard to the trout fishing accessible from this point; which knowledge, it is safe to say, can be called accurate only when gained at the expense of careful personal effort, since what was last year a prolific stream may this year be a barren one, and since further all reports on such matters, be they from sportsmen or woodsmen, must so generally and generously be accompanied by a salty seasoning of mental reservation. The objective point of this trip was the Gaylord club house, situated 300 miles north of Chicago, in the wilds of the Wisconsin pine woods, but there was so much divergence from the straight path thither, and so much of interest found by the way, that I beg to offer first some preliminary comment on the conditions and conditon of that country, reserving the specific mention of the club until the following paper, thus giving the artist a chance to make a picture of the club house, and the chance reader of both papers a better idea of where the club house is.

The railway line chosen in this case was the Milwaukee and Northern, a busy young road that runs straight north, up into the pine and iron country of Wisconsin, to the south shore of the coldest of the unsalted seas. In the big union depot at Milwaukee I found a chance open to all travelers for a comfortable shave, and the north bound sleeper open at 9 P. M. to all duly shaven northbound men. Thereinto I climbed, and at 1:45 on the following morning started northward, although I knew nothing of that until we reached Ellis Junction, in the middle of the pine woods, where the train stopped for breakfast, and where according to the advice of Mr. Tabberner, the Chicago general agent of the road, I was first to disembark. Ellis Junction is the woods station for numbers of Chicago trout fishers and deer hunters. Its postoffice name is Crivitz, by which it is better known. In its neighborhood there were formerly numerous runways for deer, and probably more deer have been shipped from that point, legally and illegally, than from any other one point in Wisconsin. It is the starting point for the upper Oconto country, the Thunder River country and also for Medicine Brook, the Peshtigo Rapids and other trout waters nearer at hand. As a town it is not any very great affair, consisting for the most part of the railway eating-house, a saloon or so, a big sawmill and its attendant population. It is, however, a very good type of north-woods town.

The station agent at Ellis Junction told me that he and the district game warden, Judge Bartels, had, a day or so ago, caught sixty-seven trout, which, when dressed, weighed 52lbs. Some of these trout, he said, were so long that their tails turned up as they lay in a market basket. Although I told this man that both his road and my paper wished for definite news in regard to the trout fishing, he was reluctant to tell me where these fish were caught, and referred me to Judge Bartels, whom I had not time to look up. I subsequently heard of this catch of trout repeatedly during the trip, but no one knew exactly where it was made, owing to different reports given out by the fishers, naming both Medicine Brook and Thunder River as the locality. This was blind trail number one.

Mr. Tabberner had told me to look up Dan Seaby, whom I should find at Ellis Junction, Middle Inlet, or Lake Neoquebay, and whom he recommended as a good boy to guide one in that region. "Dan Seaby," said Mr. Tabberner, "sent me down a basket of trout that made my hair stand on end. He is catching some big ones up there, and if you find him you will not need go further north than there."

I asked the station agent if he knew Dan Seaby, and he had never heard of him. I telegraphed to Middle Inlet and learned that he lived there, but was not at home. Some one said he might be over at Lake Noquebay, which was only three miles.

"No 'taint, neither," said some one else, "it's good eight miles."

"Well, it's only three miles over to the inlet," remarked the first speaker.

"That's all you know," said a third party, "it's five mile, easy."

Seeing that I was fallen upon one of those reliable counties, where the more you hear the more you don't know, I started to walk to Lake Noquebay, relying not so much upon their directions as to the road as upon the general direction in which the lake lay from the railway. This was blind trail number two.

Following the railway track north through one of the most desolate and impassable stretches of pine land and cedar swamp it was ever my fortune to see, I came across a clear little stream flowing to the right, and could not resist the idea that there must be trout in it, improbable as that should be so near to a ravenous railway town. By the bridge grew a wild red rose, and likewise a bunch of ripe red raspberries. Barring the mosquitoes, which I soon drove pale and fainting from the spot by a good application from a greenery-yallery box of lollacapop, this little corner, by the way, seemed much like Paradise to one escaped from a desk. Whistling somewhat, all to myself, I set down my pack, tied a cast, and caught a trout, not 40ft. from the railway bridge. Him I returned, as being too small, and leaving the rose also to say good morning to some later traveler, I went along exultant. The country was entirely new to me, and one always enjoys a new sort of country. Most black and dismal and forbidding it looked, as I must say, when I left the railway and started into the forest along a trail which might or might not be the path to Lake Noquebay.

A sharp walk of three-quarters of an hour brought me again to my friend the brook, this time in a dark little hollow, crossed by a log bridge. I could not resist the temptation, and so put down my pack again, jointed my rod, and caught another little trout from under the bridge. The swamp on either hand was too dense for passage, and I fished no further. As I penetrated yet further into the silent and solemn pine forest, the trail appeared fainter and fainter. I fancied I had missed the right path, and at length turned back, grumblingly retracing my steps to the railway.

Near by I found a little farm and a log house, and the owner, Mr. Shepherd, told me I had been within a mile or so of Lake Noquebay. "But," said he, "you'll find Dan Seaby over at the Inlet. It's a mile and three-quarters from here." Fortified by a cup of tea, I started on again, reflecting whether I had or had not lost any time by losing my way.

Middle Inlet I found to consist of nine families, some piles of cedar logs and posts and the general debris of a milling camp. The station office was in a freight car, and two freight cars joined by a little hallway constituted the home of station agent Dropp, his wife and his three children. Dan Seaby was sitting on a slab bench in front of the "depot." He was thinking. It is a great country for thinking, up there. He was a big, good-natured boy of eighteen, smooth-faced and youthful, if beyond man's stature in girth and height. I told him my errand and his face fell a foot. "Gol darn the luck," said he.

"What's the matter with the luck?"

"Well, you see, I'm married."

"What!"

"Yes, I'm married. That's my house over there," and he pointed to a house so small he could have carried it under his arm. "I'm married, and my wife she's sick she is, and she's only sixteen, and you know how women are" (this with a wise look on his boyish face).

There being nothing else left for me to do, I sat down and whistled a long whistle of surprise. "Some folks never does have any luck," said Dan, eagerly jabbing his knife into the bench. "That's me. I'd ruther go fishing with you than anything else on earth. But then you know how they is." And he sighed mournfully.

"It aint any use, nohow," he said, brightening up a bit after we had talked a while. "The dam on the lower inlet is shut down, so's they can make hay on the marsh below here. The creek where I caught all my big trout is away out at the bottom of a big pond, and you can't get at it. They won't open the gate, and even if they did, the water wouldn't run down good in less'n three or four days. There's a good many trout, eight or ten inches long, over in the North Branch, about five or six miles. We kin ketch a lot over there—but pshaw! I can't go. *I* can't go nowhere. Some fellers never does have any luck!"

The upshot of all this was that a youth by the name of Dave Teeters accompanied me to the North Branch. We walked four miles to the stream, and upon ascending it for half a mile or so came to an elaborate logging dam, beneath which lay as beautiful a pool as one could wish to see. This we fished thoroughly without a rise. Earlier in the season a lumberman by the name of Hoff caught 380 trout at this point in one day, and another man at about the same time took 309. We wanted about one dozen, but the above individuals had our share. The stream was fished out.

Above the dam I had my first experience of the style of fishing necessary in this section. The back-water from the dam had spread up stream for nearly two miles, soaking the low banks until they formed a quaking bog in which it was no uncommon thing to go down nearly to the armpits. Across this, however, we pushed on and came into a fallen cedar swamp which could have afforded Doré good studies for his illustrations of the Inferno, and which passed the wildest dreams of confusion I ever had. It was a mat of interlacing dried hard poles and limbs, through and over which we plunged with heart of desperation. At this work the natives, with their spike-shod logging shoes, are far superior to the average angler; but the angler who cannot walk a 4in. pole across a 40ft. abyss of bottomless mud would better stay out of that region.

And yet all this creek had been fished before us, for we could see a trail wherever there was dirt enough to hold a footprint. Later we learned that fishers from a lumber camp below us had that day taken over 100 trout in the stream above where we were, our entry being too late in the evening to permit us to go very high up. We picked out a few miserable seven and eight-inch trout from under logs and among the tangled brush. The short line, stiff pole, heavy sinker and bait made the only practical outfit for this fishing. I found my fly-rod next to useless, and I did not take a trout upon the fly. I do not call that trout fishing. I learned that this stream, in common with all others of the region, was persistently fished by market fishers, who kept every trout caught, no matter how small. There is one conductor on the Milwaukee & Northern Railway, whose name I can give to the authorities of the road if necessary, who buys all the trout, big and little, that the Middle Inlet boys will catch for him, paying them twenty-five cents a pound. He always buys these trout to eat, he says, but as I happen to know of a hundred pound or so he has taken down the road late this summer, I submit that he has a mighty good appetite for fish. I would hardly dare connect this with the fact that trout bring fifty cents a pound at this end of the road.

The train butcher also develops an occasional abnormal fondness for trout, and if one of these poor, down-trodden log camp fellows, who never did a day's work in his life, but who insists that he has the right to murder trout and venison irresponsibly, should happen to have ten or twelve pounds of these little fingerlings in his box, the train butcher does not find it too much for his appetite. I offer these facts to Mr. Sheardown and Mr. Dutton and Mr. Tabberner, of the Milwaukee & Northern offices, and ask them if they like it. The great bulk of the trout now being taken in these waters are the result of recent planting by the Fish Commissioners, and the trout are being skinned out of these streams before they are over 3in. long. In the winter time fishing through the ice is carried on continually. "Don't you think the trout taste as good to us in the winter as they do to you in the summer?" is the answer to your protests. The law is not thought of. The game warden for the district is, so nearly as I can learn from his neighbors, pretty nearly no good as a game warden. I could not learn of his ever having made a conviction. He is either a delinquent or an almighty much maligned individual. His neighbors tell me that he himself never spares a fingerling; that last winter he fished through the ice, and that he has publicly declared his intention to run a hound on deer this fall. That's the way they talk. Is it all due to the popular feeling against a game warden in a lawless district, or is there ground for it? If he can't convict, I will tell him that I had open confessions, or rather bold declarations, made to me of violations of the trout and deer laws enough so that I could go up there and arrest two-thirds of those entire communities. If the warden is not asleep all day, he knows of these constant violations and suffers them. Put him out. Get some one in there who is awake and not afraid. These fellows won't hear to sense or reason. They have no sentiment to which you can appeal. They are utterly selfish, utterly ruthless, utterly wanton and merciless. They will respect nothing but the law, and that only when the law has shown itself rough and unsparing. A good conviction or two once in a while will save thousands of little trout, and hundreds of illegally killed deer, in this absolutely lawless and careless, reckless and heartless region. Get a game warden. Get a man with eyes, ears and sand. I don't think it would take much of the latter. This class of lawbreakers is the one of all others fondest of a great big bluff, and the most absently absent when it comes right down to pulling a gun.

I shall have more to say on the depletion of the game and fish supply in this region in later writing, for I gave the matter as extended and thorough a looking into as I could, and covered a good deal of territory. What little I have said here will make the history of the Gaylord Club appear the brighter when we come to see it. As further preparation thereto I may briefly add that my story of Middle Inlet, where I lived in the freight car with the station agent, and made divers trips which may be condensed into later mention, made merely a confirmation of the old story of extermination. Sick of this, I was as glad to reach Gaylord club house as I hope the paper's readers may be. E. HOUGH.

175 MONROE STREET, Chicago.

CAMPS OF THE KINGFISHERS.—V.

ECHO LAKE, ONTARIO, CANADA.

EARLY dawn found us surrounding a solid breakfast of fried "pike," bacon, eggs, pilot bread and coffee (colored with "condemned milk" in lieu of the pure article), flanked by the Jedge's "scooped" trout; and by the time the sun peeped a good morning from the summit of Knots' landscape, Sam, Charley Knots and the Jedge were paired off and away, one boat heading up the lake, the other to the bay around the point below, leaving the smaller boat for the skipper to make the trip to the farm at the foot of the lake after bread and a bucket of milk.

The old rod and a bucket of frogs were placed in the boat; and a straight wake was made for the rocky point opposite the little island, and not till around this and in a small bay, was a frog put on the hook and dropped over alongside the rushes to tempt a bass or some hungry longsnout looking for an early breakfast. Three pickerel were taken in the little bay, two of them as full of good honest fight as a bass or a trout, while the other was a very stick in his motions, affording about as small sport as reeling in an old oyster can.

Can it be that fish are like the human family, some full of vim and vigor and muscle, and others born tired and dyspeptic and afflicted with ills and ailments that make life a burden? From the great difference in the fighting qualities of the members of the pike family, this would seem to be the case, but in the eternal fitness of things the dyspeptics and drones and "tramps" of the tribe are happily in the minority.

Studying over this fishy problem as I went along, and wishing a 5lb. bass might take a notion that the frog towing astern would about fill some empty space in his digestive apparatus, another point was passed down toward the outlet where the lake narrowed to a quarter of a mile, lined along the shore I was following with a growth of grass, bulrushes and bushweeds that reached nearly half way across. The frog kept getting tangled up in these, till to be rid of the annoyance I reeled up and laid the rod in the boat, when, as I picked up the oars again, I was startled by a break in the water a few yards inshore, and turning quickly saw the broad tail and two feet of the body of a great fish flash in the sun for an instant and then quietly disappear under the water.

Grasping the rod and getting to my feet with the electricity working in the roots of my hair in a manner that threatened to lift my hat, the astonished frog was cast within a few feet of where the fish went out of sight, and I waited anxiously for a few moments for a tug at the line that would begin a fight that would be the crowning glory of all the exploits of the Kingfishers in time past and for generations to come. But the looked for tug didn't come; his mightiness was probably lying quietly in the shadows of the bushweeds crushing the life out of some luckless Canada pike that had heedlessly got within striking distance of his terrible jaws. The frog was reeled in and cast a few yards further down shore and wound up to a short cast without a sign of having been noticed; then up the belt of rushes a few yards and brought back with sundry enticing yanks and twitches that would have turned the head of any dull-witted pickerel; but old General *Esox* was too smart and wary, or too busy with his breakfast, to notice an insignificant speckled frog, and all the persistent casting went for naught.

After a half hour spent in this fruitless work, the frog was taken off and a big troller tied on the line and spun up and down the fringe of rushes for a hundred yards, tangling in the weeds occasionally; but another half hour resulting in nothing but "grass bites," the troller was reeled up and the boat headed for the farm, a quarter of a mile below, with the skipper in a somewhat demoralized frame of mind.

However, reflection brought the conviction that it were folly to fish for this king of Echo Lake with ordinary bass tackle; nothing less than a butcher's meat hook and a clothesline would have prevailed over and brought him to grief in the wilderness of bush weeds, grass and bulrushes infesting this part of the lake—albeit I wasted another half hour trying to provoke a fight as I went back, for I wanted the satisfaction of breaking a line on him, if nothing more.

Louis, who had frequently fished the lake and knew its waters well, was no doubt right when he said he had "see um so long," for judging by the breadth of tail and the couple of feet of body exposed by this one, he was certainly longer than Louis.

This great maskinonje was seen near the same bunch of rushes on two different days afterward by others of the party, but could not be induced to take bait or troller, and for all we know, he is there yet, the terror of the Canadian pike and monarch of all the waters of Echo Lake. Another was seen near the head of the lake in water 4 or 5ft. deep, that was measured with the eye at more than 5ft. in length, and I have no doubt whatever that there are a great many more in the waters of Echo that will weigh from 10 to 50lbs.

Entering the river at the foot of the lake a few rods above the farmhouse, the boat was pulled in under overhanging branches to a famous spring neighbor Ruttle had told us about, and I got out to slake my thirst, for I was dry and hot, and a cool draught would help to soothe the disappointment at the failure to provoke a battle with the big maskinonje. Gushing out from under the roots of a good-sized maple leaning far out over the water, its branches sweeping the surface, was a vigorous little stream nearly on a level with the waters of the river, that was so clear and extremely cold that had it not been for the intervening miles of forest and lake, a slight stretch of the imagination might easily have followed it through some mysterious underground connection to the great spring at the foot of Six-mile Lake in beloved old Upper Michigan. Using the milk bucket instead of a cup, a quart or two was dipped out of the little basin a foot deep by a couple of feet across, and while quaffing it with frequent pauses, for it was too cold to drink much of at a time, fish and fishing were forgotten in the enjoyment of this best gift of nature to thirsty man—sweet, pure, cold water welling from the bosom of Mother Earth.

When the contents of one of old Sam's stone jugs had "evaporated" (and with the aid of old Knots and the Jedge the process was not a tedious one), the jug was filled at the spring by some of the party on the daily trips to the farmhouse, that we might have a drink of pure water in place of the flat-tasting water of the little trout stream, which was, however, much colder than the waters of the lake; and it may be mentioned for the benefit of any friend of the angle who may happen to wander into the region of echoes (having brother "Wawayanda" and his buttermilk specially in mind), that this spring and another almost as good on the opposite side of the river, in a swamp at the upper end of Ruttle's clearing, are the only springs or streams of good, drinkable water we found around the entire circuit of the lake.

Pulling across and down to a small pine log at the edge of the water that stood for a dock, further progress was stopped by the big mongrel house dog standing at the top of the bank with bristles and tail up and a proclamation of war in the surly growl that greeted me as I stepped out and fastened the boat to a handy bush. Here was another "category," but a few well chosen and conciliatory remarks at last convinced him of my peaceful intentions, and I was allowed to climb the bank, where we stood confronting each other a few moments, neither of us quite decided what would be the next best move, when a sharp rebuke from Mother Ruttle, who opportunely appeared in the kitchen door, lowered bristles and tail, and "Jack," with abashed face and sidelong glance, sneaked around behind the woodpile, from where he eyed me furtively till I reached the house, much relieved in mind. A few minutes later he came tiptoeing up to the house to see if his mistress had recovered her good humor, and noting that I appeared to be on friendly footing with the family, the hatchet was buried with a few lazy wags of his tail and sundry pats on the head, that ended in a romp, and we were fast friends afterward.

When I got back to camp in the afternoon the other boys were in with a dozen pickerel and a bass for their share of the sport; rather a slim prospect for bass, but as there is always an excuse ready for fish not biting well, we laid it to a feeling of rain in the air and other "signs" which are a never failing source of comfort to the true disciple when the luck is poor. The old angler who goes to lake or stream without a full assortment of "consolers" to fit each case of failure, and an abiding faith in the traditions and signs and omens cherished of the craft, is a broken rod, a poor stick, and fails in his duty of setting a good example to the younger fry of the brotherhood growing up about him.

While sitting around on the dock after a late dinner, smoking and discussing the advisability of trying the fish again later in the evening, we sighted a boat coming around the point some three miles below; and Knots got out his glass to see if he could make out the phiz of brother "Friz," of Detroit, whom we were expecting that afternoon, but a long and careful scrutiny of the four in the boat failing to "remind" him of anything, the glass was passed over to the skipper for a look.

When the focus had been adjusted and the glass leveled a moment, his hat was swung in the air with a "Hooray, old Dan, by the great horned frog!" and the glass was passed around to the others and back to old Knots, who had meantime sharpened his vision with a few drops of "O. F. C," that he might the better penetrate the haze mantling the water and recognize his old companion of many a camp, who sat perched on a bundle containing his tent, fly and camp cot (we knew the make-up of the bundle as well as if present at the packing), facing the rower in the old familiar camp pose of elbow on knee and chin in hand, the useless old right arm hanging limp at his side, gazing contentedly out from under the wide brim of the same old once white wool hat, that had stood the pelting of many a rain and sheltered him from the fervid rays of many another July sun in years gone by—the same old Uncle Dan who had a place in all our hearts.

A second look by Knots brought the admission, "The bald-headed old pelican of the Sangamon, sure!" And then, not to let us lose sight of the knotty side of his nature, the sunburned sinner laid the fault to the glass by declaring that "the binocular must be out of fix, or that he had been looking the first time through the 'theater' instead of the 'field' or the 'marine' lens." The gnarly old bundle of perversity always found a knothole to crawl through when cornered, and to use a slang phrase, "It was a cold day when old Knots got left" in a skirmish of wits, or failed to snub and squelch any one audacious enough to differ with him in his clinched and riveted opinions on matters terrestrial and otherwise.

When it was settled that it was really Uncle Dan, a combined yell of greeting went out over the water to our grizzled old comrade, and directly a faint cheer came back through the haze, proclaiming that the yell had been heard and understood; and then Knots was suddenly reminded that it was a fitting time to celebrate, which he, Sam, Charley and the Jedge proceeded to do, while Louis was sent to the trout stream for a bucket of fresh water, that "James Mackerel" might not be left out of the festivities.

Waiting patiently till the boat drew alongside the dock, Dan was helped out and put through a course of welcome in the shape of hand shakes and sundry mild-mannered kicks and cuffs—the usual proceeding with a Kingfisher who comes late to camp—that doubtless set his open-eyed companions in the boat to wondering if they would have to go through a like ordeal as a sort of initiation ceremony; but when we were through with old Dan they got out and were duly introduced as Mr. Guy P. and Harry B., of Decatur, two young friends, 18 or 20 years of age, rigged out, we noticed, in high-toned dudish store clothes and jaunty stiff hats, whom he had brought along for their first trip to the north woods, while the one at the oars proved to be our friend Everett, of whom we had hired the boats.

Instead of meeting us at Richmond or Ft. Wayne, Dan had at the last moment changed his plans and taken the steamer J. Gould at Chicago and arrived at Sault the night before, got the note left at the Chippewa House, hired Mr. Everett the next morning to take them and their traps in his big yawl to the camp, a matter of 23 miles; got his old once white wool hat out of the inseparable old leather trunk to preserve his complexion, lost an hour or two hunting for the mouth of Echo River; and here they were with the afternoon well gone, all tired, leg-cramped and hungry, "and it behooved us," he said, "to fly around lively and get them something to satisfy four howling appetites in about the time it would take old Bill Schrall to land a 'suckermoojen.'"

A pot of coffee was made and a bite set before them, which was soon disposed off; and then the task of putting up Dan's tent according to his critical notions was begun, a job that was turned over to the two youngsters that they might learn something in the way of making a camp. Dan was supervising architect, and before the cots were hung and stretched to his pleasement on posts driven in the ground, and tent in place over them, we had a notion that the boys wished they had staid at home.

A small level spot a few yards up the hill was selected and cleared of some low bushes, but the soil was so rocky that it was difficult to drive a stake; and to make matters more interesting for the youngsters the blackflies began to come in from the bushes, and every few minutes they would drop axe, hatchet or saw with which they were at work and make frantic swipes with both hands over neck and face where the blood suckers were "getting in their work." The pests had the supervising architect at a great disadvantage, as he had but one hand with which to defend himself, but a coat of Mother Ruttle's blackfly cream liberally applied by the skipper caused them to leave him and redouble their attention to the boys. They were advised to varnish themselves with the mixture as we were, but they thought it too "nasty" and continued at their work, until at last, when they could stand it no longer, Harry meekly asked, "Where is that smear, as you call it? I guess we'll have to put some of it on or jump in the lake."

They repaired to the warehouse and after a while surprised us by coming out, one rigged in a baseball uniform and the other gorgeous in a lawn tennis suit of stockings, skin-tight knee breeches and shirt with marvelous and bewildering stripes running athwart ships, and the hands, face and neck of both well coated with the grease and tar. This unusual spectacle in camp was too much for old Sam's nerves, who was moved to nudge the Jedge and remark in a stage whisper, "another ep.sode."

Working diligently with little bother from the flies and guided by frequent suggestions and instructions from old Dan, the boys after a while had the cots in good shape, and then a couple of us helped put up the tent over them. Owing to the rocky nature of the place this was a matter requiring patience and tact, for every guy had to be in exact line to suit the eye of Uncle Dan, (Sam declared he got cross-eyed squintin' at 'em), a deviation of a quarter of an inch raising a protest; but by much driving and resetting of stakes the task was at last accomplished about supper time, much to the relief of the two novices; and peace and good will reigned in the camp. The elders of us had been there many a time before and never got flurried over the old pelican's peculiarities, for it was a pleasure to help him in his almost helplessness, and note the expression of serene content that took possession of him when the camp was made.

Our friend Everett had decided to stay over night with us and rest up for a fresh start in the morning, as the long pull against the current after getting into the river would have run him well into the night before reaching home, a wise conclusion, for we had a good bed for him, and plenty to eat.

After supper the cool air and the skeeters moved Harry to change his gorgeous thin shirt and breeches for a heavier suit of old clothes, and then around a big camp fire the plans for next day were discussed and the "two kids," as the Jedge dubbed them, were regaled with Knots' ancient catfish story, old camp yarns and reminders—all new to them—till everybody got to yawning and the circle broke up for the night. KINGFISHER.

A FISH EPIDEMIC.—A Calcutta paper reports: The large tank at the corner of the Esplanade and Dhurrumtolla st eet at daybreak yesterday morning, presented an unusual spectacle to several hundreds of astonished passers-by. Some 5,000 fish, varying from 40lbs. to over 80lbs. in weight each, were seen floating and panting on the surface of the water, unable to move, and evidently suffering from some cause. Several of them were handled by people near the edge of the tank, making no effort to get away, and 7 of them, which were evidently dying, and which had floated on their sides, were taken out of the tank. One fish, weighing 66lbs., with some of the tank water, has been sent to the chemical examiner to government for analysis. The police formed a cordon round the tank to prevent natives from stealing the fish, which seemed so exhausted that they could have been lifted out of the water with the hand in thousands. Strange to say, not a single small fish was affected, as none were seen on the surface. After the lapse of a little more than an hour the fish appeared to recover, and one by one gradually sunk and disappeared. Few of the thousands who daily pass and repass this tank could have had any idea of the large number of monstrous fish it contains, and those who witnessed the sight yesterday morning will not readily forget the curious spectacle it presented with these monsters floating about.

ST. LAWRENCE ASSOCIATION.—The annual meeting of the Anglers' Association of the St. Lawrence was held at Thousand Island Park Aug. 7. The following officers were elected for the ensuing year: President, P. H. Warner, Rochester; First Vice-President, H. H. Chandler, New York; Second Vice-President, Jacob Hayes, New York; Secretary, W. H. Thompson, Alexandria Bay; Treasurer, R. P. Groat, Clayton.

THREE RECKLESS TROUT.

IT is a little late in the season for trout stories, and my companions of the field who drop in at the office to spend the evening nowadays have passed along to bluefish and bass, with occasional woodcock and curlew variations; and on cool evenings a few early symptoms of ruffed grouse disturbance are manifested in our confabs.

Last evening, however, there was a sudden atavism to trout stories, and the question as to whether trout would ever bite immediately after being injured by the hook brought out the fact that every one of us had known them to do so. I recalled one instance when, about four years ago, I was fishing at evening at the mouth of Eagle Creek inlet on the Fulton Lakes. A half-pound trout struck the stretcher fly with a dash and a splash, but failed to hold fast. In retrieving the flies for another cast I noticed something clinging to the stretcher; and on examination this proved to be a piece of trout skin about the size of a three-cent piece. After making half a dozen casts in other directions, the flies were again tossed near the log under which the injured trout lurked, and this time he used the right end of himself for hooking purposes and was landed in the boat according to the custom of the time. A bright red spot near the dorsal fin showed where the skin had come from that was found upon the hook a moment before.

About two years ago, while fishing with bait in my beloved old Poohtatook Brook, in Connecticut, I hooked a large trout in very shallow water; and in his struggles to get free, while I was obliged to hold him closely, he splurged out upon a flat moss-covered rock, unloosed himself, sprang back into the brook and ran down to a shallow pool a couple of yards below, remaining in sight all of the time. Not really expecting him to bite again, I floated the worm down toward him, and it was immediately pounced upon and with deadly effect, for I can hear that old fellow flopping in my basket still.

Last month, while fishing in Ashley Falls Brook, in Massachusetts, a four-ounce trout was bound to have my Reub-Wood fly; but he had bad luck in his attempts, and I sympathized with him to the extent that I offered it to him several times in rapid succession. He hurled himself at it with might and main every time, and finally was tossed out upon a big wet rock. I noticed that he was strangely deformed, being decidedly humpbacked; but that he had "angel's wings" concealed in the hump there was no doubt, for he had no sooner spluttered off from the rock and found himself in deep water than he commenced jumping at the Reube-Wood fly again, and was finally hooked and landed. ROBT. T. MORRIS.

NEW YORK, August, 1889.

NEW ENGLAND FISHING.

BOSTON, Aug. 12.—The fishing season in the New England streams holds out later than ever this year. Rain in abundance has given an unusual pitch of water, and this proves to be favorable to trout fishing. Reports show good catches, even to the August vacationists, who usually find dried-up streams, and trout only in the pools. Mr. Soule, of Bradford, Thomas & Co., of this city, has just returned from a two weeks' vacation in Waldoboro, Maine, the home of his boyhood, where he found the fishing unusually good in the streams that he had come to look upon as about "played out." In his score was one trout of 1¼lbs. weight, a very fine specimen for the brooks in that locality. But Mr. Soule was greatly disgusted with mosquitoes, which he found to be holding out unusually late in that part of the country. Generally the middle of July brings them about to an end for the season; but Mr. Soule found them "thicker than mist," and that was thick the most of the time when the rain did not pour, and they bit harder than in June. The only way that the stream could be fished at all was by the liberal application of pennyroyal and other specifics. The weather has been remarkably warm and wet, both conditions favorable to mosquitoes.

Mr. Frank Dexter, of the firm of Dexter, Bros., of this city, starts this week with his wife for Kennebago, to spend the whole month of August. This is their usual annual trip. Mr. Dexter has a hay fever, for which the high mountain air of the Kennebago region is a perfect cure. Besides, both Mrs. Dexter and himself are enthusiasts with the fly-rod. They catch trout legitimately and for the pleasure of fly-fishing, and they live to enjoy the mountains and the lakes, without desiring to kill trout for the mere sake of numbers. They are among the few who have learned that it is not all of fishing to fish, nor all of an outing to kill trout or game. Mrs. Dexter tells a good story of a party of Boston vacationists—two gentlemen. They hired a boat at Greenvale, and went trout fishing. They were gone all day, and came in with great luck. In fact, they had a boat almost full of trout—that is, they were trout, till some one who had spent a few summers in that region pronounced them chubs. The gentlemen had never seen a trout. SPECIAL.

TOWANDA, Pa., Aug. 10.—Towanda is located on the banks of the Susquehanna River, and in the neighborhood of fine black bass fishing grounds. The season so far has been one of small catches, or not any, on account of muddy discolored water, caused by heavy and frequent rains. One day the past week the fishermen who happened to be on the street saw a large 5lbs. black bass being taken to jail by a deputy sheriff. It was a gift to the sheriff of this county, sent in by Attorney Califf, who is in camp about three miles above this place with his family. It is the second one of the same size and weight captured by him this season. It takes from one-half to three-quarters of an hour to land one of those fellows, Mr. Califf says, providing you have good luck. Our other fishermen lose all their big ones. Everybody that goes out hooks a big fellow in his imagination, but fails to bring him home. This capture gave new blood to the fishermen, and the water clearing up many boats were out yesterday. All brought in fine strings, mostly black and rock bass.—SUS. Q. HANNAH.

LAKE KOSHKONONG.—Fort Atkinson, Wis.—An especially strong struggle was made last winter in the Legislature to abolish fishing through the ice, but the measure was defeated. Our lake, so famous for canvasback ducks on account of its large wild celery beds, is four miles wide and eight miles long, and is situated in the southeastern part of the State; and from our small lake alone

over fifty tons of bass, pike, pickerel and perch were caught with hook and line during a period hardly covering two months last winter. We are sick of it, but can't help it; and so must content ourselves to sit in a boat and soak a minnow, waiting almost in vain for a bite from any kind of a fish. All that could be done to stop this kind of fishing was done last winter, and now we will patiently wait another two years until the Legislature again convenes, then we will make another bold stagger to stop this wholesale butchery.—REX.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 7 to 11.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary. Entries close Aug. 28.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary. Entries close 11 A. M., Sept. 9.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager.

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary. Entries close Aug. 31.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Company, Toledo, O. Chas. E. Rowland, Secretary, Box 423.

Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Secretary.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y. Entries close Sept. 7.

Oct. 7 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. B. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

NIGHTS WITH THE COONS.—IX.

ALTHOUGH I lay no claim to being a coon hunter, still I cannot refrain from giving your readers an account of a hunt which I participated in, and really enjoyed, in October, 1886.

A friend living at Glens Falls requested me to come and spend a few days with him at his cottage on Lake George, and, to make it an inducement, added, "that I could spend the day shooting grouse, and, perhaps, if I would bring along a hound, might find some rabbits," remarking lastly that there were plenty of coons, that they had nearly destroyed Henry B.'s corn, that he knew of a dog at East Lake George that was good for coons, and he would have him at the cottage, and "we will go along some night and get a coon." I will admit I did not take much stock in the coons, for several reasons. First, because I never had seen a successful coon hunt, had tried on two occasions to get a coon by being out all night and nearly tiring myself out, and got left both times, instead of getting a coon. In the second place, Harvey never could be induced to go hunting for any other game, although he enjoys fishing, and I did not for a moment think that he would go tramping around through the woods, across marshes, over rough, rocky ground on the mountain side on a dark night, when he could not be induced to join in a hunt on a fine day; but I was mistaken. I concluded to accept his hospitality, and after loading a supply of shells, and with rifle, gun, ammunition and hound in a conveyance, I headed for Point Comfort. When I arrived I found Curly, the East Lake George dog, there. I think this dog somewhat resembled "Nessmuk's" "dog without a pedigree," not in appearance, as I should pronounce Curly a half-bred cocker spaniel, "the other half, just dog," but in his being better than he looked. Hero, one of our great Danes, was also there, and with the hound I brought we were well supplied with dogs.

It was nearly sundown when I reached the cottage, and after the horse had been stabled we walked over to the cornfield and saw the ground strewn with stalks, with the husks on the ears stripped back and the cobs bare. I never saw such havoc, and I could hardly believe that it was coons that had done the mischief. "We will try the coons to-night," said he. "All right," was my reply, but I did not even then believe him in earnest.

But when after eating supper and enjoying our usual smoke, he arose, lighted his lantern, and said, "Get your gun." I realized that under his quiet manner there smouldered rage against the despoilers of his crops. We started for the cornfield with all three dogs at our heels. Just before we reached the corn Curly entered the low, marshy ground to the south of the field, and was lost to sight, and soon out of hearing. Hero, who was only one year old, and never hunted anything except woodchucks, kept close to us, while the hound went out in the corn, and very soon we heard her, about five rods away, tune up and head for the marsh. Before she could reach the edge we heard Curly barking furiously not ten rods away in the marsh and in line of the trail the hound was running. Quick as a flash Hero was gone, and Harvey, with lantern in hand, made a dash for the spot, saying as he went, "I knew we would have a coon to-night, I smelled them in the air."

Upon reaching the spot we found all three dogs looking up at a dark object on top of an ash stump about 20ft. high, but only Curly barking. I asked Harvey if he thought it a coon or a cat; he replied, "A coon, of course; give it to him," and at the crack of the right barrel down he came and landed among the dogs, who soon extinguished what little life was left. Curly was made of good mettle, and would get a hold and hang like death, while Hero, who stood 30in. at shoulder, would pick up coon and Curly and shake them both like a terrier would a rat.

We had been from the cottage only fifteen minutes and had scored our first coon. After taking this one in we crossed over on the south side of the marsh, and had barely started toward the mountain before the hound gave another cry, and the music had hardly died away before Curly came up and struck in ahead of her. Away he flew like the wind, and inside of two minutes had his coon up a tree not fifteen rods away and was again making the woods ring with his music. One shot brought this one down and he was handled in approved style by the dogs.

We took him from them, and as we were not over five minutes' walk from the cottage, started to take him in, and were about half way there, when we heard Curly again, about ten rods further toward the mountain, in a thicket of cedars. We knew all the dogs were there and would stay, so we went to the cottage with our second coon, and our wives concluded that as the dogs were not far off they would go along and enjoy the sport of doing up the third coon.

We reached the spot but could see no coon, as the cedars were very thick, and to look up was like looking into a sea of ink, but Curly insisted there was a coon up in one of the cedars, so I set down my gun and commenced climbing the tree. I had nearly reached the top, and could see the light of the sky overhead but no coon, when of a sudden I thought I felt something behind me, and on turning partly around I found the coon had climbed so far up the tree that the top had bent over and he was almost touching me at my back. By the light of the lantern I marked a spot on the ground at the foot of a birch tree where I would stand to shoot, and also the angle I must hold the gun at to be in line with his coonship, and then descended, took my position and fired, when with a crash down he came, and with a yell and snarl died among the dogs. This coon weighed nineteen pounds. The ladies thought they could manage to carry him to the cottage, as we wanted to go further north to an old orchard, and so after hanging him over a stick with the coon between them they left us.

We went to the orchard and did not strike another; were gone perhaps an hour, and concluded we had had sport enough, and were almost back to the cottage when we heard a yell, one bark from Curly and a growl from Hero about four rods to our right, and when we arrived at the spot found Curly froze to another coon and Hero handling both as though they cost nothing. The two still-hunters had ran upon him in a little opening, and before he could reach a tree had him, and to get him meant to kill him on the spot. After taking this one from the dogs, and while we stood talking over the results of the evening, we heard a grand rush through the dry leaves, and inside of a minute Curly again broke the stillness of the night. This proved our worst coon, as he had climbed a poplar not over 10in. through at the butt and 60ft. high, with not a limb for 40ft. It took six charges to stir him, as we could not tell which dark spot was the coon, as the tree had several clumps of leaves still clinging to its branches, but at last he came down with a thud. This made our score stand 5 coons inside of three hours, and we felt satisfied with the results and entered the cottage at eleven o'clock.

I remained at Point Comfort the two succeeding nights, and we got one coon each night. Should I live for a half century I will never forget that "night with the coons," and never expect to enjoy another as successful.

F. B. ZIMMER.

SCHENECTADY, N. Y.

FLEAS AND LICE.

FOR the benefit of a number of correspondents we republish the following article, which first appeared in our issue of Feb. 28, 1884:

We have recently received several communications requesting information as to a sure method for ridding dogs of lice. Almost all of the various remedies that are recommended for their extermination will have the desired effect providing they are promptly applied. None of them will accomplish the purpose unless so applied. We have repeatedly stated that "eternal viligance is the price of freedom from fleas." This axiom is especially applicable when seeking to circumvent the bloodthirsty *lus*. The main difficulty in getting rid of these troublesome pests is owing to a want of care in applying the remedy. The louse is very prolific and matures at a very early age, and as none of the various remedies will destroy the vitality of the egg, no matter how thorough has been the war of extermination, a day or two will see their ranks again full. It is necessary, therefore, in order to make a sure job of it, that the work be thoroughly done in the first place and thoroughly repeated at least once a week, until "the last armed foe expires." Persian insect powder, when rightly used, answers the purpose very well, and is perhaps the most cleanly and least troublesome method in cold weather, but as the powder only stupefies and does not kill the insect, it is necessary to follow its application with the fine comb, of course destroying by fire every captive. To apply the powder, place the animal upon a large sheet of strong paper, and with an insect gun or common pepper box thoroughly dust the powder into every portion of his coat, following this with a vigorous shampooing until every insect receives its share. Most of them will at once vacate the premises and fall upon the paper. Those that remain must be found with the comb and all thrown into the fire. This should be repeated every three or four days until the parasites all disappear. A decoction from quassia wood will also destroy lice. Take two or three ounces of the chips and tie them up in a muslin bag. Suspend them in a pail of water, stirring occasionally. After two hours the decoction is ready for use. Apply it freely with plenty of soap and rinse off with clear water. Strong tobacco water, applied in the same manner, may be used with good results, although it is apt to make the animal sick. Whale oil, freely used, is also sure death to lice. This should be thoroughly washed out of the coat within a few minutes after using on account of cleanliness. There are many other remedies that will accomplish that purpose, but those mentioned will be found amply sufficient. Mercurial preparations of all kinds are never to be used for this purpose, as bad results are always sure to follow. Neither can kerosene be recommended for the same reason. It is absolutely necessary that the kennel and bedding be attended to or all of your labor will be in vain. A good coat of whitewash put on hot, taking care to fill up all the cracks, will render your kennel almost insect proof. The bedding should be changed often. Cedar shavings make the best bed, although those of pine will do very well. The bedding of dogs who sleep in the house should be frequently scalded out in strong soapsuds, and after rinsing in clean water, hung in the sun until perfectly dry. By closely observing the above rules any one can soon rid his kennel of both fleas and lice.

FANNY'S RECORD.—Englewood, N. J., Aug. 6.—*Editor Forest and Stream:* Since you have been so courteous as to give me the list of Cupid's winnings, will you do likewise with his dam Fanny, whose record I am not quite sure of, not having been notified by cards. Also, is it not obligatory that some sort of certificate be sent owners from the bench shows.—EDITH M. VAN BUREN. [The winnings of Fanny are: First and special, New Haven and Boston. First, New York, and champion, Philadelphia, 1885. Second, New York, 1886. First and special, New York, 1887. Second, New York, 1888. First, New York, 1889. Some show managers send certificate of awards to owners, but many do not. There is no rule in the case, but if exhibitors demand such a rule, there is no question that it can be easily obtained.]

DOG TALK.

FROM the City of Mexico Mr. L. B. France writes to the Denver *Republican*. "At the restaurant I have several times noticed a blooming wife of 250lbs avoirdupois, if she weighs an ounce; her attire is faultless, but everything looks tight. I could not avoid the impression that any unusual exertion on her part would require me, in modesty, to leave. With her is a delicate, happy-looking man in an English jacket of plaid, and his thin legs encased in tight trousers; he always wears a smile of devotion and carries an Italian greyhound, which he holds in his lap and feeds. The trio are accompanied usually by a thin, grizzled gentleman with an eye-glass, who soaks his bread crust in his chocolate; he is happy, too, and beams on his companions, not forgetting the dog. In their tours to and from the restaurant the elder gentleman assumes the lead, talking cheerily over his shoulder to the lady and she in turn to her delighted follower and his handsome charge. Whether the young man is the husband or dry nurse I have not learned. The dog is remarkably well bred and studiously refrains from putting his nose into his guardian's plate. Consideration for the dumb brutes is not wanting. In nearly every doorway will always be found a dish of water; these are for the dogs, who may be vagabonds or not. Rabies in the family of our faithful friends is more imaginary than real. It is a rare disorder, notwithstanding the opinion of the average policeman to the contrary. At the altitude of the City of Mexico I dare say a case was never known. But to keep the water handy is a police regulation to be observed by every householder under penalty of a fine. If it will not ward off madness, it will serve as a sign to detect it. So the dogs are conveniently provided for and the timid citizen is given an assurance of a safeguard against all sorts of curs."

The *Stock-Keeper* is disgruntled at the manner in which news of the Kennel Club meetings is disseminated, and has something to say on the question, and at the same time it gives a bit of the pedigree of Mr. Huscroft, who it will be remembered promulgated the Salisbury pedigree scandal. We append the remarks:

"Just a word about the apparently one-sided supply of information from the Kennel Club. A distinction should be drawn between general and precise information. We can quite understand how the results of committee inquiries leak out, and become public property. The parties to a case usually know whether they have won or lost, and cannot be expected to keep the result a secret until the appearance of the *Kennel Gazette*. They know the decision—for, though the committee do not consider their decision until the opposing parties have withdrawn, the effect of it is conveyed to the parties to the case; but, as the deliberations are carried on in private, we do not understand how, in the case of the Dublin matter, the very words of the club's resolution were published in a contemporary.

"Our remarks of last week on this subject having elicited no remark, we are now inclined to inquire whether this information was supplied to our contemporary by Mr. Huscroft, who, we understand, is editor or sub-editor of the *Kennel Gazette*. He is, we believe, the source of information which he is in a position to supply to different channels, for besides editing the official organ of the Kennel Club, he acts as London correspondent to an American paper, purveying for it a weekly budget of kennel news. We have heard that he has similar relations with a continental journal. He is further connected with an advertising agency, and also acts as guide and adviser to Americans who, being over here, may require his services when making their canine purchases.

"Which English journals Mr. Huscroft supplies with his intelligence we cannot say, but if the official resolution under notice was sent by him to our London contemporary, we should like to know why he, in his official capacity on the *Kennel Gazette*, picked out a particular newspaper, instead of transmitting official information to all the recognized organs of the kennel world. He cannot have forgotten the *Stock-Keeper*, as it was in our office during the few months he was in our employ that he picked up whatever he knows about dogs. When he was engaged by us he knew practically nothing about this subject, the names of many breeds must have been quite foreign to his mind; but though his duties were confined chiefly to office work, he may have made himself somewhat familiar, in a superficial way, with the doings of the fancy. If, therefore, in his position as editor of the *Kennel Gazette* he may supply information to the press, we consider we are entitled not to be constituted an exception.

"Further, Mr. Huscroft will require to conduct his various vocations with much skill, or he will get himself mixed. Mr. Huscroft, the editor of the *Kennel Gazette*, as Dr. Jekyll, prim and proper, must keep Mr. Huscroft, the American correspondent, as Mr. Hyde, the promulgator of unfounded statements, quite separate and distinct. The English 'editor' should forswear the American 'correspondent,' who made public a wicked and false charge against a fellow countryman residing in America. Mr. Huscroft, in the safe distance of the American journal, has fulminated mendacious insinuations against the paper which served him as a stepping-stone to his present position as editor of the *Kennel Gazette*, he dare not repeat them in an English paper subject to the jurisdiction of our law. Further, Mr. Hyde Huscroft has in the American paper written on the late bulldog match in such suspicious terms as to lead readers across the Atlantic to think that the editors of this journal entered into a conspiracy with Mr. George Raper, Mr. J. Ellis, Mr. Astley probably, and Mr. Preece also, to do Mr. Pybus-Sellon out of his money. Of course in this country, where we are known, and where Mr. Huscroft is known, such a charge could only excite notice for its monstrous impertinence—but in America, where the editor of the *Kennel Gazette* poses as a canine authority, his charges may—nay, do, we believe—find credence. Therefore, Dr. Jekyll Huscroft must be careful not to lapse into Mr. Hyde Huscroft, or the members of the Kennel Club may find the editor of their official organ prosecuted for libeling the proprietors of an English journal and several well-known and respected members of our kennel world."

Dr. C. A. Lougest, Jersey City, N. J., has imported the well-known mastiff bitch Cambrian Princess, and sold her to Mr. E. H. Moore, Melrose, Mass. She was whelped Feb. 3, 1882, and is by champion Bran and out of Modesty. She has won the Old English Mastiff Club's forty guinea challenge cup eleven times, as well as many first prizes, medals and cups. She also won the prize of honor at Brussels. She is the dam of Minting and Mr. Moore is fortunate in securing her for his kennel.

The National Coursing Association propose holding meetings near some of the large cities, beginning at Louisville, Ky., the first week in September, and at Lexington and Cincinnati, O., the weeks following. Jack rabbits will be used, and the dogs will be muzzled, thus climinating the element of cruelty, unless it be cruel to tantalize the dogs in such fashion.

It is rumored that several agricultural fair associations in different sections of the country will hold dog shows in connection with their annual exhibitions. We will thank our friends who may have knowledge of such contemplated shows to send us particulars.

Mr. S. W. Smith, the well-known English St. Bernard fancier, was judge of the breed at the recent Darlington show. Previous to the judging he received the following

letter, which he placed in the hands of the committee, and ordered the exhibitor and dog out of the ring: "S. W. Smith, Esq.: Dear Sir—I am showing Lorna Doone at Darlington. I think of selling. I advertised her a week ago, and have a customer hanging on. Fifty guineas is her price, and I think I shall get most of it, especially if you can put me well up on Friday. I would guarantee you a £5 note, or perhaps more. Lorna is looking well. I am, sir, yours truly, T. Cook."

There has been considerable talk of holding a dog show at Hamilton, Canada, in connection with the Central Fair, next month, but we understand that the project has fallen through for this year. An effort will be made to hold a first-class show there next year.

Some medical students recently applied to Mayor Grant for permission to take living dogs from the pound for scientific purposes. The animals were evidently wanted for the purpose of vivisection, and of course the permit was refused.

A public swimming bath has just been opened at Stuttgart. A rather novel adjunct to this institution is a bath for dogs, fitted up in elaborate style and at large expense, and intended for canines of all classes.

LONDON DOG SHOW.

Editor Forest and Stream:

The premium lists of the London Kennel Club's bench show of dogs, to be held at London, Sept. 10 to 13, are now ready and can be had by applying to C. A. Stone, Secretary, Toronto, Ont.

The prizes are, challenge $10, and $10 and $5 in the open classes in the majority of cases, and $7 and $3 in the puppy and remaining classes. Cash kennel prizes are offered for St. Bernards, foxhounds, English, Irish, and Gordon setters, fox-terriers and spaniels. Besides, a silver tea set, valued at $50, donated by the Hobbs Hardware Co., for the best kennel of English setters owned in Canada.

The Provincial Fair Association has presented a gold medal, valued at $40, for the best kennel of collies, open to the world; also a special prize of $10 in cash for the best kennel of spaniels in Canada, given by the London Kennel Club.

The judges are: James Mortimer, of Babylon, N. Y., mastiffs, St. Bernards, Newfoundlonds, Great Danes, pointers, setters, foxhounds, collies, fox-terriers, bulldogs, bull-terriers and pugs; Mr. Geo. Bell, of Toronto, the remaining classes.

American exhibitors will not be troubled by the customs at the lines. The London Kennel Club having made arrangements whereby all dogs will come to London in bond, and they will have a customs officer at all trains to pass the dogs on their arrival. All exhibitors who show at London and intend showing at Toronto the following week will be allowed the privilege of keeping their dogs in the buildings of the London Kennel Club over Sunday. This will give them a chance to exercise their dogs and get them in condition for the Toronto show. There are special prizes in all classes. C. A. Stone, Secretary.

TORONTO DOG SHOW.

Toronto, Aug. 5.—*Editor Forest and Stream:* I am glad to be able to tell you that there is every prospect of our having a very good show. We are hearing from the leading men on your side, and, of course, all our prominent men show here, as this is always the largest show in Canada.

Our list of special prizes is growing fast, and we expect to have handsome kennel prizes for each sporting class, also numerous prizes from $5 to $20 for each of the non-sporting classes. We have contracted with Spratts for feeding.

Our choice of judges seems to have given universal satisfaction, and we are in receipt of numerous compliments, as much from your side as from our own country, upon our general arrangements.

Last time we had 425 entries. This year we expect to get fully 550. Any breeder who has not received a premium list should let me know at once, and I hope they will send their entries along as early as possible.

C. Greville Harston,
Sec'y Dominion of Canada Kennel Club.

CONTAGIOUS DISEASES OF THE DOG.

In this country, and under ordinary circumstances, dogs enjoy a remarkable immunity from diseases which are properly classed among the contagia. Distemper, which has recently been described, is the only commonly occurring disease of an infectious nature, and even that malady does not spread, excepting under favorable conditions.

Rabies is the most deadly of all contagious diseases of animals; but it is not confined to dogs, although it may be kept up by, even if it does not always originate in them. No animal seems to be exempt from rabies after actual inoculation, and the attack is fatal to all excepting birds, some of which recover without any treatment, and afterward remain refractory to the action of the rabic virus.

After distemper, which is the most common contagious disease peculiar to the dog, several diseases are referred to, but they are of very occasional occurrence, some of them almost unknown, as diphtheria, foot-and-mouth disease, the surra disease, anthrax, variola, glanders, measles, cholera, tubercle and septicæmia.

Diphtheria was described by the late Prof. Robertson in 1875. An outbreak of disease, which was at first thought to be distemper, occurred among greyhound puppies and the malady was subsequently communicated to the older dogs. The progress of the affection was attended with a remarkable fatality, only four animals recovering out of thirty which were attacked.

Several forms of the affection were noted, in which the symptoms varied in degree of severity, but in all the cases there was the characteristic gray exudation on the mucous membrane of the back part of the throat. In one form of the diphtheritic disorder there was acute inflammation of the throat with high fever, swelling of the glands, and difficulty in swallowing. Some of the dogs suffered from vomiting and diarrhœa. In the second form of the disease the symptoms were less acute, but there was considerable effusion of fluid into the areolar tissue of the neck. A third form of the disease was characterized by blood-colored discharge from the nostrils and mouth.

Cases have been recorded of communication of diphtheria to dogs by inoculation with, and also by ingestion of, diphtheritic matter; but it is obvious that the disease cannot be designated as a contagious malady proper to the dog.

Foot-and-mouth disease, according to Steel, is communicable to the dog, and cases are mentioned of the disease arising from drinking the milk of diseased cows. We have seen kittens become sick from the effects of such milk, and dogs have died after having been kept in contact with the feet of cattle which had been killed while suffering from foot-and-mouth disease; but we have not seen any symptoms in the dog which in themselves suggested that the animal was affected with the actual affection.

Surra disease.—Mr. Steel, in his work on the diseases of the dog, refers to the presence of parasites in the blood of dogs which have been inoculated with the surra disease in India. The parasite is not one of the true spirilla, but is a monad of an elliptical form with a flagellum at each end. It is found in the blood of common sewer rats in this country, and does not in those animals appear to do any harm.

Anthrax is, by some authorities, stated to affect the dog, and it is undoubtedly true that dogs which each eat the flesh of animals dead of anthrax die rapidly in consequence, but it is doubtful if adult dogs really take the disease. The symptoms and morbid appearances correspond to those of blood poisoning; swelling of the glands of the throat, tumors in the head and also in various parts of the body, and in some cases acute œdema, are the general symptoms. Experiments which were made in France led to the conclusion that puppies up to six months old are especially subject to the anthrax contagium, and in these cases the anthrax bacilli are found to be in abundance in the blood and tissues after death. In order to determine the question of the susceptibility of dogs to anthrax, further experiments with pure cultivations of the bacillus of anthrax are necessary. No satisfactory conclusion can be drawn from those cases in which dogs die after eating the partly decomposed portions of anthrax carcasses, because dogs are very subject to septic poison, and it is quite likely that some of the putrid matter may enter the blood stream through a slight abrasion in the membrane of the mouth.

Variola is another disease which is said to affect the dog, either from inoculation or ingestion of the virus. Dogs are said to have suffered from eating portions of sheep which have died from sheep-pox. According to Steel, variola of the dog is either malignant or benign, and the eruption, as in man, may be discrete or confluent. The disease passes through the several stages of papules (pimples), vesicles, pustules and scabs or crusts. Dogs which are infected with variola suffer from the usual fever of invasion before the eruption appears, and there are the usual complications, depending on the severity of the attack. Sometimes the breathing organs are involved, and a dangerous form of bronchial inflammation occurs, which commonly proves fatal. When the digestive organs are chiefly affected, diarrhœa is a prominent symptom, and it is especially noticeable that the breath and the exhalations from the skin in these cases are excessively foul.

Considering the fatality which is said to attend the disease variola in dogs, it is fortunate that its occurrence is so rare that very few veterinary practitioners are aware of its existence.

Measles is another of the contagious maladies to which the dog is said to be susceptible, and Mr. Steel refers to a case which came under the notice of the Epidemiological Society in 1876. A dog which had suffered from distemper four years previously licked the hand of a child affected with measles in a severe form. In twelve days time the dog became ill with catarrhal symptoms, and on the fourth day it died, with marked congestion of the air passages. Whether the case referred to was really measles or blood poisoning may be considered as doubtful. At any rate, measles cannot be said to be one of the contagious maladies of the canine race.

Cholera is said to affect dogs and cats, and experiments seem to confirm this view; but there is nothing remarkable in the circumstance that during the prevalence of cholera in men, dogs and cats, which may receive the infective matter by accident or design into their system, may suffer from virulent diarrhœa, with vomiting. The true nature of the disease in men has yet to be defined, and very little can therefore be affirmed in regard to its character in the lower animals.

Glanders is undoubtedly communicable to the carnivora, and there is no reason to doubt that dogs incur a certain degree of risk by association with glandered horses; besides which, the disease with its characteristic signs has been produced experimentally by inoculating dogs with the matter of glanders, and also by feeding them on the flesh. Glanders in the dog does not seem to be a fatal disease, but among the larger carnivora, lions particularly, it is very deadly.

Tuberculosis, according to Steel, has not been detected in the dog; but a spurious form of tubercle is found in the lungs and lymphatic glands, due to the ova of the *Strongylus vasorum*. A similar condition of the lungs of the sheep, caused by the presence of a gordian form of strongle, was described as tubercle many years ago. Since the discovery by Koch of the tubercle bacillus, the true character of deposits which bear a general resemblance to tubercle can be ascertained with certainty.—*London Field.*

COLLIE STAKES.—Rahway, N. J., Aug. 9.—*Editor Forest and Stream:* Kindly publish the following: Members of the Collie Club are hereby notified that entries for the Collie Stakes of 1890 should be sent to the secretary at once. In consequence of the Long Island Live Stock and Fair Association having abandoned the idea of giving a bench show in September, the fall section of the Collie Stakes for 1889 cannot be decided as announced. A committee has the matter in charge.—J. D. Shotwell, Sec'y.

ELMIRA DOG SHOW.—Elmira, N. Y. Aug. 9.—*Editor Forest and Stream:* We will give owners of fast foxhounds a chance to win fame and cash at Elmira. Every evening after the races a live fox will be led around the course. All the hounds will be started together. The first one in gets $10, second $5, third $2.50. No entry fee will be charged for the race, but all dogs must be entered in regular classes. Will also have beagles work on fox or rabbit trail.—J. Otis Fellows.

WACOUTA KENNELS.—Omaha, Neb., Aug. 11.—*Editor Forest and Stream:* I have to-day sold my right and title in and to the name of the Wacouta Kennels, as well as all the remaining stock in said kennels, to Dr. Geo. B. Ayres, of Omaha, Neb.—R. A. Craig. The Wacouta Kennels will hereafter be at Omaha, and now contain the following mastiffs: Edwy, Lord Raglan, Champion Rose, Ilford Comedy, Dolly Varden II., Mollie Comedy.—Dr. Geo. B. Ayres.

TOLEDO DOG SHOW.—Toledo, O., Aug. 9.—*Editor Forest and Stream:* Since the issue of our prize list the following have been donated as specials at our show: $10 cash for best bulldog or bitch; fine collar, spiked, value $5, for best Great Dane. American English Beagle Club offer a suitable collar for best beagle owned by member of the American English Beagle Club. Other specials are expected and will be announced later.—C. E. Rowland, Secretary.

AMERICAN GORDON SETTER CLUB.—Baltimore, Md., Aug 9.—*Editor Forest and Stream:* By order of the Executive Committee of the American Gordon Setter Club, the annual meeting for election of officers will be held at Baltimore, Md., Room No. 9, Chamber of Commerce, Oct. 9, 1889, at 5 P. M.—I. T. Norris, Sec'y.

BROOKLYN DOG SHOW.—Arlington, N. J., Aug. 13.—*Editor Forest and Stream:* I wish to inform you that I have decided not to officiate as judge for St. Bernards at the coming Brooklyn dog show.—K. E. Hopf.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book, Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Bayard. By C. H. Kobiche, San Francisco, Cal., for black and tan American foxhound dog, whelped March 14, 1889, by Reb out of Kate.

Gipsey Queen. By G. T. Hinks, Paterson, N. J., for liver cocker spaniel bitch, whelped March 23, 1889, by Captain Stubbs (Colonel Stubbs—Maud) out of Queen Bess (Brag—Flossy).

Tipperary Kennel. By J. H. Acroyd and L. A. Lockwood, Pawtucket, R. I., for their kennel of Irish setters.

NAMES CHANGED.

Bob White to Taps. By Chas. E. Nott, Wakefield, Mass., for lemon and white English setter dog, whelped April 20, 1889, by Gus Bondhu out of Rural Neva.

BRED.

☞ Notes must be sent on the Prepared Blanks.

Lady Bess—Scotilla. Geo. N. Sherman's (Poughkeepsie, N. Y.) collie bitch Lady Bess (James—Bess) to Chestnut Hill Kennels Scotilla (Dublin Scot—Flurry II.), June 30.

Salva—Sears' Monarch. W. A. Power's (Greenwood, Mass.) mastiff bitch Salva (Ilford Caution—Bess) to E. B. Sears's Sears' Monarch (Lord Raglan—Dido), July 13.

Countess of Dunsmore—Sears' Monarch. Wyoming Kennels' (Melrose, Mass.) mastiff bitch Countess of Dunsmore (champion Beaufort—Holda) to their Sears' Monarch (Lord Raglan—Dido), July 8.

Countess of Moncton—Sears' Monarch. Wyoming Kennels' (Melrose, Mass.) mastiff bitch Countess of Moncton (Clement—Juno) to their Sears' Monarch (Lord Raglan—Dido), July 5.

Maid of Athens—Sears' Monarch. G. E. Robbins's (Melrose, Mass.) mastiff bitch Maid of Athens (Major—Maida) to E. B. Sears's Sears' Monarch (Lord Raglan—Dido), June 24.

Belle of Bangs—Duke of Vernon. Vernon Kennels' (Mt. Vernon, N. Y.) pointer bitch Belle of Bangs (Bang Bang—Miss Merrimack) to L. Gardner's Duke of Vernon (Glendale—Spotless), Aug. 9.

Werda—Ben Hur. Tracy Gould's (Vineland, N. J.) St. Bernard bitch Werda (Khartoum—Countess) to his Ben Hur (A.K.R. 6727), Aug. 8.

Maud—Plinlimmon, Jr. W. J. Slane's (Dorchester, Mass.) St. Bernard bitch Maud (Rector—Lulu) to E. B. Sears's Plinlimmon, Jr. (champion Plinlimmon—Princess Beatrice), June 15.

Una—Plinlimmon, Jr. Galaxy Kennels' (Malden, Mass.) St. Bernard bitch Una (Bayard, Jr.—Sappho), to E. B. Sears's Plinlimmon, Jr. (champion Plinlimmon—Princess Beatrice), July 1.

Lady Wellington—Plinlimmon, Jr. Wyoming Kennels' (Melrose, Mass.) St. Bernard bitch Lady Wellington (Duke of Wellington—Henly Juno) to E. B. Sears's Plinlimmon, Jr. (champion Plinlimmon—Princess Beatrice), June 29.

Countess Flo—champion Beaumont. J. H. Meyer's (New York) black and tan setter bitch Countess Flo (Heather Roy—Molly) to his champion Beaumont (Ronald III.—champion Floss), Aug. 13.

Bess—champion Beaumont. J. E. M. Lordly's (New York) black and tan setter bitch Bess (Dan—Nellie) to J. H. Meyer's champion Beaumont (Ronald III.—champion Floss), Aug. 10.

Lily of the Valley—Duke. Rural Kennels' (Wakefield, Mass.) English setter bitch Lily of the Valley (Blue Dick—Bella Gladstone) to M. E. Murphy's Duke (Dash III.—Donna), June 26.

Tiny—Bradford Harry. Geo. E. Richards's (Bangor, Me.) Yorkshire terrier bitch Tiny (Tug—Mistress Mary) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Aug. 6.

WHELPS.

☞ Notes must be sent on the Prepared Blanks.

Eastern Queen. J. W. Alsop's (Middletown, Conn.) mastiff bitch Eastern Queen, July 4, six, by E. B. Sears's Sears' Monarch (Lord Raglan—Dido).

Helen. C. H. Whitcomb's (Roslindale, Mass.) St. Bernard bitch Helen, Aug. 2, six (five dogs), by American Kennels' Gruss Bayard.

Forest Corinne. F. C. Smith's (Groton, N. Y.) Irish setter bitch Forest Corinne (champion Bruce—Little Nell), Aug. 6, ten (eight dogs), by D. Rhodes's Aldershot (champion Chief—Bizreena).

Beatrice. J. B. Martin's (San Francisco, Cal.) fox-terrier Beatrice (champion Bachannal—Blemton Arrow), July 24, eight (five dogs), by Joseph Donohoe's Clover Turk (Mixture—Spite).

SALES.

☞ Notes must be sent on the Prepared Blanks.

Brighton Queen. Lemon and white English setter bitch, whelped May 12, 1888, by King Fred out of Lady Brighton, by F. M. Shelley, Sheridan, N. Y., to W. D. Wright, Bremen, Ind.

Rural May. Black and white English setter bitch, whelped July, 1886, by Belthus out of Daisy, by Rural Kennels, Wakefield, Mass., to Dr. W. Pitt Norris, Birmingham, Ia.

Bob White. Lemon and white English setter dog, whelped April 20, 1889, by Gus Bondhu out of Rural Neva, by Rural Kennels, Wakefield, Mass., to Chas. E. Nott, same place.

Rena Belton. Lemon and white English setter bitch, whelped Feb. 14, 1889, by Leigh Belton out of Rural May, by Rural Kennels, Wakefield, Mass., to Evan H. Bragg, North Sidney, Me.

DEATHS.

Floss B. Black spaniel bitch, whelped December, 1883, by Zulu out of Sweep, owned by Rural Kennels, Wakefield, Mass., from stoppage of the bowels.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

Not Mange, but Ringworm.—My somewhat unsuccessful treatment of mange in dogs prompts me to apply to you or some of your numerous readers for a solution of the trouble. I have had more or less trouble with something resembling mange for five or six months, and while some cases have yielded to treatment others have not, and I am beginning to ponder the question, can mange be thoroughly cured, and if so, how? My dogs are all thoroughbred English beagles, and the one I am mostly concerned about is a very pretty little bitch nearly a year old that has been affected with something resembling mange that does not yield to treatment. About six months ago I noticed a small spot on her left shoulder where the hair was falling out, and shortly the place was entirely bare of hair. At once I began treating for mange with train oil and sulphur (a remedy with which I had been successful), and gradually the hair came back, but other spots became affected, and now she is nearly half nude on legs, belly, breast, feet and hip, notwithstanding she has been under treatment all the time. I have used train oil and sulphur, oxide zinc ointment (recommended by Forest and Stream); and about six weeks ago I began using a preparation obtained from a kennel and poultry farm in New Hampshire which was warranted to cure mange by using two applications. I have applied it sixteen times, double strength, and no cure yet. In addition to the external remedies I have given Fowler's solution of arsenic for two or three weeks and then stopping a week or two and see no good results. I have also used train oil, sulphur, soft soap equal parts and spirits turpentine one-half part, thoroughly rubbed into hair. The affected parts present rather a peculiar appearance, or at least differing from the general mangy look. The red and inflamed look has left them except around the edges, and the skin is thick and dry. Lately it has more the appearance of a seeded wart than anything I can compare it with. A red or inflamed looking circle is around affected spots, and I fear it will spread over the entire body, producing death or rendering the animal useless. Occasionally I have given areca nut followed by castor oil, thinking the trouble might be from worms or something of the kind. The bitch is a very light feeder, but has kept in good order all the time. I cannot think the trouble arises from filthy kennels or bedding, for the kennels are frequently cleaned out and no filthy bedding allowed, and the dogs have the liberty to run at will during daytime. I do not confine my dogs at night in close stalls, but put them in a yard provided with dry houses for them to use at will. Hoping to gain more information regarding mange and the best treatment of it from some one who has been successful in treating it, I close with best wishes for Forest and Sream.—Subscriber, Denver, S. C. [The bitch has ringworm. Use mercurial ointment twice daily. Or use a strong carbolic solution, one in thirty or twenty on one day and the ointment the day following. Ringworm is a parasitic disease. Fowler's solution continued for three weeks is an aid, and syrup of buckthorn for the bowels. Low diet.]

Names and Portraits of Birds, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by Forest and Stream.

Rifle and Trap Shooting

RANGE AND GALLERY.

OUR TEAM AT HOME.

THE Massachusetts rifle team reached America again on Saturday morning last. They came by the City of Chicago, and at the pier General George W. Wingate was present with a committee of the National Rifle Association to meet them. The committee consisted, besides General Wingate, of General Charles F. Robbins, inspector of rifle practice; Major-General Josiah Porter and General Ferdinand Earle. There were also Colonel H. S. Stockwell, inspector of rifle practice; Major Berry and Major Shorkley, of Boston. After the team's luggage had passed inspection by the Custom House officers they got into carriages and were driven to the City Hall. Their baggage in the meantime was loaded on a truck and carted to the foot of Murray street, the pier of the Fall River line for Boston. A detail of Captain Wilson's Second Battery, N. G. S. N. Y., acted as an escort as the men filed into the City Hall.

In the mayor's room the victors were met by Judge Henry A. Gildersleeve, who made a neat presentation speech, and Mayor Grant then said:

"Major Frost and members of the Team of Massrchusetts Volunteer Militia: I have great pleasure, on behalf of the city of New York, in welcoming you upon this occasion, and still more in being able to congratulate you upon the great success which you have achieved abroad. Washington said with truth that 'the great defense of a free government is a well-regulated militia.' It has always been the policy of our government to keep up a small standing army, and to trust to the citizen soldiery of the various States for our defense in time of trouble. This the history of the nation has shown to be wise. While other countries are almost crushed by the immense standing armies they are compelled to maintain, while the streets of foreign cities are crowded with uniformed men taken from civil life and supported by taxation, here the professional soldier is practically unnoticed among us. It is therefore of great importance that everything which renders our National Guard efficient in war should be encouraged, and that those who show themselves proficient should be commended. Among all the duties of a soldier there is none more necessary than skill in the use of the rifle with which he is armed. You have not only demonstrated that at Creedmoor, but in the five contests in which you have been pitted against the selected riflemen of the English Volunteers you have nobly maintained the honor of the United States. Our people are proud of the skill you have shown, are proud of your victories. Our sister State Massachusetts, which you have so worthily represented, will undoubtedly receive you with all the honor which is your just due. I desire, on behalf of the State and city of New York, to join with it in tendering to you my sincere congratulations upon your success and my best wishes for your future."

In response Major Frost said that he had tried to uphold the honor of America, and in doing this he trusted that the work of the team would reflect credit not only upon his own State of Massachusetts, but upon New York State and city as well.

After the reception the party left the City Hall, and at 11 o'clock again entered the carriages in waiting. They were driven to the Hotel Normandie, Thirty-seventh street and Broadway, reaching there at noon. A banquet, provided by General Ferdinand P. Earle, chief of artillery on Governor Hill's staff, with covers set for fifty, was in readiness, and the riflemen and their distinguished entertainers immediately sat down to enjoy the good things.

There were many neat bits of speeches and, amid a great applause, the following despatch from Boston was received:

MAJ. J. P. FROST—Your comrades and self will be received at the depot here by a delegation of officers from all the military organizations in the State. They will escort you to Young's Hotel, where a breakfast will be given you on behalf of the State of Massachusetts. On Monday morning you will be given a breakfast by the city of Boston, at which Mayor Hart will preside, and a reception will follow. (Signed) The Committee.

After the applause this was read:

Maj. J. P. Frost:

Your associates on the *Boston Globe* congratulate you on your splendid victories abroad. We are proud of you Jim, and await with pleasure the return of your "bright, breezy and conversational" countenance to the "Hub." W. F. KENNY,

Day Editor, *Boston Globe*.

Three cheers were here given for Maj. Frost. Then Col. Rockwell, inspector general of the staff of the Governor of Massachusetts, said:

"I think it due from the representative of the State of Massachusetts to acknowledge the many courtesies that have been extended to the company of riflemen here present, and on their behalf and on behalf of the State of Massachusetts tender our thanks to Gen. Earle and the other gentlemen of the State Militia of New York."

Here Gen. Earle was given three cheers. Then Gen. Wingate remarked:

"Col. Rockwell, Maj. Frost and members of the rifle team—We recognize the fact that we are receiving a body of our fellow-riflemen, who are the champions of the world."

This called forth a tempest of applause, and the general continued:

"Although they come from the State of Massachusetts, and we are of the Empire State, they are flesh of our flesh and bone of our bone; State lines have nothing to do with it."

Gen. Robbins spoke in behalf of the National Guard of the State of New York, saying that they were much elated over the victories.

Maj. Frost was next called upon. He said he had learned his speech by heart by being called upon so often. The team did its best abroad, and got all it went for and a little more. "I think," he added, "that after our experience we could go over again and beat them worse than we did this time. As it is, they haven't realized yet what has happened." (Laughter.)

The major then said the English papers gave the first match 25 lines, the second a half column. From this the papers increased the space to three-quarters of a column and to over a column, and called the team invincible. The English people overwhelmed the team with their hospitality. In conclusion Maj. Frost thanked the committee for its splendid reception.

Three cheers were given with a will for the doughty major; then every one was cheered. Judge Gildersleeve, who went over with the first team sent to England, gave some interesting reminiscences.

They were afterward taken on a drive through Central Park, and then through the courtesy of Francis Wilson, were invited to the performance of "The Oolah" at the Broadway Theatre. The theatre was specially decorated for the occasion.

The men went on board the steamer Pilgrim, of the Fall River Line, on which they started for Boston at 5 o'clock, all save Farrow, who has remained abroad to do some fine shooting at Versailles and at the Swiss ranges.

BOSTON, Aug. 11.—Fourteen bronzed men in the uniform of the Massachusetts militia alighted quietly from the 9:30 train this morning at the Old Colony station. They were the picked Massachusetts marksmen, headed by Major J. P. Frost. When the team got off the train they were pleased to find in waiting a committee of military officers, upon whom devolved the pleasant duty of escorting the victorious marksmen to Young's Hotel, where a breakfast was to be given them by the State in appreciation of their excellent work. The committee consisted of Adjutant-General Dalton, Colonel H. T. Rockwell, inspector of rifle practice; Major F. G. King and Major H. G. Kemp of the Cavalry Battalion. Arriving at Young's the party held an informal reception in Room 10, and the marksmen received many congratulations from their comrades and superior officers. On their arms were the badges which had been presented to them abroad. The first one was from the Queen and read in gilt letters, "Wimbledon, 1889." As only 100 of these badges are presented each year in the United Kingdom, the men were justly proud of them. Another badge was that presented to the members of the team by Minister Lincoln at the complimentary dinner which he gave them. It was in the form of a heart, with the American and English flags crossed above it. On the heart in gilt letters were the names of the teams with which they had competed, as follows: South London Rifle Club, Royal Berkshire Regiment, Sussex County Team, London Rifle Brigade and the Honorable Artillery Company. Underneath were the words in gilt letters, "England, 1889."

The menu card was gotten up with great elegance and was in three parts. The outside was of tinted cardboard. On the front was a design of hand-painted flowers, and bore the words "Welcome Home" raised in gilt letters. In the interior was a sheet of white satin bearing the words "Breakfast to the Massachusetts Rifle Team by the Military Department, State of Massachusetts." The menu was on the third page, the three sheets being tied with a silk cord. At the conclusion of the breakfast there were many flattering words of welcome and praise said. The team then marched to the headquarters of the second brigade, where it was dismissed, and uniforms were exchanged for citizens' clothing. At 10 A. M. to-morrow the team will be the guest of Mayor Hart, who will give a breakfast at Young's Hotel. The Western members leave for Springfield in the afternoon, where a dinner is to be given them, and those belonging to the second brigade will join their commands at Framingham.

In summarizing his trip Major Frost said on arrival: "The team upon the whole is the best I could chose. It is true that I might have selected a few individual shots who would have done better than any one of my men, but I looked for an average team. I wanted a team in which jealousy would be entirely absent, and where it would be a matter of indifference who would be first or last man. We worked together so well and spurred one another on so much that I attribute our success greatly to those facts. In all the matches in which we were engaged there was only a difference of 22 points between the best man and the lowest man. Considering the number of shots fired that difference is paltry indeed.

"We had—and that is to be taken into consideration in judging of the team's excellence—but 800 men to choose from while the Englishmen had 250,000 volunteers. Any one was eligible. Just think what an advantage that was! But, thanks to the facts already mentioned, with good material, good health, steady nerves and good coaching we gained the victories despite the odds against us.

"Our competitiors were recognized as the leading riflemen of England, and the matches were with the service arm of each country and regulation ammunition. We had little practice, owing to the late arrival of our steamer, and had to shoot our first match the same day we unpacked our rifles, in anything but shooting form. This, too, with the fine team of the Honorable Artillery Company of London. Seven of its twelve men were members of the English twenty, and the remaining five had national reputations.

"The Berkshire county team was a strong one, too, with Fidler, Kemp and Warwick, all in the English twenty.

"The London Rifle Brigade was a rattling good body. Earl Waldegrave is an English twenty man, and Preston, Desmond, Lattey and Killiher, all shot on the Irish twenty this year. We rolled up a tremendous score with this team, averaging over 90 out of 105 per man, and beating the English record with the position standing at 200yds. instead of kneeling. Bumstead made 100 out of 105—remarkable work.

"The Sussex county team, which we shot at Brighton, had Cortis and Livesay, of the English national team, and others of reputation. The weather was horrible, and we made the poorest score of the trip, only aggregating 988 points, almost 100 points under the day before at Rainham, yet defeating the Sussex team by 78 points, and then after their beating us by 12 points at 209yds.

"The South London team was picked from all the best shooting organizations in and out of England. Major McKerrell came down from Scotland. Captain Rose is the crack shot of the Queen's Westminster; Sergeant Smith and Private Lowe are Queen's medalists. Trask made second top score in the English twenty this year, and Foster, Tuke, Hath and Wells all are national 'cracks.' We made our second highest score with this team, improving 53 points on our second shoot over the Nunhead range."

"What is the relative excellence of the Springfield rifle over the Martini-Henry?" was asked.

"I don't suppose our English brothers would agree with me in my estimate. To me the Springfield rifle is the better arm up to 500yds. What it is beyond in team matches remains to be seen. We won the 600yds. distance in four out of the five matches, but lost the other by nine points. Our sight undoubtedly overbalanced the extra fifteen grains of powder shot by the English arm, but what the Springfield would do with eighty-five grains of powder yet remains to be shown. Again, there is the relative capacity of the competing men to be considered and the excellence of the team coacher.

"What the Martini-Henry can do with a decent rear sight will, in my opinion, soon be demonstrated, for I think the English volunteers, at least the marksmen, will soon have an improved sight issued to them. Opinion favors it, and our demonstration of the possibilities of the Springfield, especially in skirmishing, has rather fanned the flame.

"We could not ask for a more fraternal or royal welcome. We were cordially received at every hand, and entertained with unbounded hospitality.

"The red and gold badge worn on the left arm above the elbow is the Queen's, received at Wimbledon, and is the most coveted honor to be won by an English shooting soldier, be he regular or volunteer. The shield with the American and English colors entwined came from Minister Lincoln.

"The trip has been an unqualified success, and well worth all the labor and expense."

Capt. Frost has figured out the tabulated score of the Americans and their opponents on the other side, and is quite proud of it. Here is the score of the team's work:

	200yds.	500yds.	600yds.	Total.
Massachusetts	354	305	296	1015
Honorable Artillery	315	341	305	961
Massachusetts	335	375	354	1064
Royal Berkshire	298	349	325	972
Massachusetts	347	390	347	1084
London Rifle Brigade	315	354	340	1007
Massachusetts	316	347	325	988
Sussex	328	312	270	910
Massachusetts	360	372	336	1068
South London	332	368	325	1025

The following is the individual record:

	Individual Average.	Average Per Shot.
Major Hinman	99 3-5	4 33-105
Sergt Bull	90 3-5	4 33-105
Lieut Bumstead	90 1-5	4 31-105
Sergt Doyle	88 4-5	4 24-105
Pvt Farrow	88	4 20-105
Sergt-Maj Merrill	86 3-5	4 13-105
Corp Huddleston	86 3-5	4 13-105
Pvt F R Bull	86 2-5	4 12-105
Lieut Hussey	86 1-5	4 11-105
Lieut Edes	84 3-5	4 5-105
Pvt Farnsworth	84 2-5	4 2-105
Pvt Johnston	80 4-5	3 89-105
Average of team	86 1-2	

In the total of 1,260 shots fired at the several ranges but 11 failed to reach the target. Out of a highest possible attainable of 6,300 points they scored 5,219. At 200yds., shooting off shoulder, they counted 1,712 points, an average of 4.08 minus per shot; at 500yds., in the prone position, they aggregated 1,849 points, or 4.40 plus per shot; and at the 600yds., in the same position, they reached a total of 1,658 points, or 3.94 plus the grand aggregate, showing an average of 4.14 plus per shot. The following is the detailed record of the shooting in the several matches:

Match	Yds.	Misses.	Outers.	Inners.	Centers.	Bullseyes.
Honorable Artillery Co.	200	..	..	5	56	23
	500	..	9	5	18	52
	600	2	16	23	20	23
First Royal Berkshire	200	2	2	10	49	21
	500	..	3	6	24	51
	600	..	5	16	19	44
London Rifle Brigade	200	..	2	7	53	22
	500	..	1	3	21	59
	600	2	6	11	23	42
Sussex Volunteers	200	1	5	19	46	13
	500	2	6	13	19	44
	600	1	14	15	18	36
South London Rifle Club	200	..	..	5	50	29
	500	..	5	4	25	59
	600	1	10	14	21	38
Total		11	84	156	462	547

The individual record of the members of the team fixes their standing in this order:

		200yds.	500yds.	600yds.	Total.
1.	Hinman	147	155	153	453
2.	Bull, M W	147	157	149	453
3.	Bumstead	152	156	143	451
4.	Doyle	142	158	144	444
5.	Yarrow	149	153	138	440
6.	Merrill	138	160	135	433
7.	Huddleston	152	149	132	433
8.	Bull, F R	143	159	130	432
9.	Hussey	140	155	136	431
10.	Edes	137	149	137	423
11.	Farnsworth	129	157	136	422
12.	Johnston	136	143	125	404
Total		1712	1849	1658	5219

It will be observed that the best score made by the Massachusetts men was recorded in their match with the London Rifle Brigade, when they reached a total of 1,084 points. This score has been three times exceeded at Creedmoor, namely in the 1887 match of the National Rifle Association for the Hilton Trophy, when the Massachusetts State Team won with a score of 362, 382, 352—1,096 points, the team of the Division of the Atlantic, U. S. A., being second, with 361, 380, 352—1,093 points, and the New York State Team third, with 357, 372, 359—1,088 points. The significant feature of this record consists in the fact that while the Massachusetts and United States Army teams used the Springfield rifle, the New York team shot with the Remington, or, as it is popularly known, the "gas pipe." The team of New York National Guardsmen who accomplished this remarkable result consisted of the following members of the National Guard, finishing in the order and with the scores here given: J. S. Shepherd, Twenty-third Regiment, 97; J. F. Klein, Seventeenth Separate Company, Infantry, 95; S. C. Pirie, Twenty-third Regiment, 93; George S. Scott, Twenty-third Regiment, 93; L. J. Elliott, Twenty-third Regiment, 92; Thomas G. Austin, Thirteenth Regiment, 92; Ezra De Forest, Twenty-third Regiment, 91; George F. Hamlin, Twenty-third Regiment 89; James McNevin, Thirteenth Regiment, 88; Thomas J. Dolan, Twelfth Regiment, 87; C. A. Jones, Seventh Regiment, 86; Edward F. Young, Seventh Regiment, 85. As all of these men are still in service and in good shooting form there would seem to be a strong likelihood that the General Inspector of Rifle Practice will find little difficulty in complying with the instructions of the Commander in Chief to select a team that can win in the Sea Girt, N. J., matches, where the Massachusetts men will meet teams from the other States in a closely contested team fight.

CREEDMOOR FALL MEETING.

THE 17th annual prize meeting of the National Rifle Association opens on the Creedmoor range on Tuesday, Sept. 10 and runs 5 days. The programme includes the following matches:

No. 1. Directors' Match.—200yds., open only to directors of the N. R. A., rounds 5, any military rifle, including specials.

No. 2. Judd Match.—Open to all comers, the Remington .50cal. State model, or the United States Springfield, 200yds., standing, rounds 7, entries and re-entries $1 each, the aggregate of two scores to count for the first five prizes, 25 prizes.

No. 3. Wimbledon Cup Match.—Open to all citizens and residents of the United States, 1,000yds., 30 shots, any rifle, cleaning allowed. Won in 1875 by Maj. Fulton, in 1876 by I. L. Allen, in 1877 by Dudley Selph, in 1878 by Frank Hyde, in 1879 by C. H. Laird, in 1880 by W. M. Farrow, in 1881 by F. J. Rabbeth, in 1882 by W. Budworth, in 1883 by H. T. Rockwell, in 1884, 1885 and 1886 by J. W. Todd, in 1887 by T. J. Dolan, in 1888 by W. M. Merrill.

No. 4. President's Match.—First stage: 200 and 500yds., 7 shots at each distance, open to all members of the army, navy and marine corps, or the national guard, 17 prizes. Second stage: Open to all prize winners in the first stage, 600yds., 10 shots.

No. 5. The Long Range Military Match.—Any military rifle, including specials, 800 and 900yds., any position, open to all comers, 15 shots at each distance, 6 prizes.

No. 6. The Tiffany Match.—All-comers, continuous match, 200 yds., standing, 7 shots on the American standard target, any weight rifle with 3lbs. trigger pull, but no palm or other rest allowed. The allowance for special military rifles will be 3 points, for other military rifles 4 points, and for the Remington State model .50cal. 5 points on each string, cleaning allowed between shots for rifles other than military or special military, the first prize will be a silver vase presented by Messrs. Tiffany & Co.; 31 cash prizes aggregating $264. The aggregate of 3 scores to count for all prizes. Extra prizes of $5, $3 and $2 will be awarded each day to the 3 competitors making the greatest number of bullseyes.

No. 7. Governor's Match.—10 shots at 500yds., position any, any military inclucing specials, open to all comers, $175 divided in 24 prizes.

No. 8. All-Comers' and Marksman's Badge Match.—Open to everybody, 200 and 500yds., 5 shots at each distance, Remington .50cal. State model or such other rifles as may be issued or authorized by the State of New York, 30 prizes, total $215.

No. 9, Hilton Trophy Match.—Open to teams of 12 from the army, navy or militia, 200, 500 and 600yds. Rounds, 7 at each distance, any military rifle which has been adopted, authorized or issued as an official arm by any State or government. Won in 1878 and 1879 by New York, 1880 by Division of Missouri, U. S. A.; 1881 by New York, 1882 by Pennsylvania, 1883 by Michigan, 1884 and 1885 by Division of Atlantic, U. S. A.; 1886, 1887 and 1888 by Massachusetts.

No. 10. Inter-State Military Match.—Open to one team of 12 militiamen from each State or Territory in the United States, distances 200 and 500yds., any military rifle which has been adopted, authorized or issued as an official arm by any State or government. Prize: To the team making the highest aggregate score, a large bronze "Soldier of Marathon." Won in 1875 by New York, 1876 by Connecticut, 1877 by California, 1878 and 1879 by New York, 1880 by New Jersey, 1881 by New York, 1882 by Pennsylvania, 1883 by Michigan, 1884 and 1885 by Pennsylvania, 1886, 1887 and 1888 by Massachusetts.

No. 11. Inter-State Long Range Match.—Open to teams of 4 from all rifle associations or clubs in any State or Territory in the United States, 800, 900 and 1,000yds., 15 shots at each distance, any rifle within the rules. Won in 1877 by Amateur Rifle Club, N. Y., in 1878 by Massachusetts Rifle Association, in 1879 by New Jersey State Rifle Association, in 1880 by Empire Rifle Club, N.Y., in 1881 by Ilion Rifle Club, in 1882 by Ilion Rifle Club, in 1883 by Ilion Rifle Club, in 1884 by Amateur Rifle Club, N. Y.

No. 12. New York State National Guard Match.—Open to teams of 12 men from each regiment, battalion or separate company of infantry of the national guard of the State of New York, 200 and 500yds., the Remington rifle, State model .50cal., 5 shots at each distance.

No. 13. First Brigade National Guard Match.—Open to teams of 12 from each regiment, battalion, or separate company of infantry in the first brigade of the State of New York, the Remington rifle, State model, 50cal., 200 and 500yds., 5 shots at each distance.

No. 14. Second Brigade National Guard Match.—Open to teams of 12 from each regiment, battalion or separate company of infantry in the second brigade, of the State of New York, the Remington rifle, State model, 50cal., 200 and 500yds., 5 shots at each.

No. 15. Revolver Match.—Distance 30yds., 5 shots on the American standard target, reduced for 100yds. Position standing, offhand use of one arm only allowed, revolver not to exceed 2¾lbs, in weight, maximum length of barrel (exclusive of chamber) 7½in., minimum trigger pull 3lbs., plain open sights sufficiently strong for service purposes, ammunition any, cleaning allowed between scores only, army revolvers, with 3lbs. trigger pull and using service ammunition, will be allowed 10 points on 3 scores, aggregate of 3 scores to count for all prizes, $60 div. into 10 prizes.

No. 16. Steward Match.—Open to all comers, 200yds., Creedmoor count, 5 shots, the Remington .50cal. State model or the United States Springfield rifle, match open every day.

The matches will be shot as nearly as possible upon the following days, though the right is reserved after entries are made to change the order of shooting. Tuesday 2 and 3, Wednesday 5, Thursday 4 and 11, Friday 12, 13 and 14, Saturday 9 and 10. 1, 6, 7, 8, 15 and 16 will be open every day.

ST. LOUIS, Mo., Aug. 9.—There was a good attendance at the last shoot of the St. Louis Pistol Club. Mr. Hettel, after shoot-off with Mohrstadt, Neuhaus and Dorman, won the medal. Shooting is at a 20yds. standard American target. The scores are as follows:

W H Hettel	7	10	10	10	6	7	8	9	8	9—84
L G Dorman	6	8	7	9	10	10	9	6	10	9—84
E Mohrstadt	8	9	8	9	8	8	8	9	7	10—84
O Neuhaus	6	7	10	8	0	10	7	10	9	8—84
S V D Perret	6	9	10	7	8	8	8	7	8	8—79
M Summerfield	9	10	6	8	9	8	6	7	7	10—78
Fred A Fodde	8	7	6	6	7	8	9	7	9	10—77
W Bauer	8	6	5	10	8	5	5	8	10	7—75
G Alexander	7	6	7	8	7	9	5	5	9	10—73
J Albach	8	6	6	4	7	7	7	7	8	7—67
M Billmeyer	4	10	6	6	6	6	9	5	7	7—66
A E Bengel	6	7	8	5	5	8	4	5	7	6—61

Mohrstadt and Summerfield, both members of the local pistol club, have now shot three friendly matches; the former has won two, Both scores are good. Summerfield wound up very strong in his shooting. Conditions were 50 shots each at a 12½yds. Standard target, with 22cal. pistols. The score is as follows.

E Mohrstadt	10	8	7	10	10	8	9	7	10	6—85
	7	10	7	8	9	9	10	10	9	10—89
	9	10	9	8	10	7	9	10	9	10—91
	8	8	10	9	10	7	10	8	10	10—90
	10	6	8	6	10	9	8	10	7	8—82—437
M Summerfield	8	8	8	7	8	8	8	7	7	7—75
	9	8	7	9	9	10	10	5	8	9—84
	9	10	7	9	9	7	10	8	9	9—87
	10	9	8	9	9	8	8	10	8	9—88
	10	10	6	10	10	9	10	10	9	10—94—428

BOSTON, Aug. 10.—The several prize and practice matches of the Massachusetts Rifle Association were well patronized to-day at their range, a good number of riflmen being present. The shooting conditions most of the day were very good, with a light wind from 7 to 8 o'clock. Mr. Wilder won the gold medal in the 20-shot match, and Mr. Clark won the champion gold medal. C. M. Hill, of Lawrence, has finished shooting in the Victory medal match and won the gold, silver and bronze Victory and gold membership medals with some remarkable scores, as will be seen below. Following the scores of to-day:

20-Shot Rest Match.

S Wilder..... 11 11 11 12 10 8 11 8 10 7
10 11 9 12 9 9 12 10 12 9—202

WILMINGTON, Del. Aug. 10.—A short time ago two pistol matches were arranged between E. J. Darlington and I. P. Taylor of Wilmington, Del., and N. A. Hughes and S. C. Steuber, of Williamsport, Pa, also with W. T. Whiteford and R. B. Powers, of Barnard, Mo. The terms of the matches provided for two men in each team, and Mr. Taylor intended to shoot in company with Mr. Darlington, but owing to death in the family of the former Mr. Darlington was obliged to shoot alone. He arranged the matches more for vacation pastime rather than with any hope of winning, as Mr. Hughes is recognized as one of the best of the very few fine pistol shots of Pennsylvania, and as for Mr. Whiteford, he is known as one of the most brilliant pistol shots of the West. But the phenomenal bounds with which Mr. Darlington's marksmanship has improved within the last few months enabled him to acquit himself with credit and win by a good lead in both cases. An incident in the match with Whiteford and Powers shows the quality of Mr. Darlington's nerves. Having made 9 consecutive scores of 81 and upward he naturally desired to make the last score round up evenly, but at the end of the seventh shot he found he would be obliged to make 27 to do so. This meant three straigh bullseyes or two 10s and a 7, and he did a trifle better and made an 8. The matches were shot during last week, and the scores, which have just been received, are as follows, 50yds., Stevens .22cal. pistols, standard American target.

First Match—Darlington vs. Hughes and Stuber.

E J Darlington..... 5 6 6 6 9 9 6 7 10 9—73
6 7 10 10 8 8 10 10 7 10—86
7 8 8 3 8 9 8 7 9 5—77
10 8 9 10 6 6 8 8 10 10—86
6 7 8 7 7 10 8 8 9 9—79
9 6 7 6 8 6 10 6 6 10—76
9 10 8 9 6 8 9 10 6 8—83
10 9 10 9 7 9 6 9 9 8—86
6 9 10 8 8 10 8 9 10 7—86
8 8 8 9 8 8 8 9 10 10—85—817—817
N A Hughes..... 9 5 9 10 6 7 5 8 7 7—74
7 10 5 9 8 7 10 10 9 10—85
8 6 6 8 9 8 8 8 8 5 75
8 10 10 6 9 10 6 7 9 9—86
9 9 7 6 6 8 7 8 5 7—72—396
S C Steuber..... 7 8 7 7 7 5 8 6 9 4—67
8 10 9 9 7 10 9 8 5 6—80
6 10 5 10 7 7 7 7 8 8—74
6 9 9 5 9 6 8 7 8 6—72
6 9 8 10 10 9 9 7 4 7—70—363—755

Second Match—Darlington vs. Whiteford and Powers.

E J Darlington..... 7 7 9 9 9 7 7 7 10 10—82
10 10 10 7 7 8 7 8 9 9—85
8 7 10 10 9 10 10 6 9 8—87
10 7 6 10 8 8 10 9 10 9—87
7 8 10 8 6 8 7 9 8 10—82
7 6 9 7 6 7 9 10 10 8—82

7 6 7 6 9 8 6 7 7 4—67
6 7 10 10 10 7 3 6 8 10—77—347—775

SPRINGFIELD, Mass., Aug. 8.—Two teams from the City Guard shot a match at Lake Lookout yesterday under the rules that govern the annual matches at South Framingham. It was a perfect day for rifle shooting, but notwithstanding the favorable conditions some of the leaders on the champion team did not make a very good showing. Their score equals the best ever made at the State matches, however. The picked team made a very good showing, and demonstrated the fact that with a little more practice the old hands will have to look sharp to retain their laurels. The scores:

Capt. McDonald's Team.		S. M. McInerny's Team.	
F L Hosmer	4545445—31	J Martin	3445554—30
J M Johnson	5 44445—30	S M McInerney	3445445—29
J A Sterling	4454444—29	J E Bolliger	4534445—29
W E Hosmer	4444444—28	H J Smith	4544445—28
W M Merrick	4444444—28	E R Taft	4434444—27
S Bowers	4444344—27	F Syner	4443242—23
H McDonald	5443454—27—200	G Lammerhirt	0443444—23—189

After the match the following scores were shot:

H J Smith	4554545—32	J A Sterling	4444454—29
W E Hosmer	5545445—32	F Hosmer	4454444—29
W M Merrick	4444554—30	S Bowers	4444444—28
H McDonald	5444454—30	E R Taft	4444543—28
J M Johnson	5544444—30		

These men qualified as marksmen in the third class:

Wm L Young	44434—19	G L Hersey	23543—17
H J Vesper	34334—17	W Parker	45044—17
W J Smith	53324—17		

LIVERPOOL, Aug. 8.—Americans coming across would do well to leave their revolvers at home. Mr. J. W. Smith, of Los Angeles, who crossed on the Adriatic with his father and brother, both of whom manufacture rugs in New York, was arrested today, searched, taken to court and fined $25 and costs for having a pistol and 45 rounds of ball cartridges in his baggage.

ROCHESTER, Aug. 7.—To-day was by all odds the busiest day yet at the Schuetzenfest at Windsor Beach. The attendance of spectators and gunners was very large. The day, too, was perfect, and, as scarcely a breath of air was stirring, some excellent scores were made. The chief feature of the day was the contest between the teams composed of the Rochester Schuetzengilde and the Central Schuetzenverein of Buffalo. The prize was the handsome silver cup which the Rochester marksmen won from the Buffalos on the occasion of the contest in Buffalo in July. According to the terms of the match the cup must be won twice in succession by one of the teams in order to become its permanent property and exempt from challenges. The contest was a remarkably close and exciting one, but the Rochester men again proved too much for the Queen City marksmen, and won, although they had but five points to spare, the score standing 738 to 732. Following are the individual scores of the members of the two teams, 100 points being possible in 10 shots:

Rochester Team.		Buffalo Team.	
Frank Schwikert	88	Joseph Schmidt	78
John F Boyd	71	Matt Long	87
Charles Green	87	Frank Rudler	90
M D Tarba	84	John Zenner	51
Ed Shackleton	75	Alex Kercher	70
E Meyer	57	Gott Wackerle	70
W O La Force	79	William Cleesattel	70
Charles Hoehn	76	Val Loebner	60
Frank Harvey	55	Joseph Diegel	65
Charles Harvey	66—738	Michael Bernhardt	71—732

HAMILTON, Ont., Aug. 7.—To-day a match took place between twelve members of the Victoria Rifle Club and the same number from the Waterdown Rifle Association, at the Victoria ranges, Hamilton. The shooting was at ranges of 200, 500 and 600yds., seven shots at each range. The Victoria Club team won by 110 points. The Waterdown team was one man short, so they were allowed A. Poole, of the Victoria Club, who made a great record. His score at the 500yds. range was the largest that has been made on the grounds. He made eight consecutive bullseyes, one of them being a side shot:

Victoria Club.	200	500	600	Tl
M Graham	33	33	20	86
E B Ross	27	32	26	85
W H Clarke	30	24	30	84
Geo Margetts	32	28	24	84
E G Zealand	26	31	25	82
A Murdoch	27	26	26	79
A Pain	27	22	22	78

J Palmer	27	20	11	58
J Dickson	29	18	10	57
	333	300	197	830

NEW YORK, Aug. 12.—The seventh marksman's badge and sharpshooters' matches of the N. R. A. were shot at Creedmoor on Saturday, Aug. 10. The rain again interfered in the forenoon and delayed the match until 11 o'clock. The conditions were fair, the wind was from 7 to 9 and very tricky at times. Attendance good in the afternoon and scores very fair. Following were the winners:

	200yds.	500yds.	Total.
A Stein, Co C, 7th Regt.	24	23	47
Cash Prizes.			
G E Constable, Co F, 13th Regt.	21	25	46
E A Anderson, Co I, 71st Regt.	22	24	46
R Byars, Co G, 22d Regt.	21	23	44
F A Wells, Co B, 23d Regt.	22	22	44
G W Lotz, Co G, 13th Regt.	22	22	44
C C Wallace, Co I, 14th Regt.	20	23	43
J T Kirby, Co A, 7th Regt.	21	22	43
Medal Winners.			
Geo Ball, Co F, 23d Regt.	21	25	46
G S Scott, Jr, Co A, 23d Regt.	23	22	45

A. Stein won the gold marksman's badge for the second time.—J. MANZ, JR., Ass't Sec'y N. R. A.

MALDEN, Mass, Aug. 10.—There was a large attendance at the Bear's Den Range this afternoon, the weather being favorable, and a number of excellent scores were made as follows:

Sergt W H Thompson, Queen's Own	54345—21
G M Pottle, Co. L, 5th Regiment	44545—22
A H Whitteking, Co. L, 5th Regiment	45454—22
Lieut E C B Erickson, Co. L, 5th Regiment	54445—22
Capt J H Lathrop, 1st Brigade Staff	45455—23
Lieut H M Borghardt, 1st Brigade Staff	44334—18
Sergt E B Wells, 1st Brigade Staff	23053—13

It is expected that the range is to be open every Tuesday afternoon in future. Some of the crack companies in the State are making arrangements to lease it every Tuesday, so as to give its members a chance to practice, this being counted one of the finest rifle ranges in the State.

PHILADELPHIA, Aug. 10.—The Philadelphia Rifle Club at their regular weekly shoot had quite a large attendance, and some very fine shooting was done, particularly that of Mr. Jas. M. Green, as he shot a 22cal. special Wurfflein rifle. During the afternoon he made 21 red flags (4in. cartons), also making the nearest center-shot during the day. He also had the honor of winning the club silver medal, making 62 points out of a possible 75, 60 being required to win the silver and 66 to win the gold medal. Following are the official scores, 200yds., off-hand, on the Standard American target:

E Travis	7	8	10	8	10	10	8	7	8	7—83
C Molter	6	8	8	8	6	8	7	10	7	10—79
E F Kolb	10	10	9	5	5	5	9	9	6	10—78
J M Green	9	7	9	6	6	6	8	6	8	7—75
Wm Wurfflein	4	8	6	6	7	5	8	6	9	7—66
M Brierly	8	7	5	9	8	2	6	5	7	7—64
Wm Gelzer	7	6	9	5	7	6	4	5	6	6—62

Point target, 4in. centers: J. M. Green 21, E. Travis 18, Price 12, E. Steiber 10, C. Molter 9, E. F. Kolb 5, Wm. Gelzer 4. Honor targets, possible 75: J. M. Green (medal) 62, Wm. Wurfflein 58, E. Travis 57, Price 53, E. F. Kolb 47, E. Steiber 46, Wm. Gelzer 47, C. Molter 56, M. Brierly 13.

NEWARK, Aug. 7.—At a meeting of the Board of Directors of the Newark Shooting Society held this evening the shooting committee was instructed to arrange for the annual king and honor shoot of the society, the same to be held on Sept. 26. The same rule will obtain as in former years on the honor target, each member shooting being obliged to donate a prize valued at not less than $3, the maker of the highest score being awarded the king's medal. No member can win more than one of these medals. Besides this there will be a point target, open to all for a percentage of the receipts, and also a ring target, open to all, for a fair-sized prize list to be arranged later.... Aug. 8.—The trophy match was won by J. T. B. Collins with a score of 217, A. Begerow scored 216, H. Williams 212, C. H. Townsend 200, J. Coppersmith 208, C.E. Gensch 200, F. C. Campbell 190, W. Drexler 182, F. A. Freiensehner 153. In the expert match the score were as follows: A. Begerow 68, 64; J. Coppersmith 67, 66, 64, 64; H. Williams 64, 64, 61, F. C. Campbell 64, 62, 62; J. T. B. Collins 62; C. E. Gensch 62; C. H. Townsend 57.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

COMPTON HILL.

ST. LOUIS, Mo., Aug. 9.—The tournament of the Compton Hill Gun Club held last Wednesday was favored with pleasant weather and a good attendance. There was no wind to affect the flight of the targets and the scores were as a rule very good. Keystone targets were used for all events. Dr. E. L. Spencer of Bunker Hill, Ill., was awarded $10 for the best average of the day. His score was 84 out of 93 shot at, not counting ties. Second prize $5 was won by Lenhard, and third, $3, by J. Longsworth. The shoot was in every particular a grand success and the club will hold another shortly.

Shoot No. 1, 6 targets:

J Lee	110000—2	E Prendergast	111111—6
B Weaver	111111—6	S Prendergast	111111—6
T Bauer	111111—6	Dr Spencer	111111—6
S Hill	111111—6	McGivney	011110—4

Hill	111011111011—10	Meyer	111101111110—10

A 100-target sweepstakes took place at Compton Avenue Park yesterday. The weather was favorable. Keystone targets, walk-around rule:

J Wilber	21	20	22	16	—79	F Bauer	20	21	22	23—86
J E Hagerty	13	14	14	14	—55	Ed Meyer	21	22	24	23—90
J Latshaw	16	16	17	17	—66	B Westhus	19	22	23	21—85
H P Wilson	18	16	13	18	—65	J R Shepley	20	18	19	20—78
Col Moore	17	15	15	17	—64	J Longsworth	9	7	11	11—38

Meyer first, Bauer second, Westhus third.

CINCINNATI, Aug. 8.—The Coney Island shoot to-day for the Bohemian medal was a big event for the shooters. There were 54 contestants for the prize, and the success of the shoot was largely due to the clever direction that affairs were given by Bandle, "Wick" and Charley Kauffman. Following is the official score of the shoot: Merrick 18, E. Fey 18, C. Stevens 15, Wick 20, Cole 22, Hayes 18, E. Taylor 18, Kentuck 19, S. Vincent 19, Randall 16, Coudell 22, W. Hessler 15, Bohemian 10, Pinckard 13, Late 18, Adams 16, Colonel Stevenson 16, Bramble 9, Warwick 17, Green 13, Whitney 18, Richard 22, Willie 19. C. Apsking 7, J. Zeigler 6, Kattenhorn 19, C. E. Briggs 8, J. E. Miller 9, Halthouse 4, Dachfire 16, Kreb 19, Dayton 10, Tittle 20, Hayseed 17, Bandle 21, Tanner 9, J. Kestner 12, Graham 17, Clarence 15, Leedom 17, S. Rowen 15, J. Schatsman 17, Armstrong 13, Weiner 9, T. Gastrights 19, Frank 16, Krause 15, Exist 10, No Good 15, Murphy 14, Montice 8, Caldwell 15, J. S. Ervin 1, R. Trimble 16. Coudel, Coe and Richard being a tie, they shot at 10 singie birds each: Coudel 8, Coe 9, Richard 9. Second tie at 5 single birds: Coe 3, Richard 5.

CHICAGO, Ill., Aug. 8.—A big trap shoot is taking place on the government pier to-day, the proceeds of which will be given to the popular Fresh Air Fund for children.

ELM CITY GUN CLUB MEET.

NEW HAVEN, Conn., Aug. 9.—*Editor Forest and Stream:* The following are the scores of the tournament held on the ground of the Elm City Gun Club, Aug. 9. This is our third attempt in this line and in spite of the threatening weather several good shots were present, among them being Yerrington and Barnes, of Norwich, Woodford, Alcott and Capen, of Avon, Whitlesey, of Hartford, and Ferris, of Westport, who with Messrs. Whitney, Hill, Bates, Gould, Albee, Sherman, Widman, and Beers make a place pretty hot for the best of them. We hold regular shoots on the first and third Fridays in each month.

Event No. 1, 6 Keystones:

Hill	111111—6	Beers	111011—5
Merriman	111111—6	Woods	100001—2
Ferris	111011—5	Folsom	011100—3
Tyler	000111—3	Eddy	110110—4

Event No. 2, same:

Whitney	111111—6	Folsom	011011—4
Hill	111011—5	Ferris	111000—3
Merriman	110111—5	Woods	000000—0
Tyler	110111—5	Beers	010010—2
Eddy	010111—4		

Event No. 3, 9 Keystones:

Sherman	111111111—9	Yerrington	111110011—7
Gould	111111110—8	Barnes	101110111—7
Whitney	101111111—8	Tyler	011010111—6
Ferris	111111011—8	Hill	111010111—6
Capen	011111011—7	Merriman	101110110—6
Whittlesey	111010111—7	Folsom	110010110—5
Beers	011011111—7	Woods	110110010—5

Second and third divided, Tyler and Hill tied again on 3 to Merriman's 2 and divided fourth.

Event No. 4, 9 Keystones:

Yerrington	111111111—9	Tyler	111111100—7
Alcott	111111111—9	Capen	111011101—7
Hill	111011111—8	Gould	011111110—7
Ferris	111111110—8	Merriman	011011101—6
Whitney	111111011—8	Barnes	011011011—6
Sherman	111111011—8	Whitlesey	101101110—6
Beers	111101111—8	Folsom	101110100—5
Woodford	111111101—8		

First and third divided. Shoot off for second: Whitney 0, Beers 1, Hill 3, Woodford 5, Ferris and Sherman 6 and divided. For fourth: Whittlesey 0, Merriman and Barnes 3 and divided.

Event No. 5, 3 singles and 3 pairs:

Capen	011 11 11 11—8	Barnes	110 11 10 10—6
Hill	111 01 10 11—7	Whitney	111 00 10 11—6
Merriman	111 11 10 10—7	Gould	011 10 10 00—6
Yerrington	111 11 10 10—7	Whitlesey	110 11 10 10—6
Sherman	111 10 11 10—7	Alcott	001 11 11 01—6
Folsom	111 10 10 10—6	Ferris	111 10 00 01—5
Beers	111 10 10 10—6	Woodford	011 10 10 00—4

Second div. For third, Alcott 1, Folsom 2, Whitlesey 4, Beers and Barnes 5, Whitney 6, Gould 7 and won.

Event No. 6, at 12 Keystones, both barrels:

Hill	111111111111—12	Gould	111111111110—11
Ferris	111111111111—12	Woodford	111101111111—11
Whitney	111111111111—12	Yerrington	111111101011—10
Beers	111111111111—12	Whittlesey	111101111110—10
Avery	111111111111—12	Alcott	101111110111—10
Folsom	011111111111—11	Merriman	110011111110— 9
Sherman	111011111111—11		

Shoot off for first, Ferris 2, others 3 and div. Other ties div.

Event No. 7, 10 straightaways, 21yds., ties divided:

Yerrington	1111111111—10	Hill	1011110111— 8
Whitney	1111111111—10	Ferris	1100111111— 8
Sherman	1111111111—10	Woodford	0110111111— 8
Beers	1111111111—10	Merriman	0111011111— 8
Gould	1111111111—10	Alcott	1010011111— 7
Folsom	1110111111— 9	Tyler	0101111110— 7
Whitlesey	1011111111— 9	Barnes	0100111111— 7
Avery	1111110111— 9	Capen	1101011001— 6

Event No. 8, team match, 12 birds per man:

Widman	111110011111—11	Sherman	111111011111—11
Bates	111111111111—12—23	Whitney	111010111011— 9—20
Alcott	110110111111—10	Folsom	111011111011—10
Woodford	111111111111—12—22	Beers	101111111100 —10—20
Gould	111110111010— 7	Avery	111001111000— 7
Yerrington	101111111111 —11—21	Ferris	111111101111—11—18
Barnes	111111111101—11	Hill	010010011110— 6
Whitlesey	110111110111—10—21	Merriman	101111111101—10—16

Third div., Sherman and Whitney fourth on shoot-off.

Event No. 8, 6 singles and 3 pairs, ties divided:

Widman	111110 11 11 11—11	Merriman	111111 10 10 10— 9
Avery	111111 11 10 11—11	Hill	111101 11 00 10— 8
Gould	111110 11 11 11—11	Ferris	111101 10 10 10— 8

Bates	111111—6	Widman	110010—3
Hill	111111—6	Whitney	100110—3

DAYTON, O., Aug. 7.—At the regular Kennel Club shoot to-day Adolph Sander won the trophy with a score of 26 out of 30 bluerocks, Ed Cooper and Charles Wheaten 24 each, Gus Sander and Charles Stoddard 21 each, Charles Sander 22, Charles Hanich and Thomas Hannah, 20 each.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

AMERICAN SHOOTING ASSOCIATION.

BOSTON, Aug. 13.—The second annual tournament of the American shooting Association is now in progress. The shooting grounds are located at Beacon Park, a time-honored trotting track, but a few miles out from Boston in the town of Allston.

These grounds are admirably adapted for conducting a large tournament, and the arrangements made by the Association are very complete. In anticipation of an extra large attendance Major Taylor had devoted considerable time to devising a ground plan which would allow of the constant operation of many sets of traps without occupying too much space. As a result of his work six sets of five traps each are in a half circle, and at these traps the shooting is almost ceaseless at Peoria blackbirds, Keystone targets, bluerocks, standards, Ligowsky, kingbirds and Al. Baude clay birds. By this plan all shooters are kept in a more confined space and are within easy call when wanted from one set of traps to another. Under this arrangement no delays occurred, and the 11 events of the day were gotten through in short order.

One of the most interesting contests was the team race of teams of two men belonging both to the same club. Ed Collins and E. Pumphrey, of the Ferdinand Gun Club, made 39 out of 40, but the management decided that they were not members of a regularly organized gun club, and so awarded first prize to the team making the next highest score. This caused some kicking on the part of Messrs. Collins and Pumphrey, but the management was firm and insisted on the ruling and returned the entrance fee. About 150 shooters were present, representing all the Eastern States and many Western States as well. A larger number is expected to-morrow, when the event of the week, the team race between the East and the West, is to be shot. Stice, Budd and Baadle, who were confidently expected to be here, are not present. The scores of the whole tournament will be given in full next week.

F. Mason.

PARK RIDGE SHOOT.

CHICAGO, Ill., Aug. 8.—A novel form of trap-shooting entertainment has been devised by Mr. Henry Stephens, one of the best known Chicago shooters, which will be largely attended by the gentlemen of this city, and doubtless will be a success. Following is the call:

"You are cordially invited, with your family and friends, to attend a basket picnic at Los Alamos Park, Park Ridge, on Tuesday, Aug. 20. Gentlemen accompanied by ladies are invited to lunch at Mrs. Henry Stephens's table in the park. Adjoining the park there will be trap-shooting for four prizes, valued at $1,750, viz: One lot at $550, and three lots at $400 each. Contest open to all members of any shooting club, in good standing, residing in Cook county, Ill. The conditions of the shoot will be as follows:

"Ten live birds from five ground traps, Illinois State rules to govern. Class A will have two prizes, value $550 and $400; class B one prize, value $400; class C one prize, value $400. The shooters will be classified A, B and C, according to the ability of the shooter, to be determined by a committee of the following well-known gentlemen: R. B. Ogden, W. P. Mussey, W. L. Shepard, J. J. Gillespie, W. W. Foss, W. W. McFarland, W. N. Low and C. D. Gammon. Entrance to shoot $10 (including birds and railway fare). Railway tickets to picnic and the shoot can be obtained free of charge from W. P. Mussey, 104 Madison street, Western Arms and Cartridge Co., 49 State street, Jenney & Graham, 53 State street, or will be mailed to you by applying to Henry Stephens, Room 14, Portland Block."

E. Hough.

ILLINOIS ASSOCIATION.

CHICAGO, July 29.—*To the Members of the Illinois State Sportsmen's Association:* Messrs. R. B. Organ, W. P. Mussey, Chas. S. Wilcox, Geo. T. Farmer and C. S. Burton having united in a request that the competition for the trophies provided by the Chicago *Herald* and the Jenney & Graham Gun Co., and contested for at last annual tournament of the Association, be re-opened; therefore, in compliance with the conditions under which these prizes were presented the Association, Thursday, Aug. 29th proximo, is appointed as the date, and 10 o'clock A. M., Watson's Park, Grand Crossing, as the hour and place.

The special conditions referred to, as governing the proposed contests, are as follows: "On the request of five persons, members of the State Sportsmen's Association, the president shall call shoots for these trophies, not oftener than once in three months, and shall give thirty days' notice of the date of the shoot; the contests shall be held at Chicago, and shall consist of twenty live birds to each man, the entrance fee shall be $20, including birds; from the purse $50 shall be awarded to the previous winner of the trophies, the remainder to be divided into four moneys, on the basis of 40, 30, 20 and 10 per cent. Ties for the trophies shall be decided at five birds. The gun and medal shall become the personal property of any contestant winning them three times."

F. C. Donald, President.

BLAUVELTVILLE, N. Y., Aug. 10.—The Saturday half-holiday matches of the Spring Hill Gun Club were very interesting as will be seen by the scores below. The day being perfect there assembled quite a number of good shooters who all enjoyed themselves and will try the sport again. On Friday, Aug. 16, this club will send a team to shoot a friendly match with the Bergen County Gun Club. Match No. 1, 5 bluerock clay-pigeons:

Dr Allen	01111—4	P Moeller	00110—2
J Bogart	11111—5	C A Kittle	10001—2

Match No. 2, same:

J Bogart	11110—4	Van Riper	01111—4
Dr Allen	10010—2	C A Kittle	11011—4
P Moeller	10010—2		

Ties for first: Bogart 2, others 1 each. For second: Moeller 1, Allen 0.

Match No. 3, same:

J Bogart	11111—5	Van Riper	11111—5
A D Kittle	11010—3	Dr Allen	11111—5
P Moeller	11101—4	C A Kittle	10010—2

Ties for first: Van Riper 9, Bogart 8, Allen 5.

Match No. 4, 9 bluerock clay-pigeons:

A D Kittle	101111110—8	G Pierson	111110111—8
Dr Allen	111101111—8	Van Riper	110111111—8
F Waite	110111111—8	J J Blauvelt	011110101—6
J Bogart	101001101—5	C M Hathaway	111111111—9
P Moeller	111111010—7	C A Kittle	011100011—5

Ties on 8: Van Riper 9, Allen 8, Pierson 2, Waite 1.

Match No. 5, same:

Hathaway	111101110—7	P Moeller	011101101—6
Waite	110001001—4	A D Kittle	011111101—7

READING, Pa., Aug. 7.—There was a large sweepstake pigeon shooting match on the Berks County Agricultural Grounds on Tuesday, Aug. 6. Among the well-known shots present were Kleinz, Jones, Welsh and Irvin, of Philadelphia; Cooper and Goodman, of Mahanoy City; Jackson, of Lebanon; Gechter, of Oley; Hill and Dare, of this city. Oliver Hinnershitz, proprietor of the 5-Mile House, was selected as referee, William James, scorer, and Mose Fleishman, trapman. The first match of 10 birds each was shot in the morning, the shooters being Kleinz, Welsh, Ben Fleishman and Irvin, Hurlingham rules, 30yds. rise. All four made clean scores, and the match was declared a draw by the referee, and is to be decided at some future date. In the afternoon the crowd began to gather, and by 3 o'clock several hundred people were present. The birds that were used were a little poor, and nearly all had to be chased out of the trap. The entrance fee was $5, to be divided into first, second and third prizes, the first to receive 50 per cent., the second 30 per cent., and the third 30 per cent. The first match of 10 birds in the afternoon was shot with the following score:

Cooper	2101111001— 7	Goodman	1111111111—10
Kleinz	1110101111— 8	Welsh	1121111221—10
Gechter	1110012111— 8	Irvin	1111111222—10
Jones	1001112200— 6	Clouser	1011110122— 8
Hill	2211111121—10	Jackson	1111111120— 9
Dare	1112201111— 9		

In the second match only 7 birds were used, which resulted in the following:

Cooper	1112212—7	Welsh	1101111—6
Kleinz	2121211—7	Dare	1102120—5
Jones	2012111—6	Clouser	0001101—3
Hill	1111122—7	Jackson	1101111—6
Goodman	0111100—4		

In the third match only one barrel was used, and the first one missing was out of the match. The rise was changed to 25yds. In this match there were 11 entries: Kleinz, Irvin, Jackson, Dare, Welsh, Hill, Mellot, Clouser, Cooper, Wicklein and Fleishman. The money was divided between Kleinz, first; Wicklein second, and Hill, third. There will be a match for $200 a side between Cooper, of Mahanoy City, and Hill, of Reading, about the beginning of September. One hundred birds will be shot at, and Hurlingham rules will govern.

WALNUT HILL, Aug. 6.—A better day for trap shooting never greeted sportsmen than was experienced by the shotgun men who met at Walnut Hill to-day, and fine scores were frequent. The event of the day was the eighth competition in the gold coin match, in which Mr. Perry led, closely followed by Messrs. Swift and Bowker. Gold coin match, 15 clay birds and 15 standard targets, Keystone squad system:

	Clays.	Keystones.
Perry	111111101111111—14	111111111111111—15—29
Swift	111101111111111—14	111111110111111—14—28
Bowker	111111111111111—15	111011111111011—13—28

Nye	111101100010001— 8	110101101111000— 9—17

BREWER'S BIG RECORD.—John L. Brewer, champion trap-shot of America and England, on Thursday, Aug. 8, at Gloucester (N. J.) base ball park, in a match at 100 live pigeons, London Gun Club rules, for $100 a side, broke the American record by killing 99 out of 100. His opponent, Wm. H. Wolstencroft, the crack shot of the North End Gun Club, withdrew after shooting at 89 birds, of which number he killed 84; this was his first appearance in a match at live pigeons, but has long been a superb trap shot at inanimates. When each contestant had 11 birds to shoot at to finish the match it was discovered that only that number were in the hampers: a consultation ensued, and Wolstencroft agreed to withdraw, provided the match be continued the next day, in case Brewer failed to shoot him out. Brewer killed the closing 11 birds straight, thus winning the race and breaking the record admirably. The gun editor of the Philadelphia *Item* officiated as referee and final stakeholder. The birds were not an extra good lot:

Wolstencroft	2101211122111101112101111—22 1111111121211111111111111—25 1111110111111121111111111—23 1110111111122w.	—13—84
Brewer	2121521112112121212121111—25 1111212212111111111112111—25 1121111102121211211112111—24 1121212111121111211212112—25	—99

Time of shoot 1h. 53m.

Summary: Rq., right quarterer; Lq., left quarter; D., driver; T., towerer; I., incomer; At., above trap.

	Rq.	Lq.	D.	T.	I.	At.
Wolstencroft	12	11	9	2	32	23
Brewer	21	17	6	6	28	22

Wolstencroft used his second barrel to kill 12 times; for safety times. Brewer used his second barrel to kill 28 times; for safety times. Both shooters used Greener hammerless guns, slightly under 8lbs, loaded 4drs. Schultze wood powder, 1¼oz. No. 6 shot; Wolstencroft used Rival shells, while Brewer used the English Eley.

FLORENCE, Mass., Aug. 6.—Norwood Gun Club, 25 Keystones, Keystone trap, American Shooting Association rules:

J F Gaylor	1001111101111101101011111—20	
W Tivirs	1011100101111111100111011—18

J Gaylor	01 11 10 10 11—7	

Practice:

H Chilson	1101101011111101111—15	
Gaylor	1010111111100	—11

The base ball team use the same grounds; and through a misunderstanding the ball club commenced a match this afternoon, so that the gun club could not shoot until after 5 o'clock. The club will hold a one day tournament the last week in August. The club has now nearly thirty members, and is growing rapidly. The members are well pleased with the Keystone targets and traps, which they use. The captain of the club is well posted on the rules, and he makes all who shoot live up to the American Shooting Association rules.—KOSMOS.

DAVENPORT, Iowa, Aug. 2.—Forester Gun Club's regular monthly shoot, good attendance; match at 6 single and 3 pair Keystones, 30yds. rise:

Branigan	111111	11 11 11—12	J F Kray	111010 11 10 10— 8
Collins	111111	10 11 11—11	Q Maser	111101 11 01 10— 8
Goos	100000	10 00 00— 2	F Davis	111111 11 00 11—10
Culins	001001	01 00 10— 4	G Farrell	011010 00 10 11— 6
Shads	011110	10 10 01— 7		

WORCESTER, Mass., Aug. 8.—This week the principal event at the regular meet of the Worcester Sportsmen's Club at Coal Mine Brook Range, was the seventh contest for the Norcross Trophy. It resulted in a victory for A. L. Gilman, who can hold it for the next two weeks, when he must make the best record again or it will go to some one else. The men who have held it thus far are: 1st, M. D. Gilman with a score of 28; E. T. Smith, 27; C. H. Howe, 28; E. T. Smith, 26 and 10; C. B. Holden, 30, and Geo. A. Sampson, 27. In the contest each man has a possible 30 birds, and in case there is a tie he has a possible addition of 10 birds. Score for the shoot: A. L. Gilman 27, A. R. Bowdish 26, G. J. Rugg 26, E. Welch 26, E. B. Burbank 25, E. S. Knowles 25, M. D. Gilman 25, C. Crompton 24, E. F. Swan 23, W. R. Dean 23, Geo. A. Lampson 22, W. G. Larkin 21, A. B. Franklin 21, W. E. Johnson 21, M. A. Linfield 21, H. D. Bourdan 21, Dr. Bowers 20, F. Forehand 20, C. R. Holman 19, F. M. Harris 18, Y. F. Prentice 16.

MONTREAL, Aug. 10.—The St. Lawrence Gun Club are making another effort to stimulate the interest in shooting, which always lags somewhat at this time of the year here, and their annual tournament, which was held to-day, was most satisfactory in every way, the attendance being very large and nearly everybody present took part in one or more of the competitions. The day's sport opened with the club match at 10 birds each, 21yds. rise, both barrels. Some excellent shooting was done in this match and was promising for the rest of the day, Messrs. Bousquet and Leduc grassing their strings straight and the latter winning on the shoot-off. In the open shoot at 10 birds at 26yds. rise, ties and Bedard divided, Leduc getting third in the ties. For the ladies' match there were 29 prizes, and this shoot kept the enthusiastic ones busy all day until darkness came on, as entries were duplicated. There were 50 entries.

WELLINGTON, Mass., Aug. 10.—The pleasant weather to-day attracted a large attendance to the grounds of the Wellington Club, and some fine shooting was done in the various matches. In the silver pitcher match Perry won for the second time with 14 out of 15, at 7 bluerocks and 8 clay-pigeons. The other scores in this match were as follows: Chase, Chapin, Fielding and Allen each, Walker, Bradstreet and Lee 11 each, Sanborn, Franklin, Dalley, Bowker, Cowie and Bond 10 each, Nye, Melcher and Nichols 9 each, Porter 8. In the merchandise badge match Chapin was first with 15 straight. Sweepstakes followed.

PEEKSKILL, N. Y.—An all-day shoot at Keystone targets, three traps, Association rules to govern, open to amateurs only, will take place at Peekskill, N. Y., Aug. 22, on the grounds of the Ravine Gun Club, ten minutes walk from the H. R. R. depot, or five minutes by stage. The grand event of the day will take place at 10:30 A. M. sharp, at 25 targets; first prize a fine 12-gauge C. Smith hammerless, value $150. The balance of the prizes will be paid in cash. The attendance of all amateurs is requested, and a good time is promised.—W. H. PIERCE, Sec'y, Ravine Gun Club.

KEYSTONE TOURNAMENT.—In addition to the money prizes offered by the management at their tournament on Aug. 20 to 24, the citizens of Corry have donated many valuable articles of merchandise for competition in the various events. Extensive preparations have been made for the entertainment of visiting shooters, notably a banquet and a ball at the Rink. It seems that Corry is going to do herself proud on this occasion, and a right good time may be expected.

THE PHILMONT ROD AND GUN CLUB, of Philmont, N. Y., is just organized with about twenty-four charter members. Regular meetings the second Monday of each month; regular shooting days, second and fourth Saturdays of each month. Officers: Geo. A. Lockwood, President; E. S. Beardsley, Vice-President; C. D. Hicox, Secretary; Geo. Baker, Treasurer; M. Powell, Captain; S. Scism, Geo. Ferguson, D. Ames, Directors.

THE revised and abriged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv.*

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

26. Cedar Point.

NEW YORK Y. C. CRUISE.

WITH a fleet growing each year in size and quality, and with all details and arrangements carried out to perfection, the annual cruise of the New York Y. C. is becoming each year of greater interest from a racing standpoint, and is less of a straggling from port to port, with plenty of fun but little racing, as in some past years. The large singlestickers have done a great deal since 1885 in stirring up the racing on the cruise, usually the first occasion on which all met in racing trim, and though they have disappeared, their influence is still felt. This year the runs from port to port are more of a feature than ever before, making together a most interesting series of races in cruising trim, but none the less exciting on that account. The courses are four in number, from New London to Newport, about 38 knots; from Newport to Vineyard Haven, 37 knots; from Vineyard Haven to New Bedford, 34 knots, and from New Bedford to Newport, 27 knots. The prizes, known as the squadron trophy cups, are of the value of $100 in each class, being awarded to the yacht making the highest average in the four runs. The system is the same as that used for several years by the American Canoe Association in its races. The competing yachts in a class are numbered according to the order of the finish, by corrected time, the winner being 1, the second 2, etc. Yachts which do not start in any race will be given a number equal to the greatest number of starters in the class on any run; while yachts which start and do not finish will be given a number equal to the starters in that particular race. The record will be summed up at the end, the cup going to the yacht with the lowest total. An average of four races in this way will give a very fair test, flukes and accidents in any one race being partly eliminated.

Besides these cruising races there are three special events, for which the yachts will strive and leave nothing undone to win, so that the times will afford an interesting comparison with those made in cruising trim. The most important of the three is of course the Goelet cup race, for the two cups annually given by Mr. Ogden Goelet, $1,000 for schooners and $500 for singlestickers. The other two are for cups to the value of $500, given by the Marthas Vineyard Association, for races off the Vineyard, and special cups of $250 for the 70ft. class and $150 for the forties, given by the club, to be sailed off Newport at the end of the cruise. In addition to these follow the race of the forties for the Carroll Cup and the Corinthian sweepstakes.

The complete programme of the race is as follows:

Aug. 7.—Rendezvous of the fleet at New London.
Aug. 8.—Run to Newport, 38 knots, for squadron cruise cups.
Aug. 9.—Goelet cup race off Newport.
Aug. 10.—Run to Vineyard Haven, 37 knots, second race for squadron cups.
Aug. 11.—At anchor, Vineyard Haven.
Aug. 12.—Martha's Vineyard Association cups.
Aug. 13.—Run to New Bedford, 34 knots, third race for squadron cups.
Aug. 14.—At anchor, New Bedford, rowing and launch races.
Aug. 15.—Run to Newport, 27 knots, fourth race for squadron cups.
Aug. 16.—Race for special club cups; 70 and 40ft. classes off Newport—fleet disbands.
Aug. 17.—Race for Carroll cups, 40-footers, Newport.
Aug. 19.—Race for Corinthian sweepstakes, 40-footers, Newport.

Early on the morning of Aug. 7 the flagship Electra left New York with Com. Gerry; Secretary Oddie, Treasurer Hurst, Fleet-Captain Stephens Peabody and the regatta committee, Messrs. S. Nicholson Kane, W. E. Iselin and Chester Griswold on board. After a pleasant run through the Sound, the flagship dropped her anchor off the Pequot House, at New London, at 5 P. M., in the midst of a fleet of over 100 yachts. The fleet is a noble one, including the handsome steam yacht Alva on one hand, and from her every variety of yacht down to the cat-rig forties. Among the large boats the new and handsome schooner Constellation claimed first place by virtue of her size and appearance, while the Burgess fisherman Fredonia and Mr. Bryant's Alert were objects of considerable interest. The big sloops were entirely unrepresented, neither Volunteer nor Puritan being in commission, but the remains of several were haunting the scenes of their past glories, all under schooner rig. Elma, once Priscilla, Mayflower and Atlantic, are all with the fleet. The racing contingent is made up as follows, many only entering for the squadron cups and not for the Goelet or Vineyard Haven cups:

SCHOONERS—FIRST CLASS.

		Length.	Allows.
Dauntless	C. H. Colt	112.83	
Norseman	Ogden Goelet	110.12	1.90
Constellation	E. D. Morgan	110.00	1.99
Ramona		103.44	3.11
Palmer	R. Stuyvesant	104.17	6.36
Wanderer	Geo. D. Weld	104.00	6.49
Intrepid		99.30	10.29

SECOND CLASS.

Gitana		96.81	
Montauk	J. C. Brooks	95.33	Allows. 1.30
Fortuna	Henry Hovey	94.92	1.66
Norma	L. H. Smith	94.30	2.23
Ruth	H. G. Marquand	90.83	5.46
Fredonia	J. M. Forbes		Not measured.

THIRD CLASS.

Merlin	W. H. Forbes	92.00	Allows.
Sea Fox	A. C. Canfield	90.79	1.16
Alert	Henry Bryant	90.00	1.91
Sachem	Wm. Arnold	89.14	2.75
Mayflower	F. T. Underhill	89.08	2.81
Varuna	Sturgest & Rives	87.00	4.91
Grayling	L. A. Fish	85.21	6.76

FOURTH CLASS.

Marguerite	W. F. Burden	83.37	Allows.
Iroquois	R. W. Ellis	81.74	1.81
Halcyon	Henry Lippitt	81.08	2.56

FIFTH CLASS.

Sylph	Geo. H. Chase	70.09	Allows.
Quickstep	J. K. Grinnell	68.57	2.35
Clio	E. C. Moffat	67.62	3.46
Harbinger	H. G. Russell	67.00	4.39
Triton	J. J. Faye	65.18	7.39
Azalea	Edmund Blunt	62.12	12.19
Lotus	Daniel Appleton	60.39	15.19
Agnes	J. N. Winslow	57.66	20.19
Whim	W. G. Brokaw		
Curlew	W. L. Brooks		

SLOOPS, CUTTERS AND YAWLS—THIRD CLASS.

Titania	Oliver Iselin	74.30	Allows.
Katrina	Auchincloss Bros	73.85	.59
Bedouin	A. Rogers	72.16	2.83
Gracie	F. P. Earle	71.94	3.13
Pocahontas	J. D. Smith	69.00	7.25
Fanny	F. B. Fiske	68.80	7.54
Vision		66.00	11.74

FOURTH CLASS.

Hildegarde	J. C. Bergen	63.75	Allows.
Wizard	Ernest Styles	60.00	6.40
Whileaway	G. F. Randloph	57.50	11.01

FIFTH CLASS.

Cinderella	W. B. Hopkins	55.48	Allows.
Clara	J. C. Barron	54.28	2.45
Eclipse	F. Gallatin	52.26	6.76

SIXTH CLASS.

Adelaide	R. W. Inman	49.17	Allows.

SEVENTH CLASS.

Liris	Samuel Mather	46.47	Allows.
Tomahawk	E. D. Morgan	45.67	2.12
Maraquita	Aug. Belmont, Jr	45.67	2.12
Gorilla	R. P. Carroll	45.04	2.21
Lotawana	W. G. Foster	44.71	4.75
Nymph	F. W. Flint	44.55	5.20
Vandal	Harry Stanton	41.00	15.71
Peri	F. P. Sands	39.40	

Among the New York yachts were a number of the Eastern Y. C. fleet, the Burgess forties, Awa of Providence and Verena; and the McVey boats, Alice and Helen.

At a meeting of captains on board the flagship in the evening the programme as given above was adopted, subject to the weather, and it was decided to make an early start for Newport next morning, going outside of Fisher's Island, instead of the usual course inside. During the evening the fleet and the houses on shore were illuminated, the Pequot House making a handsome display of lanterns. A drum and fife corps on board a six-oared gig rowed through the fleet and gave some very stirring concerted music.

New London to Newport, First Run, Aug. 8.

Thursday morning was clear and bright, with a very light northerly wind. Some of the yachtsmen were astir early and out of the harbor in good season, but others counted on delay on the part of the committee, and very deservedly were left, a number being handicapped. A number of yachts made an early start through Fisher's Island Sound, leaving forty-nine to start in the race. The flagship was off the start, near Leo Flower Beacon at 9 A. M., and at 9:33 the starting gun for the first division, all under fourth class schooners and fourth class sloops and cutters, was fired. Clio was first over, followed by Gorilla, but half the fleet was handicapped. Liris fared very badly, being handicapped by 17m., which brought her just ahead of the large craft of the second division, which started at 9:58. Many had carried spinakers to starboard out of the harbor, but the wind had died out before the schooners reached the line. Dauntless, as usual, was in trouble, nearly fouling Fortuna at the line. The times at the start were:

First Division.

Clio	9 34 46	Nymph	9 36 13
Gorilla	9 35 09	Harbinger	9 36 30
Bertie	9 37 05	Quickstep	9 37 26
Adelaide	9 35 43	Lotowana	9 37 54
Handicap time	9 38 00		
Maraquita	9 39 18	urlew	9 46 06
Azalea	9 39 45	Clara	9 46 37
Agnes	9 39 52	Triton	9 48 30
Cinderella	9 39 56	Liris	9 54 57
Whim	9 40 21		

Second Division.

Sachem	9 59 43	Norseman	10 02 48
Grayling	9 59 50	Sea Fox	10 02 58
Pocahontas	10 00 26	Constellation	10 03 34
Œnone	10 00 51	Wizard	10 03 37

Fortuna	10 10 00	Alert	10 22 00
Gracie	10 10 15	Intrepid	10 24 15

The wind had come in light from the east by the time that the fleet was well past Race Rock, all working along on starboard tack. Grayling soon ran well ahead, holding close in shore and wasting nothing in distance all day. Constellation was doing well in the very light air considering her size. Gorilla was making the most of a very good start, and headed the fleet for a long time, until the schooners passed her. Sachem managed to hang dangerously close to Grayling and at one time had a very good chance to lead her in, but threw it away. Clara, after a late start, ran through the fleet, and before Point Judith was reached she was the windward boat, out to south and east of all, but when at last a southerly breeze came in and spinakers were set to starboard she was far astern of Grayling and the rest in shore. Marguerite sailed faster than she has ever done before, but failed to save her time off Œnone. The wind was fluky, in patches here and there, and shifting in direction all day, so that it was no fair test of any of the yachts. In the 70ft. class Katrina outsailed Titania and both Fanny and Gracie beat Bedouin. Clara easily beat her own class, including her old rival, Cinderella, and also the class above her, being little astern of Hildegarde on even time.

In the forties Gorilla led all day, but Liris, starting with a handicap of 17m., passed Lotowana, Awa, Peri and Nymph in succession, coming up with Maraquita off Charlestown Beach. The latter was carrying a large balloon jib, not a jibtopsail, but a jib, hoisted to the masthead and set about 6ft. in from the bowsprit end, reaching aft to the mast. This sail did good work in the light air, but Liris finally passed her, and when spinakers were set off Point Judith was a little ahead, Maraquita soon crawled up abeam, and for three miles there was a very pretty race, each in turn drawing ahead a little. Liris finally ran ahead, finishing first by a minute, but losing second place on allowance. She had made up all but 3¼m. of Gorilla's lead at the start of 19¼m., Peri beat Nymph and Lotowana in, but by a mistake she was not timed, the official times were:

SCHOONERS—FIRST CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Dauntless	10 08 00	5 03 20	6 55 20	6 55 20

Newport, Goelet Cup Race, Aug. 9.

For four seasons the big sloops monopolized the interest in the Goelet Cup race; since the memorable meeting of Puritan and Priscilla in 1884 this race, the first in which the new boats of the year entered in racing form, has been looked to as a test and an indication of the result of the trial races to follow. This year the sloops are conspicuously absent, and the schooners are once more in the ascendant. How long before another race of the first class sloops will be seen here is a question no one can answer, as it seems likely that Volunteer will sooner or later join the two-stickers. On this neutral ground, between Boston and New York, some of the classic schooner races of the day have been sailed, Montauk and Fortuna, then Grayling against the Eastern boats, and later Grayling and Sachem, have fought for the supremacy over the Block Island or Sow and Pigs courses.

There was a time when the New York fleet had every advantage both in point of numbers and in quality, but of late she has had nothing to boast of in either respect, and this year Boston has had decidedly the best of it, with an unusually fine display of schooners. First in size comes the new steel Constellation, white, like all the Burgess boats, and with a rig that overtops all her class. Another new Burgess boat is the white yacht-fisherman, Fredonia, just back from her voyage to Madeira with Mr. J. Malcolm Forbes, her principal owner, on board. She is a handsome vessel, and fast enough as a cruiser, but without kites and plenty of wind she has no place in a fleet like this. Another hard weather boat, with a leaning toward fishing rather than racing, is Alert, designed by her owner, Mr. Henry Bryant, but like Fredonia she is not canvassed for racing, though she did some fine work at Vineyard Haven last year. Under the red and white flag of the Forbes family was another new schooner, the wooden Merlin, designed by Burgess and built by Lawley. She had already been beaten at Marblehead by Sea Fox, and was looking for a chance to retrieve her laurels.

Œnone is in all ways an Eastern boat, and both Sachem and Mayflower, though now owned in New York, are Burgess boats. Besides the old Dauntless, New York had but two representatives, the Ellsworth boat, Grayling, and Com. Canfield's Sea Fox, designed by himself.

With so many good schooners the sloops attracted less attention than in the club regattas, but a race between Titania and Katrina is in itself well worth seeing, and this was the first real meeting since Katrina had been overhauled. Bedouin and Gracie also sailed the course, but they kept out of the way and troubled nobody. There was no place for the forties, but two of these bold bantams made up a private match rather than lie in harbor all day, and sailed out to Block Island and back.

The Goelet cups, as every yachtsman knows, have been given for the past eight years by Mr. Ogden Goelet, of the schooner Norseman, a cup costing $1,000 for schooners and one costing $500 for sloops, each being held permanently by the winner. The race is always started off Newport during the cruise, and is now the most important regular event of the year. There are no class divisions, but the regular club allowance is given. Of the two courses sailed, Block Island and Sow and Pigs, the latter has been chosen since 1885, but this year a strong S.W. wind, making nearly a dead beat of about 13 knots to Block Island, was blowing in the morning, so this course was chosen. The second leg, to a mark-boat off West Island, was about 16 knots, and the last leg, home to the start off Brenton's Reef Lightship, about 7 knots, 37 in all.

Orders were given for a start at 10:30, and the flagship was in position on time, but a wait was made as usual for the laggards. The gun was finally given at 11:00. Alert, on port tack, making a very prompt start, followed by Grayling, Fredonia, Sea Fox and Merlin. All of these rounded the lightship on port tack, crossing the east end of the line, but just as Katrina crossed, the schooner Œnone came under Electra's stern on starboard tack, running across the wake of the schooners and just ahead of Katrina, forcing the sloop about under her lee, Katrina was compelled to make a short hitch to the east, and then tack again, thus making two useless tacks, while Œnone gained nothing herself by the maneuver. Titania loafed about the line until all but Dauntless had crossed, thus being able to select her own water without fear of interference. The times at start were:

Alert	11 00 48	Gracie	11 03 12
Grayling	11 01 11	Mayflower	11 03 35
Fredonia	11 01 24	Constellation	11 03 56
Sea Fox	11 01 28	Bedouin	11 04 36
Merlin	11 01 45	Sachem	11 05 16
Œnone	11 02 07	Titania	11 07 17
Katrina	11 02 11	Dauntless	11 07 23

Gorilla and Maraquita started to sail around the first mark and back, being timed at the start, Maraquita 11:35, Gorilla 11:35:20. Both went off on port tack under mainsails and jibs, Gorilla holding far to windward of Maraquita and doing much the better work. Constellation and Fredonia had housed fore-topmasts and Gracie had also housed her topmast, but the others of her class were carrying working topsails sometime after they had settled down to work, only Bedouin going over the line with one, Sea Fox, Alert, Fredonia and Mayflower carried maintopsails from the start, and Grayling and Merlin soon set theirs, as well as baby jibtopsails, Sachem carried no topsails, but a main-topmaststaysail.

The fleet ran along on port tack for about half an hour, tacking when abreast of Narragansett Pier. Dauntless, the last of the lot, parted her bobstay after sailing four miles and ran home.

Constellation had not been carrying sail any too ably, but before Narragansett Pier was reached she was compelled to shorten it, by the clew of the foresail tearing away. The sail was reefed several times, each time tearing, until it was finally stowed and she sailed the race out without it. When they tacked Grayling and Sea Fox were the leaders, but Alert, standing well off shore, worked into a very good position, Fredonia following her, but to leeward. Titania had gained on Katrina, while both had dropped Bedouin badly. Gracie, after sending up topmast and working topsail, carried away the head of her jib, and was delayed by the accident.

At 12:30 Katrina went on starboard tack, Titania following at 12:33:30. Sea Fox, to windward of Titania, was on port tack along the shore by Point Judith. Alert, after her tack off shore, was now nearing Grayling, who had sailed a middle course. Katrina had crossed Grayling's bow at about 12:36, Grayling tacking at once when to windward of her wake. At 12:46 she in turn crossed Alert's bow. Alert, followed by Merlin, held on in Sea Fox's wake. About 1 P. M., when nearing the markboat, Sea Fox crossed Grayling's bow and tacked in her weather, at once running away from her. The order of the schooners was now Sea Fox, Grayling, Constellation, Merlin, Alert, with Sachem, Mayflower, Œnone and Fredonia well astern.

Titania had fairly caught Katrina when she went on starboard tack at 1:28, Katrina soon following, being now to leeward. There was a very strong ebb tide running at the mark, and while the Fox was safe to weather it Titania's chances were doubtful, and Katrina's much worse. The Fox went by safely, but just as Titania was near the mark her balloon jibtopsail was broken out by accident, knocking her off. The sail was quickly taken in, but she only squeezed by the boat with an inch to spare by the aid of a pilot's luff. Katrina was doubly unfortunate, as Grayling had now come up and crossed her bow as she came for the mark, and then tacked to windward of her. The times were:

Sea Fox	1 32 00	Gracie	1 51 35
Titania	1 36 33	Bedouin	1 52 30
Katrina	1 38 09	Sachem	1 55 10
Grayling	1 38 17	Mayflower	1 55 40
Constellation	1 30 36	Œnone	1 58 40
Merlin	1 42 19	Fredonia	1 58 45
Alert	1 44 01		

Sea Fox had beaten Constellation 6m. 9s., Grayling 6m. 35s., Merlin 10m. 31s., Œnone 26m. 2s., and Fredonia 28m. 50s., while Titania had in turn beaten Sea Fox 1m. 15s. Titania had made 6m. 42s. on Katrina.

Spinakers were set to starboard for the long run, the schooners mostly setting maintopmast staysails and the sloops balloon jib-topsails. Alert had no spinaker, and so ran wing and wing, while Constellation set no maintopmast staysail. Titania was in hard luck, her extension spinaker boom breaking at the joint, throwing a man who was on the boom into the water. He held on to the outhaul and was taken on board, but a long time was lost before the spinaker could be taken in and reset with an Irish reef in it on the larger part of the boom. Katrina had passed her, so she sent up a clubtopsail to help her along. Sea Fox carried only working topsails, but Grayling swung her club. The only times taken at the West Island mark were:

Sea Fox	3 13 09	Titania	3 21 11
Constellation	3 17 40	Merlin	3 25 00
Katrina	3 18 50	Alert	3 32 30
Grayling	3 21 11	Gracie	3 33 30

Bedouin, Mayflower, Sachem and Œnone were not timed, and Fredonia gave up on second leg.

The last leg was a close reach, the wind still holding its strength. The positions were little changed. Sea Fox gained on Grayling, while Alert made very good time over the leg. Titania parted her throat halliards on the last leg, but still came in a winner. As the flagship came up to Brenton's Reef, Gorilla was seen running into Newport, while Maraquita was just at the Lightship, Gorilla winning by 10m. The full times for the Goelet cups were:

SCHOONER CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Sea Fox	11 01 29	3 56 55	4 55 26	4 44 25
Grayling	11 01 11	4 06 01	5 04 50	4 50 20
Constellation	11 03 56	4 02 44	4 58 48	4 57 34
Merlin	11 01 45	4 08 45	5 07 03	Not meas.
Mayflower	11 03 38	4 24 17	5 20 39	5 07 59
Sachem	11 05 16	4 26 51	5 21 35	5 09 16
Alert	11 00 48	4 15 08	5 14 20	Not meas.
Œnone	11 02 07	4 32 32	5 30 25	Not meas.
Fredonia	11 01 25	Did not finish.		
Dauntless	11 07 23	Disabled.		

SLOOP CLASS.

Titania	11 07 17	4 06 07	4 58 50	4 58 50
Katrina	11 02 11	4 03 42	5 01 32	5 01 09
Bedouin	11 14 36	5 20 52	5 16 16	5 14 31
Gracie	11 03 12	4 21 39	5 18 27	5 16 31

Sea Fox beats Grayling 5m. 57s. and Constellation 13m. 11s. In a true breeze and from such a fleet Sea Fox's victory is a notable one, as she won on her merits throughout. Titania beat Katrina very fairly in spite of two mishaps, making a gain of 7m. in the windward work. Bedouin did poorly all day, barely beating Gracie, while neither came anywhere near the two steel boats.

The race was finished in the rain which continued through the evening.

The new club house of the New York Y. C. has proved a great convenience. It is a square two-storied building in colonial style, as is appropriate to the locality. There is a large room on first and second floors, with toilet rooms and lockers. The roof is surmounted with a large lantern with the club night signal in colored glass. The architect of the building is Mr. John Boit of Newport. The house is placed on the end of the wharf where the New York float has always been placed, the present float being on the north side, with an extra float for the use of boats 'crews and stewards. The following additional cups have been offered for races next month. Mr. E. D. Morgan offers a $500 cup for 70 footers, with a second prize of $100 if five start; and prizes of $150 and $100 for the forties. Mr. Rogers of Bedouin, offers two cups, of $150 and $100 for the 30-footers. The 70ft. class will race on Sept. 16; the 40ft. on the 17th, and the 30ft. on the 19th.

Newport to Vineyard Haven, Second Run, Aug. 10.

The early morning of Saturday promised but little, with cloudy skies and prospects of thick weather, but there was a strong S.W. wind for the run to Vineyard Haven, and the fleet was under way fairly early, though a number were handicapped. The flagship was off Brenton's Reef by 10, and the start was given at 10:35 for the smaller yachts, Nymph, Vandal and others had already gone ahead for the Vineyard, leaving a fleet of thirty-eight racers. The first over the line was Clara, with her old antagonist, Cinderella, chasing her. Gorilla made an early start, well ahead of her class. Liris came next, while Lotowana and Maraquita were handicapped, the latter seriously. The larger yachts started at 11 o'clock, Palmer, Fortuna, Fredonia and Sea Fox crossing together. The times of the start were:

Gun	10 35 00	Sagitta	10 38 23
Clara	10 36 00	Clio	10 39 00
Cinderella	10 36 51	Peri	10 39 14
Gorilla	10 37 00	Liris	10 39 54
Harbinger	10 37 09	Handicap gun	10 40 00
Bertie	10 37 15	Lotowana	10 40 10
Azale	10 37 25	Maraquita	10 55 45
Adelaide	10 38 03	Concord	11 07 33
Quickstep	10 38 03		
Gun	11 00 00	Dauntless	11 10 47
Palmer	11 02 07	Hildegarde	11 16 40
Fortuna	11 02 13	Constellation	11 04 32
Fredonia	11 01 17	Sachem	11 05 22
Sea Fox	11 02 37	Mayflower	11 05 52
Alert	11 03 29	Marguerite	11 07 18
Intrepid	11 03 41	Merlin	11 07 50
Iroquois	11 04 32	Norseman	11 09 22
Bedouin	11 05 54	Handicap gun	11 10 10
Montauk	11 06 54	Titania	11 10 35
Elma	11 07 57	Katrina	11 11 08
Œnone	11 08 00	Ramona	11 17 02
Grayling	11 09 52		

There was wind and sea enough at the start to toss the little fellows about in a lively way, all carrying working topsails. Liris tried her second jibtopsail, but the clew tore out. Constellation began to leave the others from the start, sailing away from her own class easily. By the time that Vineyard Sound Lightship before reached the fleet was turned completely inside out, the little fellows that had been the leaders for a time, owing to their start, now straggling along in the wake of the big schooners that had overtaken them. The wind and sea together proved too much for some of the spars, Cinderella's topmast going, though by the time she lost it Clara had fairly beaten her. A little while after Clara herself came to grief, her topmast also going. Palmer lost her foretopmast, coming in among the laggards.

Starting very close together, each a little handicapped, Titania and Katrina sailed together all day, the former steadily drawing away. Gorilla was sailing very well, but Liris had worked out ahead of her, about making up the difference in the start, when the starboard runner on Liris, a flexible steel rope, gave way just before the Vineyard Haven Lightship was reached. She was luffed off her course for some time while the damage was repaired, losing a good deal. When in Vineyard Sound spinakers were set to starboard on the big fellows, but there was still sea enough to trouble the forties. The flagship was off West Chop by 2 P. M., and a little later Constellation came down under a great spread of canvas, balloonjibtopsail, spinaker and balloonmaintop-maststaysail. Only 8m. astern of her came Sea Fox, again a winner, beating her own class, the class above her and all but Constellation of the first class. She would receive about 10m. from Constellation and was but 3m. astern on elapsed time, she had beaten Grayling by nearly 3m. Fortuna beat Montauk, Marguerite beat Iroquois and Quickstep beat Harbinger. Titania beat Katrina by nearly 7m. Clara met her first defeat in America, except when she carried away her bowsprit two years since at Marblehead. After she lost her topmast on Saturday Bertie caught and passed her. Gorilla scored her third successive victory, beating Liris, Peri, Lotowana and Maraquita. The full times were:

FIRST CLASS—SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	11 04 32	2 36 55	3 32 24	3 31 10

Anchors were hardly down in Vineyard Haven before the yachtsmen were ashore at the dilapidated wharf, all bound across the smooth concrete roads to Cottage City, in all sorts of conveyances. The place was full of wheels and wheelmen, the annual meet of the L. A. W. being just over, and bicycles, tricyles and socials abound on every road and street. The generous hospitality of the Oaks Bluffs Club was extended to all members of the fleet, and the handsome club house on the bluff was the general rendezvous during their stay. The club has done much to help the island, and this year it has made a strong and successful effort to make the place still more popular with yachtsmen than in the past.

Sunday was a bright and beautiful day, a cloudless sky and light breeze. The yachts in harbor, about 100 in all, dressed ship in the morning. Com. Gerry and his staff attended service at the Episcopal church. In the afternoon a reception was held on the Alva, most of the yachtsmen attending. Several of the racers were busy repairing damages in season for the morrow's race. Clara ran over to New Bedford at midnight on Saturday for a new topmast. Liris replaced her wire runners by manilla and borrowed a new spinaker boom from the schooner Clio. Clio is 27ft. longer on l.w.l. than Liris, but the boom was several feet too short for the 40-footer. The arrangement of classes for the four Vineyard Haven cups put the first, second, third and fourth class schooners together, the fifth class sailing alone; while second and fourth class sloops sailed together, and the fifth, sixth and seventh made up the entries for the fourth cup. The course was from a starting line off the Sea View House, at Cottage City, past the whistling buoy off Nobska Head, then on five miles further to a markboat off Tarpaulin Cove for the smaller schooners and single-stickers, and about 3 miles further still to a second markboat off Robinson's Hole for the larger yachts, returning over the same courses, making about 22 and 28 knots.

There are with the squadron a number of Eastern yachts, the racing forties Helen, Alice, Verena, Awa and Pappoose, that have accompanied the fleet from New London, but have taken no part in the runs, not belonging to the New York Y. C. These boats were desirous of trying conclusions with Liris and the other forties, but as the club declined to open the race for the Vineyard Haven cup to them, a special sweepstakes of $25 each was made up, to be sailed in connection with the Vineyard Haven cup.

Vineyard Haven Cups, Aug. 12.

Monday turned out another clear day, with a very light wind from N.W. in the morning. At 10 A. M. the Electra was at anchor off the Sea View House, and at 10:20 the start was given. Titania was first away, running along the line and over in quick time. Then came Gorilla, the other forties waiting a little. The number of large schooners made the early part of the races very hard for the little ones, as they were constantly blanketed by some larger boat. Quickstep made a good start, followed by Azalea. Merlin and Grayling had the best of the start in the large class, Sea Fox being in a tangle with other boats, while Katrina was in a bad berth also. As Liris crossed the inshore end of the line on port tack, followed by Pappoose and Awa, Maraquita on starboard tack came by and put her about, covering her for a time, but Liris in turn soon worked out to windward of Maraquita. The tide was a strong ebb, the wind very light ahead, and clubs and small jibtopsails were set. The start was timed:

Titania	10 21 30	Maraquita	10 25 20
Gorilla	10 21 35	Gracie	10 25 45
Alice	10 23 35	Liris	10 25 50
Quickstep	10 23 40	Constellation	10 25 50
Azalea	10 23 45	Pappoose	10 25 55
Merlin	10 24 04	Sea Fox	10 26 20
Katrina	10 24 06	Awa	10 27 55
Grayling	10 25 00	Mayflower	10 30 00
Helen	10 25 15	Sachem	10 34 50

The fleet worked slowly around the East Chop, Titania in the lead, all hugging the shore and working well into the harbor. The wind was very light and flaky the first hour, but after that, when the leaders were well out in the Sound, it freshened considerably, growing stronger later on and holding to the finish. Pappoose was doing very good work, sneaking along inshore and picking up what air was going. She had been astern of Gorilla, Maraquita, Alice and Liris, but Captain Watson worked very cleverly, and aided by a little luck in the shape of a stray zephyr he got her out into the Sound and clear of the land, as well as of the big boats. Alice too managed to get out into the breeze, and she and Pappoose made a very pretty race across to the whistling buoy off Nobska Head, the rest of the class still being under West Chop. Gorilla, the leader at the start, was becalmed there, with Maraquita. Liris, after having a good lead over Pappoose and Maraquita, had been becalmed in the harbor, and later, after touching on a rock on a cast inshore, found herself between Gracie and Grayling, the schooner completely shutting her off from the open water outside. By the time she was fairly out of this pocket, she was the last of her class. Both Sea Fox and Constellation were astern, and with no wind in the harbor. Gracie and Grayling finally managed to get out, and when the breeze freshened Gracie went away fast, passing Titania before the turn. Her jibtopsail sheet parted before the mark was reached, so that Titania overtook her, and being inside compelled her to give room at the buoy. The times were:

Alice	11 50 40	Merlin	11 54 33
Pappoose	11 50 47	Sachem	11 55 16
Quickstep	11 51 40	Awa	11 55 31
Gracie	11 52 45	Sea Fox	11 55 46
Titania	11 52 50	Azalea	11 56 15
Grayling	11 53 19	Helen	11 56 28
Katrina	11 53 37	Gorilla	11 56 38
Mayflower	11 54 00	Liris	11 57 37
Maraquita	11 54 30	Constellation	11 59 31

Thus far the work had been very fluky and unsatisfactory, but the wind was now blowing fresh up the course, making a dead beat of 8 for the larger boats, there being all that the largest of the forties could carry a clubtopsail in. Grayling and Titania at once began to leave their classes. Quickstep was doing well, and Pappoose and Alice were still far ahead of the other forties. Constellation was aground for a few minutes in the harbor, and so was last, but with this exception Liris was the tail boat at Nobska buoy. Once on the wind, and with sheets trimmed for hard work, she began to show her quality, walking through the fleet of forties and leaving Helen, Gorilla, Awa and Maraquita astern in quick time. Awa, with her great beam, was tempted into carrying jibtopsail and clubtopsail too long, and after a warning in the shape of a hard knock down she hurried them in. Alice had more wind than she wanted coming down to lower sails for a time in spite of a ton of lead put in at Newport, but Pappoose carried her club in great style walking out to windward.

The order now was Titania, Katrina, Grayling, Merlin, Sea Fox, Quickstep, Pappoose, Alice, Liris, Azalea.

Sachem had already distinguished herself during the race by forcing the little Alice about when the latter had the right of way, and emboldened by her success, she tried for larger game. Mayflower was going along on starboard tack, when Sachem on port tack rammed into her just abaft the mainmast, carrying away Mayflower's mainboom and tearing her mainsail badly. Both gave up at once.

The first to turn the shorter course was Quickstep, setting spinaker to starboard. Following her came Pappoose and Alice, Liris being a little astern of Alice. As Azalea came for the mark on starboard tack, the big Constellation bound for the other mark ran in between her and the markboat, shutting off the smaller boat completely. While in this position Constellation, instead of holding on and clearing the other as quickly as possible, tacked just beside the mark, covering it completely. As there was plenty of room and no other boats near there was no excuse for such interference with a boat in another class. Gorilla and Maraquita were close together at the mark. The small boats rounded the second mark as follows: Quickstep 12:41:00, Pappoose 12:42:10

Alice 12:47:00, Liris 12:47:05, Azalea 12:50:00, Gorilla 12:50:30, Maraquita 12:51:30, Helen 12:52:17, Awa 12:54:45.

The large boats were not timed at the outer mark, the flagship running home to time Quickstep.

The little fellows carried spinnakers to Nobska mark, Liris tearing hers and being compelled to set her balloon jibtopsail as a spinnaker. Alice was doing well off the wind, holding Pappoose, and Liris was gaining little or nothing on either, but was holding Maraquita and Gorilla. At Nobska Buoy all trimmed down for a broad reach home, balloon jibtopsails being set. There was still plenty of breeze, and the pace was very fast. Quickstep finished first in sight of the crowd of spectators on the bluff. Azalea being some distance astern. Pappoose came first of the forties, closely followed by Alice, but it was clear that the little Indian baby had taken the sweepstakes, but the result of the regular race for the Vineyard Haven cup was still in doubt. Liris was coming for the finish in grand style, swinging her silk club and balloon jibtopsail, but when within a quarter of a mile from the line her starboard spreader gave way, the topmast went at the cap, and both topmast and topsail yard fell across the gaff, breaking it in the middle. The wreck was a tolerably bad one, and with Maraquita and Gorilla close astern under all kites the chances were very poor, but the crew of the Liris were used to little mishaps, and were quickly at work. The broken spars and gear were hauled out of the water, and under the headsails and crippled mainsail the yacht was headed for the line, crossing it in time to beat Maraquita by 21s.

The large boats were not timed at the turn, but the order was Titania, Katrina, Grayling, Merlin, Sea Fox, Gracie. Spinakers were set to starboard to Nobska buoy, and then balloon jibtopsails for the reach in. Grayling finished first, with Sea Fox and Merlin close astern, Mayflower, Sachem and Constellation withdrawing. The full times were:

CLASSES 1, 2, 3 AND 4 (SAILING AS ONE CLASS).

	Start.	Finish.	Elapsed.	Corrected.
Grayling	10 24 41	2 59 21	4 34 40	4 24 16
Sea Fox	10 27 46	3 02 03	4 34 17	4 26 57

Awa	10 29 22	2 31 06	4 01 34	not ms.

Grayling beats Sea Fox 2m. 43s.; Quickstep beats Azalea 9m. 6s.; Titania beats Gracie 4m. 33s. and Katrina 6m. 25s.; Pappoose beats Alice 7m. 43s., actual time, and about 10m. corrected time, and Liris beats Maraquita 21s.

In the evening a reception was held by the Oak Bluffs Club, at which the cups were presented by Pres. Van Slyck. Com. Gerry was present with his staff in uniform. During the night Mayflower and Liris took a tug for New Bedford to repair in time for the rest of the racing. Clara came in at sunset from New Bedford with a new topmast.

Vineyard Haven to New Bedford, Third Run, Aug. 13.

The orders were for an early start on Tuesday morning, but a cloudy sky and strong S.W. breeze caused many of the smaller craft to start out to Quick's Holl rather than to keep with the squadron through Vineyard Sound, the course being from off West Chop around the red buoy off Cuttyhunk, and to a finish off Clark's Point. Of those which started nearly all the schooners had reefed mainsails, No. 2 jibs and foretopmasts housed, Grayling setting all lower sail with topmasts on end. Titania, Katrina and Gracie housed topmasts, reefed mainsails and set No. 2 jibs, Titania shifting to No. 1 after running out to try the wind. The small schooners showed similar sail, while Bertie, Gorilla, Maraquita and Lotowana had topmasts housed, two reefs in and small jibs.

The start was given at 10:10, the flagship being anchored off West Chop. Maraquita was first over, followed by Gorilla, with Quickstep, Harbinger and Bertie, some of the larger yachts crossing with the small ones and returning for the start of their division 20m. later.

The fleet worked across toward Tarpaulin Cove on port tack, Quickstep and the forties holding to the Vineyard Haven shore. Sea Fox soon tacked away from the fleet, also working the Vineyard Haven side, while Titania, Grayling, Katrina and most of the others held along by Naushon. Titania was not only leaving Katrina rapidly, but was holding the schooners, being ahead of Grayling. She finally stood across the Sound when near Cuttyhunk, Grayling after her, and Katrina now far to leeward. Sachem had been in some trouble, giving up, and she and Dauntless had taken a short cut for New Bedford.

When the leaders came together at 1:35 Grayling covered Sea Fox's bow, tacking at once, but failed to blanket her; Sea Fox at once ran from under her lee, and in 20 minutes was far ahead of her. Titania was doing the best sailing of the day, under whole lower sail and working topsail, and led Sea Fox at the buoy off Cuttyhunk, the turn being timed: Titania 2:28:38, Sea Fox 2:29:28, Grayling 2:31:35.

Sheets were started, and at 3 P. M. the schooners set spinakers, Grayling also setting clubtopsail. Sea Fox finished first, but did not save her time on Grayling. Official summary:

FIRST CLASS SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Dauntless	10 45 00	Did not finish.		
Constellation	10 40 51	4 06 41	5 25 50	5 24 33

SEVENTH CLASS SLOOPS.

Maroquita	10 10 43	4 55 58	6 45 15	6 45 15
Gorilla	10 11 51	4 55 49	6 23 58	6 23 37
Lotowana	10 15 00	Did not finish.		

Constellation beats Palmer 10m. 15s., Norna beats Fortuna 7m. 58s., Grayling beats Sea Fox 2m. 2s., Iroquois beats Marguerite 14m. 14s., Quickstep beats Harbinger 36m. 13s., Titania beats Katrina 12m. 42s., Hildegard wins. Bertie wins, Gorilla beats Maraquita 21m. 45s.

GREAT SOUTH BAY Y. C.—The first regatta of this new club was sailed off Conover's wharf, Islip, on Aug. 9. At 10 o'clock the boats got off on a triangular course of 6½ miles, three times around for sloops, twice for the cats. The catboats started first with a stiff southwest wind. The interest in the race centered in the sloops Berkeley, Patience and Belle Powell. The Belle won, Patience carried away topmast when half way over the course, Evelyn won in second and Markee in third class sloops. Madge, Senad and Damfyno won in second, third and fourth classes of cats. Silver trophies were presented as prizes to the winners.

YONKERS CORINTHIAN Y. C. CRUISE.—The fleet of the Yonkers Y. C., under Com. Prime, was at Red Bank last week on the annual cruise. On Aug. 7 a race was sailed, open to yachts of the North Shrewsbury and Yonkers C. Y. C., but it ended in a drift. Next day it was resailed, Nedaga winning in second class and Irene in third. The cruise of the Corinthians was a most enjoyable one, and wound up with a hop at their fine club house on Monday evening.

CAPE CATS AND CUTTERS.

Editor Forest and Stream:

I sincerely trust the episode of the Harbinger's victory over the Saracen and Kathleen at Marblehead, will not be allowed to pass without further comment, and, if possible, explanation. As it stands at present it is certainly startling. Here for years back we have been learning the lesson of depth and low ballast and the cutter rig. We have the outcome of it all in Kathleen and Saracen, and against these we have a centerboard boat, shallow, comparatively, of (presumably) small displacement, enormous beam, rock ballast, and a rig very like the old-fashioned American sloop, and in what every yachtsman regards as the crowning test of a yacht, turning to windward in a good breeze, the centerboard sloop shows herself as good as the cutters. Lay aside the discussion of the question of whether or not the Harbinger would have won but for her taking advantage of smoother water. The startling thing is that she should make any showing beside the other two boats at all. Under such conditions of wind and water the two keel cracks should, if modern theories are correct, have soaked out to windward 3ft. to her 2.

But if "Fair Play" is correct, on the long beat of ten miles before Tinker's Island was reached she fully held her own with them, and the timings show that she went down the wind as rapidly as they did, I don't see much force in the argument that she had much advantage by reason of her light top hamper and small sail plan. A cutter with her topmast housed is surely light enough aloft. I am a believer in keel craft of moderate dimensions with outside ballast and cutter rig. But facts are facts, and if it is the fact that a boat can be built practically safe in any weather a small yacht need expect to meet, equally comfortable for all purposes except being out at sea at night, much easier to handle and as good a performer in good racing weather as a modern fashionable 30ft. "keel mine," while costing about a fraction as much to build and equip, why, good many of us would like to know it. So let us have the facts. Did the Harbinger really show as good ability to windward as her two rivals, and if so how do the experts account for it? Was it her board or her beam, or her small displacement, or her rig, or all combined, or what?

INQUIRER.

CORINTHIAN Y. C. OF MARBLEHEAD.

A FINE series of races has been arranged by the Corinthian Y. C. of Marblehead, to cover four days, Aug. 24, 26, 27 and 28, and open to the 40, 30 and 27ft. classes. The prizes include the Eastern Y. C. or Weld cup, valued at $250, now held by the Chiquita, to be sailed for 5 times, the winner of the greatest number of races taking the cup. In the 30ft. class are two cups, one of $125, offered by a member of the Corinthian Y. C., for cutters and sloops over 27ft. and not over 30ft., and one of $102, given by the owner of Saracen, for the keel yacht making the best average in the three days' racing of the 30ft. class, Saracen not included. A cup valued at $100, given by a member of the club, is offered for sloops and cutters over 21 and not over 27ft. l.w.l.

There will be four days of racing in the 40ft. class, and three days in each of the other classes. In the 30ft. and 27ft. classes the yacht winning two races shall own the cup. In case of a tie in either of theses classes, there will be a sail-off on Wednesday, Aug. 28.

The Eastern Y. C. cup for 40-footers will be sailed for under the sailing rules of the Eastern Y. C., and the cups for the 30ft. and 27ft. classes will be sailed for under the sailing rules of the Corinthian Y. C. In the 40ft. and 30ft. classes the races will be open to yachts of any club, but in the 27ft. class competition will be restricted to yachts of the Corinthian Y. C. Yachts in the 40ft. class may carry one man for each four feet of racing measurement or fractional part. Yachts in the 30ft. and 27ft. classes may carry six men, one of whom may be a paid man, but they must be steered by an amateur. In the 27ft. class the helmsman must be a member of the Corinthian Y. C.

No race in any class will be considered made unless finished by one of the yachts in that class before sunset.

In case the judges' steamer should not be at the line in time for the return of any class a judge will be stationed in a boat flying the Corinthian Y. C. flag, who will take the time until the steamer has resumed her position.

Contestants are requested to read this circular carefully, as one or two minor points have been altered since the issue of the previous circular.

Entries must be made in all classes. All entries must be directed to the chairman of the regatta committee, Corinthian Y. C. House, Marblehead Neck, Mass., and must be received by 2 o'clock P. M. of Friday, Aug. 23. Entries should state the racing measurement, where known.

The regatta committee includes Messrs. George A. Stewart, Chairman, Frank W. Chandler, William P. Fowle, John B. Paine Harry P. Benson.

QUAKER CITY Y. C. ANNUAL CRUISE.

THE following orders have been issued for the cruise of the Quaker City Y. C. Com. Middleton has appointed Mr. Samuel A. Wood fleet captain:

Flagship Helen, Quaker City Y. C., harbor of Philadelphia, Aug. 1, 1889. General Orders No. 7:

1. The vessels of the fleet will rendezvous in the cove above Turkey Point, Chesapeake Bay, for the annual squadron cruise, on Monday, Aug. 19.

2. Captains will report aboard the flagship at 8 o'clock A. M., at which time the movements for the earlier days of the cruise will be decided upon. At 9 o'clock, on signal from the flagship, the fleet will proceed to Shady Beach, the country seat of Capt. Joseph L. McDaniel, of the yacht Mascotte, who has extended an invitation to captains and their guests to spend the day with him. The cruise will extend to Baltimore and Annapolis. Special features of the cruise will be a day's fishing at Betterton, a clam bake at Tolchester, rowing and sailing races by the boats belonging to the vessels of the squadron, and swimming races for members of the crews. Races will be given at Baltimore, Annapolis, Bay Ridge or Tolchester—rules and regulations governing the same will be issued to captains by the regatta committee. The Chesapeake Bay and Baltimore yacht clubs have been invited to participate in these races.

3. There will be two divisions of the fleet during the cruise, the first division comprising all schooners, first and second class sloops and steam yachts. The second division comprising third and fourth class open yachts and steam launches.

4. The daily runs will be trials of speed for all classes, and the first yacht arriving at the destined post will take its own time and that of the others, and report the result to the commodore. In all races the second division will start fifteen minutes in advance of the first division.

5. The signals for starting will be as follows: First gun from flagship to prepare to sail; ten minutes later, second gun from flagship, for second division to start; fifteen minutes later, third gun from flagship for first division to start.

6. The routine and rules contained in the Club Manual will be observed during the cruise.

7. Yachts, when in squadron, are earnestly requested to take their ship's time in striking flags from that of the flagship; and in no case to anticipate it.

8. Captains intending to join the squadron are requested to notify the fleet captain at the club house, No. 911 Walnut street, at as early a date as possible.

By order of the Commodore.

SAMUEL A. WOOD, Fleet Captain.

A PLEA FOR THE NEW YORK Y. C.

A NEW defender of the New York Y. C. has come forward in the person of a member of the club, Mr. Arthur Ryerson, now in Europe, who writes as follows to the London *Times:*

SIR—So much criticism appears in the public prints concerning the New York Y. C. and the new deed of gift of the America's Cup that, as a member of that club and an American yacht owner, I ask room for a line in defense.

It would be as well, I think, for those who stigmatize the present deed of gift as an attempt on the part of the New York Y. C. to hold the cup under conditions narrower than those originally attached to it to be reminded for how it was won.

The schooner America simply came over and raced against the whole fleet of that day, and whatever time rules were then in vogue in English waters.

The first return races in America, sailed, I think, against Mr. Ashbury's challenge, were of the same character, and it was because of English protest and at English request that we gave up this style of contest and bound ourselves to match the challenger with our best ship, which we have done since.

When we conceded this, we at one step gave up more than all other conditions, precedent or subsequent, combined. It is one thing to cross the Atlantic to raise a match, and quite another to sail 3,000 miles to take part in a regatta and chance being beaten, not only by one superior boat, but by any one of perhaps twenty inferior ones through a fluke. If the New York Y. C. should announce to-morrow that it held the Cup under the conditions in accordance with which it was originally won, it would put an end to all contests for it. That effectually disposes of any charge that we have imposed restrictive conditions.

A word as to the actual conditions of the present deed of gift. I take it the condition most objected to is that providing that if the challenger be a small boat the challenged may still match her with their largest and best. The object of this condition is to limit contests to the best on both sides. If the object of these contests is, as I presume it is, to settle yachting supremacy, what object or gain is there in England sending over a 70-footer, and beating our 70-footer, while at the same time we might have a boat equal to beating, not only the English 70-footer, but any other English yacht? I fancy that the public on both sides are interested in the question of which country has the best yacht, not the best 70-footer. The question is a broader one than either naval architects or experts would seem to regard it. The condition is a stimulant for either side to send their best ship, for if they do not they put themselves under the handicap of being opposed by a better one.

I have noticed this point because it seems to have been the rock upon which the recent challenge has split. If the object of the contest is to settle which country has the best yacht, I think any one must admit the condition to be a wise, nay, even a necessary one.

Again, at English request the race over the New York inside course was given up, and all the races set to be sailed outside, where local knowledge counts for nothing. I do not think any other conditions are worthy of comment. Several times, however, we have changed our measurements, and each time to favor the English yacht—that is, by taxing beam.

Now, in view of all this, it is a trifle hard to be accused of unsportsmanlike conduct, and it is a more serious matter than looks, because, despite of all the demagogues may do or say there is a pretty solid appreciation among gentlemen in America of English principles and English honor an appreciation which I, for one, should hate to see disturbed by a mere misunderstanding. I hope that some one will be found to follow in the footsteps of those thorough sportsmen, Sir Richard Sutton, Lieut. Henn and Mr. Bell, and that the cup may be seen changing hands every year or two, and that with each change we may see still greater triumphs in both ships and sailing. I ask you to insert this rather long-drawn-out letter in the name of fair play, and remain very obediently yours,

ARTHUR RYERSON.

BROWN'S HOTEL, London.

We would call Mr. Ryerson's attention to the fact that in the original race the owners of America declined to sail under the "time rule then in vogue," and the race was sailed with no time allowance from America to the small cutters. In speaking of the first race, in 1870, he also omits to say that the English protest against meeting one yacht by the entire fleet was most emphatically backed up by the then commodore of the New York Y. C., Mr. Henry G. Stebbins; and the whole proceeding was condemned in the following year by Mr. Geo. L. Schuyler.

By Mr. Ryerson's own showing there can be no fairness in sailing a fleet of home vessels against one foreign challenger, and so far from the action of the New York Y. C. in giving up this point in 1871 being in any way a generous concession, no one can read the very strong letter of Mr. Schuyler, in April, 1871, and the discussions that took place then, without coming to the conclusion that in place of any voluntary act of a generous nature the club was driven with difficulty to do a simple act of justice.

Mr. Ryerson is correct in assuming that the 90ft. limit and no time allowance are objected to by the opponents of the new deed, but he passes by entirely the chief grounds of objection, that the designer of a challenging yacht is so impeded and tied down that he cannot hope for success, and at the same time he is obliged to show his hand long in advance to his adversary, getting nothing in return. This is one of the worst features of the new deed, far more severe on the challenger than the 90ft. clause, bad as that is. In taking the popular ground that biggest and best are synonymous in yacht racing, Mr. Ryerson like most other defenders of this view overlooks the fact that the 90ft. class is but visionary, there never has been one and there is now no likelihood of its establishment, and in the meanwhile the Cup must be laid on the shelf.

He evidently heard the statement lately made by Mr. Geo. L. Schuyler, or he would not have fallen into the error of saying that the inside course was abandoned at the request of English yachtsmen. Mr. Schuyler has very frankly given the true reason, that the course was too shoal for Volunteer and Mayflower with 22ft. of draft, and not for Thistle with 18ft. In speaking of the changes of measurement, Mr. Ryerson does not go into details, and has unfortunately overlooked the change made after the Cambria races, and in preparation for Livonia. On the whole we fail to see that he has proved anything in behalf of the club, or advanced any statements that are not misleading or easily refuted.

JEFFRIES Y. C.—The annual open regatta of the Jeffries Y. C. was sailed at Boston on Aug. 10 in a strong S.W. breeze, the courses being, for the special, first class keels and centerboards, from judges' boat, leaving black buoy No. 5 on starboard, red buoy No. 10 on port, Governor's Rock and Glade's buoy on starboard, Apple Island buoy on port, Governor's Flats buoys No. 1 and 2 on starboard, Sculpin Ledge buoy on starboard, Thompson's Island red buoy No. 2 on starboard, Castle Rocks No. 7 on port, Glade's buoy No. 7 on starboard, No. 10 and No. 5 on port to starting line, 9 miles. The jib and mainsails, second class centerboards and keels, sailed from judges' boat leaving buoy No. 5 on starboard, buoy No. 10 on port, Governor's Rock and Glade's buoy on starboard, Apple Island buoys on port, Governor's Flats buoys Nos. 1 and 2 on starboard, Thompson's Island red buoy No. 2 on starboard, Castle Rocks No. 7 on port, Glade's buoy No. 7 on starboard, No. 10 and No. 5 on port to starting line, 7½ miles. The times were:

CAPE ANN Y.C.—The yacht race of the Cape Ann Y. C. was one of the chief attractions of the annual "River Day" at Annisquam. The day is observed as a general holiday, being given up to water sports of all kinds. The race was sailed in a strong S.W. wind, the summary being:

FIRST CLASS.

	Length.	Elapsed.	Corrected
Hazard, Pierce & Moody	22.08	1 53 54	1 33 01
Climax, Tucker	18.06	2 00 00	1 35 06
Maud S., Irwin	10.09	2 00 37	1 38 15
Lark, Parkhurst	18.02	2 10 27	1 45 50
Silver Cloud, McLaughlin	20.04	2 11 35	1 48 50

Black Cloud, Evelyn, Old Honesty, withdrawn.

SECOND CLASS.

Madcap, Wheeler	11.06	2 02 42	1 38 08
Alpine, Stetson	16.02	2 15 56	1 48 59
Luna, Webster	16.10	2 17 12	1 51 01
Uncas, Webster	16.00	2 19 18	1 52 07
Sassacuss, Griffin	16.09	2 20 50	1 54 33

Sapphire and Keno, time not taken.

THIRD CLASS.

Volna, Wheeler	14.02	1 37 54	1.18 14
Umbria, Hildreth	14.06	1 51 47	1 32 12
Minot, Boardman	13.05	2 01.59	1 41 41

P. T. Douglass, time not taken.

Judges: James S. Steele, Daniel B. Stanwood and Henry Norwood. Prizes in first class, $10, $8 and $5; second class, $8, $5 and $3; in third class, $3, $2 and $1.

CORINTHIAN Y. C.—The second championship regatta of the Corinthian Y. C. was sailed off Marblehead on Aug. 10 in a strong S. W. wind, followed by a rain squall and calm. Mignon beat Saracen by nearly 5m., passing her near the end of the race. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Mignon, W. P. Fowle	34.09	2 05 41	2 02 20
Saracen, H. Batson	38.03	2 08 11	2 07 08

SECOND CLASS.

Moondyne, A. J. Shaw	29.00	2 22 22	2 14 47
Agnes, W. E. Cummings	31.02	2 27 52	2 21 08
Ione, J. S. Payen	36.08	2 23 11	2 21 47
Trudette, L. M. Haskins	30.11	Did not finish.	

THIRD CLASS.

Swordfish, J. B. Payne	31.06	2 28 28	2 22 39
Otter, P. Chase	Not measured.	No time taken.	

FOURTH CLASS.

Myrtle, R. C. Poor	20.00	1 37 20	1 26 06
Wanda, R. C. Robbins	21.07	1 39 18	1 38 23
Nerena, R. Saltonstall	21.08	No time taken.	

FIFTH CLASS.

Mosca, G. H. H. Foster	25.03	1 34 50	1 27 13
Kathleen, R. S. Peabody	25.07	1 34 35	1 27 16
Wraith, H. P. Benson	23.03	1 37 35	1 28 32
Carmita, F. E. Peabody	24.03	1 38 22	1 30 24

SIXTH CLASS.

Dauphin, R. C. Robbins	18.00	1 57 08	1 43 13
Nonpareil, W. O. Taylor	18.08	1 57 10	1 44 04

Nerena grounded, and injured her keel so, the board jammed.

MONATIQUOT Y. C. SECOND CHAMPIONSHIP, AUG. 8.—The second championship regatta of the Monatiquot Y. C. was sailed on Aug. 8, off Weymouth, the wind being light from E. for a part of the race, freshening later on. Moondyne was protested by Erin for sculling with the rudder during the calm, but the protest has not been decided. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Moondyne, A. J. Shaw	24.10	2 23 29	1 56 28
Erin, John Cavanagh	26.11	2 31 39	2 04 25

SECOND CLASS.

Posy, R. G. Hunt	22 03	2 29 40	1 57 22
Secret, E. F. Linton	22.06	2 34 37	2 03 06
Nereid, C. F. Colby	20.09	2 40 53	2 07 17
Madge, W. H. Howes	23.08	2 44 32	2 14 16

THIRD CLASS.

Atala, E. F. Linton	19.10	5 08 46	1 37 17
Rocket, H. M. Faxon	16.02	2 16 02	1 38 35
Diadem, L. Hayward	18.02	2 10 19	1 41 24
Hester, P. R. Blackmar	19.11	Withdrawn.	

The judges were: Henry Gardner, Dana Smith and A. J. Bates.

RAJAH AND MONA.—A very interesting race was sailed, by arrangement, on Aug. 3 between the Mona and Rajah. The course was from the Black Can Buoy off the easterly end of the Hen and Chickens Rock (over an imaginary line, of which the other extremity was the judge's boat) to and around Matinnicock Buoy; then to and around the Red Buoy off the westerly end of Captain's Island, then to and around Matinnicock Buoy and to finish line. Mona allowed Rajah 3m. 20s., and the times were as follows:

	Start.	Finish.	Elapsed.	Corrected.
Mona	10 57 00	2 19 00	3 22 00	3 25 21
Rajah	11 02 11	2 23 40	3 21 29	3 21 29

Wind, S. W., strong and steady; a reach, run, beat, and reach. Mona gained 1m. on each reach. Rajah gained about 2½m. on run with spinakers. On the wind the boats appeared to be equal. The judge was Mr. Otto Sarony of regatta committee of Larchmont Club.

RHODE ISLAND Y. C. OPEN REGATTA.—The third annual open regatta of the Rhode Island Y. C. will be sailed off the club house, Pawtuxet Neck, on Aug. 27. The classes will be sloops, 33ft. and under 48ft. l.w.l.; 23ft. and under 33ft.; cats, 24ft. and over; 20ft. and under 24ft.; 17ft. and under 20ft.; under 17ft. No shifting ballast will be allowed. A cup of the value of $50, given by Com. F. P. Sands, will be awarded to the yacht in Class 1 winning under the waterline and spar measurement proposed by E. Burgess. Entries will be received of yachts enrolled in any yacht club. They may be mailed to 12 Aborn street, Providence, R. I., or left with the janitor at the club house. Entries will close Aug. 26, at 12 o'clock noon. One member of each crew will be placed upon some other boat to see that the rules are observed. It will be the duty of such person to report any infraction of the rules to the judges immediately after the finish of the race.

CAPE COD Y. C.—The second of the series of regattas held by the Cape Cod Y. C. was sailed off Orleans on Aug. 10, the times being:

FIRST CLASS.

	Elapsed.
No Name, William Wareham	1 24 05
Kickapoo, D. B. Gould	1 26 01
Bessie, Edward Penniman	Did not finish.

SECOND CLASS.

Seola, E. E. Nickerson	1 25 06
Pemmegiwassett, W. M. Crosby	1 39 09
Transit, Samuel Small	1 41 02
Carrie L., George Clark	Did not finish.

THIRD CLASS.

Mischief, E. L. Snow	1 06 34
Imp, J. P. Knowles	1 30 19
Prince, P. Doane	1 36 27

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS, Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON, Peterborough, Can.

Vice-Com.	Rear-Com.	Purser.
Central Div.—W. R. Huntington.	E. W. Masten.	T. H. Stryker, Rome, N. Y.
Atlantic Div.—W. P. Stephens.	L. B. Palmer.	F. L. Dunnell, 136 Jeroleomon St., Brooklyn.
N'thern Div.—Robert Tyson.	S. S. Robinson.	Colin Fraser, Toronto.
Eastern Div.—H. E. Rice, M. D.	Maxton Holmes.	H. D Marsh, Springfield, Mass.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, Chicago, Ill.

FIXTURES.

AUGUST.

—. Pequot Meet, Thimble Islands.
7-23. A. C. A. Meet, Stave Island, St. Lawrence River.

SEPTEMBER.

2. Arlington, Annual, Arlington, N. J.
7. Puritan, Record Races, No. 5.
14. Ianthe, Annual, Newark.
7. Brooklyn, Annual, postponed.

BROOKLYN C. C.—A race was sailed on Saturday, Aug. 3, for the Brooklyn C. C. challenge cup. The course was triangular, although a strong ebb tide made it practically to leeward and return, insuring a good race. Com. Wilkin's Queen Bess had the best of the start, but Niente, Mr. F. L. Dunnell, overhauled her on the run out and turned the first mark ahead. Here the windward work began and it looked like a victory for Queen Bess, as she immediately took a windward position, but only for a short time, for Niente began to outfoot her and gained a lead on the second tack, which she held to the finish. Phœnix, Mr. W. McK. Miller, the only other starter, did not finish.

A. C. A. MEMBERSHIP.—Atlantic Division: C. W. Burroughs, New Jersey. Eastern Division: W. F. Stevens, Portland, Me.

Answers to Correspondents.

S. N. R., Pawtucket.—We will make inquiries for you.

INSECT POWDER, Ridge Hill, Mass.—See article on fleas and lice in kennel department.

H. B., England.—For the bullfrogs apply to Eugene G. Blackford, Fulton Market, New York.

G. W. M., Chattanooga, Tenn.—For the ornithologist's tools apply to John Wallace, No. 16 North William street, New York.

S. Y. M., Toledo, O.—The Illinois prairie chicken season will open Sept. 1 and close Nov. 1; the quail season will open Oct. 1 and run to Dec. 1.

E. A. B., New York.—For membership in New Jersey societies you may apply to the West Jersey Game Protective Society, Chas. H. Barnard, Secretary, Gloucester City, N. J., or to W. L. Force, Secretary New Jersey Game and Fish Protective Society, Plainfield, N. J. Certificates from either apply throughout the State.

SPORT, Nyack.—You can kill ruffed grouse in Maine after Sept. 1, but large game is protected to Oct. 1, at which date the fishing for trout will close.

READER, Ansonia, Conn.—For trout fry apply to your Fish Commissioners, Wm. M. Hudson, Hartford; James A. Bill, Lyme; Robert B. Chalkin, Saybrook.

ORNITHOLOGIST, Mt. Vernon, N. Y.—Please tell me how I can obtain a naturalist's license. Ans. Apply to Mr. J. E. Allen, American Museum of Natural History, Central Park, New York.

D. AND OTHERS, St. Clair.—Where can good black bass fly-fishing be had in September, within a day's travel of Philadelphia? Ans. Try the Susquehanna River in the vicinity of Towanda, or of Renovo.

RIFLE.—The standard American target counts 2 for 4×6ft. space outside of first circle, 3 for 46in. diameter circle, 4 for 26in. circle, 5 for 19 68-100in. circle, 6 for 14 80-100in. circle, 7 for 11in. circle, 8 for 8in. circle, 9 for 5 54-100in. circle, and 10 for 3 36-100in. circle.

CESTRIAN, Bowdon, England.—1. You will find trout fishing in California; and the tackle stores there are so well supplied with suitable goods that you may leave the purchasing of tackle until your arrival. 2. The small game includes quail, doves and hares; and there is capital wildfowl shooting.

X. Y. Z.—1. Will a telescope sight be of any use to old eyes in shooting squirrels and other small game in the woods? 2. Are they of any practical use to the hunter in a general way? 3. Is the Rural Manufacturing Company of Philadelphia reliable? Ans. 1. Yes. 2. They are of good service under certain conditions of rest shooting. 3. We believe it to be.

T. C. S., Detroit.—All the revolvers will "jump," even the best grades; but you can to a great degree remedy this by preparing your own cartridges, using lighter loads. The two makes you name are of surprising accuracy when held right, as demonstrated in the shooting galleries, but they are there shot with specially prepared loads.

A. B., Lancaster county, Pa.—1. The name "Bob White" is applied to the bird commonly called "quail." "Wells's" contention is that the bird is not a true quail. In this he is right, but it is too late in the day now to think of correcting the erroneous nomenclature. 2. There is no well-defined line between amateur and professional trap shots; the distinctions now made are not based on any hard-and-fast rule, but certain individuals are recognized professionals and are so treated.

C. G., Rye, N. Y.—Can you inform me how the shooting of small birds can be stopped? Every Sunday it is a continual bang all day. I am aware of the law, but our game keeper lives far from this place, and, if I should complain to him, I have my doubts of his taking any action in the matter. I tried to get the justice of the peace of my village interested in the protection of the small birds, but he says if I will make a complaint he will take action. Now, how is a stranger going to make a complaint against one whom he has never seen before? Ans. The proper course is to lay the matter before your district protector, Dr. Willett Kidd, Newburgh, who will undoubtedly give it his attention.

AZTEC.—1. Of what brand is the dead shot powder mentioned in your gun tests? 2. I find the abridged A. O. U. Check List does not help to identify birds. What work would you recommend for that purpose? Does the unabridged Check List of the A. O. U. or of Coues give full descriptions and characters of the birds? If I must have a larger work, will Ridgway's "Manual" or Coues's "Key" be most likely to meet the requirements of Mexico? 3. Is Trumbull's "Names and Portraits" confined to the United States? 4. What is the scientific name of the turtle dove? Ans. 1. Made by the American Powder Mills, Boston, Mass. 2. Ridgway's "Manual" will answer your purpose for Mexican birds. 3. Trumbull's work professes to apply to the eastern half of the United States. 4. The turtle dove, also called the mourning dove and Carolina dove, is the *Zenaidura macroura*.

QUERIES AND REQUESTS.

R. R. S., Philapelphia, writes: I would like to be one of a party of two or three to fish and hunt for large game in Colorado or Idaho about Sept. 1, for recreation and pleasure.

E. L. R. asks: Can any of your numerous readers inform me where a party of three can go in Virginia and find sport for a month with turkey, deer, bear, etc? We are willing to go any distance to find plenty of game and few hunters.

G. D. L. writes: Have any of the readers of the FOREST AND STREAM used hollow pointed bullets of .38-cal. rifle cartridge? I use a .38-55-255, and it gives fair results with solid bullet; but would like some one who has experience with the hollow point of that caliber to give his opinion of the matter.

X. Y. Z. writes: I expect to start about Sept. 1 for a hunting trip in British Columbia. Would like a companion. From the aquaintance I have already formed both of persons and places, I confidently expect a pleasant and successful trip. I don't care so much whether my companion has much experience in hunting, camping, etc. (although that is desirable, of course), as that he be companionable and able to put up with some of the inconveniences without grumbling.

A party of two sportsmen who are going to Montana for big game would like the pleasure of spending a day or two with some readers of FOREST AND STREAM having good dogs, on the line of Northern Pacific R. R. in Dakota, after chickens, ducks and geese. Being in moderate circumstances, in exchange, should any reader see fit to entertain them, they will extend the same goodfellowship to the party for a grouse and quail hunt in their native State. References given if desired. Address SPORTSMAN, Box 442, Towanda, Pa.

SPORTSMEN SMOKERS

SHOULD ALL SMOKE OUR CELEBRATED

Hand-Made Havana Cigars.

MADE IN TWO STYLES AND SIZES.

LONDRES PERFECTO, 5in. long @ $7.00 per 100
CONCHAS ESPECIALS, 4¼in. @ 6.00 "

The favorite cigar of Rod and Gun Clubs generally. These cigars are made of the choicest tobaccos grown, and selected with the greatest care. They cannot fail to suit the taste of all lovers of the fragrant weed. Each cigar has the brand impressed on it, and every box has a label, fac-simile of the title of the popular journal, and our firm's signature, without which none are genuine. We are the only authorized manufacturers of the above brand, and to insure the smoker of the genuine we would ask you to send us your orders direct. We will deliver, free of express charges, either size, on receipt of price.

(KINNEY TOBACCO CO. Successors). Also manufacturers of the Old Reliable
SWEET CAPORAL.

DODGE'S PATENT
Collapsing, Folding, Landing and Minnow Net Frame.

No. 1 represents the frame unfolded and expanded, ready for use. Can be unfolded and expanded with the net on the ring (in 30 seconds) by the same motion that is used to open an umbrella. The ring is 12in. in diameter, made of steel, broad and strong where it joins the staff, and narrow and light at the outer side. The other working parts are made of brass, nickel plated. Nos. 2 and 3 represent the frame collapsed and folded, staff unjointed ready to pack. Can be carried in tackle box, trout basket, grip sack or pocket.

PRICE COMPLETE, $4.00.
J. W. DODGE, 278 Division St., Detroit, Mich

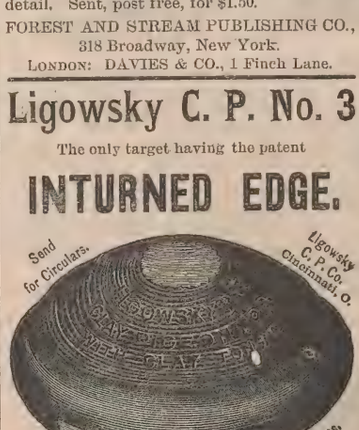
No Chemicals.

W. BAKER & CO.'S
Breakfast Cocoa
Is Absolutely Pure, and it Is Soluble.

To increase the solubility of the powdered cocoa, various expedients are employed, most of them being based upon the action of some alkali, potash, soda or even ammonia. Cocoa which has been prepared by one of these chemical processes, can usually be recognized at once by the distinct alkaline reaction of the infusion in water.

W. Baker & Co.'s Breakfast Cocoa

is manufactured from the first stage to the last by perfect mechanical processes, **no chemical being used in its preparation.** By one of the most ingenious of these mechanical processes the greatest degree of fineness is secured without the sacrifice of the attractive and beautiful red color which is characteristic of an absolutely pure and natural cocoa.



W. Baker & Co., Dorchester, Mass.

LOG CABINS
AND
HOW TO BUILD THEM.
By WILLIAM S. WICKS.

This is a complete exposition of the art and method of building log cabins from the simplest dog kennel to highly artistic dwellings. Everyone going into the woods and designing to construct his shelter with the materials at hand, should procure "Log Cabins," for in its pages he will find a variety of designs, simple and ornate, adapted to temporary shelter or to permanent homes, with full and clear instruction and illustration in every matter of detail. Sent, post free, for $1.50.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

The only target having the patent
INTURNED EDGE.

2,000 shots out of each 1,000 targets on account of non-breakage in shipping, trapping and falling upon ground. The only target made with the INTURNED EDGE, producing the surest breaker when hit, and surest non-breaker when not hit. Our traps are sold for the sole purpose of shooting our targets.

Hotels and Routes for Sportsmen.

GRAND TRUNK RAILWAY.

When planning your summer piscatorial tour remember that this company controls over 4,100 miles of railway, equipped in the most approved modern style, and passing through a magnificent country, noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

PORTLAND, ME.—For salt water fish.
RANGELEY LAKES (via Bryant's Pond or Bethel, Me.)—For brook trout, pickerel, yellow perch, rock bass.
THE WHITE MOUNTAINS (via Gorham, N. H.)—For pickerel, trout, bass, cusk.
THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).
LAKE ST. JOHN DISTRICT.—For Ouananiche (reached via Quebec).
THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For mascalonge, pike, bass, whitefish, pickerel, perch.
THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalonge, pike.
MUSKOKA LAKES (the best place on the continent for fishing, shooting and camping, reached from various points on Northern and Northwestern Division).—For brook and salmon trout, black bass, mascalonge pickerel.
PARRY SOUND AND GEORGIAN BAY.—For pickerel, mascalonge, black bass.
LAKES ONTARIO, ERIE, HURON AND MICHIGAN, (via stations at all principal ports).—For the varieties of fish for which they are noted.
LAKE SUPERIOR (via Collingwood, Wiarton, Sarnia, in connection with steamship lines).—For lake trout, etc.

The charges for hotels, guides, and camping at many of the fishing waters named above, are extremely low. Full particulars of same, with many valuable hints as to baits, best months and general facilities are published in a pamphlet entitled **"Fishing and Hunting Resorts of the Grand Trunk Railway,"** which will be furnished gratuitously on application to any of the company's principal agents, or of the General Passenger Agent, Montreal, P. Q.

WM. EDGAR, Gen. Pass. Agent. JOSEPH HICKSON, Gen. Manager.

THE
Northern Pacific RAILROAD
Reaches the Best Fishing Waters on the Continent.

DETROIT AND BATTLE LAKES, MINN., afford excellent fishing for black bass, mascalonge, pike and other varieties.

First-class hotel accommodations, boat equipment and services of oarsmen at reasonable rates.

The waters of the Yellowstone, Gallatin, Madison and Jefferson Rivers, in Montana, all immediately accessible from Livingston, Gallatin and Townsend, are a revelation to fishermen. These streams and their numerous tributaries abound in GRAYLING and the various species of speckled trout known as "ROCKY MOUNTAIN," "RAINBOW" and "COLORADO," many of which reach a size **unknown in other American waters.** LAKES PEND D'OREILLE and COEUR D'ALENE, in Idaho, are also in immediate proximity to the line and with tributary streams yield the finest species of mountain trout and other varieties.

The SPOKANE RIVER, in Washington Territory, accessible from Spokane Falls on the main line, is one of the finest trout streams in the Northwest.

THE LAKESIDE HOUSE at Lake Pend d'Oreille, for sportsmen, will be opened by this company in the spring of '89. Terms reasonable. Attractions and facilities for sport unsurpassed.

The streams and lakes now comparatively easy of access, by the Northern Pacific, assure the veteran sportsman a new experience and a quality of sport not now attainable in eastern waters.

Special Rates for Sportsmen will be Made to all Points on the Line.

A handsomely illustrated book entitled "The Wonder land" will be sent free to any address on application to the undersigned and a mention of FOREST AND STREAM. The preliminary chapters contributed by John Hyde, F. R. S., are descriptive of the Fishing Resorts along the line of the N. P. R. R., the Yellowstone Park, Lake Cœur d'Alene and Puget Sound Resorts. The chapters "Through Wonderland," etc., written by Lieutenant Frederick Schwatka, the celebrated explorer and writer, are descriptive of the "INLAND PASSAGE," THE NORTHWEST PACIFIC COAST AND THE TOURISTS' ROUTE TO ALASKA. Other publications of interest will also be forwarded.

ROUND MOUNTAIN LAKE.
A New Trout Fishing and Hunting Resort.

KENNEDY SMITH, so long and favorably known to sportsmen and summer tourists who have visited the Dead River Region, has within the past year built the best set of camps in Maine. All are neatly furnished and will be kept in a first-class manner; plenty of very nice boats. Trout are plenty and rise well to a fly. Large and small game very plenty. This camp has no equal for lake and mountain scenery in Northern Maine. High up among the mountains over 2,000ft. above sea level. Pure air; no hay fever. For any other information address
KENNEDY SMITH, Eustis, Me.

Bromfield House, Boston.

Canadian Pacific Railway.

NEW TERRITORY
FOR THE
SPORTSMAN AND ANGLER.

Do you want the very cream of Canadian big game hunting, salmon, speckled trout, bass fishing, etc., etc., or to spend a summer holiday with canoe and camera?

THEN READ CAREFULLY THE FOLLOWING LIST.

The magnificent hunting grounds and trout streams of the ROCKY MOUNTAINS for bear, sheep, goat, panther, elk, deer, etc., and mountain trout; the grand prairies and woodlands of the Canadian Northwest for moose, elk, antelope, deer, bear, swan, geese, grouse, duck and myriads of other waterfowl; the far-famed Nepigon and kindred waters on the north shore of Lake Superior for superb speckled trout and whitefish; the Lake Superior and Sault Ste Marie regions for trout, lunge, black bass, bear, deer, grouse and duck; Lake NIPISSING and TROUT LAKE for deer, grouse, duck, and all varieties of game fish; the OTTAWA and MATTAWA rivers and their tributaries for explorations by canoe, bear, deer, grouse, etc., and speckled trout and black bass fishing equal to the best (moose and caribou are protected until 1895); the NORTH SHORE of the St. Lawrence River and LAKE ST. JOHN, and the region north of the City of QUEBEC for caribou, grouse, salmon, speckled trout and winnanish; The RIDEAU LAKES and other famous waters in Ontario for canoeing, camping and black bass fishing, and the forests surrounding them for deer and grouse; LAKE MEGANTIC and MOOSEHEAD LAKE for moose, caribou, deer and grouse, and trout and landlocked salmon in adjacent lakes and their tributaries; the world-renowned rivers and forests of NEW BRUNSWICK and NOVA SCOTIA for noble salmon, and moose and caribou. All of these are traversed by the Great Canadian Pacific Railway system, and they are the very finest portions of Canada for the sportsman and angler. Most of the points mentioned are new territory, only lately rendered accessible, where such a thing as over-hunting or too close fishing will be unknown for many years.

ANSWERS TO CORRESPONDENTS.

THE TEAM ABROAD.

IN their visit to Great Britain the Massachusetts men achieved success because they deserved it. They won their way to the front by hard work, and had defeat met them on British soil no one would have been more surprised than the shooting members of this squad. They had the best arms and the best method, and these advantages enabled them to vanquish as good or better men shooting upon home ranges.

The managing spirit of the trip had laid out a neat plan of campaign. In a quiet unassuming way he had drawn on matches with several representative shooting corps among the English volunteers. With characteristic British complacency, the home teams were quite confident of success, and the way in which the Yankee visitors bowled over one after another of the strong teams pitted against them must have very much surprised the discomfited ones.

The scores were not very extraordinary, no great revolution in shooting matters is to follow the trip, but what was done and how it was done ought to set some of those who dominate in shooting circles abroad thinking and acting. It was the adjustable rear sight which helped more than any other one thing, was the confession of the American victors. Will the rules of Wimbledon, at once so fixed and so complicated, be amended so as to get the best shooting irons into the hands of the men instead of as now, being framed with the seeming one object of seeing how well the men can shoot under the most repressive regulations?

It is nonsense to say that the sight is not a practical field device. It is the arrangement of a regular army officer and has the indorsement of every military man. That it has not been tried in any deadly campaign is simply because of our luck as a pacific nation. It would not be well for those who advocate the Martini to fall back on its campaign record.

Perhaps some day, when a few more American teams have iterated and reiterated the lesson, the British may learn the knack of team coaching in a way to bring a company of fairly good shots up to a total which a group of brilliant shots, each for himself and Old Nick for the aggregate, never can equal.

The team deserves all the praise which can be put upon them. The discipline was excellent. The work was done in a quiet, effective fashion, without any hurrah effort or claptrap surroundings. The men won good opinions because they deserved them, and, having had a good time, come home again to draw public attention to the fact that it was a Massachusett team, and that not another of these two-score Commonwealths is able to put a similar team in the field. Why not? Because rifle practice is not yet appreciated at its full value, and in many States the Guard is not yet out of its target-company uselessness.

THE JEKYL ISLAND PHEASANTS.

WE have given statistics from time to time of the progress of the pheasant product of the Jekyl Island Club (occupying an island near Brunswick, Georgia), and especially of the hatching of the first birds imported, seventy-eight, from which were raised, a year ago this last spring, the surprising number of 1,000 birds, all of which arrived at maturity and were turned loose to take care of themselves, which they have done.

With a view to continuing the experiment of importing brood birds, and as a further test of success, the club decided not to take up any of the original birds over the product for hatching purposes, but sent to England again for fresh birds. A coop of fifty were shipped and but one bird was lost. The other forty-nine were landed in healthy condition; and they proceeded immediately to business. The result of this second experiment has been equally gratifying. At last report from the game keeper 960 had been hatched, which did not represent the number of eggs laid, which was 1,600, by this small flock of birds. The eggs are placed under the common barnyard hens for hatching and raising. Owing to a scarcity of hens the eggs are not all utilized, and a few were addled by thunderstorms. It will be seen that it was in the possibilities to have raised perhaps 1,200 birds from the 49, which would have been a most wonderful product and certainly a very encouraging result.

The future pheasant shooting of the club is an assured fact, as already there must be, with the raising of this year and last added to the natural work of the wild birds, as many as 2,500 or 3,000 healthy birds on the island with which to open the season. The club contemplate making all preparations another year for setting 5,000 eggs. No wonder membership in the Jekyl Club is so eagerly sought and hard to obtain.

FISHCULTURE IN THE NATIONAL PARK.

THE project of stocking with food fish certain waters in the National Park which are now barren has often been discussed by some of those most interested in the reservation, and it now seems likely that this matter may really be taken in hand.

At the solicitation of Captain Boutelle, Col. McDonald, U. S. Commissioner of Fisheries, recently visited the Park, and made an examination of certain of these waters, which he believes can be stocked with game fish to the great advantage of the Park and the public.

It has long been remarked as a singular fact that the headwaters of one branch of the Snake River—that on which Shoshone and Lewis Lakes are situated—contain no fish above the falls, and the same thing is true of the heads of the Gibbon and Gardiner rivers, above their falls. This fact would suggest that the streams of this region were peopled by migration, but against that theory stands the fact that the waters of Yellowstone River and Lake above the Falls are abundantly supplied with trout. However that may be, it is beyond question that three river systems in this region, together with innumerable lakes, are without fish, while other waters, hardly a stone's throw distant, teem with trout.

Three species of fish of excellent quality are found in this region. These are the trout, the grayling and a whitefish. The last named, though a good fish, is not nearly so valuable as the two first. It would be an admirable thing if trout and grayling could be planted in these barren waters, but Commissioner McDonald looks at this subject from a broader standpoint, and sees the grand opportunity which the Park offers for experiments on the acclimatization of certain species of fish foreign to these waters. He has expressed himself as desirous of introducing into one of these river systems the brown trout of Europe; the Eastern brook trout might be introduced in another, and the grayling in the third; or the brown trout and the grayling might do well together in the same stream, as is the case in European waters.

It seems altogether likely, providing a fuller examination of the streams shall justify it, that a fish hatchery will before long be established in the Park, and a systematic effort made to increase the supply and the number of varieties of fish in this most beautiful national preserve. The thorough stocking of streams which flow into both Atlantic and Pacific oceans is an important matter, and should be undertaken with as little delay as possible. The project is one which is equally interesting, whether viewed from an economic or from a purely scientific standpoint.

SNAP SHOTS.

WE have had occasion more than once to allude to the trait of human nature which makes it so much easier for a man who is cognizant of unlawful shooting and fishing practices, to sit down and write a complaint of them to send to a distant journal, than to do anything practical in the way of punishing the offenders. A Vermont correspondent recently reported in our columns that the six-inch trout law of that State was being generally enforced. In response to this some one wrote to him from a town in eastern Vermont, relating that the law was there commonly violated; this informant was urged by him to lay his information before Warden Frank H. Atherton, of Waterbury, who would punish violators. And that was the end of it, as it is in nine cases out of ten. The only moral is, that if a person is unwilling to do his individual part toward enforcing the law, he ought not to complain because others fail to do their part.

Light on the woodcock and worm question: According to the last Smithsonian report the Hupa Indians, in Humboldt county, California, relish angleworms as a delicacy. In the autumn, when the ground has been well soaked by the rains, the Yuki housekeeper takes her "woman stick," a pole 6ft. long and 1½in. thick, sharpened and fire-hardened at the end; and thrusting this into the ground about a foot in depth, twists it around in every direction, so agitating the earth that the worms come to the surface in large numbers for a radius of two or three feet, and are scooped up for soup. "Frequently," says the report, "the worms are brought to the surface by the Indians dancing over the ground to make the game uncomfortable below." The Indians of Round Valley punch a pole as far as possible into the damp earth, work it back and forward, and by pressure drive out the worms, which they eat raw or make into soup. Now, may it not be true that when the woodcock bores for worms it procures them in three ways, by seizing any which it may come upon directly in boring, by agitating the earth by successive borings, thus driving the prey to the surface, and further by the dancing, stamping or beating with the wings described by observers?

A movement is on foot to go to the New York Legislature at its next session with the plan of converting a portion of the Adirondack wilderness into a public park. The rapidity and certainty with which the forest lands are being denuded by lumbermen, and all the choicest hunting, fishing and camping grounds are taken up by individuals and clubs, emphasize the importance of putting through the park project at once if it is to be done ever.

The "camp cure" has proved efficacious in scores of instances. A correspondent whose pseudonym is well known adds as a postscript to a letter: "I then thought, and, I believe, my friends also, that before this time there would have been a dozen lines or so in the FOREST AND STREAM as an obituary notice of 'Kelpie.' Camping out saved me."

Members of the South Fork Club, owners of the Lake Conemaugh dam, have been sued for damages by some of the Johnstown victims, and have expressed a determination to defend the suit. The case will shortly come up in court. The dam, it is said, will be rebuilt on a smaller scale than the former one.

The fifteenth of August and the first of September mark the opening of a number of game seasons, as given in our Game Bag and Gun columns.

The Sportsman Tourist.

HUNTING WITHOUT A GUN.

FRESH fields for exploration and adventure have become few and restricted, and if they had not, there are many who could not and many who would not seek them.

We, who for one reason or the other never get far from the ground to which our pioneer grandfathers transplanted their families, must content ourselves with hundredth hand exploration and make the most of small adventures. As we till and mow, with all the ease a farmer may, the fields that our grandsires smoothed for us with infinite toil out of the old wilderness, so we float with only the labor of oar and paddle along the streams whereon their way was beset with a century's downfall and drift of bordering forest. If afoot we lose our way and faintly realize what it is to "get lost," it must be in second-growth woods where we can almost feel the way of the wind or see it in the drift of the clouds, and we recover our bearings with little exercise of woodcraft. It is a greater adventure for us to meet a raccoon than for them to have encountered a bear; the muskrat and the mink are rarer sights to our eyes than the beaver and otter were to theirs, and they saw moose and deer oftener than we see grouse and woodcock. But we have more time to look at the little that is left us of the wild world, and may possibly discover something that was overlooked by our toiling forefathers.

With such purpose, and with a whole day to devote to it, I came to the creek this morning, intending to voyage somewhere, perhaps up the South Slang, diverging therefrom into Goose Creek, and as far up as its narrow channel would let me, or if another way should invite me more, down to the mouth of Wonakaketukese and cruise along the shore of the Bay of the Vessels, or up beautiful Lungahnetsik.

But my purpose and half-formed plans were frustrated when I found my boat was gone from her soft bed of mud, borrowed by some one, who had not taken the trouble of asking, to ferry himself across to the Myer's Landing. There she was, hauled up on the further shore, not thirty rods away, "so near and yet so far," for between us lay impassable marsh and channel. Should I wait till the unlicensed borrower returned, or should I take a three-mile tramp by way of the first bridge and follow the shore around to where she was now lying? It would be long waiting if my unknown beneficiary should choose to come back by another route, or not come back at all, and so of the two the longer and more toilsome seemed the easier and quicker way to regain possession of my boat.

Lighting my pipe and shouldering my paddle, after a long look up and down the channel in fruitless quest of some friendly craft that might give me ferriage, I took the path that boatless generations of red and white men had trod before me. Frequently it led me under some old apple trees, the ragged survivors of the old settler, Davis's orchard, planted a hundred years ago. Near them is a wild plum tree, a giant of its slow-growing race, a foot and a half in diameter, standing patriarchal in a thicket of its sprouts. How the old settler's children must have delighted in the fruit of this tree—a lusty one even in their young day—poor little souls, with nothing to satisfy the child's craving for such fare but what nature had impartially set for them and bird and beast. How sweet to their palates were the red horse plums while they were awaiting the tardy fruitage of these seedling apple trees.

I fancy that Tom Sweet's bear was on his way to this tree, doubtless well known to all the bears that ranged hereabouts, or was returning from it, overladen with a paunchful of unstoned plums, when the valorous old fisherman overtook him in midchannel and beat the life out of him with his paddle. The elm Tom stripped the bark from to make a harness for his saddle horse wherewith to haul his trophy home, has gone the way of most of our old trees, and I look in vain for a great elm, with a long scar seaming its trunk, for my imagination to browse upon.

The apple trees, that for half a century have had no care, have not lost all characteristics of civilization, but show a manner of growth very different from the wild apple trees one finds in pasture land and sometimes in the woods, when one would not guess what they were but for their fruit; for they have tall, slender trunks and a thin ramage of lithe branches, quite unlike what one expects in the apple tree. The wild tree of the pasture is more like its neglected brethren of the orchard, scrubby and beset with sprouts, but with no such mark of the pruning saw as may be seen on these trees where the square-cut stumps of limbs jut from the trunk, their ends almost overgrown with bark and each with a branch of later growth curving upward therefrom, shaped like a monstrous teapot spout. Many years have passed since their branches were thinned but by decay and storm, or their fruit gathered but by the squirrels.

But what jolly "paring bees" it gave occasion for, uproarious with the unrestrained fun of old-time merry-makings, when all the young folks of the wide neighborhood gathered at the house up yonder, to pare, quarter, core and string the apples. Do I hear the squeak of the fiddle tuning up for Money Musk, the squawk of make-believe surprise of a buxom damsel kissed in a romping game, and the guffaw of the swain who caught her? Or was I only dreaming, and the sounds that caught my ear were only the chafing of a branch, the squall of a red-headed woodpecker, the cawing of a crow? Long ago the fiddler exchanged his cracked instrument for a golden harp; the lads and lassies of those days were old men and women when we were babies, and have slept for many years beneath the graveyard golden rods; and their ghosts, if inclined to visit the scenes of their junketings, would find scarcely a trace of it, for the hearthstone is under the turf and the chimney bricks are scattered far and wide.

There is the swaying branch that fooled my ear, there is the crow, sagging along in flight from shore to shore, and there the woodpecker, trying his luck at fly-catching. Old trees have grown too scarce to supply his stomach's wants, or he has discovered that it is easier to bore thin air than wood for his food, and he seems to be having fair success in this lighter industry. Every loop he makes from his perch on that basswood stub, though it is done with a jerking flight, quite awkward compared with the airy swoop of the kingbird or phebe, apparently brings something to his maw, and he repeats his sallies with evident satisfaction. If he learned this trick of the born flycatchers, I wonder if he borrowed one of his notes of the tree toad who must be as intimate an acquaintance.

A golden-winged woodpecker, happy possessor of many befitting names, flies up before me from an ant hill with a loud "yarrup" and a "flicker" of gold and white. While I am speculating on the possibility of his final development with his groundling habits, into a woodcock, I stumble through a thicket of willows and upstarts the real woodcock, thridding the soft fluff of leaves with a rapid whir so different from the yellowhammer's flight that I am convinced that my highhole's way to woodcockery will not be made in my day. He has rid himself in some measure of the loping flight of the woodpecker, acquired when trees were nearer together than now, and one stroke of the wings would bear a bird from tree to tree, but how and with what years of practice shall he acquire that rapid wingbeat which surrounds the flyer with a brown halo, an aureole, if he might attain it, how manage those sudden shiftings of course that one may fancy sometimes surprise even the woodcock himself, as they certainly do him who essays to stop them. Well, I am content that he should continue even as he is, game for those who hunt without a gun, a delight to the eye that sees him beyond in intervening gun sight, a delight to the ear and the heart when his jolly cackle tells of the assured arrival of spring.

While I stop to mark the woodcock's flight as he darts away to another of his haunts, I am given a rare and pretty sight. Another alights on the soft inner border of the marsh just before me, and struts a moment with lowered wings and spread tail, then daintily prods the mud with his bill, boring till he strikes a worm, which he brings up and swallows. How he knew the worm was there is as much a mystery as how the squirrel knows where in the unmarked level of the snow to dig for a nut and find it. He alighted silently, with as little fuss and flutter as the ruffed grouse makes when he alights on his own undisturbed affairs, and you can hardly believe that he is the same bird who tears his noisy way through branches or air when rudely or warily, you intrude upon his privacy. He gives you a lesson in silent approach, when he comes to you. I make a wide detour and leave the woodcock to his late breakfast or early dinner, and do not hear him fly away, though no doubt his quick ear has caught my careful footfalls. Perhaps not seeing me, he takes me for some kindlier animal than man, or possibly he knows that I am hunting without a gun.

Above the Myer's Landing the steep banks of Little Otter are scored with frequent gullies, which in the old times, where there were ducks, were the coigns of vantage of gunners, who creeping down them, were almost sure to find a flock of woodducks upon a log waiting for a raking shot, or a huddle of unsuspicious teal, or a great drove of dusky ducks, comforting themselves with wild rice, duck gossip and aquatic sport. Those old gunners held the obsolete idea of sport, that its object was to get game, and perhaps they had an eye to the flesh pots as no sportsman has now, and perhaps had another, or both, to feather beds, for I remember some old duck shooters who cared nothing for a duck but for its feathers. They never squandered their handfuls of powder and shot on a single bird, rarely risked the chances of a wing shot at flocks, but patiently waited for great opportunities of destruction, then picked up their ten or a dozen birds and went home, happy with the result of one wise expenditure of ammunition. The ducks learned nothing from these infrequent lessons of danger; and the unscathed ones were back in their haunts next day. But the incessant banging of latter day sportsmen has taught the few surviving wildfowl to avoid the narrow limits of these upper marshes, where it is now unsafe for even a poor bittern or kingfisher to venture.

As I breast the further bank of one of these gullies I am painfully reminded that here I was given my first chance of a shot at ducks. Coming to the crest of the bank it was my luck to see them before they caught sight of me, a flock of twenty or more, sitting just off the end of this point in such a huddle that a blanket might cover them all. Down I sank close to the ground, and pushing my gun before me, wormed my way through thirty rods of ripe thistles till I was in short range of them. And now I, who had only for a year or so been permitted to use a gun, and with no greater achievement than squirrel shooting to boast of, was to cover myself with glory and suddenly attain a place among great sportsmen. My heart hammered loudly and painfully, but I took careful aim, remembering all I had ever heard of the danger of over-shooting in down-hill shots, and then pulled the trigger manfully, without a wink or a flinch, and the miserable little thin-shelled corroded abomination of a "G. D." cap—may the soul of the Frenchman who made it never find peace—responded only with a flat click. That mischance holds a place among the bitter disappointments of my life; and the old pain visits my heart with the same first sickening twinge whenever I see this spot. I wish the old scent of the marshes and the old indescribable aroma of autumn woods might as easily come to my nostrils, just as of old they arose from marsh and woodland, and I catch a whiff of them sometimes, but faint and elusive, and not to be inhaled with the full invigorating thrill they gave the boy. Alas! the boy's keenness of scent has gone with many another of his youthful belongings.

In one of those days, when I was hunting with a gun, I stood on the sticky shore of Mud Landing, closely scanning marsh and channel that seemed to have no living thing in or upon them, when all at once they burst into teeming life. A hawk, cruising over the marsh, made a sudden swoop, when, with a thundering roar of two hundred wings, a great flock of woodducks uprose from the sedges and wild rice and at once settled in the channel, so safe from his attack in water deep enough to dive in, that the baffled marsh harrier sailed sullenly away. They were far out of range of my shotgun and not to be more nearly approached without a boat, so that all my satisfaction was in the goodly sight of them and that consolation of him who hunts with or without a gun—the ill-luck of the hunter.

This landing, the only one of the lower creek where bank and channel meet, the marsh everywhere else separating them, was a favorite fishing place for us boys, to whom boating was forbidden. Here we could cast from the shore into deep water with a delightful uncertainty of what we might catch and, also with great expectations. It might be that our worms would lure only pumpkin-seeds or perch or bullheads, but there was always a possibility of their tempting a hungry pickerel or pike perch or sheepshead. These last valiant fighters we valued only for the fun of catching, the show they made on our strings and the "lucky bones" which were the inner adornment of their heads, or perhaps carried by them as by us, for luck. I have no knowledge that these charms ever brought us good luck, but we felt that the chances were better with a pair of them rattling in our trousers pockets. We did not know that these fish were good to eat, for our mothers had not learned that parboiling would make them very toothsome when boiled, broiled or fried, as after wrestling with the toughness of the first one, all the sheepshead we caught went to the cats.

A little further up stream is Bowfin Bay, in whose weedy shallows greatly abound the uncouth and worthless fish who gave it a name. If one desires only the "goode tugging" that Gervaise Markham promises to show you if you "tie a hooke with a Frogge upon it with a string at the foote of a Goose, and put her into a Pond," he may get as much as he likes of it here with the same bait (only his frog is better skinned), a strong hook and line and a stout pole, not a rod. The stronger the tackle the better, for when the bowfin is hauled in there comes with him all the marsh growth within the line's scope. Of the edible qualities of this fish it may be said that of the many who have tried to eat him few have succeeded, and fewer yet have been bold enough to pronounce him good. This may be said in his commendation, that in his infancy he is much beloved of pike-perch and bass, and so hardy that he may be kept for the angler's use half the summer in a tub of unchanged water.

Here is Potash Landing, the uppermost of the lower creek on this bank and named for works of that ilk that stood here in old times; and here in olden times the proprietor's clerk of this township suffered the loss of the land records in his keeping, "about forty deads for about six thousand acors." The mishap, which befel "the 3 day of the 10m., 1785," is circumstantially chronicled in his own hand and spelling in the archives of the town. The old surveyor was moving "to letill ortor crik forls" with his "wife and five childarn and one woman peggy smith by name and one child was all in an open bote and it was a dark rany time." There was nothing in the matter-of-fact account of the affair to give one the impression that these women and children were suffering unusual hardship in such belated, stormy travel, but the rather, that it was an ordinary circumstance of pioneer life, remarkable only for the casualty by which "Ritings of grate importuns" were "bornt." Wider apart than the lapse of years which divide them is the difference between our easy lives and theirs of toil and privation.

It is not easy to imagine these smooth, grassy slopes, shaggy with the wild woods that clothed them then; these shores, bristling with the prone and inclining trees, through which the "open bote" came to the end of her voyage, nor easy to picture to oneself the savage wildness of the gorge at the falls, choked with an inextricable confusion of floodwood that the lithe mink could scarcely find a passage through, above the hidden current.

The drought-shrunken stream is too weak to turn the millwheel to day, and the sawyer is idly pottering about among the scant array of logs in the millyard awaiting the slow filling of the dam. A footman need not take the bridge, and I cross the dribble of waste water dry shod. The jolly sawyer welcomes me as warmly as if I were the owner of a thousand logs, shows me the latest improvement of his mill, consisting of a new prop set in the labyrinth of posts and props that keep the log slide from tumbling down, and then takes me into his museum, the disused grist-mill, whose inner walls are hung with an odd collection of old-time implements and weapons. To each old farming tool and household utensil of clumsy but honest workmanship, to flintlock musket and militia captain's sword, he sets some fanciful history of his own invention, and the forenoon has grown short when I set forth on my way down the left bank.

As my head gets above the crest of a ridge, some moving objects on the slope of the next catch my eye, which presently make them out to be a family of foxes, five cubs at play and the mother watching their pranks with evident approval and pride in their promise of vulpine excellence. How alert and nimble they are, how different every motion from the clumsy gambols of puppies. While I watch them, forecasting sport in November days, when I shall not go hunting without a gun, and freshening my memory of the runways hereabouts, Madame Vixen, who does not let pride get the better of watchfulness, by some sense becomes aware of my intrusion, and speedily calls her babies indoors, she lingering last at the threshold to chide me with a snarling bark. Upon closer inspection, the neighborhood of her abode does not betoken neat housekeeping, for there is an untidy litter of bones and feathers strewn about, lambs' legs and turkey pinions enough to enkindle the wrath of all the shepherds and poultry wives in town. I shall tell them no tales of her, and pray that she may be left to rear her young in peace, that none of them may fall in with any but such as hunt without a gun till fields are dun and woods are brown.

Following a path much used by cows and fishermen, I skirt Hemlock Point, where many years ago I visited a party of St. Francis Indians, trappers and basket-makers, who were camped here in the shelter of the great hemlocks. The place would not invite them to tarry in it now, for not a tree is left to shade it, and of the beautiful hemlocks there remains but the name. With the exception of my friend, the sawyer, and one other, every riparian owner on the lower creek does his worst to strip the banks of trees, to the stream's loss of beauty and his of soil. I must confess to some unchristian satisfaction, when the rotting roots of the murdered trees loose their strong, kindly hold, and a rood of land slips into the spring floods.

The locust trees of the Myer's Landing are close in sight now, and with the nearer prospect of getting afloat, I begin to rearrange the plan of the voyage that must be shortened to accommodate it to what remains of the day. I stumble over the grassgrown foundations of the old Dutchman's house, and wonder to what quarters of the world was scattered the dusky brood that he and his mulatto wife reared here in the shadow of the locusts that he planted. There is something pathetic in the

thought of those children, whose lot was cast with the despised race of the mother, though more of white than of negro blood ran in their veins. I remember one of them, a comely, sad-faced woman, harbored in middle age in the family of a negro, whom in her girlhood she was too proud to marry. Poor Chloe, on what shore, far from this quiet stream you first beheld, were you stranded by the tide of years?

I round the last thicket that hides my boat, grasping my paddle for the long, strong push that shall send her swishing through the marsh, and my foot is almost raised to step on board, when I discover that she is not here. The sole occupant of her flattened bed of rushes is a big bullfrog, who winks at me placidly over his broad straight mouth, uncommitted by upward or downward curve to a smile of derision or a sad expression of sympathy. Over there on the further shore, in the very place where I sought her this morning, just as far from me now as then, lies my boat in the port to which the honest thief has most considerately returned her.

If my emotions are those of gratitude or of a quite opposite character, I have no language wherewith to give them expression, but if that fellow were within fifty yards of me at this moment, I am inclined to believe that he would have reason to be thankful that I am hunting to-day without a gun. ROWLAND E. ROBINSON.

FERRISBURGH, Vt.

HOTEL LIFE IN EUROPE.

IN November, 1881, accompanied by my wife I started for Europe, where we remained until December, 1882. We landed in Havre, spent a month in France, another in Germany and Austria, and from February until May in Italy, the summer in Germany, France and Switzerland. Since our return I have very frequently been consulted by friends in moderate circumstances, as to the expenses of such a trip I have always stated, although in very general terms, for I have relied upon memory, that while journeying was dearer, yet hotel life in Europe was much less expensive than in the United States. I have long intended to overhaul my hotel bills and find out just what it did cost us.

At each city we visited it was our custom to go to the best hotel, to look at the rooms, obtain prices including service, lights, fires, etc., and to then mention the sum we were willing to pay; in every case this amount, or at least a considerable reduction from the sum first named, was agreed upon.

We were neither extravagant nor parsimonious. In each place we had a room or rooms, not above third floor, and as high as that only where there was a "lift." We had sometimes one large room, quite as often bedroom and parlor, and sometimes three rooms.

Neither of us drank much wine, but complied with the usual custom and always had it at dinner.

We drank the wines of the country we were in, not calling for claret in Germany, Capri in France, Assmanshausser or Liebfrauenmilch in Italy. In the tables I have included board, lodging, service, lights, fuel and laundry.

I have excluded in most cases the expenses of entertaining friends, including high-priced wines.

I had intended excluding all items such as cigars, carriages, stamps, telegrams, payments for purchases, etc., and have to a great extent carried out my intention; but as the task of overhauling such a lot of bills, containing such an endless amount of items—five or six sometimes for a simple first breakfast, such as "2 breads, 2 butters, 1 milk, 1 sugar, 2 eggs, 1 honey," for instance—has become very tiresome, especially as I have forgotten the meaning of many of the words, I have gone through the last forty-eight or fifty quite rapidly, and undoubtedly have missed many such items not large enough to attract attention, for when a hack costs but a mark or franc and a message but a few pfennigs or sous, they don't stand out as they would in a New York hotel bill. It is more than probable that a more careful revision would reduce the amount.

My most expensive day was at Baden-Baden; one room only, $8.55; the least expensive at Aix la Chapelle, or more proper Burtschied, a suburb, where sulphur baths are furnished, which was $4.90 per day for three rooms, first floor. The low price was due to our stay at that place being over three months. A single room at the same hotel, for but one person, cost $5.

The Quirinal at Rome was remarkably reasonable. First-class in every respect, the charges for one room for 25 days were $5.25 per day, but by making arrangements, I was given two large rooms connecting on the upper floor (where all typhoid fever patients are sent by the doctors), and a small room, where I could smoke and sleep, including the board of two nurses and a bottle of Chiante at dinner, for $8.34 per day. I think I've made good my claim that a fairly provident man and wife can live in Europe at the best hotels for less than $5 per day.

In many of the places mentioned there are excellent *pensions*, notably the Pension Chapman at Rome and Florence, and others in Germany, where very comfortable rooms and excellent fare can be had at not greatly over one-half of the hotel prices.

NECESSARY EXPENSES INCURRED DURING A YEAR OF EUROPEAN HOTEL LIFE.

GERMANY.—Baden, *De Russe;* Aix la Chapelle, *Carlsbad;* Cologne, *De Dom;* Frankfort, *Frankfurter Hof;* Homburg, *Quatre Saisons;* Heidelberg, *Grand;* Munich, *Quatre Saisons;* Mayence, *D'Angleterre;* Strasburg, *D'Angleterre;* Soden, *De L'Europe;* Stuttgart, *Marquard;* 160 days; total bills $800, or $5 per day.

AUSTRIA.—Loeben, *Zum Post;* Vienna, *Metropole;* 17 days; bills, $106 39, or $6.25 per day.

BELGIUM.—Antwerp, *De L'Europe;* Brussels, *De Flandres;* 7 days; bills, $38.90, or $5.76 per day.

SWITZERLAND.—Geneva, *National;* 4½ days; bills $22.50, or $5 per day.

FRANCE.—Havre, *Frascatti's;* Aix le Bains, *De L'Univers;* Paris, *Bedeune;* 55 days, bills $385, or $7 per day.

ITALY.—Bellagio, *Grand Bretagne;* Capri, *Quissisana;* Castelmare, *Quissisana;* Florence, *D'Italie;* Genoa, *Isota;* Lugano, *Du Pare;* Milan, *Grand;* Naples, *Grand;* Pallanza, *Grand Pallanza;* Pisa, *Minerva;* Rome, *Quirinal;* Sorrento, *Villa Nardi;* Turin, *Grand;* Venice, *Grand Britannia;* 118 days, bills $775.75, or $6.59 per day. Deducting from above 39 days at Rome, when, through illness, three rooms and board of two nurses were required, the amounts are for 79 days; bills $450.35, or $5.70 per day.

PLACE—Attic chamber of a farmhouse not far from one of the best trout streams in Massachusetts.

Time—Four A. M. The alarm clock goes off with a vehemence that brings a challenge from the rooster in his house twenty rods away, and starts P. and Scribe, who have been listening for it all night, out of bed at the first tinkle. Scribe dresses, and on looking around for P., instead of finding him ready to start, is surprised to see him still in ghostly attire shuffling about the room searching for something. "What are you looking for? Why don't you dress and come along?" asks the impatient Scribe. "My pants. Where can they be?" Then with a shudder as he looks at the frosty grass outside, P. turns upon his fellow bogtrotter, "Confound you, Scribe, I believe you've got on pants enough for two." P. looks Scribe over, sees he is mistaken, and resumes his search about the room. "Well," quoth P., after a five minutes' grope in the dark (the only matches in the company had disappeared with P.'s vest, which had gone with his pants), "it's no use, Scribe, I can't go fishing without pants. You had better go along and I'll get back to bed." "What's that sticking out from under your pillow?" asked Scribe. "O, I remember now," said P., "I put them under my pillow last night to raise my head up higher. Guess I can go after all." SPECKLED BEAUTY.

BROCKTON, Mass.

274.

"You wants a b'ar st'ry, does you? Well, I spec I kin give you one. It was a good while back, afore this country got settled up so.* Some of my cows got strayed off, down thar in the bottom somewhars; so I jest ketched my old sorrel horse, Pete, and put the saddle on, and got my cow whip—fur I had a powerful good un in them days; it had a lash nigh 30ft. long, and, lors, how that whip would crack! You might a hearn it a mile off. I didn't carry no gun, kase that would be unhandy while I had the whip. I mounted old Pete and took the path down thar by the branch, what you see over yonder. I rid about half a mile. I reckon, when all of a suddent I seed a b'ar about half ways up a good-size tree, and not more 'n 30yds. off. Says I, 'I'm gwin to see what my whip will do for you.' Then I rid up a little closter and swung the whip around over my head once or twice, and fetched that b'ar a carwhallaper right over his rump. Lors! you orto have seed that b'ar squirm. It hurt him so bad he couldn't holler. Then I swung the whip around agin, and give him a wipe right over his snout that fotch him down a bit. Then I gin him another on the rump and driv him up a piece. Then on the snout and fotch him down some. I kep' on licking that b'ar, first on one eend and then on t'other, till I got him cowed. Then I whipped him over the snout till he comes down the tree and got in the cow path. When I had him thar, I driv him toward home, and whenever that b'ar tried to leave the path I jest whipped him on that side and driv him back. He was a little onruly at first, but after a little I just driv him same as if he'd been a cow. And I kep' on a-drivin' of him until I come in sight of my brother. I hollered to him to fetch a gun and shoot my b'ar what I had driv home. So he fotch the gun and killed the b'ar in his tracks.

"Since I found out this way to kill b'ars, I never have no trouble to carry my b'ar meat home." TOT.

*The squatter who told this story to the writer, in Alabama, some fifty years ago, said the country was getting "too thickly settled," and that "he should have to move away." When asked how far it was to his nearest neighbor, he said, "Twenty-five miles."

275.

Hunting Without a Gun: It was many years ago. He was hunting bear in one of the swamps of Alabama in a canebrake. He was in a narrow path in a dense growth of cane, and had put his gun down for a moment, when suddenly the bear and dogs came down the path, right upon him. The cane was so thick that he could not dodge to either side, and had only time to grasp as many canes on opposite side of him as he could hold, and draw himself up, his feet above his head, and let the bear and dogs pass under him. A true story, as told me by Uncle Franklin R.; he being the chief actor and the gymnast on this occasion. TOT.

Natural History.

THE WOODCOCK'S WHISTLE.

Editor Forest and Stream:

Will you kindly allow me a little more space in which to answer the arguments that you advance in support of your belief that the whistle of the woodcock is a vocal noise, and not made by the bird's wings?

You discriminate between the sound which the bird makes in rising, "which might perhaps be called a whistle," and which you admit is produced by the wings, and a "well-known ringing note" which you compare to the twitter of the kingbird. I am perfectly well aware that the woodcock's whistle varies considerably in form and perhaps slightly in tone, also at different times, but to my ear it does not vary to anything like the degree that the *scaipe* of the Wilson's snipe varies from the slight whistling which the latter bird sometimes makes with its wings. With the woodcock the variations have seemed to me to be distinctly correlated with different phases of flight. Thus I have observed that when the bird beats its wings vigorously, rapidly and evenly, its whistle is clear, shrill, and practically continuous; when the wing beats are slow and languid, the whistle becomes feebler and less resonant; when they are intermittent it is divided into distinct syllables or set of syllables, which, as you say, sometimes suggest the twitter of the kingbird. I have frequently seen a woodcock, after flying some distance, scale downward on set wings as if about to alight, and then, apparently changing its intention, turn sharply upward, at the same time resuming its flapping. In such cases the whistling has invariably ceased during the interval of sailing, and quite as invariably has been renewed when the wing began to move again. I have never known a woodcock to produce any form of whistling or twittering when its wings were at rest.

These facts impressed me long ago with the belief that the sound, throughout all its changes or modulations, was produced by the wings, but I did not feel that I had any real proof on this point until after the experiences described in my last letter. The sound made by the wounded birds which I held by the bill was precisely the same as that made by other wounded birds which I have seen jump up ahead of a dog and attempt to fly in the manner you have described. It does not seem possible that I could have been mistaken as to the origin of the whistling made by the former, while in respect to the latter, I fail to understand why the injured wing may not be moved with normal velocity and power. Your objection that if so moved it "would have turned the bird quite over," has no real force, for I have repeatedly seen a wing-broken woodcock during a vain attempt to fly with one wing actually turn quite over and land on its back, with feet kicking in the air. Moreover, if the sound is vocal, why is the woodcock invariably dumb during the moult? As already stated, I have never known a bird which lacked the "whistling quills" to make the least whistling or twittering, either during the ordinary flight or after being wounded and when trying to evade the dog.

As to the Wilson's snipe, I cannot see why the fact that, like many other birds, it utters when wounded a sound which every one admits to be vocal, should furnish an analogy bearing difectly on the case of the woodcock. Would it not be quite as logical to claim that because the quacking of a flying mallard or black duck is unquestionably vocal, the whistling sound supposed to be produced by the golden eye's wings must be also vocal?

Before concluding, however, I would say that, while I believe most firmly that all of the various modifications of whistling and twittering which the woodcock makes while flying are produced by its narrow, stiffened, primary quills, I do not wish to be understood as denying that at least some of these sounds may be vocal. It is so easy to be mistaken about a comparatively simple thing, and so difficult to settle positively a point as elusive as that of the origin of the woodcock's whistling, that I am perfectly willing to admit that the matter may be still an open question which, it is to be hoped, the readers of FOREST AND STREAM will investigate further at every possible opportunity. WILLIAM BREWSTER.

CAMBRIDGE, Mass.

Editor Forest and Stream:

Your articles on the woodcock have interested me very much. In your issue of Aug. 1 both yourself and Mr. Wm. Brewster give opinions as to the manner of the woodcock making the whistling noise. I quite agree with Mr. Brewster that the noise is made by the wings, although for many years I was a doubter, until the following occurrence settled it in my mind. One day quite late in the autumn, having very slightly wounded a full-feathered, large fall bird, I retrieved it myself, not letting the dog touch it. As I was holding it by the bill my companion said, "Hear it whistle." I immediately placed the bill lengthwise, between my thumb and forefinger, holding it tightly the whole length; whenever it fluttered, which I let it do several times before killing, it made the twittering whistle so peculiar to the woodcock, that certainly was proof positive. As for the cause, I consider it the same as the whirring sound of the quail and grouse, viz., rapid motion of the wings, caused by fright. Quite often after flushing a woodcock, and when it is some distance away, when shot at and not killed, we hear the same whistle, caused, no doubt, by the additional fright at the sound of the gun or noise of the shot passing near; not a poetical but certainly a practical reason. I hope these articles will cause sportsmen to be more observing, and that new facts as regards this very eccentric bird may be brought to light. W.

SALEM, Mass.

BIRD NOTES FROM MISSOURI.—The spring and summer months with us here in northeast Missouri have been pretty well, and this summer will be recorded as a period of gentle and frequent showers. Until about June 10, the temperature remained exceptionally low for this latitude; and as a result, vegetation was delayed in growth. Regardless of all these adverse agencies, the wildfowls and birds appear to be prospering. All the migratory birds arrived about the usual dates. As the forest area here remains almost as extensive as ever, we have a great variety of birds of beautiful plumage and sweet song. A few of the strictly native Southern mockingbirds venture this far north to add their joyful notes to the congregation of musical voices. Our best singer, I think, is the brown thrush or common mockingbird, which retains its rank of being the bird *par excellence* for clearness of notes and variety of song. The catbird and even the much praised Southern mockingbird both fall far below the thrush in point of distinctness and excellence of song. Some writers assume that the thrush's power of mimicry is acquired, yet this is not well established.—JASPER BLINES.

NESTS OF THE SUNFISH.—*Editor Forest and Stream:* I have read with much interest the article in your paper in regard to "Nest Building of the Sunfish." I have examined the so-called "nests" several times and have lifted the sand and gravel carefully out of the bottom, but have never found any spawn, although the fish were in the nests when I went to examine them and would return to them shortly after I left and level the bottom again with a current of water from their tails. The nests I have chiefly examined were in a mill-pond. There were more nests made by perch (yellow belly) than by sunfish. I also found chub in these nests, but whether they made them or not I do know; but if I dropped any pebbles in their nests they also would flirt them out with water or, if too heavy, the water would cut the sand from under the pebbles so that they would sink low enough not to trouble the fish. I have also found these nests made by perch on the flats of a tide water river, where they were left dry every low water. —R. F. R. (King William County, Va.)

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

THE EARED SEALS.—III.

OTHER wonderfully interesting accounts of this sea lion have been given us by Mr. Elliott, Capt. Scammons and others, but I must hasten to devote my remaining space to a brief notice of the northern fur seal or sea bear (*Callorhinus ursinus*).

This animal has nearly the same geographical distribution as has Steller's sea lion, while to those at all interested in our animals, the form, coloration and the magnificent pelage of fur of this well-known seal are all too familiar to require my entering upon such details here. These are, moreover, all recalled by the life like sketch of a group of fur seals by Mr. Elliott, herewith reproduced.

To Mr. Elliott is due full credit for the most detailed accounts of *Callorhinus*. In his work upon the Seal Islands of Alaska we find the most minute descriptions of the external characters of this animal at all ages, while its habits seem to be almost exhaustively treated. Then he has presented us with a long series of sketches from nature of the haunts of the fur seal, with the animal itself in all imaginable attitudes. Some of these sketches are well calculated to impress upon our minds the fabulous numbers that gather at the "rookeries" during certain seasons; they are packed together and can best be estimated by the acre. Had the present writer not already taxed the generosity of FOREST AND STREAM to the utmost in the matter of figures, some of these sketches might be introduced, but the reader had best seek a copy of the work to which I refer and study them all. They are well worth it. It will at once be seen that most striking differences exist between the male and female *Callorhinus* in point of form and size. According to Allen an old male will measure between 7 and 8ft. and a full grown female about half that length. A pup a week old is about 1ft. long and weighs between 6 and 8lbs., and an old male will weigh nearly 375lbs., while a female rarely attains to a weight of 90lbs. The great resort of all resorts for the fur seal are the islands composing the Prybilov group, and in 1872 Mr. Elliott estimated that there were 3,000,000 of them on Saint Paul's Island alone, and probably 163,000 on its neighbor, Saint George's Island, the following year, at a time when another separate estimate was made. The fur seal has been written of at greater or less length ever since 1751, when Steller described it in no small detail, both as to its anatomical structure and its habits. In 1817 Péron first noted its distinction from the fur seal of the Southern Hemisphere, but even this was not clearly defined until 1859, when Dr. J. E. Gray pointed out the distinctive characters of the two species. In alluding to Elliott's "Seal Islands" Allen says: "The work is nicely illustrated with photographic plates, taken from Mr. Elliott's sketches, about twenty-five of which are devoted to the fur seal. The text of this rare and privately distributed work has since been reprinted with some changes and additions and has been widely circulated. It contains very little relating to the fur seal that is strictly technical, but the general history of its life at the Prybilov Islands is very fully told, while the commercial or economic phase of the subject is treated at length."

Fur seals migrate to and from the rookery at St. Paul's Island every season, the males returning in advance, a few vigorous bulls being the first to appear during the early part of May. It is at such times that their locomotion on shore and their wonderfully agile action in the sea can be most favorably studied. In speaking of the rookery to which I have just alluded, Elliott says, "From the time of the first arrivals in May up to the 1st of June, or as late as the middle of the month, if the weather be clear, is an interval in which everything seems quiet; very few seals are added to the pioneers. By the 1st of June, however, or thereabouts, the foggy, humid weather of summer sets in, and with it the bull seals come up by hundreds and thousands, and locate themselves in advantageous positions for the reception of the females, which are generally three weeks or a month later, as a rule." Then follow the extraordinary battles of the bulls, with all the strange habits incident thereto. "The sound arising from these great breeding grounds of the fur seal, where thousands upon thousands of angry, vigilant bulls are roaring, chuckling, piping, and multitudes of seal-mothers are calling in hollow, bla-ating tones to their young, which in turn respond incessantly, is simply indescribable. It is, at a slight distance, softened into a deep booming, as of a cataract, and can be heard a long distance off at sea, under favorable circumstances as far as five or six miles," and is constant, night and day, throughout the season. The females begin to arrive in June, and the duties that then devolve upon the bulls are so onerous that the latter are obliged even to entirely abstain from all food and water for a period of several months. During this time they are nourished solely by the absorption of adipose of their own bodies, being very fat at first, and woefully lean after the ordeal.

The cows when they arrive show great gentleness of disposition as compared with the ferocious, fighting, flesh-tearing bulls. "When they come up, wet and dripping, they are of a dull, dirty gray color, darker on the back and upper parts, but in a few hours the transformation made by drying is wonderful; you would hardly believe they could be the same animals, for they now fairly glisten with a rich steel and maltese-gray luster on the back of the head, neck and spine, which blends into an almost pure white on the chest and abdomen." These females are driven to land at the rookeries from the approach of the period of parturition, their pups being born soon after their landing, shortly after which they receive the attention of the bulls.

The landing of the cows has been described by Mr. Elliott in the following words, he says: "They are noticed and received by the bulls on the waterline station with much attention; they are alternately coaxed and urged up on to the rocks, and are immediately under the most jealous supervision; but owing to the covetous and ambitious nature of the bulls which occupy the stations reaching way back from the waterline, the little cows have a rough-and tumble time of it when they begin to arrive in small numbers at first; for no sooner is the pretty animal fairly establishe ' on the station of bull number one, who has installed her there, he perhaps sees another one of her style down in the water from which she has just come, and in obedience to his polygamous feeling, he devotes himself anew to coaxing the later arrival in the same winning manner so successful in her case, when bull number two, seeing bull number one off his guard, reaches out with his long strong neck and picks the unhappy but passive creature up by the scruff of hers, just as a cat does a kitten, and deposits her on his seraglio-ground; then bulls number three, four, and so on, in the vicinity, seeing this high-handed operation, all assail one another, and especially bull number two, and have a tremendous fight, perhaps for half a minute or so, and during this commotion the cow generally is moved or moves further back from the water, two or three stations or more, where, when all gets quiet, she usually remains in peace. Her lord and master, not having the exposure to such diverting temptation as had her first, he gives her such care that she not only is unable to leave did she wish, but no other bull can seize upon her." Other points of most engaging study and dwelt upon at length by the entertaining writer just quoted, are the various sizes of the harems with respect to the females in each, the habits of those bulls who fail to secure harems at the beginning of the season, the amount of punishment that an old bull will stand before he will quit his position, the universal amiability of the cows, the extraordinary attitudes they assume both on shore and in the water, the birth and numbers of the pups, and the behavior toward them by their mothers and the bulls, and their own habits, the disbandment of the harems later in the season, and the growth and education of the pups, all these points as I say are brought out with an ever-increasing interest, and finally "by the middle of September the rookeries are entirely broken up, only confused, struggling bands of cows, young bachelors, pups, and small squads of old bulls, crossing and re-crossing the ground in an aimless, listless manner; the season is over, but many of these seals do not leave these grounds until driven off by snow and ice, as late as the end of December and 12th of January."

But there still remains the natural history of the thousands upon thousands of "holluschukie" or bachelor seals; the consideration of the young females; the most exciting chapters treating of the chase of the fur seal, and the entire history of the fur-sealing trade, preparation and disposition of the skins, and other matters: the enemies of the fur seal and its migrations. It is evident that it will be simply impossible for me even to touch ever so lightly upon these subjects, and the reader will never regret the hours he may spend in reading the works from which I have so extensively quoted. It will be gratifying to the reader to know that after Mr. Elliott's long years of study of the millions of fur seals that resort every year to the Prybilov Island, and their constant destruction by man, and by their natural enemies in other quarters, he had "no hesitation in saying quite confidently that, under the present rules and regulations governing the sealing interests on these islands, the increase or the diminution of the life will amount to nothing; that the seals will continue for all time in about the same number and condition."

We will pass in our next paper to a brief consideration of the earless seals or the family *Phocidæ*, an enumeration of the North American representatives of which I have already presented in a former contribution.

R. W. SHUFELDT.

THE FUR SEAL (*Callorhinus ursinus*). FROM LIFE SKETCHES BY H. W. ELLIOTT, PRIBYLOV ISLANDS, 1872-1876.

A. Old "seecatch" or male, 8 to 24 years old.
B. Young "seecatch," 6 to 8 years old.
C. Young males, 2 years old.
D. Female nursing pup.
E. Cow fanning herself.
F. Cow asleep.
G. Cow napping and fanning herself.
H. Female crooning to the male.
J. Old male; a characteristic attitude.

THE PLUMED QUAIL OF ARIZONA.

THE plumed quail are very abundant in the walnut grove valley, some fifty miles south of Prescott, Arizona. The vegetation through this valley is called chapparal or brush, consisting principally of scrub oak and cat-claw. The quail delight in this brush, and during the heat of the day nearly every second clump conceals a covey.

A novice sportsman, approaching a clump, gun in hand, hears first a subdued note of warning from a more watchful bird; this is repeated by others, giving evidence of a large covey in concealment. Our novice now feels the delightful excitement caused by game near at hand, and holding his gun in readiness, approaches warily. He comes nearer, every instant expecting the birds to rise; still nearer and nearer, and there is no movement from the clump. He feels disgusted, thinks he has been deceived in the quail, and lets his gun fall. As he rounds the brush and looks about, some 60ft. off he sees the covey, running daintily and swiftly away; and as the birds see they are discovered, they turn quickly behind another thicket. Now our novice is wiser and steps quickly but carefully toward the birds. With a rushing whirr they are up, and he must be a good shot to bring more than one down. Swift as our Eastern quail, if they are old birds they scatter more, and their flight being through thick clusters of bushes, our sportsman may get only a few glimpses of them.

A covey of these quail as they are running over the

arid brown wastes of Arizona is a beautiful sight. There are sometimes thirty birds together, and as they step along, their heads slightly thrown forward and their crests erect, they are unsurpassed by any of our game birds for beauty and neatness. Their colors are clean and clear; in the male this is especially so; their crest is a beautiful affair, a jet-black, club-shaped, tight bunch of feathers about an inch and a half long.

The quail spend the day upon the foothills feeding, and just at dusk come down to the stream which drains the valley, to drink. After drinking they settle in the willows along the banks for the night; while thus settling they constantly call to each other in their sweet, plaintive notes. In their courtships and pairings they are very interesting, and make a source of endless delight to a lover of natural history. At this time the cock brings himself into prominence; and his challengings and struttings, his fights and victories, his billings and cooings, are pleasing studies of social bird life, to be seen on the arid desert, on the mountain or in the cañon, and in the verdant river bottoms.

Their food consists principally, I judge, of the seeds of the scanty herbage. It seems sometimes the birds must live very hungry, the grasses and weeds are so scanty. Probably they consume many insects though, and gain a good sustenance from these. Sometimes they make havoc in the crops of the ranchers. One planter disgusted me by telling me how he succeeded in poisoning several hundred quail.

Many of the teamsters in Arizona carry shotguns besides their usual weapon and kill many quail. The quail gather about the camping ground to get the grain left and dropped by the stock, and the "bull-whacker" or "mule-skinner" makes a pot shot into the flock of feeding birds, killing twelve or twenty.

But the little bird, although nature and man seem against him, flourishes and is happy, helping to make a rather dark place brighter. T. W. B.

New Haven.

Skunks on Dress Parade.—Chicago, Ill., Aug. 19.—A friend in Wisconsin tells me of an amusing incident he noticed in the woods up there. Himself and a companion were riding along together, when there suddenly stepped into the road ahead of them a little army of skunks—one old skunk and five half-grown kittens. These seemed perfectly fearless, and halting by the wayside, the gentleman's companion began firing at them with a six-shooter, although he did not hit any of them. At the sound of every shot, the skunks, which had marshaled themselves into perfect line, threw up their tails in perfect unison, as straight and stiff as a ramrod, above their backs, making no further hostile demonstration, and simply standing at a ready until their fear had partly subsided. They repeated this maneuver a dozen times, and my informant says the total effect was funny in the extreme.—E. Hough.

Grouse Reared in Confinement.—A correspondent of the Truro, Nova Scotia, *Sun* says that the young partridges hatched on the farm of Mr. Henry Hills, of Lower Stewiacke, N. S., were not hatched under a common hen; on the contrary, they were hatched from eggs laid by a tamed partridge, a pair of which Mr. Hills has had in his possession for five years. The mere act of taking a nest full of eggs home and hatching them under a hen does not appear a very extraordinary feat. But the fact that Mr. Hills has held these wild birds in captivity for five years, and has at last succeeded in raising from them a brood of young birds, is what we call an extraordinary feat, and is, we believe the first instance of the kind ever accomplished. Another very difficult feature in Mr. Hills's achievement is the fact that his birds were captured when fully fledged.

An English Starling in Maine.—Calais, Me., Aug. 14.—A boy has sent me an English starling shot here with some redwings. I saw some imported ones were let out at Central Park last spring. This may be one of them come north.—Geo. A. Boardman.

Game Bag and Gun.

AN OUTING IN WYOMING.

(Concluded from Page 66.)

FRIDAY morning, bright and early, we were up and had breakfast out of the way. Cook and Jack started out together, and Jim and I, Crane said he would hunt around camp. We hunted north of camp for some time, but saw nothing. My boots were galling my ankles in a horrible manner, and I gave up and went to camp, where I found Crane. We built up a big fire, took the old bake kettle and pot-roasted several rump roasts of antelope, and stayed at camp the rest of the day. Jim came in first and reported a small blacktail doe killed as the result of his day's shooting. Jack and Cook came in shortly after; each had killed a fine buck, which they had dressed and hung up; they were ravenously hungry.

Saturday I had been studying what I could wear on my feet that would not murder me. I finally put on five pairs of socks with my rubber overshoes over them, tied my canvas pants tight under the hollow of my feet, and was all right. They were soft, warm and light. I had hit it. All the other boys took the horses and went out to bring in the three deer killed yesterday. I went east of the camp to the head of a cañon, and hunted down a way until I struck a track that was coming toward me. I turned on the track and followed it back up the side of the cañon, across the top of the mountain to near camp, down into another cañon, where the one I was following joined a band of others. I followed them for a while until I came across what I thought were elk tracks. I left the deer tracks and followed them. I had never seen an elk nor an elk track. Some one had told me that they looked like cattle tracks, only more pointed. This answered the description of the track I was on, so I stuck to them until I found out they were cattle tracks. I never realized the poverty of the English language as I did then. I struck off across to where I left the deer tracks, and was working carefully along up a small cañon that branched off from the main one, when I saw start out from under a cedar tree five does and a splendid buck; they walked along a few steps and stopped to look at me. I guessed the distance at 250yds., raised my sights, up with old reliable, sighted for his shoulder and cut loose. He was standing on a very steep side hill, and at the crack of the rifle he staggered down the hill sideways several feet, but did not fall. The others ran to the top of the gulley and stopped; he followed them. I had shot him with an explosive bullet, so I thought he was safe; and I shot again at one of the others as soon as I could load. When I shot the second time he ran off to the right behind a large rock; the others ran straight over the hill out of sight. I hurried up to where I had seen him last, took his track and followed it about 40yds. and found him. He was down, but looked as if he had lain down to rest. His eyes were open and looked as bright as could be. I did not know but he was laying for me, and as I had no fancy for a rough and tumble fight with a wounded buck that would weigh two hundred and fifty pounds, I loosed the safety catch to my rifle, and with the gun loaded in both hands, went up near enough and gave him a punch with the muzzle, but he was dead. To say that I was pleased would not half tell it: it was the first deer that I had ever killed to be sure of. I had shot at deer with others and some one had killed them, but no one knew who; this one was my own. Was not he a beauty? He had a fine set of antlers. I dressed him and found the bullet had struck him back of the shoulders, too high for the heart; it had exploded and had cut the wind pipe and forward part of the lungs into hash; the base of the bullet had gone out the other side. Notwithstanding this terrible wound he had been on his feet in sight for as much as thirty seconds, and had run as much as 60yds., part of the way up a hill that was at least 45 degrees elevation. I might as well have tried to hang up a horse alone, so I dragged him upon a rock, tied my handkerchief to his antlers to scare away any varmint, and put out on the tracks of the others. I had followed them about a half mile when I came on to the carcass of a bull elk that had been killed probably the fall before. The horns were 3ft. 7in. long, and 3ft. 2in. between the tips, and were large and as even as they could be. I twisted off the head and carried it on top of a hill so I could find it again and went on. I followed the tracks until they scattered near our camp, and concluded to leave them and go to camp, get a pony and some help and bring in my deer.

When I got to camp I found two nice bucks and a doe hanging on a tree near the tent; the boys had brought in the game killed the day before and had gone out again. Crane, Jack and Cook had taken the horses and wagon when they went after their game, and Jim had taken the white pony and gone after his doe alone. About the time the other boys got their bucks loaded up and were starting for camp, Jim put in an appearance and said he had been having a small-sized circus with the pony, for when he attempted to blindfold her to put the doe on her back, she yanked him all over that part of the mountain until she broke the bridle and then lit out in the direction of camp. They drove over to where Jim's doe was, put it in the wagon, and Crane drove to camp while the others hunted for more. After getting the deer into camp Crane went off west of camp and saw the same band that I got my buck out of, but did not get a shot. I got me something to eat and then went back and brought in the elk head I had found. By that time Crane had returned, but it was too late to go after my deer, so we went to getting supper. Jim came in about dark and reported another doe and a coyote killed; Cook and Jack came in soon after, had seen four deer and had shot at them, but got nothing. We had antelope soup for supper, and any one who says it is not good never tried it after tramping all day. After supper we skinned out the heads of the deer killed yesterday ready to mount.

Next morning Cook and Jack started off east of camp and hunted all day. Cook killed a small doe and they dressed and hung it up on a tree, wounded another and followed it nearly to camp, but it was getting dark and they left it until morning. Jim and I had taken the brown pony and gone out and got the deer he had killed the day before. I brought it into camp and he hunted. Crane and I hung Jim's doe up with the rest and then took both ponies and went after my buck. I rode that pony over places I would have been afraid to go afoot; he was slow, but sure. When we got near the dead deer I saw a bobcat that had been feeding on the entrails run off over the hills; he was out of sight before I could dismount and shoot at him; he had killed one magpie and wounded another that I caught and took to camp. We loaded my buck on to the brown pony and went to camp. I worked a while cleaning my elk head, when Jim came in and reported a big buck killed in the same cañon that I had killed mine in, so Jim, Crane and I took both ponies and went out after it. Jim with his rifle went ahead, Crane and I rode the ponies. It was near sundown and we were about half a mile from camp, when Crane pointed off to the west and exclaimed: "Great Scott! look at that elk; yes, and there are two more." And sure enough, on top of a ridge clearly outlined against the sky were three animals, one feeding and the other two walking around; they looked about the size of big cows. Crane told me to stay and watch them and he would hurry on after Jim and get him to come back with his rifle. Oh, how we regretted leaving our guns in camp. I watched them for about fifteen minutes, when, as Jim and Crane did not come back, I went on and found them at work on the buck, getting him ready to pack. On the way back, when near where we saw the elk, Jim pointed up on to the ridge and said: "Are those your elk? Well, you are dandies. They are nothing but blacktail does." He was right; they did not look to be a quarter as large, owing, I suppose, to the difference in the light. However, he blazed away at them three times before they stirred, and then they walked over the ridge out of sight.

We had now six fine deer hanging on the trees around the tent, and the ridge pole of the tent well garnished with antelope venison that we were jerking. In his rambles to-day, Jim found a dead cow elk that Jack wounded three weeks ago to-day, but could not find; also an immense buffalo bull that had been killed some months before. They had skinned out the hindquarters and left the rest, not even taking the hide; the horns were beauties, and Jim managed to get them off and brought them in.

Monday morning Jim and I were both lame from tramping and climbing, and thought we would make a lazy hunt that day; so we went out to where we had seen the does the night before. We could see by the tracks that there was a regular crossing there, so we fixed ourselves comfortably and watched for several hours, but saw nothing. Then we played boy for an hour, rolling rocks from the ridge down into the cañon. I then proposed that we work across to where I had killed my deer, and see if we could see any deer and perhaps get a shot at my bobcat. We found the cat back there after the rest of the entrails; but he heard us before we got in sight of him, and had started for some more retired place. We both shot at him and made the stones and gravel fly just behind him, and from the way he made tracks he evidently thought there was no place like home. We kept on up the side of the mountain, and while passing through a large clump of cedars jumped a fine doe not 30yds. from us, that ran across in front of where we were. Both shot and missed her. She ran off to the right along the side of the mountain among the cedars; we followed her tracks for about 60yds., to where she had stopped to look at us. We got a glimpse of her as she dashed down the hill, and Jim said she would come out on a naked knoll about 100yds. distant. Sure enough, the next instant she ran up to the top of the knoll and stopped. We both fired and down she went, dead as a stone. As it was but about half a mile to camp, we carried her in and hung her up with the rest.

Cook and Jack went out this morning after the doe they had hung up yesterday. Cook had left his handkerchief tied to the carcass to scare away any prowlers. He found his game about half eaten up by a couple of bobcats, and his handkerchief the worse for it. They sent the remnants to camp by Crane, and went to look for the cats who had mortally insulted Cook. They hunted all day and returned to camp at dark with nothing. Tuesday morning Jack got up at daylight and went out before breakfast, it was windy and looked like a storm. We had just finished breakfast when Jack came in and said he had killed a nice buck and doe. All hands except myself took the horses and wagon and went after them. We were busy nearly all day getting our meat and heads ready to take home. We had killed ten deer in all, five large bucks, and five does, and had them hanging on trees around the tent. It was a sight that would have delighted any sportsman. I would have given anything for a good photograph of camp as it looked when we commenced to cut up our deer, I tried to make a pencil sketch of it, but it was not a brilliant success, but afforded lots of fun for the boys. Cook and Jack came in about 4 o'clock, Jack had killed a badger; he got something to eat and then went out again; he wanted a buck's head for some friend of his to mount, the two he had already killed were for Crane, and his partner Moffit. He came in at dark but had nothing.

Wednesday morning Jack was up and out by daylight. We struck the tent, packed the wagon and got ready to start by the time Jack came in sight. He had seen nothing. We then pulled for Crane's camp, saw lots of antelope on the way but killed none. Made Crane's camp in time to get the tent up and make things snug for the night. Thursday some of Crane's men took the team and went after wood, and we loafed around camp, and toward night went out to look for antelope. Jim was the only one that had any luck. He killed one, and as it was near the road we would travel the next day, he left it where he shot it. Friday morning we loaded our traps into the wagon, bade good-bye to Jack and the rest of the men, and started for Casper. Picking up the antelope Jim had killed, we got to the derrick in time for dinner, and there heard how the Presidential election had gone. We determined to make Casper that night if possible. We saw a large oil spring by the side of the road that was a curiosity to those of us who had never seen anything of the kind before. When we had come up the road the boys on the train did everything they could to make us comfortable, so when we stopped at the derrick for dinner we skinned the antelope, cut it in quarters and put it in a gunny sack, and when we got to Casper in the evening and found the train standing on the track, we rapped on the door of the luggage car, and when they opened it we bundled the sack of meat into the car and told them to divide it to suit themselves. We left Casper at 6 o'clock the next morning and arrived in Blair Sunday evening, having been gone just two weeks. Taking everything into consideration it was the pleasantest trip I ever took. We had good weather, a pleasant company; there was not a cross word spoken on the trip, no one was hurt, we got all the game we wanted and reached home when we intended to. Jim, who is a taxidermist of no mean ability, has been with me for some days, and has our bucks' heads mounted in fine shape. Mine is hanging in the room where I am writing this, and as he looks down at me it seems as if I could hear him say, "It is all right, old man, but if we were to try this thing over again you would not get me so easy."

Dr. E. A. Palmer.

Blair, Nebraska.

A Modern Fable.—One day a city snap shot went out hunting, he carried an improved breechloading shotgun, and his special boast was that he never shot either bird or animal without giving it a fair chance for its life. His sentiments were favorable to the protection of all game birds and birds of song and beautiful plumage. At least this was his conviction on the subject when he wasn't out hunting. After spending most of the afternoon in a pretty good run of luck, he found that his game pouch contained 3 red birds, 13 doves, 2 grouse, 6 quail and 1 squirrel. "This will do," he said, and then he started to cross a field, homeward bound. Presently up flew two quail, one of which soon fell a victim to the destructive aim of the snap shot. The other bird, being closely pursued by a hungry duck hawk which happened to be near, sought safety in some tall grass, but was seized by the greedy bird of prey. Just then there was another report from the sportsman's gun and the hawk with its prospective dinner fell to the earth. In the evening, after the fly-shot had partaken of a toothsome supper of game birds, and had related his adventures in flowery adjectives, he sat down and wrote for a high class paper an article entitled: "Hawks, the Great Destroyers of our Game-Birds."—Jasper Blines.

Forest and Stream, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

DEER HUNTING IN TEXAS.

ON the 1st day of November last, the writer, in company with Messrs. Joel W., John and James Walker, Geo. A. Witter, Geo. W. James, Jack Ray and J. L. Greathouse, left Belton by overland for Walker county, in quest of bear and deer. It was decided that the Bedias should be the point of destination. The Bedias is a small running stream, which heads at the village of Bedias in Grimes county, and winds its way through the heavy pine forests until it empties into the Trinity at Calhoun's Ferry.

Our first day's travel brought us within about twenty miles of Calvert, and the next day being occupied in quail hunting along the route, we barely reached Calvert by sundown. Sunrise the next morning found us on our journey. We reached Franklin, Robertson county, about 10 o'clock, and a few miles east we stopped for dinner. Up to this time we had been living like lords, having all the small game such as quail and squirrels that we desired. The writer and Mr. Greathouse, alias Sam Bass, were the only quail hunters in the party. Mr. John Walker, however, would occasionally get what he called a "pot shot" on the ground, thus demolishing the entire covey. Bill, our cook of the mulatto persuasion, was kept busy all this time preparing the game for the next regular meal. Night here finds us approaching the famous "two bits" bridge across the Navasota River. Being met about a mile from the bridge by the keeper, who was going to supper, we were informed that it was a toll bridge, and that if we would pay him the dollar for our four wagons it would save him two miles ride going back. Sam Bass thought it best, however, for him to go back, as he told the gentlemen that we were not in the habit of crossing a bridge until we came to it. After crossing the bridge it was about good dark, and tired and worn out as we were, we all went to work to assist the cook, and soon afterward a good supper greeted us, for our appetites were indeed sharp.

This place on the Navasota is known as San Antonio crossing, and is on the old Nacogdoches and San Antonio road, which has been used for a great many years. We left San Antonio crossing the next morning about daylight for Madisonville, Madison county, a distance of twenty-two miles. We traveled on without striking much small game, except an occasional squirrel, which is very readily picked off the limb by Sam Bass with his trusty Winchester.

At about 11 o'clock, on the fifth day of our travel, we reached the Bedias Bridge, and according to directions from a physician in Madisonville, proceeded down the stream until we came to a sawmill. Upon inquiry we were told that game was very plentiful in there. Said the gentleman, "The mast this year is very heavy, and I have never seen deer so plentiful as at the present time. I saw eight or ten deer in one drove within 300yds. of this mill yesterday, and it is no trouble at all to kill them. But I want to say one thing to you in regard to running your hounds in here. There are certain still-hunters who reside through here, who have bluffed out every hunting outfit that has ever been through here. I have known them to go to the camp after all of the hunters were asleep and drag a green deer's hide through the camp and put out strychnine bait in this manner." Believing that this was too high up on the creek, as it was our intention from the first to get out of the settlements, we thanked the gentleman for his information; and after winding our way through the heavy pine for about four miles, came to a little opening in the woods called Manning Prairie. Upon inquiry from a "gentleman of color," we found that we were in the forks of the Bedias, and that it was splendid hunting ground.

After getting everything arranged in camp, we concluded to take a little round to get used to the woods and see if we could not kill a deer for immediate use, as we were beginning to get out of meat excepting bacon. Mr. Joel W. Walker was detailed to do the driving for that evening, and we all occupied such stands as we believed to be good ones, not knowing at that time how the deer would run. After being out for a couple of hours and running several deer, we succeeded in getting one out by Mr. Walker, who had quit the drive and turned the dogs over to his son John and taken a stand himself. After several shots were fired Mr. Walker finished the job. It was decided that it was too early to go in to camp, so the doctor and myself were detailed to carry the deer into camp, a distance of about one and a half miles. After an hour's run the rest of the boys returned empty handed; finding more deer but failing to get a shot. On the Bedias it is almost impossible to use a horse in hunting, as the thickets are so numerous.

It was decided the next day that it would not do to remain longer in the forks of the creek. We knew that there were plenty of deer in here, but just how to kill them was a mystery. In walking around some of the boys met Mr. Ira E. Woods, who lived about three miles from where we were camped. He informed us that we had camped at the wrong place for killing deer. He said we could find plenty of them, but there was no such a thing as killing them—a fact we had already learned. Before leaving the Bedias we all concluded to take a round at ducks, and in less time than an hour we had killed more than we could do anything with. Mr. Woods had advised Mr. James, whom we all seemed to look upon as our foreman, to camp at a spring about 100yds. from his residence, assuring us that if we would we could there kill all the deer we wanted. The settlements through here are very thin, and deer have thousands of acres of mast to feed upon, so it is no wonder they are so plentiful. We at once set to work to get things ready, and in three hours time were located at a beautiful spring at the eastern corner of Mr. Woods's yard fence; and after being told that deer would come up and drink water out of this spring house, it was admitted by all that this was the place we had been hunting. The woods were open here, and in some drives a horse could be used very readily. Mr. Woods seemed very anxious to hunt with us, and the next morning, Monday, we all started out in good earnest, each one anxious to kill a deer. Mr. Woods placed us on the stands, and then with James Walker made a short drive. It was not long before they started five deer, and James Walker killed one of them in the drive; and I succeeded in killing a fine little yearling buck, which happened to run my stand.

For several days we stayed here, never failing to kill one, two and sometimes three deer every time we would go out. It was here that we met old Bill Murray, a negro, who is an old hunter, and has been living on the same farm most of his life. He lived on this place during the war, and belonged to Richard Murray, of Huntsville, Tex. Bill at once advised us that he would "miss a crap any time to hunt," and that we could not stay too long to suit him. We found Bill to be very useful to us as he was acquainted with every hog-path in the woods and could tell us more about the country in one day than we could learn in a week if let alone.

After staying at Mr. Woods's three or four days we were advised by Bill to move about three miles toward Huntsville and camp on Past Oak Creek, at the edge of Brushy Prairie. This we did, and the result was almost marvellous. Mr. James being very fond of fire-hunting he and Bill concluded to take a round one night; and while out Bill shot two down and wounded a third.

Mr. Woods and the Doctor concluded to go one night; and after a ten-mile round on horseback they returned without seeing an eye. "It is strange," said Mr. Woods, "that some nights I can go out, and in less time than we were gone last night I can shoot down half dozen deer; and again I go out with the same result as that of last night. There is no certainty in killing deer by fire-hunting, though I believe the best time to go is the first night after a rain."

We stayed here until about the 12th, and never failed to kill deer. Mr. Joel W. Walker killed, not more than 300yds. from camp, one of the largest bucks that the writer has ever seen; and Bill said that if they grew any larger in these woods he had not seen them. Previous to the killing of this large buck by Mr. Walker, while we were camped at Woods's spring, Mr. James had killed one that we thought was large, but it was small compared to the one killed by Mr. Walker.

On the morning of the 13th it began to look like rain, and the dogs being about run down, we concluded to start for home. Bidding farewell to Bill and Mr. Woods, we turned our faces homeward. We, however, had not gone more than a quarter of a mile from camp before we saw five deer cross the road ahead of us. Mr. Walker's dogs being the only ones tied, Sam Bass spent about an hour in getting his own back. After taking a horse from the wagon and riding about two miles he succeeded in blowing them off.

Everything passed off pleasantly from this time until, as we approached the Navasota, all of the dogs being loose, they trailed some deer that had just crossed the road, and Mr. Walker had the misfortune to lose two of his best hounds.

We arrived home on the 16th, and all agreed that we had one of the best times possible, and all that was needed to complete the entire outfit was Wess. Danly with his "deer and bear" dogs and Col. Tad Powers with his little dirk knife. W. E. C.

Belton, Texas.

RECOIL IN BREECHLOADERS.

Editor Forest and Stream:

About thirteen years ago I wrote you an article on recoil. I thought the difficulty of getting the contracted powder chamber into the shell required more powder to give same penetration as the patent breech of the muzzle-loader. I had used an old J. Manton for some years for bird and deer hunting; little wonder I was prejudiced against the breechloader. My boys got two made to order, pretty to look at, and I thought handy, and with plenty of powder might throw shot far enough to kill a bird. About five years ago five or six of us went to Atlantic county, N. J., for a deer hunt, but found the woods so dry the dogs could not do anything, so we concluded to go home and wait for a rainstorm. Before separating we tried our guns at the form of a deer chalked on a door and placed at 80yds., all breechloaders but the old Manton. Only one placed a buckshot in the deer that would have killed; the Manton put in three and through the door. The breechloaders did not stick their shot. I just hugged the old black gun. We went into the house to get ready to go home, the guns standing around in the corners. A hunter jumped up saying, "What is this? a gun bulged an inch from the muzzle." "There," said another hunter, "I always load my buckshot loose, so as to pass the choke without bulging." All this confirmed instead of abating my prejudice.

We went home to await the rain, and being in the gun store in the city, I told the circumstance to the gunsmith. He laughed saying, "You have got a Parker." I said, "Yes, two of them." He took a No. 12 brass shell, selected shot that would chamber very tight four. He said: "Load your brass shells with 5drs. best powder, 12 shot, try your breechloader on a deer. I will guarantee your gun won't bulge."

The rain came; three of us went to look around the woods for sign of a buck that had fooled us more than once. At 7 A. M. two took two dogs, going due east. I started alone, due south. I had got about three and one half miles, and was looking around the water stand on the side of an old pine field, a big tree here and there, no underbrush but sand and moss; could see half a mile in any direction; the wind was light and from northeast. I heard the notes of a dog on a warm trail, and although like a mosquito at first, and swaying to north and south, always drawing nearer, until I took my stand leaning against a big tree, my left arm resting on a snag, the little gun across, my finger on the trigger. Suddenly a squirrel in an adjoining tree barked and made so much noise I looked around to see why. There was my buck; it had made a circuit around the field so as to come up in the wind to that water stand. He winded me at 30yds. and went off due north on the jump. I inwardly groaned. Oh! for the old gun. The little one was after him with a snap. He came down as if shot with a cannon. The left hindleg broken in three places, once below and twice above the knee, with one shot behind that raked him, and one in the neck behind the ear. A four-snagged swamp buck, with a beautiful set of horns, he weighed 228lbs. dressed. The men came in answer to my summons. I stood where the buck changed his course. The driver looked at the track, saying, "Fooled again." I took them to the tree I shot from, and stepped 104 steps to where the deer lay. They looked and admired. I had no eyes or admiration for anything but the little gun that stood by a tree close by. I confirmed that shot by many others afterward. In a broadside at a buck seven shots broke the ribs, through heart and lungs, and through the other side. Little wonder my prejudice is changed to pure love. My impression is that many a good gun is condemned because not properly loaded, and I think that means tightly loaded, so that the powder has to force the charge all the way through the barrel, and not be brought up at the muzzle by an abrupt choke, as in many guns, nearly a sixteenth of an inch smaller than the bore. It may be prejudice, but I cannot see but the more a gun is muzzle-choked the more penetration is impaired and recoil caused.

On this principle, I conceived the idea of boring my No. 12 chambers to take No. 10 shells, with the chamber shoulder taken down to thickness of brass shell. This gives the choke in the breech instead of the muzzle. The charge goes into the barrel tight, and if the wad is solid is tight all through the barrel. This, I think, will give better penetration. I have shot thirty to forty shells three or four times. The report sounds more like a rifle than a shotgun, and feels more like it at the shoulder; so much so that I would rather shoot 100 shots now than ten before. Prejudice.

Camden, N. J.

MAINE GAME.

THE prospects for partridge shooting in Maine this fall are somewhat a matter of doubt, and I am very much afraid that they are not good. Thus far I have failed to learn of any number of flocks seen, though taking a good deal of pains to question fishermen and guides who have been into the woods. The theory would be that owing to the absence of snow, and hence crust, last winter, the birds should have wintered well, and again that the very early spring should have been favorable. But almost ever since the early spring the weather has been very wet, with remarkably heavy rains, especially during June and July; the very time when the chicks would be the least able to stand the cold and wet. Indeed I hear the idea advanced that the young grouse have suffered almost to utter extermination all along the seacoast of Maine for a strip 100 miles inland. North and west of this strip there was not as much rain during the latter part of May and early in June, and it is possible that the young birds may have fared better. But on the whole I do not expect very good partridge shooting in Maine this fall, and I find that others, familiar with the hunting localities of the State, think the same way.

But the prospects for large game in Maine are good. Mr. John Danforth writes a friend here, or at least that friend tells me so, that three moose have lately been seen by fishermen and guides at Parmachene, and that several caribou have been seen and tracked. The gentleman receiving the letter will start for that lake early in October or late in September. He says he shot his three deer there last fall, and he intends to be there till after the first snow this fall. But the worst feature of the whole is that he does not go up there with a proper feeling as to the game laws of that State. He says that he shot his three deer last fall, and would have shot more had the weather permitted. He also says that all the deer would have been used on Mr. Danforth's table—none would have been suffered to waste. He says that Mr. Danforth encourages the shooting of deer by sportsmen, even beyond the limit of the law, for he "can take care of them." Now that is just what the gentleman says. I would not harm Mr. Danforth, and I hope that the story is not the truth, but he has no right to any more than three deers at his camp in any one open season. The gentleman has no more right to shoot more than three deers than he would have to rob my game bag of a deer that I had shot, and if he will persist in taking more than three deer in a season, he is really robbing other sportsmen of the game that they might shoot were they left by the man who has already had his share.

Special.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 20.—The prairie chicken crop in Illinois promises to be an unusually good one, the close season having had a remarkably good effect. There are coveys now in considerable abundance along almost all the valleys and wild land where the grass was high enough for them to breed well. The Illinois valley has plenty of chickens, and the Kankakee marshes have bred their thousands. I know of three coveys of birds within four miles of Morgan Park, a Chicago suburb, and have heard of numbers of young birds all through the northern part of the State. It is fair to say that this bird, formerly thought to be practically extinct for sporting purposes in this State, will be abundant this year, and can be kept so under intelligent treatment. Season opens Sept. 15. Our legislators tried to open it Sept. 1, but a clerk by an engrossing error made it Sept. 15, very fortunately. There have been chickens killed in this district already, and by Sept. 1 a great many coveys will be broken up. No arrests heard from.

From what I know and hear from Kansas, I would hardly advise any one to go from a distance to that State for prairie chicken shooting, except upon the definite advice of a friend certain as to the shooting in some given locality. There is some shooting in spots in Kansas, but you have got to know the spots, as the chicken supply in that country was badly cut down by severe winters three years or more ago. Illegal shooting all over this State. The gun clubs are about the worst. They keep the chickens killed off, so that by opening day there isn't much shooting left.

Nebraska should be a better State to make for than Kansas this year for prairie chickens. Dakota is, of course, good as yet in some localities, where there has been wheat enough sown to gather the birds in. Perhaps because I know more about that country personally, I believe I should about as soon chance it for chickens in northwestern Iowa as anywhere. The law is entirely disregarded there, but it is naturally a great place for the pinnated grouse.

Really the best ground in the United States for pinnated grouse shooting is in the Indian Territory. I should prefer the Osage or Creek Nations, below Coffeyville, Kansas. That is grass shooting, and is very good. The weather is very warm down there, and hunting not so pleasant as in the North. The law, United States and military, must be broken to get in there, and there is risk of getting into serious trouble, and of having a darky soldier jab a bayonet into you. It would be well if darky soldiers with bayonets guarded the grouse in the localities first mentioned.

Mr. H. M. Joralmon, long identified with sporting journalism in Chicago, and an authority on guns and shooting, has left his late field of work and gone into the banking business in Denver, Col. It is to be hoped he

will continue as an amateur in what was once his professional employment. E. HOUGH.

The Illinois prairie chicken season will open Sept. 15, not Sept. 1. The law as passed (and so reported in our columns) made the season open Sept. 1, but by an error in engrossing the law as enacted the date was made Sept. 15, as appears from this dispatch from Pres. Fred C. Donald, of the Illinois State Sportsmen's Association:

"CHICAGO, Aug. 19.—*Editor Forest and Stream:* The prairie chicken law as enacted made open season Sept. 1; as engrossed and printed it appears Sept. 15. Attorney-General decides law must stand as published until corrected by a court of competent jurisdiction.—FRED C. DONALD."

"AUTOUR DE MA CHAMBRE."

WHO has not been charmed by LeMaistre's ingenuity? He tells of the preservation and cherishing of animal life within the walls of his dwelling—I, on the contrary, propose to relate a story of its destruction, in true and sportsmanlike fashion.

This torrid August has driven my family to the cool, sleek strand of Cape May, and I am left alone to find a corner of my house less hot than the other three—or dozen.

Yesterday evening, I was sitting in my library, close to the open north window, awaiting the announcement of dinner, and turning the pages of the *Century*, and looking beyond the woes of Siberia into its flowers and freshness. Across the room darted a saucy mouse, and sought refuge in the grate, which at this season is filled with torn paper and rubbish generally. There he sat and leered at me.

Now, in my closet, under lock and key, stands a Flobert, charged with what is called a "sparrow cartridge." This cartridge is a small copper tube, the diameter of a crow quill, and has some sort of fulminate which makes no noise or smoke, and propels a few grains of dust-shot. Last winter, while confined to my bed by an accident, I used, on pleasant days, to pop through the window at the English sparrows which frequented the big wistaria which covers the house front, killing about one in three shots. I do not like to destroy birds wantonly, but these little foreign pests are too typical to be spared. They are little pauper immigrants, and, having been admitted to our shores through malice or stupidity, are now driving out the home industries of our robins, orioles, warblers and chippies. The cartridge in the Flobert is not left there for them, however. It is for a neighbor's dog, which has bitten children, and which, when he traverses his evening lunch route, responds with a little yelp to the occasional salute given to discourage his visits.

The slight mortality to the sparrows, at a range of twenty feet, and the feebleness of the dog's response to the salute, had given me a contempt for the cartridge's efficiency.

Leaving my mouse grinning in the grate, I quietly walked to the closet, took out the Flobert, and returned to my seat and *Century*. A glimpse, a snap-shot, and a success as amusing as unexpected. F. S. J. C.

WILD RICE IN THE HUDSON RIVER.—Hudson River Improvement, Engineer's Office, Albany, Aug. 14.—*Editor Forest and Stream:* "F. B.," of Saugerties, in last week's issue makes inquiries about the chances of wild rice growing in the sluggish bays of the Hudson at and near this place. Some of the most extensive fields of rice on the Hudson River are to be found in the immediate vicinity of Saugerties. South of the mouth of Esopus Creek there are several large patches, notably one at a place called the "Vlaie." North of Saugerties, as for instance at Catskill, Athens and Hudson, he will find some of the largest fields on the river, and at all of these points it seems to thrive very well indeed. The most northerly patch on the river, of which I have any knowledge, is located at Bear Island, a point five miles south of Albany. I am unable to learn at what time or where rice first made its appearance on this part of the river, but it seems to have been noticed for the first time by rail shooters at New Baltimore about fifteen years since. The finest growth of rice one would wish to look at can be seen back of the dykes near Castleton and New Baltimore.—S.

WOODCHUCK CLIMBING TREES.—Rochdale, Mass.—I noticed a discussion in FOREST AND STREAM a few weeks ago as to woodchucks climbing trees. My dogs treed one the other day. This woodchuck was on a small limb less than 3in. in diameter, and was 2½ to 3ft. from the body of the tree, which was pine and a foot or more in diameter, 10ft. from the ground. He looked very comical with his big belly spread out and over the small limb. I was at home, and hearing my two dogs barking sharply, I started out to see what was the matter, and found dogs and 'chuck as described. My opinion is that a woodchuck might climb a tree when hard pressed by dogs if the tree was conveniently near and the chuck's hole a good ways off—not otherwise.—F. E. B.

OPEN GAME SEASONS.

Arkansas.

Deer, Aug. 1 to Feb. 1. Wild turkey, Sept. 1 to May 1. Pinnated grouse, prairie chicken, Sept. 1 to Feb. 1. Quail, Virginia partridge, Oct. 1 to March 1. Exportation of fish and game forbidden.

Connecticut.

Ruffed grouse, quail, woodcock, gray squirrel, Oct. 1 to Jan. 1. Wildfowl, Sept. 1 to May 1. Sora rail in Litchfield, New Haven and Fairfield counties, Aug. 20 to Jan. 1; elsewhere, Sept. 1 to Jan. 1.

Georgia.

No uniform State game law; county laws govern. In Richmond county, deer, Oct. 1 to Jan. 1; wild turkey, partridge, quail, Oct. 15 to April 1. Summer duck, dove, Aug. 15 to April 1. Woodcock, Aug. 15 to Jan. 1.

Idaho.

Buffalo, elk, antelope, deer, mountain sheep, Sept. 1 to Jan. 1. Quail, Oct. 1 to Dec. 15. Mongolian pheasants protected at all seasons.

Illinois.

Deer, wild turkey, Sept. 15 to Jan. 15. Pinnated grouse, prairie chicken, *Sept. 15 to Nov. 1. Ruffed grouse, quail, pheasant, partridge, Oct. 1 to Dec. 1. Woodcock, July 15 to Dec. 15. Gray, red, fox or black squirrel, June 1 to Dec 15. Wildfowl, Sept. 15 to April 15.

*See note under "Chicago and the West."

Kansas.

Pinnated grouse, prairie chicken, Sept. 1 to Jan. 1. Quail (on one's own premises), Nov. 1 to Jan. 1.

Maine.

Moose, deer, caribou, Oct. 1 to Jan. 1; one person may kill only one moose, two caribou and three deer in a season; dogging forbidden. Mink, beaver, sable, otter, fisher, muskrat, Oct. 15 to May 1. Woodduck, dusky, black, teal or gray duck, Sept. 1 to April 1. Ruffed grouse, partridge, woodcock, Sept. 1 to Dec. 1. Quail, Oct. 1 to Dec. 1. Pinnated grouse, prairie chicken, Sept. 1 to Jan. 1. Plover, Aug. 1 to May 1.

Maryland.

The laws are complex, each county having special provisions; a tabular statement was given in our issue of July 25, 1889.

Massachusetts.

Ruffed grouse, partridge, woodcock, Sept. 1 to Dec. 1. Quail, Oct. 15 to Jan. 1. Ducks, Sept. 1 to April 15. Plover, snipe, rail, marsh and beach birds, July 15 to May 1. Gray squirrels, hares, rabbits, Sept. 1 to March 1. Deer protected at all seasons.

Mississippi.

State law subject to modification by county enactments. In Yazoo county: Doves, Aug. 1 to March 1. Deer, Sept. 15 to March 1. Wild turkey, Oct. 1 to May 1. Quail, Oct. 15 to April 15.

Montana.

Bison, buffalo and quail protected for ten years from 1889; moose, elk and beaver protected for six years from 1889 White-tailed deer, black-tailed deer, mule deer, mountain sheep, Rocky Mountain goat, antelope, Sept. 15 to Jan. 1.

New Brunswick.

Moose, deer, red deer, protected to 1891. Mink, otter, sable, fisher, beaver, Sept. 1 to May 1. Partridge, Sept. 20 to Dec. 1. Woodcock, Sept. 1 to Dec. 1. Snipe, Sept 15 to March 1. Black duck, woodduck, teal, Sept. 1 to May 1. License fee $20 for non-residents. Issued by J. DeWolfe Spurr, Chief Game Commissioner, St. Johns, or Provincial Secretary, Fredericton.

Newfoundland.

Caribou, Oct. 1 to Feb. 15. Ptarmigan, willow grouse, partridge, Sept. 15 to Jan. 12. Black game, canercailzie, protected to 1891 Moose and elk protected to 1896. Hare, rabbit, Sept. 1 to March 1. Otter, beaver, Oct. 1 to April 1. For full text of deer (caribou) law relating to non-residents, see our issue of June 20, 1889. The non-resident license fee is $50.

New Hampshire.

Plover, yellowlegs, sandpiper, duck, rail, Aug. 1 to Feb. 1. Woodcock, ruffed grouse, partridge, quail, Sept. 1 to Jan. 1. Deer, moose, caribou, Sept. 1 to Dec. 1. Mink, beaver, sable, otter, Oct. 15 to April 1. Raccoon, coon, gray squirrel, Sept. 1 to Jan. 1. Hares, rabbits, muskrats, Sept. 1 to April 1.

New Jersey.

Quail, partridge, ruffed grouse, pheasant, rabbit, Nov. 1 to Dec. 15, inclusive. Woodcock, the month of July, also Oct. 1 to Dec. 15, inclusive. Upland or grass plover, Aug. 1 to Dec. 15, inclusive. Wilson, English or gray snipe, the months of March and April and Oct. 1 to Dec. 15, inclusive. Reed bird, rail bird, marsh hen, Sept. 1 to Dec. 15, inclusive. Black and fox squirrels, Sept. 1 to Jan. 1. Gray squirrels in northern section (Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Sussex, Union and Warren counties), Nov. 1 to Dec. 15.; elsewhere Nov. 15 to Dec.25.

New Mexico.

Elk, buffalo, deer, antelope, mountain sheep, wild turkey, grouse, quail, Sept. 1 to May 1.

New York.

Deer, Aug. 15 to Nov. 1; hounding season, Sept. 1 to Oct. 20, on Long Island Oct. 1 to 10; no hounding in St. Lawrence and Delaware counties; one person may kill only three deer in a season; one carcass only can be transported if accompanied by owner. Rabbits, hares, Nov. 1 to Feb. 1. Black and gray squirrels, Aug. 1 to Feb. 1. Wildfowl, Sept. 1 to May 1.; Long Island waters, Oct. 1 to May 1. Quail, Nov. 1 to Jan. 1. Woodcock, Aug. 1 to Jan. 1. Ruffed grouse, partridge, Sept. 1 to Jan 1. Plover, bay snipe, sandpiper, shore birds, in Queens and Suffolk counties, July 10 to Jan. 1. Rail birds, meadow hens, in Queens and Suffolk counties, Sept. 1 to Jan. 1. Robins and blackbirds on Long Island and Staten Island, Nov. 1 to Jan. 1. *Exceptions*—Chautauqua county, wildfowl, Sept. 1 to Feb. 1. Delaware county, woodcock, Sept. 1 to Jan. 1. Oneida county, ruffed grouse, partridge, woodcock, Sept. 1 to Jan. 1. Queens and Suffolk counties, ruffed grouse, partridge, Nov. 1 to Jan. 1. Duchess county, ruffed gronse, partridge, woodcock, squirrel, Sept. 1 to Jan. 1. Rockland county, woodcock, gray squirrel, Sept. 1 to Jan. 1. Columbia county, woodcock, ruffed grouse, partridge, Sept. 1 to Dec. 1; quail, Nov. 1 to Dec. 1; rail, Sept. 1 to Dec. 1.

Ohio.

Quail, Nov. 10 to Dec. 15. Squirrel, June 1 to Dec. 15. Woodcock, July 15 to Nov. 1. Ruffed grouse, pheasant, prairie chicken, Sept. 1 to Dec. 15. Wild turkey, Oct. 1 to Dec. 15. Ducks, Sept. 1 to Dec. 15; in Lake Erie and its estuaries and bays, ducks may be killed only on Wednesday, Thursday, Friday and Saturday of each week in open season. Deer, Oct. 15 to Nov. 20. Dates inclusive.

Quebec.

Caribou, Sept. 1 to Feb. 1. Deer, Oct. 1 to Jan. 1. Moose protected to Sept. 1, 1890. Hares, Nov. 1 to Feb. 1. Woodcock, snipe, partridge, Sept. 1 to Feb. 1. Ducks and teal, Sept. 1 to April 1. Non-residents must procure hunting license from the Commissioner of Crown Lands. Fee $20.

Rhode Island.

Woodcock, ruffed grouse, partridge, Sept. 1 to Jan. 1. Quail, Oct. 1 to Jan. 1. Bartram's tattler, upland plover, Rhode Island or grass plover, Aug. 1 to April 1. Dusky duck, black duck, woodduck, summer duck, blue or green-winged teal, Sept. 1 to March 1. Rabbit, hare, gray squirrel, Sept. 1 to Jan. 1.

South Carolina.

Deer, Sept. 1 to Feb. 1; in counties of Clarendon, Georgetown, Colleton, Williamsburg, Marlboro, Kershaw, Horry, Darlington, Marion and Berkely, Aug. 1 to Feb. 1. Wild turkey, partridge, quail, woodcock, pheasant, Nov. 1 to April 1. Dove, Aug. 1 to March 1.

Tennessee.

Deer, Aug. 1 to Jan. 1. Quail, partridge, Nov. 1 to March 1. For excepted counties see our issue of Aug. 8, 1889.

Texas.

Male deer at any time (females, Aug. 1 to March 1). Prairie chickens, July 1 to March 1. Quail, partridge, Sept. 1 to March 1. Many counties are exempt from the law.

Utah.

Elk, deer, mountain sheep, antelope, Sept. 1 to Dec. 1. Wildfowl, Sept. 15 to April 15. Quail, partridge, grouse, Aug. 15 to March 15.

Vermont.

Deer protected to Nov. 1, 1890. Mink, beaver, otter, Nov. 1 to April 1. Quail, "woodcock or ruffed grouse," partridge, Sept. 1 to Feb 1. Woodcock, Aug. 15 to Feb. 1. Wildfowl, other than woodduck, Sept. 1 to May 1.

Virginia.

Deer, Aug. 1 to Jan. 1. Partridge, quail, Oct. 15 to Jan. 1. Pheasant, ruffed grouse, wild turkey, Sept. 15 to Feb. 15 in counties west of the Blue Ridge (except Rockbridge); in Rockbridge and counties east of the Blue Ridge (except Prince Edward), Oct. 15 to Jan. 15; in Prince Edward, Oct. 15 to March 1. Woodcock, Nov. 1 to April 1. Waterfowl, Sept. 1 to May 1. Marsh hen, Jan. 1 to June 20. Willet, Jan. 1 to July 20. Gull, striker, Sept. 1 to Jan. 1. Certain counties are exempt from the law.

Wisconsin.

Woodcock, Aug. 1 to Dec. 1. Quail, partridge, pheasant, ruffed grouse, prairie hen, prairie chicken, sharp-tailed grouse, grouse of any variety, plover, squirrel, Aug. 1 to Dec. 15. Snipe, wild duck, wild goose, braut, Aug. 1 to Dec. 15. Deer, Oct. 15 to Dec. 1. Otter, martin, mink or fisher, Nov. 1 to May 1.

Wyoming.

Deer, elk, moose, mountain sheep, mountain goat, antelope, buffalo, Sept. 1 to Jan. 1 (may not be killed by non-residents). Colon or quail protected to September, 1893. Ptarmigan, pinnated, sharp-tailed, sage, red or other grouse, sage hen, July 15 to Nov. 15.

Sea and River Fishing.

CAMPS OF THE KINGFISHERS.—VI.

ECHO LAKE, ONTARIO, CANADA.

THE morning came on windy, and by the time Everett was below the island on his way home the lake was so rough that the others did not care to go out; but as the skipper and old Dan had not had a fish together for a whole year, we got ready and headed up lake to fish around to the further side and down as far at least as to the island.

When we turned at the head of the lake to fish along down shore, we had the wind dead ahead and the waves running nearly two feet high; and the hard work—on the part of the skipper—of making headway against wind and sea more than balanced the pleasure of the fishing, for although we had both our lines out we didn't get a fish on the way clear down to the rocky point above the island.

Here we turned sharply to the left and followed around the little bay to the foot of the hill in comparatively quiet water, and down shore till opposite the island, when we crossed over and got out to rest, for the skipper's muscles were a trifle overstrained in the long tussle with wind and waves since leaving camp.

In the little bay we had taken four big Canada pike after four stubborn and well-contested fights; and this in a measure paid us for the hard work of the last two or three hours.

After picking a few huckleberries and strolling around till the kinks were out of backs and legs, we got back in the boat to make the circuit of the island for a bass or two; but here the wind had a fair sweep from the foot of the lake, and we found it hard work to manage the boat and both fish at the same time.

At the lower end, just outside the belt of bulrushes, Dan struck a fish; and while the skipper held the boat and listened to the whistling of the wind through the branches of the old dead pine standing sentinel at the point of the little inlet, an exciting trial of strength and skill took place between the old pelican and a pugnacious black bass of 3lbs. (afterward weighed at camp), that made ample amends for the poor luck of the morning. Twice he left the water to show us how high he could jump, and then tried to catch Dan off his guard by making a sudden dash for the bulrushes, but the grizzled veteran was up to all the tricks and stratagems of the *Micropterus* family, and soon had him alongside the boat exhausted and gasping, when the skipper lifted him in out of the wet and shortly returned him to the water with a stringer knotted in his lower jaw to "rumynate," as old Ben would have said, "on the onsatisfyin' result o' tamperin' with a speckled frog that went around loaded fur bass."

While the stringing was going on the wind blew the boat in among the rushes; and before we were fairly out again Dan was in another difficulty with another bass of about the same size as the other, and after a very similar performance he took his place on the stringer with his mate, to be followed in quick succession by three others, varying little in size, all taken by old Dan, while the skipper fished a little and attended to the stringing and the boat without as much as a solitary nibble during the whole time. But it was pleasure enough to note the expression of pure delight that beamed all over Uncle Dan's face while this exciting episode was going on; and when they suddenly quit biting, and he had made a dozen casts without a strike, the skipper headed the boat for a pull around the island, more than ever impressed with the truth that "it is not all of fishing to [catch] fish."

When we had fished carefully around to where we had started from without striking another fish, we concluded to go on down to the farm after milk and back around to the bay across the lake from the island, where old Sam had taken the young maskinonge, that we might be sheltered from the increasing wind, where both could have a chance to fish with some degree of comfort; nor did we put out a line going down or back, till we rounded the rocky point and got into smoother water, where the boat did not pitch and roll so badly.

In the bight of the bay, and for a quarter of a mile out, the water was quiet and unruffled, and here we had some great sport with the pickerel; no less than eleven fell to Dan's rod that weighed from 5 to 12lbs.; while the skipper held up his end with a less pretentious but no less satisfactory score.

The big 12-pounder was the hardest and longest fighter of his tribe we had ever struck, and for the first fifteen minutes of the contest we would have wagered our best rod against a split shot that he was one of the *Esox* family, but when he finally made a dash under the boat and we got a sight of him, Dan's hopes of beating old

Sam by taking the biggest masky were scattered to the winds and he made a few impromptu remarks that are better left out of these chronicles lest they leave the impression that his religious training was in a measure lost sight of in his early youth.

But the villainous old longface made a great fight, if he wasn't a masky, and proved himself dead game from snout to caudal. It seemed as if he would never tire, and the struggle was kept up with a dogged, persistent pull and frequent rushes, that nigh blistered Dan's thumb, till led alongside, when he was knocked on the head and dragged in the boat, where he lay limp and dying, no longer a terror to the timid bluegills and goggle eyes that made their home in the grass and thickets of bush weeds growing in the bay.

Old Dan was in his glory, several times we were handling a fish each at the same time, and he was only induced to bring the sport to an end when the shadows crept away out on the lake, warning us of approaching night, when the rods were laid in the boat and we took our way to camp in a happy frame of mind over our first day out together; and with "peekrils" enough to have kept "Sam Lovel's Camp"—"Peltier," "Solon Briggs" and all—sortin' bones for a month.

As we pulled into the dock, we found Knots planted in his chair under the old flag flapping in the breeze, gazing across the lake at his landscape, over which were lazily drifting great wisps of soft gray mist, the summit lit up with the last rays of the setting sun peeping out from under a bank of clouds hanging over the mountain at our backs, the whole forming a picture of sunset loveliness that would have caused our artist friend Tom Lindsay to go into raptures, had he been there to catch the spirit of the scene with his ready pencil.

The two kids were in a boat fishing a few hundred yards up the lake, old Sam was taking a quiet nap under a mosquito bar in the warehouse, Louis was busy with the supper and looking after a camp kettle of savory bean soup simmering on the iron bars over a small open fire, while Charley and the Jedge were yet out; the one with the Jedge's rifle looking for a bear he had lost back in the hills, as he had informed the others before starting out, the other with his rod somewhere up the little stream, spying out the hiding places of the wary trout that were hardly plentiful enough to pay for the work of clambering and barking his shins over the rough rocks to reach the few pools where they had their abiding places.

The Jedge came quietly out of the bushes near the bank of the stream soon after, with a string of five or six fair-sized trout on a forked twig; and Charley came down the main road a little later carrying his lost bear, which Knots pronounced the "worst shrunk bear in the Dominion,"—reminding him once more of his old and napless yarn of the old darky and his "shwunk" catfish.

Charley's "bear" was a slim-built little animal, hardly as large as a gray squirrel, covered with a coat of the finest and softest lead-colored fur, except a strip of pure white along the belly. We could tell nothing of the form or shape of the head, as he had clipped it off with the rifle ball, as the little fellow peered at him from a cleft in the rocks, as clean almost as though cut with a knife. None of us knew what to call it, but Louis took a look at it and said, "marten."

Louis announced that supper would soon be ready, and a resonant solo evoked from the bottom of a frying-pan with a fragment of rock, called the boys in from up shore, and we gathered around the table without annoyance from the mosquitoes or blackflies, the stiff wind up the lake during the day having blown them high and dry back in the hills. (We found it a good rule, in making a camp on a lake shore, to select a point, if one is to be found, free of underbrush as possible, on the side of the lake where the prevailing course of the wind is on shore, in which case the flies and mosquitoes are not nearly so troublesome.)

The two boys had come in with a string of sunfish and perch, two or three "snakes," and a broken rod, the latter due to their limited knowledge of the rush-under-the boat proclivities of the Canada pike; but Harry, the victim of the mishap, was made happy the next morning by the loan of one of Uncle Dan's old reliable Japanese cane rods, tried and tested in many a hard-fought battle with the bass and longsnouts of Upper Michigan, and the worthless $1.50 stained and varnished wooden fraud with beech-lancewood tops was cast aside as so much useless timber.

And here a word to the youngsters and beginners: Never buy a cheap wooden rod that is stained and varnished and painted up to conceal a brittle, crossgrained piece of wood. Buy a good rod or wait till you get to the woods and cut a pole, and you will never have to bewail the loss of a good fish and the greater—not the best, for they have no best—part of your kindling-wood rod.

KINGFISHER.

SCRANTON, Pa., Aug. 10.—I took a 4lb. 19in. black bass from Lake Winola last week with an 11oz. lancewood rod. This was my first experience. It was great sport, for he fought long and hard. I attribute the successful capture of him to the instructions got from reading fishing articles in your columns. I have reason to think there are landlocked salmon there, though none have ever been taken. Can you give me instructions how to get them? What do they bite, when, deep or shallow water?—W. [We doubt that there are any landlocked salmon in the lake above mentioned, and our correspondent must refer to the lake trout (*S. namaycush*). During the summer months the lake trout makes its home in deep water, and may be caught with the spoon trolling on or near the bottom. It is a ravenous feeder, and most any kind of fish makes good bait. A good way to attract the fish is to scatter pieces of bait (fishes cut into small pieces) over the waters to be fished a day in advance. A rod and reel and one hundred to two hundred yards of fine strong line, with a ten-ounce sinker on the end for deep fishing, a gut leader of ten or twelve feet, tied to the line about its own length from the sinker, makes a good outfit. Dealers furnish numerous contrivances for the capture of this fish.]

SEINES, NETS of every description. American Net & Twine Co., Mfrs., 34 Commercial st., Boston, or 199 Fulton st., N. Y.—*Adv.*

THE revised and abriged edition of the A. O. U. Check List of North American Birds, including the additions and changes made in the supplement, will be sent post free on receipt of 50cts.—*Adv*

CHICAGO AND THE WEST.

AS stated in my earlier letter, life at the little town of Middle Inlet, deep in the pine woods of northern Wisconsin, could hardly be expected to furnish any thrilling excitement, yet I managed to put in several very pleasant days here, spending most of my time in trying to get Dan Seaby to go out fishing with me, or in trying to find out the secret of the ineffable peace and content with life which seems to brood over that community. So far as I could learn, Middle Inlet toils not, neither does she spin, but she lives and is happy, and that is more than many of us can say for ourselves. We might accept Dan Seaby as the type of Middle Inlet philosophy. "The difference between me and you is right here," said Dan, "as soon as you've had your supper, you begin to worry about whether you're goin' to have any breakfast er not. Now, ef I just have the supper, I aint worryin' about the breakfust at all. That's me!"

No one knew how Dan managed to get the supper, but he seemed somehow to find enough for himself and his girl wife. He was the happiest man I ever saw, and I like to think about him. Barely 18 years of age, he stood over 6ft. tall and was very strongly built. It is said that he can lift 350lbs. from the ground and put it up over his head. He is valued on the logging "drive," and is skilled in all the wild accomplishments of the North Woods. He can stand erect upon a slender log which his weight sinks 2ft. beneath the water, and pole it where he likes as rapidly as one could run a canoe. Even the little boys came and told me how Dan Seaby could spear the pickerel, and the older members of the community all acknowledged that Dan could catch trout where nobody else could, and when others fishing at this side could not get a bite. The country thereabouts is unspeakably rough and hard to traverse, yet I found that Dan took it with all ease, whether in log jam, windfall, cedar swamp or tamarack bog, and never missed his footing, no matter how slippery the log or limb. He is a typical son of the forest, and knows every foot of ground for 50 miles about his home. He used to live on Lake Noquebay where he was well-known as a guide. Once his sailboat upset in late November, and he was in the water for two or three hours, at a season when the lake was fringed with ice. "Oh, I didn't mind it much," said he. "The boat she was upside down, so I just dove under her and come up inside, and crawled up under the seat-boards. I wasn't only two or three inches over the water then, and down on the bottom I could see the fish as plain as day. I never saw so many fish in my life. There was plenty of air in the boat, and I just took it easy. It was a lot warmer inside than it was out. Bimeby I see the water get shallower, and 'fore long I struck a bar and waded out. It seemed a good while 'fore she drifted acrost the lake."

It is said of Dan that he never goes to bed without getting his feet wet, and that he can't sleep well if his clothes are dry. Another peculiarity, which may or may not be connected with the above, is that I never happened to see Dan have on two stockings of the same color. But, taken as he is, I would not change a line of Dan, even if I could make him all over, nor have any one think I hold him one shade less than a generous, open-hearted fellow, simple and hearty as the breath of the woods that raised him, ready to share his last crust, and ready to go out of his way to accommodate even a stranger. I like such men infinitely more than I do the knock-kneed fools in cap, belt and blazer, we sometimes see about the edge of cities, posing as apostles of the love of outdoor air.

One day Dan and I went up the Middle Inlet stream about three miles, but found that stream so full of logs and sand that we turned back. Had we kept on three miles further, to the upper dam, we should have found good fishing in the deep water above there, as I afterward learned. All these streams are logged and dammed. That is the most dammed country I ever saw. In the early season, the fishing below these dams is magnificent, but by this time you can hardly find anything but chubs in the great, beautiful pools below the dams. It is a mystery where the trout get to. It is probable that they run up into the small or brushy streams, or lie in the deep water far out in middle of the back-water. In either such locality, they are nearly inaccessible, and the fly is utterly worthless as a lure. If we except the pools between the railroad and Lake Noquebay, the Pike River, the lower Thunder River and the rapids of the Peshtigo, it is fair to say that the angler cannot use the fly, and can hardly use a fly-rod, so unutterably tangled, dense and thick-grown is the wilderness along the narrow and hidden little streams. The short, stiff rod, the short line, heavy sinker and big bait, are unquestionably the best and almost the only practical tackle.

The Milwaukee and Northern Railway has put several hundred thousand trout into its streams in the past three years, and has this season planted nearly 100,000. This is certainly a wise and commendable action, and is indeed the only thing to do if the company wish to have any fishing left near their line. I lately met Mr. Sheardown, general passenger agent, and Mr. Tabberner, the general agent of this road, located at Chicago, and they both laughed at me when I spoke of the danger of their streams being fished out. "Why, didn't you catch any fish?" they asked. It is true I did. But so does everybody else up there, and the result is the streams will not stand it. There is no restraint practiced and no limit placed. The result is already apparent. The railway company will do well to keep up its planting, for the harvesting is continuous, and by and by it will be only gleaning.

Lake Noquebay, five miles from Ellis Junction, or Middle Inlet, is a great water for bass, pickerel and wall-eyed pike, or "doré," as the latter fish is called in that country. These fish run up into the inlets and get into the great pools under the logging dams, where they lie in numbers. The pool at the Forks, or junction of the Middle Inlet and the North Branch, was full of these fish, and sport at them was common. Even so high up on the Middle Inlet as the second dam, I was told, one might be pretty certain of striking a big doré and perhaps a big trout or two. As this was only a mile or so below the railway station, I walked down one morning, declaring my intention of landing a doré on the little fly-rod. This, of course, excited laughter from the villagers, who declared "that thing'd break." Yet, using a big bunch of angle-worms, I did hook and land a three-pound doré. It was not very much of a fight, and the result was no trick at all.

Speaking of angle-worms, any one going into this country to fish should take the worms up with him if he cares for that bait. Except where they have been planted, there is hardly a worm to be found in all that country. We found trout-fins much superior to worms for bait, however, and it will hardly pay any angler to bother much about a can of worms to take along. The fin is a much tougher and more lasting bait, and quite as attractive as any for trout in those waters.

One day I went up the Lower Inlet, where so many large trout had been taken. It was said that over 2,000 trout had been taken in this water within 60 days, and the average was very heavy, a pound, pound and a half or larger being nothing uncommon. The dam being shut down, there was back-water running up nearly a mile and covering many of the best fishing points, yet by dint of wading and floundering waist-deep through the treacherous grassy bog covered by the overflow, we managed once in a while to get out to the creek bank, and then nearly always got some good trout. The local market-fishers said that nobody knew where all the trout came from in this stream. If left unfished for a week or two, there seemed to be as many as ever; and after the water had run down, upon opening of the gates, the fishing was always extremely good. I think the trout lie in under the banks and work out from time to time. There are many places along these streams where the water runs directly underground, as I noticed on the Medicine Brook, and the whole country is honey-combed with water chambers invisible from the bank. It is in such places that the largest trout lie, only coming out to the mouth of their caverns when tempted by some exceptional bait. I found several such holes while wading the Medicine Brook.

This fishing on Lower Inlet was only about three miles from the station. Indeed, one does not need a team to get at pretty fair fishing for small trout close to the railway. Shepherd's Creek, a brushy and difficult stream, affords good fishing at little ones, within three miles from Middle Inlet. The South Branch, between the railway and the Forks, offers some difficult but paying water. I caught six trout one morning under the dam, right in the village of Middle Inlet, where no one thought any trout were left. In fact, I never made a trip that I did not catch some trout, and I kept Station Agent Dropp and his family supplied with trout all the time I lived with him in his freight-car home. The only drawbacks in the fishing were the smallnes of the run, the terribly rough going in the country, and the extreme sluggishness in biting of the trout in these streams; at this season they bite much more like suckers than like trout, and the bigger the trout, the more timidly they bite.

Wausaukee is six miles above Middle Inlet. A nine-mile buckboard ride brings one to good fishing from that point. The trout run a little larger. The stream is so rough that a fly-rod can hardly be used. Bait is best for that water.

Pembine is about thirty miles above Middle Inlet. There is good fishing in the river there, anywhere from two miles to six miles from town, earlier in the season. There is an infernal old market-fisher here who keeps the trout pretty well skinned out of these waters. He usually catches from 6 to 15lbs. a day. Everybody in town knows he breaks the law. The law is universally broken all through that country. If you raise your voice against that, you are safe to hear some loud talking, and the natives will bulldoze you, if they think they can. An example or two is very much needed in that country, and would have a swift and salutary effect. A game warden with a backbone is needed. Let the railroad company get one such appointed. It will be money in their pockets.

I met an old, rough-spoken, kind-hearted character by the name of Van Keuren at Middle Inlet, our first acquaintance being during a little circus we had over his shutting down the dam so that he could cut hay on the marsh below. I reasoned with him that a little paltry hay didn't amount to anything compared to the trout fishing he had spoiled, and he remarked that he would remove the interior machinery of anybody who dared raise the gate, which remark disposed me to go and raise the gate. We finally compromised the matter by going fishing together over to Medicine Brook, about sixteen miles from the village. Van Keuren drives a clinking good team, and is the best woods driver I ever saw. The way we cleared stumps, logs, trees and brush wood was a caution, and we went over country where I should not have thought it possible for a wagon to go. If any one is going into that country he cannot do better than to get Van Keuren to take him. He will go flying, and if the wagon holds together will get to the good fishing. Our trip was made directly after a heavy windstorm and the road was in a bad shape from "cross timber." We had to cut through nearly a dozen fallen trees, some of them 2ft. in diameter. At this work Van Keuren and his companion, Charlie Chelsey, proved themselves mighty handy. It was always a pleasure for me to see a genuine woodsman handle an axe. No writer has ever described this as well as Cooper, I think in his novel "The Prairie."

None of us knew the way over to Medicine Brook, and we got lost out in the "Flats," and in our wanderings discovered a beautiful lake, Elbow Lake, as we learned later. Saw moccasin tracks in the road, and knew the Indians had come in after huckleberries—a very scarce crop this year in that country. We finally found our stream, at first a tiny, crooked driblet, almost hid in the grass and brushwood. We followed down over the most treacherous and boggy country imaginable, finding a spring in every bog, until the creek grew rapidly bigger and deeper, and became a very good trout stream indeed. The fishing was very rough, as is usual on all these streams, and the art of it consisted in dropping your bait in between the branches into the deepest and blackest holes; but we caught a lot of beautiful trout, a number of which ran over a pound. I have rarely seen fish so plentiful and so large in so small a stream. I caught one rainbow trout, a half-pounder. Large numbers of this variety have been planted in these Wisconsin streams,

and in some waters they are said to be doing very well. They grow more rapidly than the native trout.

Our Medicine Brook trip was a great success, but still we did not find the place where the Ellis Junction men had caught their big trout; and that was just what we were after, for we were told it was in the Medicine.

I now went up to the "Soo Line," and made the visit to the Gaylord Club, of which I shall write later, and on coming back stopped off again at Middle Inlet. Mr. Van Keuren was all ready for a trip over to the Thunder River, distance twenty miles, and said he was told that the Thunder was where the big catch of trout was made. That settled it. We started the next morning at four o'clock, and before sun up were on the horrible corduroy road which crosses Shepherd Creek swamp between the Inlet and Ellis. After we got over this purgatory, the rest of the ride was delightful. We crossed the broad and beautiful Peshtigo River just above Ellis Junction, and followed up the valley of that pleasant stream. The air grew fresh and pleasant, the road was good and smooth, the country was open and pleasant, and on the whole this trip was the finest one we had. A constant source of delight was the discovery of lake after lake, nestled down in the green hills, and often visible only in a flash of silver through the surrounding forest. Many of these little lakes were very gems of beauty, and apparently unknown to the angler. Not even the bark roof of an old camp showed upon their shores, and no boat could be discovered in the reeds. We had not time to fish these waters, but it is almost certain that they hold plenty of bass, as do most of the lakes of that region. Wisconsin is the wateriest country I ever got into.

We crossed the main Thunder River, leaving Thunder Lake to the left. Plush's Camp, on Thunder Lake, is a good place for strangers to stop at in this district, and good fishing is within easy reach from there. Thunder River empties into the Peshtigo, and from the road down is a wide, beautiful trout stream, where a rod can be used well and some comfort taken in fishing. If we had gone down this stream we should probably have taken some large trout, but we feared the stream had been fished to death, and so kept on up, stopping for a rest at the camp by the dam, where the North and South branches of the Thunder unite. We heard that Marinette parties had been in there for some time, and had stripped the streams. Thousands of trout had been taken out, and a party was camped there then, packing trout down on ice. They told us our chance was slim, and advised us to go somewhere else. "Great heavens!" I thought, "is there any place else where some trout hog or other has not been before and cleaned out the fish?" But we resolved to try it; so, wisely disregarding all their advice, we pushed on up the South Branch, above the "Haymarsh," and went into camp, tentless, but happy, near the little bridge over the creek above the marsh. This is fully five miles above the big dam, and about twenty-five miles from Ellis Junction.

In the morning one of our party, Charlie Hiller, drove the team down to the dam. Van Keuren, Charlie Chesley and myself resolved to fish down the stream to that point, which we expected to reach in time to drive to Ellis and catch the south-bound evening train at 8 o'clock, which was to take me away from Wisconsin. As I wanted a basket of trout to take home with me I resolved to quit all conscientiousness and go in for results for once. I discarded my split-bamboo fly-rod, took a stiff lancewood bass-rod about 8ft. long, tied the line directly into the snell of the hook and put on a bunch of fins about as big as my fist. I didn't have very much sport, but I should remark that I caught trout. It is no trouble to out-fish the market-fishers if you use their tools.

It was 2 o'clock instead of 12 when we got down to the dam, and how we ever got there at all is more than I can tell. The stream runs through a swamp whose like I never saw. The thicket of alders, willows and water-elms was the densest I ever saw, and if one worked out through the tamarack bog to the hills he met such a jungle of cedar fall, broken pines and boggy creeklets that he wished he had stayed out in the middle. That stream is not fished out and never will be. It will protect itself. On over one-third of its length it is impossible to get at the water at all. In the more open places lower down we found the paths of fishermen, plainly beaten, but we went through country never touched by anglers. We only tasted the stream here and there, but we got a splendid lot of trout. I had sixty dandies, several which we thought would run a pound and very few small ones.

We went home, still wondering where those big trout had been caught. A half-hour before the train started south I met George A. Schlick, a saloonkeeper and liveryman at Ellis Junction. We talked of trout. He took me to his ice house, and there, right before my eyes, showed me a basketful of that very same brand of trout, caught that very day!

I had worked hard, and had traveled far and wide on my trips for some good trout. My largest would not weigh over a pound and a half. Here were trout that would weigh two pounds, three pounds, three pounds and a half—great magnificent fellows, so long that you had to turn them up at both ends to get them into a market-basket! And they had been taken right in that troutless Peshtigo River, at the mouth of Medicine Brook, within ten miles of Ellis Junction, and within four miles of where we had been fishing. When I learned that, I could have sat down and cried. I would always rather catch one big trout like that than fifty little younglings. And here they were.

"Yes," said Mr. Schlick, "there are trout in the Peshtigo, below the big falls. I have often caught them in the rapids between there and the mouth of the Medicine, and there are several other points equally good. We caught these trout on minnows, and we also caught numbers of mighty good bass right out of the same hole. The trout don't always bite, but they're there. They lie in the deep, cold holes at the mouth of the creeks. In working for these big trout this short-pole, jerk-'em-stiff business don't go. You've got to know how to fish, and you want the right tackle. Come with me and I'll show you some big trout."

I couldn't come, but I have been mourning over it ever since, and some day I shall go up there again, and get out in the middle of those rocky rapids, chin-deep, and fish for trout the way a fellow ought to fish, with a fly and a fly-rod, and not jerk them out through the brush on bass tackle.

This ended my trip. My friend the station agent at Ellis Junction could have made it very pleasant for me if, on the first morning we met, he had not sent me out of the country and away from his pet fishing hole—which I found out after all, and take pleasure in publishing, on his account. His companion, Judge Bartels, the game warden, I did not see at all. I didn't hear any one say much about his ever wardening anything, but everybody says he is an almighty good hand to take you to the best fishing grounds, and I presume that is so. I got a lot of experience on my little trip, and learned that without a reliable guide you can fool away a lot of time following out directions intended to keep you away from the best fishing.

On our Thunder trip we were not far from the headwaters of the Oconto, where the fishing is good. If it were not, F. P. Taylor and his Chicago party would not be in there now on a second trip. It won't be so good when they come back. They will kill two or three thousand trout.

The mosquitoes are not bad in Wisconsin this year. Any one going in should be sure to take heavy woolen underwear. The nights are cold. E. HOUGH.

BASS NOTES.—Pottsville, Pa., Aug. 10.—I have enjoyed reading Dr. Gill's "Nest Building of the Sunfish." I have now an explanation of the reason why I could not take two small-mouth black bass with the fly or bait. I was very anxious to have them in my net. As near as I could guess they would measure 10 or 12in. They must have been protecting their spawn. It was in just such a place as he describes the sunfish makes its hatchery. They acted in the same way, but would take neither bait nor fly. While fishing with John Messner at Dauphin last year we both caught the same bass. One hook was swallowed, but the bait was 6in. up the leader, the other hook was through the side of the head, but the bait was swallowed and came out loose with the first hook. We were fishing with small live catfish from the same boat.—C. W. P.

WEAKFISH are now caught in great numbers in the West Channel of Great South Bay, Long Island.

Fishculture.

U. S. FISH COMMISSION WORK.

THE Albatross during the winter and spring of 1889 was at work along the southern coast of and in the Gulf of California, and since June her work has been extended northward, through Oregon, Washington and southern Alaska. Capt. Tanner was in command as hitherto with Prof. C. H. Gilbert as chief naturalist, C. H. Townsend assistant naturalist and B. A. Alexander as fishery expert.

Her work on the northern coast had reference mainly to halibut and cod, though of course her investigations were of a general nature. Where her work has been carried on continuously by soundings it is of vast importance to the Hydrographic office and to the Coast Survey. These soundings are made to determine the location of fishing grounds or to discover unknown banks.

The special Senate Committee of Indian Affairs, consisting of Senators Dawes, Stockbridge, Manderson and Jones, of Arkansas, accompanied the steamer along the Alaskan coast as far as Sitka, in order to investigate the conditions of the Indians in that region, making frequent stops.

Prof. Gilbert being obliged to join his college in September, left the ship the first part of August and is now in Washington, where he will work up the results of the cruise in those departments of which he was in charge. Her cruise up to the present time has been exceedingly valuable in its results. Reports upon this work are in course of preparation and will be published as soon as possible.

The Fish Hawk has been prepared to continue her investigations into the ravages of the starfishes upon the oyster beds along the southern New England coast and has commenced work in the vicinity of South Norwalk. She will, while making scientific investigations concerning the characteristics of the beds and the habits of the starfishes with reference to determining some method of preventing the injury which they do to the beds, also make practical tests as to protecting the beds and ridding them of the starfishes after they have been attacked. This is one of the most difficult problems connected with the fisheries. The starfishes destroy several hundred thousand dollars' worth of oysters every year in the waters of Rhode Island, Connecticut and New York. South of that region they do no harm to the beds, the reason being that the water south is too fresh, where the beds occur, to enable the starfishes to live upon them.

The results of this work are anxiously waited for by the oystermen of Long Island Sound. The Fish Hawk is in command of Lieut. Robert Platt, U.S.N., with Mr. C. F. Hodge, of Clark University, as naturalist.

The Grampus is engaged upon an investigation of the region between New York and Nantucket through which the mackerel pass in their migrations north and south. This work is being carried on from near the shore into the inner portion of the Gulf Stream. The object of this investigation is to ascertain if possible the cause influencing the movements of the schools of mackerel from year to year with respect to their abundance and times of their passage: as is well known there is a great variation in their numbers and movements in different years, and some seasons they move northward at a lower level in the water than at others, so that the fishermen are not able to find them. The Grampus has already undertaken some work in connection with this subject in the springs of 1887 and 1888. She has now been fitted with the most approved scientific appliances, and it is expected that important results will be obtained. Prof. Wm. Libbey, Jr., of Princeton College, is in charge of the investigation, assisted by Professors Magie and Rockwood of the same college. One cruise has already been made, and Prof. Libbey reports many new facts not hitherto known respecting the Gulf Stream.

With respect to the interior waters, two parties are now at work under the direction of President D. S. Jordan, of the Indiana University. One of these parties, which is headed by the professor in person, is working in Colorado and the adjoining territories; the other, under Professor S. E. Meek, of Iowa, is investigating the waters of Missouri and the adjoining regions. These explorations consist in making thorough examination of the rivers with respect to the fishes living in them, the general characters of the river basins, the temperature of their waters, etc. The principal object is to ascertain the different species occurring in the rivers which have an economic value, and also learn the advantages of streams for the introduction of certain fishes. This work began about the middle of July, and will be continued into September.

The work at Wood's Holl is in charge of Dr. H. V. Wilson, formerly of Johns Hopkins University. The doctor's principal work is the study of the embryology of economic species in connection with the work of fishculture, which is carried on at this station during a large part of the year. There have been no changes at this station during the summer; at different times from twelve to twenty naturalists, the most of whom are engaged in studies having a more or less direct bearing upon the work of the Commission. These naturalists are men that volunteer, or persons occupying tables at the station by the courtesy of the Fish Commission. Among them are Prof. W. H. Brooks, of Johns Hopkins University; Prof. Edward Linton, of Washington and Jefferson College, of Pennsylvania; Mr. E. R. Boyer and Mr. C. B. Davenport, of Harvard College; Prof. T. H. Herick, of Cleveland, O; Mr. S. Watase and Dr. R. P. Bigelow, of Johns Hopkins University; Dr. E. A. Andrews, and Dr. James I. Peck and others.

The Fish Hawk and the Grampus have headquarters at Wood's Holl, and in the intervals of their work are carrying on investigations in connection with the laboratory. Among the important economic questions which have been studied here have been the rearing of young lobsters from the egg, and the starfish and oyster question; also the life history and the habits of the economic fishes.

NEW FISHCULTURAL STATIONS.

Several new stations for the Fish Commission are being established, some of which are in a condition now for beginning work. These stations are as follows:

At Leadville, Col., where the Government has set aside a reservation of nearly 1,500 acres for the use of the hatchery, a hatchery and ponds will be built mainly for rearing and distributing trout in the extreme Western States and Territories. Col. John Gay, Inspector of Stations for the Commission, is in charge of the laying out and construction of this station.

A station on the Clackamas River, Oregon, is being established for the replenishing of Columbia River with salmon, of which the natural supply has been enormously decreased during the past few years. Livingston Stone is in charge of this station.

At Neosho, in the Ozark region of Missouri, a hatchery for rearing and distributing members of the salmon family (trout) and indigenous fishes of the region is being established.

At Duluth, Minn., a station has been established for propagating the whitefish. This station was operated last winter for the first. It is in charge of Dr. R. O. Sweeny, formerly State Fish Commissioner of Minnesota.

There is also a station about to be established at Put-in-Bay, Ohio, on Lake Erie, for the collection of whitefish eggs, and also for their hatching and distribution to a certain extent. Put-in-Bay is the scene of one of the most important whitefish fisheries of the Great Lakes, and it is expected that by concentrating most of the work of collecting eggs at this place they can be obtained with greater economy, and probably in much larger numbers than ever before. Such of the eggs as cannot be accommodated for hatching here will be sent to other stations for that purpose.

The Penobscot salmon hatchery, which is situated at East Orland, Maine, eight miles south of Bucksport, in charge of Mr. C. G. Atkins, is being much improved. Congress having appropriated money for the purchase of land, including the site of the old hatchery, the facilities for the hatching and rearing of salmon at this station will be greatly enlarged. Mr. Atkins has had charge of the Maine stations since they were first organized.

The Commissioner, Col. Marshall McDonald, left Washington on the 8th of July for an examination of the western stations and especially the ones which are being constructed and those for which plans have been drawn up. His trip, therefore, has included the Leadville station, the stations in California, Oregon, Minnesota and Lake Erie. He has also visited the Yellowstone Park, where it is expected that facilities can be furnished for hatching fishes to be placed in the headwaters of the principal streams of that region. On the west coast he also paid attention to questions of general interest, especially at San Francisco and Portland. The Commissioner is expected to return to Washington the latter part of August. He has been accompanied by Mr. George H. H. Moore, in charge of distribution, and by Mr. J. J. O'Connor, chief clerk of the Commission. During the absence of the Commissioner, Professor Richard Rathbun, in charge of the division of scientific inquiry, is acting Commissioner.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

SUBSCRIBER.—It is hardly probable that Mr. Fife will consent to the publication of Minerva's lines.

S. C. P., Caribou, Me.—You cannot buy ribs ready made, but will find full instructions for making them in "Canoe and Boat Building."

AWAHSOOSE.—The beetle is the *Trox unistriatum*; this genus is usually found on the ground, under old woolen clothes, hides, etc. It is harmless.

H. H. B., Palmer, Mass.—The lines of Rob Roy cannot be had, but the Raritania in "Canoe and Boat Building" is a similar boat and probably as good.

F'LIN, New York.—What effect would it have upon a 12-bore Parker gun, choke-bore, 30in. barrels, to shorten the barrels 2in. or more? The gun shoots too close for brush shooting of the thickest kind. Ans. It would convert it into a cylinder and give wider scatter to the shot.

W. D., Philadelphia.—What kind or kinds of native birds can be kept in a building about 6ft. square and 10ft. high? It is well-built and sheltered from storms, has open wire work in lower half of south side, but can be closed at night. The sun shines on it all day. There is no artificial heat. Ans. No species of American wild birds is adapted to thrive in such quarters; confined there wild birds would drag out a miserable existence.

F. W. N., Plattsburgh, N. Y.—The Attorney-General of New York, in a letter to the Secretary of State, dated June 17, gave these points in a summary of the new State dog law, now in force: "It increases the tax upon a dog other than a bitch from 50 cents to $1. It exempts all dogs under four months old from any tax. It provides for the registry of every other dog, annually, on or before the first day of May, by the owner or harborer. * * * Penalties are then provided for the failure to register, number or license such dogs. Provision is then made that any dog not registered or collared, as provided for in the act, may be lawfully killed by any constable, etc. The act is not to apply to any dog owned or possessed by any person or association, etc., engaged in the business of breeding dogs, etc. The amendatory act, it is provided, shall take effect immediately. It will be seen, therefore, that the only change in the amount of the tax provided for is in the addition of 50 cents for each dog other than a bitch. By the Revised Statutes, the assessors of towns, etc., are required to finish their assessment rolls by the first day in August in each year. So much of this act, then, as provides for the assessment of the tax, is capable of enforcement the present year. So much of the act, however, as provides for the registering and collaring of dogs, must be done annually, by the first of May, and so much of the act as provides for the furnishing of lists by the town clerk or village clerk, must be done by the first day of June. It is clear that these provisions of the act cannot take effect before the year 1890. No other construction can be given to these provisions of the act. * * *—CHAS. F. TABOR Attorney-General."

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

FIXTURES.

DOG SHOWS.

Sept. 7 to 11.—First Annual Dog Show of the Brooklyn Kennel Club, at Brooklyn, N. Y. Charles Dickleman, Secretary. Entries close Aug. 28.

Sept. 9 to 13.—Dog Show of the Farmers' Lancaster County Fair Association, at Lancaster, Pa. A. A. Herr, Secretary. Entries close 11 A. M., Sept. 9.

Sept. 10 to 13.—Sixth Annual Dog Show of the London Kennel Club, at London, Ont. C. A. Stone, Manager. Entries close Sept. 5

Sept. 10 to 13.—Dog Show of the Central Canada Exhibition Association, at Ottawa, Can. Capt. R. C. W. MacCuaig, Secretary. Entries close Aug. 31.

Sept. 11 to 13.—First Annual Dog Show of the Toledo Kennel Company, Toledo, O. Chas. E. Rowland, Secretary, Box 423. Entries close Aug. 26.

Sept. 16 to 19.—Dog Show of the Dominion of Canada Kennel Club, in connection with the Industrial Exposition at Toronto, Canada. Capt. C. Greville Harston, Sec'y. Entries close Sept. 4.

Sept. 17 to 20.—Dog Show of the Pet Stock Association at Elmira, N. Y. J. Otis Fellows, Superintendent, Hornellsville, N.Y. Entries close Sept. 7.

Oct. 7 to 12.—Eighth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Jan. 27 to Feb. 1, 1890.—Dog Show of the Colorado Poultry and Pet Stock Association, at Denver, Col.

Feb. 18 to 21, 1890.—Fourteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

March 11 to 14, 1890.—Second Annual Dog Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

March 25 to 28, 1890.—Second Annual Dog Show of the Mass. Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

April 1 to 4, 1890.—Sixth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Nov. 4.—Third Annual Field Trials of the Indiana Kennel Club. P. T. Madison, Secretary, Indianapolis, Ind.

Nov. 11.—Inaugural Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Secretary, London, Ont.

Nov. 18.—Eleventh Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 2.—Inaugural Field Trials of the Central Field Trial Club, at Lexington, N. C. C. H. Odell, Secretary, Mill's Building, New York, N. Y.

Dec. 16.—Second Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Marietta, Ga.

Jan. 20, 1890.—Seventh Annual Field Trials of the Pacific Coast Field Trial Club at Bakersfield, Cal. H. H. Briggs, Secretary, 313 Bush street, San Francisco, Cal.

Feb. 11, 1890.—Fourth Annual Field Trials of the Texas Field Trial Club, at Marshall, Tex. W. L. Thomas, Secretary.

COURSING.

Oct. 9 to 12.—Fall meet of the National Coursing Club at Hutchinson, Kan. M. E. Allison, Manager.

Oct. 24.—Annual Meet of the American Coursing Club, at Great Bend, Kan. F. K. Doan, Secretary, St. Louis, Mo.

THE TAIL OF A DOG.

FATE has decreed that this should be cut short, as the story itself will subsequently unfold to you, and strange to say, were it not for the brevity of this tail there would be no tale at all. On the morning of April 1, 1882, the population of W., a small town in northeastern Illinois, was increased by the valuable addition of two bright-eyed yellow pups, as near alike as the Siamese twins. They were thoroughbred Irish setters, and were proud of their ancestors, who many years before had dwelt in the city of Dublin.

James Riley and William Ferguson became the envied possessors of these puppies. Ferguson named his puppy Jack, and Riley called his Sport. Although both masters labored diligently in training their dogs, Sport soon proved to be the better dog in the field, as he was gifted with a more vigorous constitution than Jack. While Riley was exulting over the excellent results of Sport's careful training, and congratulating himself on being the possessor of a fine fielder, Ferguson was grumbling over his ill luck, and it seemed inevitable that he must lose the fruits of his labor, as Jack's health was rapidly failing. However, Riley was also destined to taste the cup of bitterness, for, notwithstanding his many precautions, one day Sport met with a sad loss. It was about the middle of the afternoon that Sport, with the aid of a small boy, managed to tie himself loose from Mr. Riley's dog house. It did not take him long to join his friends in the streets, but his freedom was of short duration. He had not turned more than a half-dozen corners when, unfortunately, he came in the vision of a young Mr. Mills from the country, who had a special fondness for bird dogs, and had been known to become so attached to them that they would invariably find themselves chained to his dog house ere this attachment ceased. Half rations now took the place of the bill of fare to which Sport had been accustomed, and this was not the only thing that gave him an unfavorable impression of country life. Mills, fearing that some one might recognize Riley's dog, cut off the greater portion of his tail. This severed the last tie which bound Sport to his new master, and he longed to be once more under Riley's tender care, away from the insults of this country barbarian. I do not know what Sport's politics were, but he howled for protection when Mr. Mills introduced this extreme measure. Poor Sport, he was now afloat on the stormy sea of life without a rudder.

It was about two weeks after Sport's taste of the Mills inquisition that Riley, having been informed of his dog's whereabouts, drove out to the farm of Mills, where he found what was left of his lost bird dog. Notwithstanding the great change which deprivation of food and tail had wrought in the appearance of the unfortunate animal, Riley immediately recognized the remainder of his once noble dog. We must give Mills credit for having the honesty to inform Riley that his dog had voluntarily come there a short time before, and that he had fed the dog to keep it from starving; but Sport's appearance would hardly substantiate this statement. After Riley, by the use of strong adjectives, had expressed his indignation at the way in which Mills had mutilated the caudal appendage of his dog, he put the living skeleton into his buggy and drove home. Once more placed on full rations, Sport soon became himself again, but he never regained his wag.

Mills was not the only one in the neighborhood who took a fancy to Riley's dog, and in spite of care Sport again disappeared, but after a short search was found behind the barn, cold and lifeless. The following day Riley persuaded Pat, the hired man, to help bury the dead dog; and that night when Pat went down town he told the boys that Jimmy Riley had shed tears over the loss of his dog, and that his parting words were "Good-bye, Sportie." Of course, this was not "all wool and a yard wide;" nevertheless it was very annoying to Jimmy Riley to hear the boys in the street call after him, "Good-bye, Sportie." This lasted for about a week, when one night, as Riley stepped out of the kitchen door, he was startled to see in front of him, full of life and gladness, to all appearances, the identical dog that he had buried but a few days before, and there could be no mistake, for there was the stub of a tail wagging away as naturally as ever. Jimmy, fearing that this was an hallucination, called the dog into the house, where Mrs. Riley explained that it was a sure case of resurrection. Pat told the boys down town that Jimmy Riley's dog had turned up again, and that Jimmy had come into the house and informed his mother that Sportie was resurrected. So the boys had a new tune to harp on, and whenever Riley showed himself on the streets, some small boy would yell out, "There goes Resurrection Riley!"

This is a true, although strange, story. The explanation is this: We left Ferguson despondent over the failing health of his dog Jack, nor were his fears unfounded; for one afternoon, about two weeks after Riley had rescued Sport from the country barbarian, Ferguson found his dog dead on the barn floor. While he stood there wrapped in his disappointment, a sudden thought struck him which drove away his gloom. Why could he not take advantage of the striking resemblance between his dog and Riley's and exchange with him. Riley was out of town that afternoon, and at dusk Ferguson carried Jack over to Riley's place, cut his tail the length of Sport's, placed Sport's collar on him, left him behind the barn and departed with Riley's dog. Although Sport was kept carefully tied up in Ferguson's barn, he managed one day to escape, and went home, where he was received as one resurrected.

This was not the only time in this brief tragedy that Sport took the part of the resurrected dog. The same afternoon on which Jack died, Mr. Ferguson's father had gone out to the barn for the hatchet, and discovered Jack lying dead on the floor. That evening he had occasion to go again to the barn after Sport had been chained there, and on opening the door was considerably frightened to have what he thought to be the dead dog jump into his face as full of life as ever.

The old saying is, "Three times and out." So it was with Riley's dog. About three weeks after his return, Sport was stolen for the third time and was never heard from again.

E. W. Austin.

PREVENTION OF RABIES.

CURE of rabies, as it occurs in the lower animals, has never been looked upon as a promising subject of inquiry. As soon as the existence of rabies is recognized, there is no hesitation in directing the destruction of the animal which is suffering from the disease: and even if this course is not taken, a few days suffice to render it unnecessary, and no one thinks of testing the action of medicines on a rabid horse, ox, sheep, dog or pig.

Man, when affected with rabies in its usual form of hydrophobia, has from time immemorial been treated by numerous "cures," as they are called, which, however different in character, agree in being equally inefficacious, and it is allowed by medical authorities that there is no authentic case of recovery from the disease on record.

Prevention of rabies is a far more hopeful matter than its cure. The term may mean the prevention of the occurrence of the disease altogether; or it may be limited to the treatment of infected animals, with the view of neutralizing the effects of the virus which has been introduced into the system. Or it may be taken to include the whole; and in that sense it suggests, as a matter of primary importance, stamping out the disease among the animals which are most liable to take it, and, when affected, the most dangerous to man and other animals which come within their reach. Slaughter of diseased animals is one essential part of the stamping-out system, to the adoption of which, in cases of rabies, very few people will object. The objections appear when any attempt is made to apply restriction to animals, especially dogs, which are not mad, in order to prevent them from doing mischief if they should become mad; and the most effectual way of securing this end is the use of a proper muzzle

An Order of Council, to which we referred in a former article, is now in force to provide for the muzzling of all dogs being at large in any place to which the public have access in the Metropolitan Police District. Exception is made in favor of dogs which are used for sporting purposes, or for the destruction of vermin. Seizure and detention of unmuzzled dogs is also provided for in the order; but, until the Board of Agriculture Bill becomes law, there is no power vested in the authorities to order the slaughter of stray dogs, unless they are rabid, or suspected of being rabid. The Privy Council Order is limited in its operation to the Metropolitan Police District, and local authorities in other districts where rabies has appeared have made regulations for muzzling dogs within their districts; but many of the regulations contain an exception in the case of sheep-dogs and dogs used for driving animals, besides which, they often provide an alternative to muzzling in the case of dogs which are under proper control by being led by means of a string or chain. These exceptions have recently been objected to as likely to destroy the beneficial effects of the restriction, and the following circular has just been issued to all local authorities by whom regulations relating to rabies have been made:

Agricultural Department, Privy Council Office, 44 Parliament street, Westminster, S. W., July 24, 1889.

REGULATIONS FOR RABIES.

SIR: I am directed by the Lords of the Committee of Council for Agriculture to request that you will have the goodness to inform your local authority that the Privy Council are advised that in making regulations directing the muzzling of dogs on account of rabies, although it may be desirable that exception be made in favor of packs of hounds, harriers, or beagles, or greyhounds, or other sporting dogs while being used for sporting purposes, or to any dogs while being used for the capture or destruction of vermin, and in charge of competent persons, there does not appear to be any sufficient reason for extending this exception to drovers' dogs, or to dogs used for driving animals, such dogs being most dangerous to other animals if they become "rabid," besides being able to perform their work without biting.

I am further directed to request that you will point out to the local authority the insecurity afforded by any alternative regulation which permits a leading strap or chain to be substituted for the muzzle, it being clear that a led dog (if he is unmuzzled) is able to bite any person or animal that may happen to pass within his reach; and this objection even more strongly applies to an alternative regulation which permits dogs to be in a public place under what is called control.

It would appear therefore advisable, in applying regulations to any particular district, to insist on the muzzling of all dogs (other than dogs while being used for sporting purposes or for the destruction of vermin, as before mentioned) while being in any public place, whether the dogs are led or not, with a muzzle so constructed as to render it impossible for the dog while wearing the same to bite any person or animal.

The Lords of the Committee are of opinion that it would be useful if, at the foot of handbills announcing regulations the following short description of the most marked symptoms of rabies in dogs were given:

"Change of habits, restlessness, moving from place to place, often hiding in dark secluded corners, depraved appetite, gnawing and eating indigestible substances, altered voice, difficulty of swallowing, but showing no dread of water, thick viscid saliva hanging from the corners of the mouth which the dog tries to remove with its paws, frequently snapping at the air or imaginary objects. These symptoms in the furious form of the disease are followed by paroxysms of excitement, in which there is an irresistible tendency to bite and attack other animals, especially dogs; the animal then wanders from its home, biting and snapping at every animal that may come in its way; emaciation and exhaustion rapidly follow with loss of nervous power, partial paralysis often supervenes, and the animal drops and dies if it has not previously been destroyed.

"In the dumb or torpid form of the disease the premonitory symptoms are followed by dropping or paralysis of the lower jaw, rendering the animal unable to bite or bark; the tongue swollen and livid hangs out of the mouth. The dog in this condition seldom leaves its home, but endeavors to remain quiet in some dark place; takes little or no notice of what goes on around it; paralysis of the hind limbs soon sets in, and death quickly follows."—I am, sir, your obedient servant,

C. L. Peel.

It is perfectly obvious that the leading strap or chain offers no security to passers by. A dog under such restraint, if in the early stage of rabies, would be all the more inclined to snap at any living thing which came within its reach, and therefore the chain cannot be in any sense a substitute for the muzzle.

Dogs used for driving animals were often exempt from the muzzle under the Rabies Orders in 1886-1887, although they did not contain any provision for such exemption; and considering the terribly disastrous consequences which would follow from the ravages of a drover's dog among a herd of cattle or flock of sheep in the event of his becoming rabid, the exemption cannot be defended.

In reference to the preventive treatment to be applied to man or animals which have been bitten by a rabid dog, it may be said that people are familiar with everything which can be said on the subject. Prompt application of caustic after rapid and free washing of the wound is advocated, and a strong solution of corrosive sublimate appears to be the best form of caustic to apply. Between the local treatment by caustic or actual cautery the adoption of Pasteur's system of inoculation, there seems to be no alternative; and whatever may be the merits or defects of either method, there can be no doubt that both should be looked upon as temporary expedients which are justified by the circumstances. But the one important object which the sanitarian should keep in view is the eradication of the disease.—*London Field.*

THE REGISTRATION FEE.

Editor Forest and Stream:

At a recent meeting of the Stud Book Committee (which is composed of three members) it was decided that after Dec. 31, 1889, the registration fee for each and every dog would be $1. I do not think that this action in itself is a judicious one. At all events, it would have looked much better if the question had been brought up before a meeting of the A. K. C. after due notice had been given to its members.

As it is, one feels like asking: "Does the A. K. C. exist for the purpose of protecting and governing the breeders and exhibitors, or are they here to maintain the A. K. C.?" If the latter is the case, then, of course, all they have to do is to say "yea and amen" to all the rules and regulations the Stud Book Committee may be pleased to adopt. The registration fee is a direct tax on the breeder. The first question an intending purchaser asks is: "Is the dog registered?" Hence the breeder is compelled to register the puppies he sells. Not only does he derive no direct benefit from it, but it is simply so much money out of his pocket. Suppose he gets an average of $50 for each puppy he sells, the fee of $1 would represent two per cent. on the value of the dog. If the average price is lower the percentage is proportionately higher. As things go this is too high a tax; half a dollar is quite enough, especially now that nearly all dogs are registered, for all that is required is to give the name of the dog and the names of sire and dam and their respective numbers, for instance: "Turned out of the Ring, by Breeder Unknown, number so and so, out of Pedigree Unknown, number so and so."

If the Stud Book Committee is after dollars and cents, outside of whether the enactment of this rule would be detrimental or not to the breeder, it will, I am afraid, not gain its point; for breeders will think twice before they register puppies at $1 per head, and, therefore, the registrations will decrease. If the club is in need of money it will have to be raised in some other way. This is an important question and should be well considered. It will, I hope, be brought up before an A. K. C. meeting, and clubs and associate members would do well to discuss the matter beforehand and instruct their delegates accordingly. I trust that the decision of the Stud Book Committee will not be upheld; but if the clubs, members of the A. K. C., and associate members should vote otherwise, breeders will either have to pay the dollar or else get out of the business.

K. E. Hoff, Associate Member A. K. C.

Arlington, N. J.

PENDLETON DOG SHOW.

Editor Forest and Stream:

Some time ago it was decided to hold a stock show at Pendleton, S. C., in connection with the State Agricultural Society, which took place Aug. 7, 8 and 9. A few lovers of fine dogs also decided to have some of their stock on hand for exhibition, just to let the people know there are some as fine sporting dogs in this section as can be found. Beagles were the class best represented, there being eleven shown. The Blue Ridge Beagle Kennels, Denver, S. C., had six on exhibition, all thoroughbreds, descendants of the finest strains in America, having such imported dogs as Sam, Dolly, Warrior, Rover, Rattler, Elmore's Ringwood, Lady Bird, Music, Actress, Banker, etc., as ancestors. They had a young dog, Boston, that gives great promise of being hard to beat when thoroughly matured. He is by Joe (Riot—Skip) out of Pansy (Elmore's imported Ringwood—Fairy). They showed the smallest beagle ever seen in these parts and probably the smallest in the United States. She was just a year old the day shown and only weighed 6½lbs. S. Y. Stribling, Seneca, S. C., showed three dogs, by Thom out of Music. Mr. W. J. Hembree, Denver, S. C., showed two bitches, one by Thom out of Venus, the other by Thom out of Nell. As far as numbers go pointers were a weak class, but strong in quality. Mr. S. D. Cherry, proprietor of Oconee Pointer Kennels, Seneca, S. C., had a rare good specimen in St. Elmo. This youngster combines the blood of Meteor and Sensation, being by Meteor, Jr., out of Bell, she an in-bred Sensation bitch. This youngster is snow white with deep liver ears and side of head and liver spot at root of tail. He was pronounced by judges the finest specimen they ever saw. Mr. Cherry is an enthusiastic sportsman and intends to supply his kennel with the best blood obtainable. He knows how to handle a gun as well as he handles a dog. He bagged 1,003 birds in three months' shooting. Dr. W. W. Watkins, Pendleton, S. C., showed a very fine young pointer from the best native field stock. None of the dogs shown were entered for competition. The beagles being something comparatively new attracted a good deal of attention and comment. Exhibitors were besieged with all kinds of questions, showing a lamentable lack of knowledge of this noble breed of small dogs. After gazing in wondering admiration on them as they were being removed from the cage one fellow remarked: "If I could shoot birds on the wing like some people do, I would have me some of these dogs."

Blue Ridge.

ELMIRA DOG SHOW.—Hornellsville, N. Y., Aug. 16.—*Editor Forest and Stream:* Everything looks promising for the Elmira dog show. We are having applications for premium lists from all over the States and Canada. Entries are coming in fast, and we shall have some of the best kennels there are. We shall feed Challenge food, and use "Sanitas" as a disinfectant.—J. Otis Fellows, Supt.

DOG TALK.

IN an article upon the English field trial celebrities of the present year, *Land and Water* gives the following description of Trip of Kippen, that is entered by Messrs. Lowe & Hitchcock for the Eastern Field Trial Club Derby: "Trip of Kippen (fifteen months), by Tutsham Trip, last year's winner at Shrewsbury, was unlike any other setter puppy at the trials, except his half brother, Aldon Trip, which ran third at Worksop. The Kippen puppy is a liver and white dog, long in the body, long in the stern, and rather long in the leg, and prick-eared, but he has good, strong, straight forelegs, nice, well-bent stifles and good feet. He carries plenty of feather, and, like the rest of the family, is a good one to go, and has a very fair, if not actually good nose. At times he worked very well, while at others his performance indicated a somewhat jealous and headstrong disposition. Furthermore, he did not appear to have been thoroughly well broken, and had evidently not seen a great many hares before he ran at Newport. At times he was staunch before and behind, although backing is clearly most distasteful to him. He is a dog that wants a lot of work to steady him, and, like the rest of the Woodhill Bruce and Tutsham Trip family, he can stand a lot of work. He won the Derby rather by chance than otherwise, although in our opinion, when thoroughly broken, he could always beat Banco of Brussels, as he has a rather better nose than the latter, and more pace, which he always seemed to utilize in taking the outside cast from Banco."

Madison Square Garden at last is being torn down. For several years it has often been given out that the structure was to be at once demolished and replaced by something better adapted for public use. In our issue of Feb. 28 there is a description of the building to be erected in place of the Garden. Some are sanguine enough to predict that the amphitheater will be finished in time for the dog show next February; but it is hardly possible that this will be the case, and the Westminster Kennel Club will undoubtedly have to find other quarters for their show, and they will probably select the American Institute Fair Building, where their shows were held in 1881 and 1882.

There will be a dog show at Wilmington, Del., Sept. 2 to 7, in connection with the second annual fair of the Wilmington Agricultural and Industrial Association. The premium in some of the important classes is $5, dogs and bitches to compete, with $3 for puppies. In nearly all the remaining classes the premium is $3, with $2 for puppies. In case the judge deems an animal worthy of second prize, a silver medal will be given. There will also be a special of $10 for largest exhibit. Mr. James Watson will judge all classes. The address of the secretary is Mr. T. D. Brown, Wilmington, Del. Entries close Aug. 27.

The resolution adopted by the stud book committee of the American Kennel Club increasing the fee for registration to one dollar does not take effect until Jan. 1. There is considerable talk among dog owners of making an effort to have the resolution rescinded at the next meeting of the club.

At a recent meeting of the English Spaniel Club, the subject of holding field trials of spaniels was discussed and the matter was postponed for further consideration until the next annual general meeting of the club.

The London Fox-Terrier Club appears to be in a flourishing condition. At its annual meeting recently held, the treasurer reported a balance on hand of $650, and a membership of over 100.

The mail vote of the Spaniel Club for a list of official spaniel judges closes Aug. 23. The number elected is not to exceed eight and is not confined to members of the club.

The Scottish Kennel Club will hold their show at Edinburgh, Sept. 18 to 20, instead of in October as previously announced.

ST. BERNARD IMPORTATION.—Peterborough, N. H., Aug. 14.—*Editor Forest and Stream:* We have received from Mr. H. J. Bitterton of England the smooth-coated St. Bernard dog Parson—formerly Barry. He was bred by Herr Doppeler of Berne, Switzerland, of whom he was purchased by Mr Bitterton last year. Parson is the sire of Juno, first and special at the late International show at Berne—the bitch that Mr. Bitterton did not succeed in buying, and which Mr. Hopf thinks is likely to remain at home for some time.—W. H. WALBRIDGE.

A SMALL BEAGLE.—*Editor Forest and Stream:* Please allow me through the columns of your paper to give the measurements of a beagle bitch belonging to the Blue Ridge Beagle Kennel, and challenge the beagle fraternity to beat it in size—small size I mean. She is by Banker out of Dolly (Riot—Skip), whelped Aug 8, 1888. At one year old she just weighed 6½lbs., is 8½in. high, 12in. ear spread, 13in. chest measure. She has always had all she would eat, and has kept in good order. For her size her field qualities are first-class. She has an exceptionally fine nose, and gives a free tongue. Her sire, Banker, is by champion Rattler out of imported Actress. He was bred by Dan O'Shea, London, Ont., and is the winner of five first prizes, two specials and one brace special. If any beagle fancier has anything to beat this, please trot it out gentlemen and let us hear from you.—JOHN L. JOLLEY (Denver, S. C., Aug. 12).

DOMINION OF CANADA SHOW.—The secretary reports things progressing favorably for this show, and there is every indication of its exceeding any other show ever held in Canada. The following are some of the extra special prizes that have been offered: A gold medal, value $20, known as the Hub medal, for the best fox-terrier dog and bitch owned by any one Canadian; $8 prize for the best pointer puppy under 12mos old; $4 prize for the best black retriever bitch with pups, or failing that the best dog; $10 silver cup for the best greyhound dog in the show; $10 for the best kennel of English beagles; a handsome silver cup for the best English setter bitch with a litter of pups; a fishing rod for the best brace of Gordon setters; a revolver for the best brace of Irish setters; $5 for the best pair of Great Danes; $10 for the best St. Bernard dog and bitch; a barrel of ale for the best Irish setter owned in Canada. With a few others this completes the second preliminary list of extra specials, and the secretary promises a third in a short time, and speaks with confidence of receiving at least $1,000 of extras. Each of the breeds, such as mastiffs, St. Bernards, Great Danes, also setters, pointers, collies, spaniels and Irish spaniels, also all the terrier classes, have already received one, in some cases as many as three or five extra specials, and the committee are holding out every inducement to large breeders both in Canada and the United States to bring kennels of from two to six dogs for competition, and this course is giving great satisfaction.

TOLEDO DOG SHOW.—The Eberhart Pug Kennels, of Cincinnati, have offered a box of cigars for best bulldog in show, and meerschaum cigar-holder for best greyhound in show.—TOLEDO KENNEL CO.

THAT "RABIES" MEETING IN LONDON.—*Editor Forest and Stream:* Unless I am entirely "off," the above was a most remarkable affair: Firstly, it was a meeting called by the Lord Mayor. At such a meeting it would be the presumption that all representative men, known for knowledge on the subject matter of the meeting, would be welcomed, but nobody was admitted but those holding invitations. This may work in England; but, great snakes! wouldn't we raise Cain? Then a resolution was passed advocating muzzling, but with reservations, so that all dogs were not to be subject to it. To this Mr. Hugh Dalziel demurred, and on a show of hands, his was the only one elevated. (It ought to have had two clubs in it), but for all of that, the resolution passed unanimously! I suspect that some of the trouble came from the diversity of opinion there is in England on the rabies subject, and really hostile positions taken by different bodies; and I suppose the Lord Mayor was backing one side or the other, but it seems to have been much of a bungle. I confess, I haven't got all the threads straightened out, and if I am wrong in my conclusions, would be glad to know it. I am firmly of the belief that Mr. Dalziel knew what he was doing, and had the right end of the stick; he always steers clear of the other end.—W. WADE.

LONDON SHOW.—London, Ont., Aug. 19.—The specials are still coming in. There will be specials in every class besides extra specials for Canadian dogs. We are bound to make this a success. Prof. Parker, of New York, and his troup of dogs, will give two performances each day. The dog circus and judging will be done in a large tent 100 by 40ft., which we have engaged expressly for the purpose. Mr. Mortimer will also judge the greyhound and deerhound classes. Besides the large list of specials published in our premium list we have received the following: Piece of silverware, valued at $50, for the best kennel of St. Bernards, four or more. The American Collie Club donates $10 for best collie dog or bitch owned and exhibited by a member of the Collie Club of America. Geo. Bell, Toronto, donates a very handsome special for the best cocker dog or bitch. There is a special for best St. Bernard pup under six months, and one for the best cocker bitch and four of her progeny. W. J. Reid & Co., London, donate a special, valued at $25, for the best kennel of St. Bernards, four or more, owned in Canada. There is a special for best St. Bernard bitch and two of her progeny, also specials for best fox-terrier dog and fox-terrier bitch owned in Canada. The entries close Sept. 5.—C. A. STONE, Sec'y and Manager.

TORONTO SHOW.—Toronto, Aug. 19.—Our premium list mentions the English Kennel Club shows as counting toward wins for the challenge class. This is an error. This year we do not count wins under the E.K.C., as we are working under the C.K.C. rules and in conjunction with the A.K.C. Since writing to you I have received a handsome special cash prize for a kennel of bloodhounds; also a special extra for the second collie puppy in class 44, and a very handsome silver cup for the best cocker dog and two of his get, and a special prize for a kennel of cockers, and another special for setters and several others. I hope to send you a complete list next week. Entries are coming in, but I would ask our friends to send theirs along as soon as possible, as we want to know exactly how many dogs to provide for. I hear from all sides that we shall have the largest exhibition ever held in Canada.—C. GREVILLE HARSTON, Secretary Dominion of Canada Kennel Club.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 or any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Birmingham Lass. By F. F. Dole, New Haven, Conn., for sable and white collie bitch, whelped May 22, 1887, by Duke of Rutland (champion Woolf—champion Madge) out of Lady De Brooke (Sefton—Judy).

Tam o' Warwick. By Warwick Kennels, Bridgeport, Conn., for black, white and tan English setter dog, whelped June 23, 1889, by Warwick Albert (champion Royal Albert—Maida) out of Warwick Countess (Prince Phœbus—Rosey).

Dash o' Warwick and Meg o' Warwick. By Warwick Kennels, Bridgeport, Conn., for black, white and ticked English setter dog and bitch, whelped June 23, 1889, by Warwick Albert (champion Royal Albert—Maida) out of Warwick Countess (Prince Phœbus—Rosey).

Protection. By F. F. Dole, New Haven, Conn., for white bull-terrier dog, whelped Aug. 3, 1889, by Hinks (White Sam—Duchess III.) out of Starlight (champion Grand Duke—champion Maggie May).

Beverwyck Trap II. and 2d Lillias. By Jas. E. Unks, Muncie, Ind., for white, black and tan fox-terrier dog and bitch, whelped June 17, 1889, by Beverwyck Trap (Dusky Trap—Daze) out of Lillias (champion Splauger—Blemton Lily).

BRED.

☞ Notes must be sent on the Prepared Blanks.

Dinah—Boston. Blue Ridge Beagle Kennels' (Denver, S. C.) beagle bitch Dinah (Thom—Lady Hinton) to their Boston (Joe—Pansy), Aug. 11.

Birmingham Lass—Sefton. F. F. Dole's (New Haven, Conn.) collie bitch Birmingham Lass (Duke of Rutland—Lady De Brooke) to J. F. Goodfree's Sefton (champion Charlemagne—champion Madge), June 26.

Gipsey—Balkis. G. L. Griffith's (New York) imported greyhound bitch Gipsey to H. W. Huntington's champion Balkis (Clyto—Primrose), Aug. 10.

Baroness IV.—Wacouta Nap. W. E. Walden's (Watervliet, Mich.) mastiff bitch Baroness IV. to E. Ryder's champion Wacouta Nap (A.K.R. 5435), July 28.

Lady Alice—Parson. John Mead's (Greenfield, Mass.) St. Bernard bitch Lady Alice (Bernard's Prince—Fanny) to Contocook Kennels' Parson (Bello—Thyros), July 6.

Yum-Yum—Parson. Contocook Kennels' (Peterborough, N. H.) St. Bernard bitch Yum-Yum (Marco—Hermita) to their Parson (Bello—Thyros), Aug. 3.

Nell—Markland Ranger II. F. G. Kent's (Tiverton, R. I.) Gordon setter bitch Nell (Dan—Moll) to C. T. Brownell's Markland Ranger II. (Markland Ranger—champion Nell), Aug. 1.

Nellie D.—Trentham Baron. M. Dillon's (New Haven, Conn.) bull-terrier bitch Nellie D. to F. F. Dole's Trentham Baron (champion Trentham Dutch—Trentham Belle), Aug. 9.

Nellie—Trentham Baron. Mr. Foley's (New Haven, Conn.) bull-terrier bitch Nellie to F. F. Dole's Trentham Baron (champion Trentham Dutch—Trentham Belle), July 25.

The Duchess—Hinks. G. H. Davison's (Millbrook, N. Y.) bull-terrier bitch The Duchess (champion Count—White Violet) to F. F. Dole's Hinks (White Sam—Duchess III.), July 4.

Lillie Belmont—Beverwyck Trap. Jas. E. Unks's (Muncie, Ind.) fox-terrier bitch Lillie Belmont (Carl Leycester—Coquette) to his Beverwyck Trap (Dusky Trap—Daze), June 20.

Bell—Bradford Harry. E. G. Carleton's (Boston, Mass.) Yorkshire terrier bitch Bell (Bradford Harry—Bell) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beal's Lady), Aug. 10.

Forest Fern—Sir Tatton. Forest Kennels' (London, Ont.) blue belton setter bitch Forest Fern (Prince Royal—Forest Rany) to Item Kennels' Sir Tatton (Sir Alister—Belle of Furness), Aug. 7.

WHELPS.

☞ Notes must be sent on the Prepared Blanks.

Warwick Blonde. Warwick Kennels' (Bridgeport, Conn.) English setter bitch Warwick Blonde (Yale Belton—Warwick Countess), July 9, seven (five dogs), by H. F. Schellhass's Countess (champion Rock—Meg); two dogs and one bitch since dead.

Spinaway. G. E. Stickney's (Newburyport, Mass.) Irish setter bitch Spinaway (champion Chief—Tyrrell's Nellie), Aug. 3, eleven (eight dogs), by his Derby (champion Berkely—Aura).

Juliet Obo. H. F. Hildebrand's (Indianapolis, Ind.) cocker spaniel bitch Juliet Obo, Aug. 6, three dogs, by his Romeo Obo.

Sheeny Obo. H. F. Hildebrand's (Indianapolis, Ind.) cocker spaniel bitch Sheeny Obo, July 29, two dogs, by his Romeo Obo.

Starlight. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Starlight (champion Grand Duke—champion Maggie May), Aug. 3, ten (six dogs), by his Hinks (White Sam—Duchess III.).

Dauntless. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Dauntless (champion Jubilee—Modjeska), Aug. 16, six (three dogs), by his Trentham Baron (champion Trentham Dutch—Trentham Belle).

Young Venom. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Young Venom (Old Prince—Venom), July 26, five (three dogs), by his Hinks (White Sam—Duchess III.); all since dead.

Lady Mellville. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Lady Mellville (champion Trentham Dutch— ——), July 27, six (two dogs), by Fred Hinks's White Sam (Silver King—Kettering Maggie).

SALES.

☞ Notes must be sent on the Prepared Blanks.

Essex—Mora whelp. Orange and white St. Bernard dog, whelped March 24, 1889, by Essex Kennels, Andover, Mass., to Chequasset Kennels, Lancaster, Mass.

Warwick Albert—Daisy Druid whelp. Blue belton English setter dog, whelped March 1, 1889, by Warwick Kennels, Bridgeport, Conn., to R. F. Mix, Ballston, N. Y.

Warwick Albert—Warwick Countess whelps English setters, whelped June 23, 1889, by Warwick Kennels, Bridgeport, Conn., a black, white and tan dog to W. Wicks and a lemon belton dog to H. H. Holmes, both of Stratford, Conn.; a black, white and ticked dog to W. J. Baughn, Ridgeville, Ind., and a black, white and ticked bitch to R. F. Mix, Ballston, N. Y.

Warwick Albert—Dot Noble whelp. Blue belton English setter dog, whelped June 29, 1889, by Warwick Kennels, Bridgeport, Conn., to R. F. Mix, Ballston, N. Y.

Rita II. Black cocker spaniel bitch, whelped April 7, 1887, by Harry Obo out of Rita, by Warwick Kennels, Bridgeport, Conn., to J. A. Heather, Huntsville, Mo.

Buffalo Alice and Buffalo Amy. Black and tan terrier bitches, whelped May 30, 1889, by Buffalo General out of Gipsey Queen, by A. W. Smith, Buffalo, N. Y., to John G. Burns, same place.

PRESENTATIONS.

Beverwyck Trap II. White, black and tan fox-terrier dog, whelped June 17, 1889, by Beverwyck Trap out of Lillias, by Jas. E. Unks, Muncie, Ind., to Ralph Unks, Pittsburgh, Pa.

DEATHS.

Lillias. White, black and tan fox-terrier bitch, whelped July 6, 1887 (Splauger—Blemton Lilly), owned by Jas. E. Unks, Muncie, Ind., Aug. 9; from poison.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

F. A. P., Bath.—I have a mastiff dog, about four years old, that is troubled with eruption coming out of the back of his neck and foreshoulder, about the size of a good-sized pea. He seems to feel all right in every way except that the bunches make him scratch continually. Can you tell of anything that will help him? I have given him Fowler's solution and washed him once a week in borax water, which has always kept him in nice condition, but it doesn't seem to work on this trouble. His coat is in nice condition, with the exception of these bunches; he is plump, but not fat, and gets plenty of exercise, and is kept clean. Ans. Wash with solution of carbolic acid 1–40. Dry and then apply the following ointment, rubbing in gently:

℞ Ung. zinc oxide.
Ung. diachylon..... .....aa ℥i.
Mix. Sig. External.

E. E. G., Stoughton.—On August 1 noticed that my setter dog, ten years old, was considerably bloated. I gave him four doses of castor oil, twelve mandrake pills, a dose of sulphur and eight injections of castile soap and lukewarm water. The oil did not have much effect, the pills no effect, but the injections finally started his bowels a little. I noticed that a worm about 5in. long came from him. I then procured a bottle of Dr. Humphreys' D.D., which I saw advertised in the FOREST AND STREAM, and am doctoring him now with that for worms. He is still bloated, but does not seem sore when touched, passes water all right, has some appetite, but not ravenous; eyes do not run any to speak of; does not breathe regularly. Previous to this sickness he has been kept on chain, as he has always, and fed on pudding of meal and scraps. When I take him to walk I notice he stops and licks stones. Will you please inform me, in your next issue, if you think I am doctoring him for the proper thing, i. e., worms, and give me any suggestions you can? The woodcock season opens here Sept. 1, and I am anxious, if possible, to have him in trim by that time. Ans. You will find that he has another round worm to come away. Castor oil is the best purge to use. Santonine pills, two or three grains in each pill, and given four times daily, concealed in a morsel of meat, will probably bring away the remaining worm or worms. The diet during the treatment should be mostly milk.

Rifle and Trap Shooting

RANGE AND GALLERY.

MINNESOTA STATE SHOOT.

THE fifth annual tournament of the Minnesota National Guard will be held at Lake View Camp, Lake City, opening on Sept. 3 and running four days. The list of matches is long and varied, and includes the following:

Sept. 3—Opening of bullseye match or pool shooting, 200yds. Fifty per cent. of proceeds divided each day among holders of bullseye tickets.

No. 1. Red Wing Match.—Individual, 10 shots each at 100, 200, 300 and 500yds.

No. 2. Pillsbury Match.—Company teams, teams of 6 men each from a company, 7 shots each at 200 and 500yds.

No. 3. Continuous Match.—Individual, 200yds. standing, scores of 5 shots each, best 3 scores to count.

Sept. 4.—No. 4. Regimental Team Match.—Teams of 10 men from each regiment of the State, 10 shots each at 200, 300 and 500yds.

No. 5. Company Team Match.—Teams of 7 men from each company, 7 shots each at 200 and 500yds.

No. 6. Commissioned Officers' Match.—Individual, 10 shots each at 200 and 500yds.

No. 7. Enlisted Men's Match.—Individual. 5 shots each at 100, 200, 300 and 500yds.

Sept. 5.—No. 8. Reeve Match.—Individual, open to commissioned officers of the National Guard of any State or Territory, 5 shots each at 200, 300 and 500yds.

No. 9. Minneapolis Match.—Individual, 7 shots each at 200, 300 and 500yds.

No. 10. Stillwater Match.—Individual, 10 shots each at 200, 300 and 500yds.

No. 11. Fergus Falls Match.—Individual, 10 shots at two distances; targets, position and distances designated at time of opening of this match.

Sept. 6.—No. 12. Washburn Match.—Teams of 12 men each from any State or Territory in the United States, 10 shots each at 200 and 500yds.

No. 13. St. Paul Match.—Individual, 10 shots each at 200, 300 and 500yds.

No. 14. Revolver Match.—Individual, 10 shots on Standard American target, 50yds., open to all comers, pistols or revolvers of 4in barrels or over, and .38cal. and over.

Address, Major C. M. Skinner, Minneapolis.

FINE SCHUETZEN WORK.—The shooting during the two days' festival of the German-American Shooting Society at Union Hill, N. J., last week was something remarkable. In a contest for sixteen gold medals, single tickets to count, three shots per ticket, the lowest winning score was 70 points in a possible 75, a large number of 69's and 68's being dropped. On the ring target there were three 72's, two 71's, five 69's, five 68's and three 67's, the fortieth winning score being 60. On the honor target two 71's, one 70, one 68 and one 67 were put up. The principal prizes were won by L. Flach, M. Dorrler, G. Walther, G. Zimmerman, J. A. Boyken and C. G. and B. Zettler.

BOSTON, Aug. 17.—The fine weather to-day attracted many shooters to the Massachusetts Rifle Association range, and while some complained of the light and wind, the veterans and some of the younger shots did some good shooting. Several members of the Boston Press Rifle Association were present, and one of their cracks put up a fine score of 84 decimal count, which was a good 49 Creedmoore count, ending with six bullseyes. J. R. Munroe won the medal in the 20-shot rest match. The champion off-hand match was not shot. Below are the scores for the day:

Twenty-Shot Rest Match.

J R Munroe	12	11	10	11	12	11	12	11	10	10	
	12	11	9	12	12	10	10	11	12	9	—218

WILMINGTON, Del., Aug. 12.—To-day was the most perfect day for outdoor sports since last fall. The clear atmosphere and the cool, bracing northwest wind combined to tempt all lovers of open-air pastimes to their various fields, but especially strong to the Healdmoor rifle range. There was a fair attendance and local marksmen enjoyed a full and active afternoon of sport. The shooting embraced nearly every variety, and the scores were generally good. One day last week E. J. Darlington shot a 100-shot revolver match for record, and tied his brother's fine 10-shot record of last March, and then beat it one point by making two fine runs of 90 and 91. The score is a fine piece of work and is admired by all who know what marksmanship means. It fully heads the general scores, which are as follows, standard American target, off-hand:

100-Shot Revolver Match, 50yds.

E J Darlington (S. & W. 32-44)	7	8	8	10	8	8	8	5	5	9—76
	10	10	7	5	9	7	9	8	10	8—83
	9	8	8	6	9	9	8	9	9	6—79
	10	10	9	8	9	9	10	7	7	6—85
	8	10	5	7	8	10	9	7	6	8—78
	9	10	7	9	8	9	8	10	11	10—90

CREEDMOOR, New York, Aug 19.—The marksman's badge and sharpshooters' matches of the N. R. A., shot at Creedmoor on Saturday, Aug. 17, were favored with good weather, and the attendance was very large. The conditions were good, with a light 10 o'clock wind, which at times was rather gusty and tricky, but the scores were very good. Following were the winners of the match:

Cash Winners.

	200yds.	500yds.	Total.

SMOKELESS POWDER.—The new powder came in for a showy test recently at the sham fight given at Spandau before the German and Austrian Emperors. The battle took place on the heights south of Spandau. One division of ten battalions used the new smokeless powder, while their opponents used the old style powder. The contrast between the effects of the two explosives was striking, the troops using the old powder being completely enveloped in smoke.

NATIONAL RIFLE CLUB.—To complete the record we here give the scores made at the last meet of the National Rifle Club, at Vernon, Vt. Standard weight of rifles, 20lbs. as fired; all over must give ½in. per pound; under 20lbs. will receive ½in. per pound on each string of 10 shots. Match to be 5 strings of 10 shots each. Any style rest allowed that does not confine rifle or add weight to it. Sights, any. Time rules. String measure. Distance, 40 rods. The contestant in each string making longest string to drop out of the match. Lowe was testing some U. S. bullets. Brockway, shooting a rifle of his own make, scored the shortest aggregate string in the history of the club, then sold his rifle to Stephenson. Hayes shot his rifle without cleaning from beginning to end. Smith has never yet missed a shoot. All used muzzleloaders, 40 rods, rest. String measurement in inches:

	Weight. Lbs.	Allowance.	1	2	3	4	5	Total.

SAN FRANCISCO, Aug. 15.—One of the greatest prize shooting festivals ever held on the Pacific coast will take place at Harbor View Park on the 25th and 26th inst., under the auspices of the California Schuetzen Club. Delegations of marksmen will come from Marin, Sonoma, Alameda and Santa Cruz counties. The St. Helena Rifle Club will send a contingent of its best riflemen. The California is the crack club of the coast, and includes among its members some of the best shots in the United States. The shooting will begin at 8 o'clock in the morning and closes at 6:30 o'clock in the afternoon, with an intermission from 12 to 1 for dinner. The shooting will be off-hand, 200yds. distance, all rifles not over .45cal. and not more than 70grs. of powder, and all sights except telescope, and any pull of trigger will be allowed. A 12in. black, divided into three parts, will be used as a point target, on which will also be counted the best centers. Forty prizes, ranging from $40 to $1, will be given to the marksmen shooting closest to the center of the target. Twenty-five prizes, from $40 to $1, will also be given to competitors making the mosts points during the day. Probably the keenest competition will be manifested among the marksmen participating in the King shooting. Each person entering will be allowed 200 shots, and the marksman making the goeatest number of points will receive a diamond medal, besides a handsome money consideration, and be crowned Shooting King. All persons making 400 points will receive a diploma as master marksman. A special prize of $2 50 will be given for the first and last bullseye in the forenoon and afternoon. The target representing the upper part of a man will also be used. These targets are 30in. nigh and 20in. broad at the bottom, divided into perpendicular lines, counting from the middle. Forty prizes, amounting to $250, will be distributed on this target. In order that absolute security may be insured and the guests of the club witness the proceedings with safety, the grand stand over the shooting room has been made bullet-proof by placing 10in. of sand between the spectators and marksmen. The stand was tested one day last week by Philo Jacoby, who placed the muzzle of a .45-70 Winchester—one of the largest rifles used—within 10ft. of the stand and the bullet was found to have penetrated but 7in., and was then perfectly flattened.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 20, 21, 22, 23.—Second annual tournament of the Keystone Manufacturing Co., of Corry, Pa. Traps will be pulled by a new electric apparatus.

Aug. 22.—Amateur tournament, at Keystone target, Peekskill, N. Y. W. H. Pierce, Secretary.

Sept. 3, 4, 5.—Annual Tournament of the Rocky Mountain Trap Shooters, Denver, Colo., Broadway Athletic Park. Inanimate and live targets. Address C. M. Hampson, Denver.

Sept. 10, 11, 12.—St. Paul, Minn., Gun Club Tournament, at Hamilton. F. D. Ponsonby, Secretary, St. Paul.

Sept. 17, 18, 19, 20.—Central Illinois Sportsmen's Association's eleventh annual tournament, Jerseyville, Ill.

Sept. 24, 25, 26 and 27.—Fifth Annual Tournament given by Al. Bandle, at Cincinnati; $1,000 guaranteed.

Sept. 24, 25, 26, 27.—New Jersey State Sportsman's Association for the Protection of Fish and Game Annual Tournament, on grounds of the Jersey City Heights Gun Club, at Marion, N. J. W. F. Quimby, 291 Broadway, N. Y.

Oct. 8, 9, 10, 11.—Middlesex Gun Club Tournament, Dunellen, N. J. W. F. Force, Secretary, Plainfield, N. J.

Oct. 8, 9, 10, 11.—Fred A. Fodde's Second Annual Amateur Tournament, at St. Louis, Mo. Inanimate targets and live birds.

Oct. 15, 16, 17, 18.—Tournament at live birds and inanimate targets. J. F. Kleinz, Secretary, 600 South Delaware avenue, Philadelphia.

Oct. 21, 22, 23, 24 and 25.—Second Tournament of the Mercer Gun Club, at Trenton, N. J. E. G. Updegrove, President.

AMERICAN SHOOTING ASSOCIATION.

THE second tournament of the Association was held at Beacon Park, Boston, on the 13th, 14th, 15th and 16th inst. Many shooters from out of town arrived on Tuesday night, and the corridors of the Quincy House, which was headquarters, swarmed with familiar faces. President Dimick and Manager Taylor were on hand to welcome the arrivals, and the prospects for a good time and a large attendance seemed favorable. The attendance, however, did not come up to expectations. The vicinity of Boston is one of the best, if not the best, trap-shooting sections of the country, and it was expected that the clans would turn out in great numbers. Just why they did not is unknown, but it seems that the generous purses offered by the Association and the classification system should have induced many more amateurs to attend. The C class matches were none of them largely filled, and many of the guaranteed events fell short in entries. The first business of Tuesday was a tally-ho ride tendered by President Dimick to the directors of the Association and the representatives of the sportsmen's journals. Mr. Dimick's plan was to give the visitors an idea of the beauty of Boston's suburbs, and in this he succeeded. The route was to the Chestnut Hill Reservoir through Brookline, and it was thoroughly enjoyed by the fortunate participants. The coach arrived at the grounds about 10 o'clock, at which time the traps were in operation.

A new arrangement of traps, with the special view of accommodating a large number of contestants, had been devised by Major Taylor. Six sets of five traps each were placed in a half circle, and midway between them and a little behind the scoring stands, was the Association tent. In this Major Tayl r had his headquarters and there the press and all who would were regaled with lemonade made with the Major's own hands and served from an enormous silver punch bowl won by him years ago by his skill at the traps in Kentucky. Under the Association's system of supplying the press with scores in full, there remained not much work for the scribes to do. The force of assistants was rather young and more work devolved on the Major than is usual. With six sets of traps in constant operation and the Keystone rules prevailing, the programme was promptly run through. The fusilade of guns was unceasing, except from 1 to 2 o'clock, when dinner was served in a mammoth tent, and such a dinner as it was—a rarity on a shooting ground and equal to that served in any first-class hotel. The caterer was J. A. Dill, Melrose, Mass., and he certainly deserved better patronage than by reason of the weather was accorded him.

On Tuesday morning the air was heavy with humidity and promises of coming rain, which were realized by several hard showers during the day. But it was on Wednesday that the clouds opened and poured forth a perfect deluge of moisture. This commenced long before any one was up, and on discussion the day's programme was postponed, and a notice given to that effect. Some of the shooters would not be denied, however, and about twenty-five started for the grounds determined to burn some power at all hazards. The day was spent in shooting extra sweepstakes, many of which were shot while the rain fell in torrents, but no official scores were kept. These were the most enthusiastic ones, and in truth, the most careless of their comfort and health as well, for the grounds were in a decidedly mushy condition. Beacon Park is situated right on the Charles River, and is partly composed of marshy land, where, it is said, snipe and bay birds are plentiful. In fact, some who went out in the rain were favored with a shot at live targets. Five grass birds flew over the traps and were all bagged, three by Mr. Law and two by Mr. Manchester.

Those who remained at the hotel passed the time between anathematizing the weather clerk and talking shoot. The talk was accompanied with pantomimic action, and in little groups all around the office and billiard rooms one could see an umbrella drawn quickly to the shoulder and sighted. The ruling passion was shoot, and it seemed the aim of all to come as near the actual firing of a gun as possible. As is usual match talk was the outcome of some of the discussions and one race was made between Belle O. Heikes, of Dayton, O., and Al. Spangler, of Syracuse, against E. Gillette, of Boston, and Dan Lefever, of Syracuse. The conditions were 50 single birds per man, for $10 a side and the supper. As 2 o'clock arrived the imprisoned ones became very restive and unable longer to stand the confinement, it was proposed to go out and shoot this race at once, so rubber coats were donned and away they went. The match resulted in a tie on 86; this when shot off at 10 birds each gave the victory to Heikes and Spangler. Gillette shot three different guns during the race and this no doubt contributed to his defeat.

Match race between Heikes and Spangler against Lefever and Gillette, at 50 birds each for $10 a side and the supper.

Heikes	11111111111111111111111111111111111111111111111—47
Spangler	11011111111101101111101111010111001111001110111—46—86
Lefever	11111111111111111111111111101110111111111111111—48
Gillette	11111111111101111011010110011011011111011111—38—86

Ties at 10 birds each:

Heikes	1111111111—10
Spangler	1011011111— 8—18
Lefever	1111101111— 9
Gillette	1011111111— 8—17

Dick Schaefer started on the warpath and wanted to shoot a match with any one on the grounds. J. E. Pumphrey, of Columbus, O., accommodated him "just once" at 50 Peorias. Dick won with a score of 46 to 42. Later in the week they shot two more matches, one of which Schaefer won and Pumphrey the other. Dick shot a strange gun, which pounded his shoulder and drew blood, but when not occupied in coaxing entries and running sweeps he was sure to be found shooting a match with some one, and it is but fair to say that in the most of them he was victorious.

Thursday was also a dismal day, but the tally-ho carried its load of guns, ammunition and live freight to the traps at about 9:30, and Wednesday's regular programme was put through. The great team race, West vs. East, was to be shot, but as Bandle, Budd and Stice, of the Western team, were absent, this was postponed until Friday, when two teams fairly approaching each other in skill could be picked. In place of it Friday's match No. 8 for teams of four men from any one club was substituted. There was much interest displayed in this match, which ended in a victory for the Onondaga Sportsmen's Association team of Syracuse. The Onondagas seem to be dangerous opponents in team races, as they usually get there.

Canada sent two representatives in the persons of Messrs. E. Octave and J. R. Meadowcroft, of the Dominion Gun Club, of Montreal, to see how Boston ran a great shoot. They seemed as indifferent to weather conditions as the average American shooter, and in spite of the rain on Thursday they were present, and evinced much interest in all that occurred. During the day Mr. W. Wolstencroft, the crack North End Gun Club, Phila., shot, gave an exhibition of the rapidity with which a Winchester repeating shotgun can be worked. Four birds were sprung simultaneously, and in as many seconds nothing remained of them but a shower of broken clay. An unfortunate accident happened to Mr. H. A. Penrose, of the Keystone Target Co. While adjusting one of his traps it was sprung by a trapper, and the arm struck his knee-pan with great force, making a nasty cut. It was soon dressed, however, and Pen. limped around smiling for the balance of the day. It is to be hoped that all the soreness will have disappeared before the Keystone tournament, at which Pen. is a very pressing necessity.

All the target companies were represented; Paul North, of the Bluerock Co.; C. C. Hebbard and Rolla O. Heikes, of the Standard; W. H. Cruttenden, of Kingbird; D. Kirkwood, for the Peorias. Many other celebrities were present, among them S. A. Tucker, with his new Parker; Harvey McMurchy, of L. C. Smith fame; W. Fred Quimby, the only "Fred;" Lieut. Albee, who works a Winchester like a charm; Ed. Taylor, of Cincinnati, who talks Laflin & Rand powder to every one; M. F. Lindsley, whose main hold is wood powder, and many others. The only directors of the Association present besides Mr. Dimick were Chas. Tatham, of Tatham's Shot Works, and Geo. T. Harding, of the Leroy Shot Co.

In consequence of Wednesday's postponement it was necessary to continue the tournament on Friday, and on that day the most perfect weather prevailed. The sun shone brightly, and just enough air was stirring to rob its rays of too great warmth. The little encampment of tents, with streamers flying, and the bright colored scorers' stands presented a very pleasing sight as the coach drove on the grounds. Its fine weather came a little too late in the week to be of much benefit to the Association, as many had left for home, having made arrangements to remain only three days. The small number present meant a loss to the Association on the guaranteed events, but they were all shot in regular order. As the scores show, some of the contestants were very fortunate in falling into positions alone, where good returns resulted. Two teams were made up to shoot the team race of five, and instead of its being the East against the West, it really was the East against the whole country. A strong team, consisting of Perry, Dickey, Wheeler, Swift and Smith, was picked to represent the East, and pitted against them were McMurchy, Heikes, Whitney, Miller and W. Wolstencroft. The latter was a combination of all hard to beat, and all opinions pointed to an easy victory for them. The match was by no means a walk-over, however, and the Eastern team did themselves great credit in the face of such decided opinion, being beaten by 7 birds only, after an exciting race in which the scores were close all through. When this event was settled, there remained little of the programme to finish, and this was quickly attended to. Once more the tally-ho was in demand, and soon those who for four days had faced each other at the traps were speeding in many directions toward their homes.

Socially the second tournament of the American Shooting Association was a grand success, and if it falls a trifle short financially it is to be attributed to the weather, which without doubt kept many intending participants away. The most perfect harmony prevailed during the entire shoot, no kicks were made, and no objections to the classifications, in which no changes were made. The scores in full are given below:

Tuesday, Aug. 15.

Match No. 1, Class A, open to all, 20 Peorias, entrance $3:

Miller	11111011111111111111—19
Wheeler	11111101011111111111—19
Taylor	11101000101111101101—13
Eager	11101111011111110.0—16

First money, $12, div. by Marshall, Budd and Cahoon; second, $10.50, div. by Still and E. L. Tooie; third, $7.50, div. by Howard and Henry.

Aug. 9. To day's programme was declared off on account of rain, and all shooters left for home. The club has recently had a new fence put up around the park, which is a great improvement, and now no club in the West has a finer park than the Foresters. Frank Taylor, the club caterer, served excellent dinners during the tournament. The tournament was conducted under the Keystone rules entirely. So many of the boys are such good shooters that few ties were shot off. This was the most successful midsummer shoot ever held by the club. W. M. PIERCE.

N. Y. SUBURBAN SHOOTING GROUNDS.—Claremont, N. J., Aug. 17.—Following are to-day's scores, ties div.:

CORRY will be reported in our next issue in full.

DAKOTA TOURNAMENT.—Herman, Minn., Aug. 13.—The Dakota Territoral Tournament held at Aberdeen, Aug. 6, 7 and 8, was not a glowing success owing to the non-attendance of Dakota sportsmen; only four sportsmen from Dakota and one from Aberdeen attended, and one of these went home on the second day. President Fred. Shaft, of the Aberdeen Club, and Secretary C. S. Vroom did all in their power to make a success of a failure. They did make it pleasant as possible for visiting sportsmen, among whom were John A. Ruble, of Beloit, Wis., who took first average; Rolla O. Heikes, of Dayton, Ohio, second average; J. H. Block, St. Peter, Minn., third average; A. J. Arland, Mt. Vernon, Dakota, fourth average; H. S. Williams, St. Paul, fifth average, and others. The wind was blowing a howling hurricane in shooters' faces the first day, and there were about as many misses as hits, still Ruble made the excellent record of 70 out of 72, including 12 pairs. Three Keystone traps were used. One man shot from known, trap shooting either three or six before leaving the score, otherwise American rules governed. The second day the wind reversed and blew on the shooters' backs, and although it blew very hard the shooting was not so difficult. The dust was very bad and altogether they were as disagreeable two days as the writer ever shot in. Following are the scores:

Seven single Keystone, entrance $2, 4 moneys: Ruble 7, Heikes 6, Block 6, Shaft 6, Newton 6, Dennison 6, Williams 5, Arland 5, Heninger 4, Holla 5. Ruble first, Heikes and Dennison div. second, Williams, Holla and Arland div. third, Heninger fourth.

Eight singles and one pair, entrance $3, 4 moneys: Ruble 10 Heikes 10, Block 10, Holla 9, Shaft 8, Dennison 8, Heninger 7, Newton 7, Arland 7, Williams 6. Ties div.

Ten single Keystones, entrance $2.50, four moneys: Heikes 10, Arland 10, Ruble 9, Williams 8, Holla 8, Block 7, Newton 7, Heninger 6, Dennison 6, Shaft 6. Ties div.:

Five pairs keystones, entrance $3, four moneys: Ruble 10, Block 9, Williams 9, Newton 8, Arland 8, Shaft 9, Heikes 6, Holla 6, Heninger 6. Ties div.

Ten single Keystones, entrance $2, four moneys: Heikes 10, Shaft 9, Ruble 9, Block 8, Arland 8, Williams 7, Holla 7, Newton 7, Heninger 6, Vroom 5. Ties div.

Six singles and 2 pairs, entrance $2.50: Ruble 10, Heikes 9, Block 9, Newton 9, Williams 7, Heninger 7, Holla 7, Arland 7, Shaft 5. Ties div.

Fifteen straightaway, entrance $4: Ruble 15, Shaft 15, Holla 14, Block 13, Arland 13, Heikes 12, Heninger 12, Newton 12, Williams 11. Ties div.

Six singles and 2 pairs, entrance $2: Shaft 10, Williams 9, Heikes 8, Ruble 8, Block 7, Arland 7, Holla 6, Heninger 5, Newton 5. Ties div.

Ten singles, entrance $2: Heikes 10, Block 9, Williams 9, Ruble 9, Heninger 9, Holla 9, Newton 7, Shaft 7, Arland 6. Williams and Holla div. second after shoot-off.

Four singles and 2 pairs, entrance $2.50: Block 8, Williams 8, Heikes 7, Ruble 7, Holla 7, Shaft 7, Newton 6, Arland 6. Shaft and Ruble second after shoot-off; others div.

Fifteen single rises, entrance $2: Shaft 13, Williams 13, Heikes 13, Block 12, Holla 12, Ruble 11, Arland 10, Newton 9. Ties div.—WILLIAMS.

WELLINGTON, Mass., Aug. 17.—There was a good attendance at the grounds of the Wellington Club to-day, and although the weather conditions were good the scores made were not up to the average. In the silver pitcher match at 7 bluerocks and 8 clay-pigeons Warren, Chapin and Lee tied with 12 each, and in the shoot-off Warren won with 6 straight. The other scores in this match were as follows: Perry, Melcher and Baxter 11, Stone, Porter, Hammond and Sanborn 10, Field, Bond and Bradstreet 9, Chase and Bradbury 8. In the merchandise badge match at 15 clay-pigeons Lee won with 13. The other scores in this match were: Sanborn, Field, Chapin, Bradstreet, Melcher, Bond, Dill and Porter 12, Chase and Warren 11, Baxter 10, Stone 9. The winners in the sweepstakes follow: Five clay-pigeons—Chapin and Dill 5, Sanborn, Perry and Porter 4, Melcher 3, Stone and Bradbury 2. Six bluerocks—Bond 6, Warren and Chapin 5, Sanborn, Porter and Melcher 4, Field 3. Five clay-pigeons—Bond, Field and Perry 5, Chase 4, Stone 3, Sanborn, Bradbury and Wood 2. Six bluerocks—Chapin 5, Bradbury, Stone and Wood 4, Chase 3, Sanborn 2. Eight clay-pigeons—Perry and Wood 8, Warren, Sanborn and Bradstreet 7, Chase and Melcher 6, Bond 5 Seven bluerocks—Baxter 7, Stone, Porter and Chapin 6, Warren and Melcher 5, Bond, Wood, Dill and Bradbury 4. Five clay-pigeons—Sanborn, Chapin, Wood and Baxter 5, Field, Bradbury and Porter 4, Chase, Stone and Melcher 3. Five clay-pigeons—Chase, Bradstreet and Dill 5, Sanborn, Field, Chapin and Melcher 4, Porter, Wood and Baxter 3, Stone 2. Five clay-pigeons—Porter, Melcher and Wood 5, Field, Stone and Bond 4, Chapin and Dill 3, Green and Baxter 2. Six bluerocks—Sanborn and Chase 6, Porter 5, Field 4. Five clay-pigeons—Porter and Dill 5, Stone 4, Chapin 3. Six bluerocks—Sanborn, Porter and Field 6, Stone and Bond 5, Chapin and Bond 4.

TORONTO, Aug. 17.—The Stanley Gun Club held their eleventh shoot for the President's gold watch at McDowall & Co.'s grounds this afternoon. About a dozen members competed for the trophy, Mr. C. Charles winning with a score of 19 out of 25 at 24yds. rise, this making his second win. Two other members have also won the prize twice:

C Charles (25yds.)	1111001011111111101101110—19
W McDowall (24)	1111111111011100111000101—18
T Sawden, Sr (24)	0010001101010111111000110—13
T Sawden, Jr. (24)	0100110001101011100010110—12
T S Bayles, (18)	0101000011011100000010010—10
J Beatty (19)	1100001010111011000100000—10

F. Emond, F. Mallett, J. Rice, J. Daisey and J. White retired after missing 8 birds.

First sweepstake at 10 birds:

Charles	1111101011—8	Daisey	1101000100— 4
McDowall	1111111101—9	Emond	1111111111—10
Sawden, Sr	1011111111—9		

Second sweepstake at 10 birds:

Charles	1001110101—6	Sawden	1111100011—7
McDowall	1011111011—8	Emond	1111111101—9

WORCESTER, Mass., Aug. 16.—At this week's regular meet of the Worcester Sportsmen's Club at Coal Mine Brook Range, the principal event was the continuation of the Classification Match. Each man has a possible 30 clay-pigeons or blackbirds in the class score, a possible 10 in the prize score, and 5 or more in shooting off a tie. The work of each man somewhat in detail follows:

Class A.	Class'n.	Prize.	Class A.	Class'n.	Prize.
M D Gilman	24	10	E F Swan	22	6
Geo Sampson	22	10	A B Franklin	25	6
E T Smith	28	9	C H Holman	23	6
C B Holden	26	8	W A Linteld	22	4
C H Howe	26	8			

Ties on 10 and 8 div. Ties on 6; Swan 5, Franklin and Holman 4,

Class B.	Class'n.	Prize.	Class B.	Class'n.	Prize.
Chas Crompton	21	9	F Stone	16	4
C Forehand	13	6	F Forehand	13	4
V F Prentice	18	5			

MONTREAL, Aug. 4.—The St. Hubert Gun Club tournament took place to-day a few miles beyond Petite Cote, some twelve members taking part in the tournament. Mr. Lamoureux killed his 12 birds straight and took first place. Mr. Dubuc took second place with 11 birds. In the open shoot at 10 live birds there was some fine shooting done. The birds were lively and were shot at against a brisk wind at 21yds. The following is the score, 14 taking part for a sweepstake:

Pelser	1001101011—5	Jones	1111111111—10
Dionne	1111111011—9	Pauce	1111111011— 9
Boucher	1010111110—7	Paquet	1010111111— 8
E Octave	0110011111—7	Celin	1111111111—10
Truesdel	1111111101—9	Martineau	1101111111— 9
Smith	0011111111—8	Racette	1011110111 – 8
Lareau	1000110111—6	Parizeau	0011111111— 8

Mr. Colin took first money, having killed his 10 straight with one barrel. Mr. Jones also killed his 10 straight, but had to use his second barrel once on a stiff flyer crossing to the right. Mr. Truesdel, with 9 out of 10, took third place after tieing off with the other nines. In the ladies' shoot there were some 50 entries. Messrs. Octave, D. Robert, Paquet and Smith got their 9 straight. Ties being shot off, the following took prizes: E. Octave first, D. Robert second, Smith third, Paquet fourth. The tournament as a whole was very successful and quite up to the usual standard of all tournaments given by the St. Hubert Gun Club, who, although not often heard from over the Peorias or other inanimate targets, can nevertheless be counted on to hold their own at live targets.

PHILMONT, N. Y., Aug. 10.—Philmont Gun Club's regular shoot at 10 bluerocks under National rules:

Milton Powell	1100111010 6	E J Beardsley	0100001100—3
G Vanderburgh	0001010011—4	D Myers	1001010100—4
W A Lingman	1110011001—6	D Howland	0000 1011 5
A L Becker	0000100001—2	Chas Smith	1000111011—6
Geo Ferguson	0000100010—2	D Ames	0010001100—3
Geo Baker	0000110110—4	Dr Vedder	0100000010—1
Dr Stickles	0000000000—0	C D Hicox	0011100100—4
S Scism	0100000000—1	H Beardell	0000100000—1

LODI GUN CLUB.—Lodi, Ohio, Aug. 11.—The Lodi Gun Club held a sweepstakes shoot on their grounds yesterday. A large number of visitors were present from neighboring towns, Seville especially being largely represented. The following matches were shot:

Practice shoot, 6 standards:

DeWitt	10101—4	F Aldrich	101100—3
Eggert	111110—5	Smalley	001000—1
C V Matteson	010101—3	Collins	001111—4
Robinson	011111—5	Noggle	000100— 1
Rockey	010001—2	Kennard	100111—4
H Aldrich	111111—6	Doolittle	010011—3
Rogers	101111—4	Wertz	001000—1

Match No. 1, 9 standards:

C V Matteson	111111000—6	F Aldrich	101000001—3
H Aldrich	111111011—8	Rogers	111101001—6
Robinson	011001101—4	Egbert	101111111—7
Rockey	011001011—5	Kennard	011001100 4
DeWitt	011110100 -5	Smalley	001000000—1
C L Matteson	111110101—7	Collins	100111110—6

Match No. 2, 12 standards:

Robinson	111111000111—10	C L Matteson	1101001011 10—7
C V Matteson	0010 10101110 – 5	DeWitt	1100101001010—6
Beach	1010000101 1— 6	Collins	0110110001111—7
Egbert	1110011111 1—10	F Aldrich	1110011100001—7
Barnes	010 1100 1110— 7	H Aldrich	0101011111110—8
Zimmerman	0111100001100— 6	Stevenson	0000001100 1—4
Rogers	1111101010 0— 8	Smalley	0000000000000—0
Rockey	1011111010 1— 9		

Match No. 3, 6 singles and 3 pairs:

Robinson	111111 10 10 10—9	Rockey	101111 00 10 01—7
Egbert	010111 11 01 11—9	C V Matteson	101101 10 11 10—8
DeWitt	010000 00 01 10—3	H Benscotten	101001 10 00 01—5
H Aldrich	101011 11 10 11—8		

Match No. 4, 10 standards, both barrels:

Robinson	1011011110—7	C L Matteson	1011110011—7
C V Matteson	1011011110—7	Barnes	0000010011—3
H Aldrich	1110111111—8	Zimmerman	1110010110—6
Rockey	1111011101—8	Collins	1101000111—6
Egbert	1101110111—8	Chase	1111001000—5
Rogers	1110111010—7	Smalley	1100001000—3

Captain H. H. Benscotten was present and gave an exhibition of fancy rifle shooting. He used a Colt's repeating rifle, .22cal. He broke 88 out of 100 glass balls thrown in the air, breaking the last 10 in 15 seconds, missing one of the last 10 but picked it up and shot it in time to break the 10 balls in 15 seconds. The captain is a fine shot, and is said to be almost equal to Dr. Carver, the famous rifle shot.—A. E. ELLIOTT.

CHICAGO CLUBS.—The second match between the Mak-saw-ba, Cumberland and Grand Calumet Heights gun clubs was shot at Grand Calumet Heights Station, Ind., Aug. 3, with the following results. The third and last match will be shot Aug. 20:

Mak-saw-ba Club.			
R B Organ	1122111211—10	J P Card	2011010111—7
H C Buechner	1100212011— 7	H Sloan	0012202212—8

T Cartwright	1010101100000001000011001— 8

At 5 double rises:

Gaylor		10 11 10 11 10—7	

Practice:

Foster	1010110110011101— 9	Gaylor	1001101110101011011111101—16
Twiss	1111011101011101—11	Chelson	1100101110111111—12

The club's new club house will be finished this week. The club will hold a tournament Aug. 27, open to all, except in one event. The horse cars run to the ground. Plenty of birds will be on hand, Keystone traps and birds.—ROSMOS.

WATSON'S PARK.—Grand Crossing, Ill., Aug. 14.—South Chicago Gun Club shot at 10 live pigeons, 5 ground traps, 30yds. rise and 80yds. boundary, birds killed with second barrel counted only one-half:

Doc Larkin	0121121211— 7½	B Fogli	0011011121— 6½
F Willard	2110111111— 8½	Lem Willard	0212201111— 6½
Chas Templeton	1111121112— 9	Ed Marsh	1021011222— 6½
Alva Reeves	1111111111—10	Emery Reeves	1110211121— 8

The medal shoot same day at 20 blackbirds, 18yds. rise:

E Reeves	01101111001 10111011—12	E Marsh	0000011010000000001— 5
Dr Larkin	10000110101010111010—10	L Willard	11010110111111111011—16
A Reeves	00101110101101000110	B Fogli	01010111110100011111 —13
Templet	10110101011111111101—15	F Willard	11111111011101101111—17

F. Willard won. RAVELRIGG.

FARGO, Aug. 15.—The sixth annual tournament, under the auspices of the Fargo Union Gun Club, opened here to-day with a large attendance of noted northwestern sportsmen. The day's programme opened with a sweepstake (9 singles), in which there were 23 entries. In the first regular event (10 singles) there were 25 entries. Skinner, of St. Paul, won first money, shooting off ties on 10; Lewis second money in shooting ties on 9; third was divided and to 4th won by Laizure. In the second event (9 singles) there were 25 entries. First money was divided by C. Bowers and Jones; second divided by Stone and Schiorman; third by Arnold and Lewis; fourth by Morris, Morrissey, Ahlstrom, Robbins and Thompson. In the third event Benson and Skinner divided first money; Thompson and Baldwin second; Smith, Arnold, Roberts and Lewis third; Rich and Jones fourth. In the fourth event Jones won first money; second money was divided by Morrissey, Benson, Roberts and Rich; third by Fuller, Arnold, E. Bowers and C. Bowers; fourth won by Schiorman and fifth by Fletcher. The club guarantees $600.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888 with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

NEW YORK Y. C. CRUISE.

Vineyard Haven to New Bedford, Third Run, Aug. 13.

THERE can be no complaint this year of lack of wind for the runs and races, the average being better than usual, and nearly every day has brought wind enough to afford a test of the boats. The first day's run was very light and fluky, while for an hour in the Vineyard Haven race the wind was very light, but the Goelet cups were sailed for under more satisfactory conditions of weather than have held since 1885; the second run to Vineyard Haven was begun in a strong working breeze, with plenty of wind to spare at the finish; the race for the Vineyard Haven cups was sailed for three-fourths of the course in a good clubtopsail breeze, and the third run was under still different conditions, the early part being sailed with reefed mainsails and housed topmasts, and the latter part with a strong breeze, though kites were carried off the wind.

On Tuesday morning a strong S.W. wind was kicking up a sea off West Chop, the whitecaps were running down Vineyard Sound, and though the water was comparatively smooth by the Middle Ground there were hills and hollows in plenty between Gay Head and Cuttyhunk. There were obvious reasons for the housed topmasts, double-reefed mainsails and No. 2 jibs on the forties, but there seemed no sufficient reason for a single-reefed mainsail and double-reefed foresails on such a craft as Constellation, 100ft. l.w.l., or even for the reefed mainsail and housed foretopmast on Sea Fox. Dauntless carried her maingafftopsail, Palmer had a single reef in mainsail, but both topmasts on end, the fore being a jury one, the broken spar of Saturday set up temporarily. Fredonia carried all her sails with foretopmast housed, Sachem, Merlin and Marguerite had reefed mainsails and foretopmasts housed, while Quickstep and Harbinger had housed both sticks and reefed main and foresail. The most conspicuous of the schooner fleet was the little Grayling, swinging all her lower sails and with both sticks up, evidently with no fear of the weather. The race in this class really belonged to Sea Fox in such weather, considering her size and model, but she lost it before the start by a double error; in the first place in reefing at all; in the second in starting with less sail than such a craft as Grayling was carrying. Had she started with full sail any freshening of the wind would have hurt her far less than Grayling; while in the opposite case of less wind, she need have lost no time by small canvas or time spent in shaking out a reef. Further than this she left Grayling early in the race instead of sticking close to her. The 70-footers showed no topmasts and carried reefed mainsails and No. 2 jibs, Gracie having two reefs in.

During the night the old America had come in, and as a matter of courtesy she was timed with the fleet. Alert was not in harbor, but just as the fleet started she came down before the wind with whole lower sail and working topsails set, running for the shoals. Clara did not start, though in port with a new topmast, as Captain Barr was taken suddenly ill, while two of the crew were also unwell, the fleet surgeon, Dr. Asch, spending some time aboard. Mayflower and Liris took a tow for New Bedford at 3 A. M. for repairs.

The cruising contingent, Nymph, Vandal, Adelaide, Whim, Azalea, Triton, and the Eastern forties, Awa, Alice and Helen, ran through Quick's Hole for New Bedford, the course for the races being from off West Chop up Vineyard Sound and by the Sow and Pigs Buoy, to a finish off Clark's Point, 31 knots.

At 10 A. M. the Electra was anchored off West Chop, the preparatory gun being fired at 10:10, with 5m. handicap limit. Although the large boats had 25 more before their start, a number of them crossed the line with the little ones, Titania running out and then returning to set a larger jib, No. 1. But four forties started, Gorilla, Maraquita, Lotowana and Peri; while Bertie had a walkover in the 53ft. class, and Hildegarde and Whileaway were the only starters in the 61ft. class. The start was timed:

Start	10 10 00	Œnone	10 37 26
Maraquita	10 10 43	Merlin	10 37 30
Gorilla	10 11 51	Marguerite	10 37 53
Quickstep	10 12 09	Gracie	10 38 50
Harbinger	10 12 30	Halcyon	10 39 08
Handicap gun	10 15 00	Sachem	10 39 11
Peri	10 15 15	Hildegarde	10 40 14
Medusa	10 15 28	Constellation	10 40 51
Lotowana	10 18 27	Katrina	10 41 10
Start	10 35 00	Iroquois	10 41 10
Fredonia	10 36 04	Norna	10 41 28
Intrepid	10 36 06	Whileaway	10 42 06
Sea Fox	10 36 12	Titania	10 42 09
Palmer	10 36 14	Handicap gun	10 45 00
Fortuna	10 37 12	Dauntless	10 49 00
Grayling	10 37 12		

Maraquita and Gorilla were first away, the former well ahead and to windward, both working close in to West Chop. Maraquita set her staysail, but before the steamboat wharf was reached Gorilla had crossed her bows. Lotawana and Peri were several minutes astern at the start. Quickstep followed the forties along shore, working the Vineyard Haven shore all day, but the rest of the fleet made one long tack from West Chop to Noshka Head, working closely under the Naushon shore for a time and then crossing the Sound, while a few, like Titania and Grayling, held under this shore all the way. Katrina, as in several previous starts, was in a knot of schooners at the line, but Capt. Haff held Titania back until all but Dauntless had crossed, and then chose his own water. Titania stood out on port tack, making a short leg in the middle of the Sound and then back on port tack again she headed for Tarpaulin Cove the third boat.

At 11 o'clock some of the big schooners began to realize that things were not what they seemed, and Grayling, with several others, set their maintopsails, Sea Fox shaking out a reef. Quickstep was now the leader of the small craft, with Gorilla well ahead of Maraquita and Bertie by the Vineyard Haven shore. Titania was now leading the larger division, being to windward of Grayling under the Naushon shore, while Sea Fox, on starboard tack, was making across for the south side of the Sound. She was beating Grayling as it was, and could have done so safely had she stayed by her, but in breaking tacks so early in the race she took a heavy risk. Katrina was a safe distance astern of Titania, Merlin and Sachem were following Grayling at a respectful distance, the big fisherman was doing good work, while Constellation was only about the middle of the fleet. Lotawana broke the toggles of her boom, leaving the foot of the sail loose, and gave up, running through Quick's Hole, and both Maraquita and Medusa parted throat halliards, while Palmer carried away jurytopmast during the day.

At noon Sea Fox had tacked off shore, being quite close in. Quickstep was well ahead of her neighbors, Bertie had not yet passed the forties, and Gorilla was a long way ahead of Maraquita. The others had begun to straggle across the Sound, Palmer being well out in the middle, while Norna was leading Fortuna. Katrina was not far from Grayling, and at 12:20 crossed the schooner's bows.

About the same time Sachem was in trouble under the north shore. She had already succeeded in forcing Gracie about when the sloop had the starboard tack, and now she was lying in irons. Twice she tried to tack and failed, then by means of a jibtopsail she was paid off until broadside to with no way on, when she took a very bad knock down, partly filling her cabin and floating all loose stuff off her decks. When she was righted she steered for Quick's Hole.

At 1:20 Titania was leading easily, crossing the Sound on port tack, having just shaken out a reef. Sea Fox, astern, was also on port tack off Bay Head, while Katrina was standing in toward shore on starboard, now a very long distance astern, Sea Fox crossing her bows when they met. To leeward of Sea Fox was Quickstep, while in Nemsha Bight, under Gay Head, were Fredonia, Gracie, Medusa, Constellation, Norma and the small craft. The wind was lighter than at the start, a lower sail breeze for the seventy-footers, but there was quite a head sea rolling in. Grayling, far ahead of the rest on the north shore, had picked up a favoring breeze off Robinson's Hole, and was coming out very fast on starboard tack to meet Sea Fox, and for ten minutes it was a very close thing as to which was ahead. At 1:45 she crossed Fox's bows, tacking at once on her weather beam, but the Fox at once danced away through her lee, and in ten minutes had left her a good distance astern. Grayling set a maintopmaststaysail, but it only hurt her, and soon after Titania set her jibheader, Katrina setting hers and a baby jibtopsail.

Titania was doing the best work of the day, holding two fast schooners 13 and 20ft. longer than she in a strong wind. The leaders were now near Sow and Pigs buoy, and it was a question whether Titania or Sea Fox would pass first, but the single-sticker led by a few seconds, the times being:

Titania	2 28 40	Katrina	2 43 58
Sea Fox	2 29 33	Quickstep	2 46 08
Grayling	2 31 40	Constellation	2 51 00

Palmer, Fredonia, Gorilla, Gracie, Norma, Fortuna and Merlin turned in order, but could not be timed, as the flagship was hurrying for the finish off Clark's Point.

Sheets were started at the buoy, and after a little the wind drew sufficiently astern to allow spinakers to port, both of the schooners setting them, but Titania did not need one to beat her class. Grayling also set a clubtopsail, but Fox carried only her two jibheaders. She had two minutes to make on the run in, and it was soon apparent that she could not do it. She led at the line, but was beaten by two minutes on corrected time. Maraquita was badly beaten by Gorilla, and Iroquois pulled off a good victory from her class. Norna beat Fortuna quite badly, but it does not count, as she was hauled out during the cruise. The fisherman, Fredonia, is not measured, but is very close to Norna. Constellation won in her class, but her showing during the day was nothing remarkable, as she cannot carry her canvas in a strong breeze. Quickstep, as usual, sailed very fast all day. Titania beat Katrina very badly all over the course. The times were:

SCHOONERS—CLASS 1.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	10 40 51	4 06 41	5 25 50	5 24 33
Palmer	10 33 14	4 14 19	5 38 05	5 34 48

Lotowana	10 15 00	Did not finish.		

A large fleet was awaiting the racers in New Bedford harbor, having come through Quick's Hole, one, the new Awa, losing her centerboard by the way. In the evening a reception was held on board the flagship, Commodore Gerry and his staff in dress uniform welcoming a large number of guests. The flagship was brilliantly illuminated by a string of electric lights from the mastheads to the bow and stern, and also around the awnings, while many other yachts were bright with colored fires. On shore was a bonfire of tar barrels, while a fleet of canoes, decked out with strings of colored lanterns, paddled about the harbor.

The orders for the next day called for an early start for the final run to Newport, but about 6 A. M. a light rain began to fall, the wind coming in heavily from the south, blowing up the harbor. Incoming yachts reported thick weather and a heavy sea outside, while several of the fleet, after leaving for Newport, soon came running in. A signal, start postponed, was given from the flagship at 10 A. M., and after waiting until noon, it was finally decided not to start, the weather being worse rather than better. Alice and Helen hauled out at New Bedford to prepare for the Corinthian sweepstakes of Monday, but the other forties could not do so without giving up the last run. The day was very disagreeable in every way, and the yachtsmen worried through it very impatiently.

New Bedford to Newport, Fourth Run, Aug. 15.

Thursday was slightly better than Wednesday, but still not much to boast of; cloudy and chilly, with a light N.E. wind in the harbor and every prospect of fog outside. To avoid the latter as far as possible the time of starting was advanced, and at 9:20 the flagship was anchored well off Clark's Point. A number of yachts had already started, leaving but twenty-five to cross the line for the run. The preparatory gun for the smaller boats was fired at 9:33, the starting gun being at 9:43 and the handicap at 9:48. The larger boats were started 10:08, with a handicap gun at 10:18. The times were:

Gorilla	9 47 17	Grayling	10 13 17
Harbinger	9 47 53	Gracie	10 13 48
Lotowana	9 48 08	Palmer	10 15 02
Bertie	9 48 55	Titania	10 15 09
Clara	9 49 26	Halcyon	10 16 01
Liris	9 49 29	Œnone	10 18 20
Maraquita	9 50 50	Marguerite	10 18 20
Quickstep	9 59 15	Merlin	10 18 52
Fortuna	10 10 09	Sea Fox	10 18 57
Constellation	10 10 11	Mayflower	10 18 57
Katrina	10 12 43	Iroquois	10 19 10
Hildegarde	10 12 44	Fredonia	10 21 08
Intrepid	10 12 47		

All the small boats were late in starting, and some were handicapped. The wind was very light, and spinakers were carried on port side by all. Clubtopsails were carried by all but Lotowana and Fortuna, the former having a jibheader and the latter a square-headed yardtopsail. Fredonia carried working topsails, maintopmaststaysail and jibtopsail. Balloon jibtopsails were run up or broken out on the line. Titania as usual picked out a place for the start where there was nothing near her, but Katrina went across with Grayling blanketing her and Intrepid close to her. Clara had come in during Wednesday from the Vineyard, Capt. Barr being well again, and she had started near the head. At 10:40 off the Dumplings the order was Gorilla, Clara, Liris, Bertie, Maraquita, Lotowana, Harbinger, Quickstep. A few minutes later Maraquita took in her spinaker and jibed over, and spinakers soon came in on all the first division, being reset in a little while on starboard side.

The fleet moved on slowly, the wind being even lighter than at the start. Constellation and Katrina led the second division, with Grayling third. A heavy roll was met off the Hen and Chickens, which lasted until the fleet was safe in Newport Harbor, an old sea coming in. The times at Hen and Chickens were:

Gorilla	12 01 15	Harbinger	12 16 50
Clara	12 02 15	Katrina	12 21 00
Liris	12 05 15	Titania	12 22 00
Bertie	12 06 30	Gracie	12 22 30
Lotowana	12 14 16	Hildegarde	12 25 20
Maraquita	12 15 35	Constellation	12 26 00
Quickstep	12 15 47	Grayling	12 28 30

Maraquita had trouble with her extension spinaker boom, and broke it.

For the next hour there was little or no wind, Clara and Gorilla lay near West Island, hardly drifting, while Liris fanned up on them. The large boats astern were coming down under spinnakers, but they would not draw on the leaders. After rolling another half-hour the Norna, not in the race, but just ahead of Clara, caught a nice breeze from the north and trimmed sheets for a reach. A few minutes later Clara and Gorilla caught it nearly at the same time, balloon jibtopsails coming in quickly. Liris went ¼ mile astern, had to wait for some minutes more before her turn came, and the rest were served in the same way, the head boats getting the breeze first. Titania and Katrina were not far apart, the latter ahead, but Capt. Haff was hunting for the breeze as far as was possible, and picked it up first. There was no time to lose, as the fog was shutting in rapidly, jibtopsails of all sizes, from babys to ballooners, were set according to the skill of the various skippers, some of the schooners sending up balloon maintopmast staysails. The last four miles were quickly run off, the flagship anchored off Brenton's Reef at 2:30, and a little later Clara came by under lower sail and clubtopsail, followed by Gorilla and Liris with baby jibtopsails drawing. Next came the lively little schooner Quickstep, followed by Beatrice, and then the big Constellation. The prettiest picture of the day was the finish of Titania, with Grayling's bowsprit almost touching her boom end, and Sea Fox close aboard of Grayling. The latter had started 5m. ahead, so Fox was the winner. Maraquita finished with her balloon jib set. The official times were:

FIRST CLASS SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected.
Constellation	10 10 11	3 52 30	4 42 19	4 42 10
Palmer	10 15 02	3 10 28	5 10 26	5 02 28
Intrepid	10 12 47	3 30 13	5 17 26	5 13 42

SECOND CLASS SCHOONERS.

Fortuna	10 10 09	3 21 29	5 11 20	5 11 10
Fredonia	10 18 00	Did not finish.		

THIRD CLASS SCHOONERS.

Sea Fox	10 18 00	2 56 25	4 38 35	4 38 04
Grayling	10 13 17	2 56 08	4 42 51	4 39 48
Mayflower	10 18 00	3 07 06	4 49 06	4 47 50
Merlin	10 18 09	3 20 48	5 02 48	5 02 48

FOURTH CLASS SCHOONERS.

Iroquois	10 18 00	3 02 32	4 44 32	4 43 43
Œnone	10 18 00	3 22 39	5 04 39	5 01 53
Halycon	10 16 01	3 26 20	5 10 19	5 09 10
Marguerite	10 18 00	3 27 25	5 09 25	5 09 25

FIFTH CLASS SCHOONERS.

Quickstep	9 48 00	2 51 46	5 03 46	5 03 46
Harbinger	9 47 33	3 08 18	5 20 45	5 19 50

THIRD CLASS SLOOPS.

Titania	10 15 09	2 55 55	4 40 46	4 40 46
Gracie	10 13 48	2 59 03	4 45 15	4 43 50
Katrina	10 12 43	3 01 43	4 49 00	4 49 00

FOURTH CLASS SLOOPS.

Hildegarde	10 12 44	3 04 01	4 51 17	4 51 17

FIFTH CLASS SLOOPS.

Clara	9 48 00	2 44 18	4 56 18	4 56 18
Bertie	9 48 00	2 51 58	5 03 58	5 01 51

SEVENTH CLASS SLOOPS.

Gorilla	9 47 17	2 46 47	4 59 30	4 58 30
Liris	9 48 00	2 50 05	5 02 05	5 02 05
Maraquita	9 48 00	3 05 03	5 17 03	5 15 45
Lotowana	9 48 00	3 16 22	5 28 22	5 26 14

Constellation beats Palmer 20m. 9s.; Sea Fox beats Grayling 1m. 44s.; Iroquois beats Œnone 18m. 10s.; Quickstep beats Harbinger 16m. 4s.; Titania beats Gracie 3m. 4s.; Gracie beats Katrina 5m. 10s.; Clara beats Bertie 5m. 33s.; Gorilla beats Liris 3m. 35s.; Liris beats Maraquita 13m. 40s. and Maraquita beats Lotowana 15m. 29s.

Newport, Special Race, Aug. 16.

The programme for Friday included the special races for 70 and 40-footers that had not hauled out to clean bottom since the cruise began, the prizes being a $250 cup for the 70ft. class and a $150 cup for the 40ft., with a second prize of $100 for more than two entries in each class. Besides these races, a special sweepstakes for the large keel schooners of $100 per side was arranged privately. For the latter prize only Dauntless, Palmer and Fortuna started, and of the seventies only Titania, Gracie and Bedouin; Katrina not starting. In the 40ft. class the starters were Gorilla, Liris, Maraquita and Tomahawk; this being the first race the latter has sailed since the Corinthian regatta in June. The courses were, for schooners, the regular Block Island course; for the seventies, 12 knots to leeward and return, and for the forties 9 knots.

The weather on Friday was a great improvement on that of the preceding day—clear and bright, with a light N. W. wind, and a long easy roll to the sea. The start was set for 11 A. M., and at that time the racers were off Brenton's Reef Lightship, all carrying clubtopsails, and with spinaker booms ready to starboard.

Tomahawk was sailed by Mr. Morgan, Mr. Burgess being on board; Maraquita was sailed by Mr. Belmont and Capt. Haff, while Capt. Chas. Barr and some of Minerva's men were on board; Liris was sailed by Mr. Lovejoy, and Gorilla by Capt. Smith. Clubtopsails were barred by consent in the keel schooner class. The single-stickers started at 11:30:20, and the schooners 2m. later. The times of crossing were:

Maraquita	11 31 57	Gracie	11 38 15
Gorilla	11 33 26	Titania	11 39 57
Tomahawk	11 37 03	Fortuna	11 51 59
Liris	11 37 13	Palmer	11 52 02
Bedouin	11 38 14	Dauntless	11 58 04

Maraquita and Gorilla, to the westward, went over in time, but Tomahawk and Liris, timed almost together, were handicapped nearly a minute. Bedouin and Gracie followed Liris. All of these carried spinakers to starboard, but Titania had only her balloon jibtopsail. She hauled up a little and went over the line at a good gait, running out to windward before she came in her course and set spinaker. Maraquita and Gorilla were ahead to the west of the fleet, Titania astern of both with Gracie beside her. Bedouin was abeam of Gracie, with Tomahawk between the two and a little ahead, while Liris was abeam of Bedouin and under her lee. The wind was very light and there was a long, easy roll to the sea. Under these conditions the heavy keel boats at once pushed to the front. Liris went by Bedouin and from under her lee, working across her bow until the big cutter was on her lee quarter and Gracie some dis ance astern on her weather quarter. Tomahawk was next to Liris, just ahead of Gracie, both Maraquita and Gorilla having dropped back a little. Bedouin had gained on both Gracie and Titania, and was ahead in her class.

The fleet jogged along easily until 1 P. M., when Liris lost the wind and took in spinaker, the big boats also taking in theirs. There was every promise now of a S. W. breeze after a few puffs from that direction Liris trimmed her headsails for it. She had hardly started off before it dropped, and she was left becalmed. A few minutes later the wind came in about W. by N., striking Gorilla and Maraquita first, then Tomahawk, while Liris was left becalmed until the others were well away from her.

It was now a reach to the mark, now only some 3 miles away, and under balloon jibtopsails the boats were traveling very fast.

The seventies found the same luck as the forties, Titania getting the wind first and soon having a long lead on Gracie and Bedouin. When Maraquita and Gorilla first caught the breeze as it worked to the west Gorilla was to windward, both carrying spinakers, Maraquita took hers in quickly and huffed under Gorilla's stern, running out to windward and ahead. A heavy puff in Gorilla's balloon jibtopsail broke the shackle of the bobstay tackle, and the topmast went over to leeward. She at once turned for home, clearing up the wreck. Liris nearly lost hers in the same way, but managed to get the ballooner down in time to save it. Maraquita mistook the mark and overstood, so that Tomahawk caught her. The times were:

Tomahawk	1 58 03	Liris	2 00 02
Maraquita	1 58 24		

The seventies ran out three miles further, Titania leading the procession as usual. They were timed:

Titania	2 14 55	Bedouin	2 18 55
Gracie	2 16 35		

Instead of a beat the course home was only a close reach, all but Maraquita fetching on one tack, though at first it seemed as though they could not fetch. Tomahawk and Maraquita were well away before Liris rounded, both lowering their clubtopsail, but Liris held on to hers, carrying it easily. She worked out to windward of the leaders and soon passed Maraquita. Tomahawk gave her a closer race, and the two had a hard battle of it to the line. Liris carried her clubtopsail for nearly half the distance home, and then lowered it, going faster at once. She had a good weather berth and a certainty of fetching, while it was doubtful whether Tomahawk could fetch as the wind was. When within a couple of miles of the line Liris was nearly abeam of Tomahawk. Here the wind fell lighter for a few minutes, and Liris set her club again. Soon the puffs came in heavily as she neared the land, and though she carried her sail well enough she was not doing as well with Tomahawk. The wind also shifted enough to let both boats over the line very easily. Maraquita had set a baby jibtopsail some time before, and was now well to leeward of the flagship, making the east end of the finish line. As she came for the line Tomahawk luffed out, crowding Liris so close that she barely shaved by the Lightship, her bowsprit lapping Tomahawk's boom. Maraquita was obliged to tack for the finish, Tomahawk led by six seconds, winning by forty-four seconds, Liris taking second prize.

In the large class Titania gained steadily on both, coming in an easy winner.

The schooner race was not specially exciting, there not being wind enough. The first leg was a reach to the markboat off Block Island, being timed:

Fortuna	2 20 30	Dauntless	2 38 25
Palmer	2 25 16		

On the next leg with spinakers to port Palmer gained, the times being:

Palmer	3 38 00	Dauntless	3 55 00
Fortuna	3 41 00		

Palmer finished first, but failed to save her time over Fortuna. The times were:

KEEL SCHOONERS.

	Start.	Finish.	Elapsed.	Corrected
Fortuna	11 51 59	4 34 08	4 42 09	4 32 57
Palmer	11 52 02	4 31 03	4 39 01	4 25 06
Dauntless	11 55 20	5 04 02	5 08 42	5 08 42

CLASS 3—SLOOPS AND CUTTERS.

Titania	11 35 20	3 32 06	3 56 46	3 56 46
Gracie	11 35 20	3 37 32	4 02 12	4 00 57
Bedouin	11 35 20	3 39 07	4 03 47	4 02 29

CLASS 7—SLOOPS AND CUTTERS.

Tomahawk	11 35 20	3 17 30	3 42 10	3 41 33
Liris	11 35 20	3 17 36	3 42 16	3 42 16
Maraquita	11 31 57	3 22 09	3 50 12	3 49 20
Gorilla	11 33 26	Disabled.		

The winners were: Fortuna beat Palmer 2m. 9s. Class 3, Titania beat Gracie 4m. 11s. Class 7, Tomahawk beat Liris 44s.

During the day a number of yachts left the fleet. Liris sailed for Fall River immediately after the race, as the railway at Newport declined to haul her. Tomahawk had been out on the Newport ways, but only by the aid of a full tide. Gorilla went on the Newport ways, but Maraquita, who expected to haul with her, could not get on the cradle, as Gorilla stuck before going far enough on to admit another boat astern of her.

Saturday, like Friday, was fair and warm, and in the morning the rowing and launch races were held. That for the Gamecock colors and $25 brought out four four-oared crews, Mayflower, Dauntless, Sea Fox and Norna, the former winning easily. But one entry was received for the Owl colors, Harry Shambo, of Lurline,

steam yacht. John Martin, of Norna, schr., entered to make a race, but was beaten by Shambo, the prize being $10 and $5 given by Com. Gerry, in addition to the flag.

The launch race was quite exciting, the course being 3 miles and each boat being handicapped at the start according to its power. There were nine starters, two from Electra and one each from Oneida, Vidette, Unquowa, Norna, Dauntless and Intrepid. The big fellows were well over the first half of the course before the big ones were started, the three 6 h. p., Electra, Oneida and Palmer, going off before Electra's large launch, an 8 h. p. Ofeldt boat. Oneida's launch won, with Electra's larger launch second. The prize was $25, given by the commodore.

After the race a meeting of captains was held on the flagship, and the fleet was formally disbanded, Com. Gerry leaving in the Electra for Sag Harbor, returning to New York by Monday morning. Many of the yachts left, a few remaining over to see the Corinthian sweepstakes sailed for on Monday.

The winners of the squadron cruise cups are Constellation, Fortuna, Grayling, Iroquois, Quickstep, Titania, Hildegarde, Bertie and Gorilla. In the fourth schooner class a remeasurement of Marguerite and Œnone is necessary before it is certain whether or no Iroquois wins. A summary of the cruise shows that it lasted 10 days, in which time four runs, each a race of about 50 miles, were made, and three special races were sailed, with three days spent at anchor. While this has made the cruise interesting and exciting it has made a great deal of hard work, especially for the crews, and in the smaller classes. The influence of this competition has been beneficial, and it is in the right direction theoretically, as the races are of necessity sailed in cruising trim.

The regatta committee have worked hard, and the result has been a success, as all of the races have been sailed without any hitches or mishaps. They have been greatly aided in the work by the perfect appointments of the flagship, in the way of fast launches and every convenience for work, and the club owes a great deal to Com. Gerry for the generous way in which he turns the flagship into a committee boat for all races. The work is done as it never could be from a tugboat; in fact without such a yacht as the Electra racing over all the present one would not be possible. There is one point in which the present squadron cruises are weak, the absence of visiting and social intercourse between the yachtsmen. At New London, Newport and Cottage City, as soon as the anchor is down the gig is at the gangway and all hands are ashore. Of course there is a good deal of gaiety and life about the hotels, and all meet in the evening, but there is not the close intimacy among the yachtsmen as would result from one or two stops at out of the way harbors, where there are no outside attractions, and where the evenings are spent on board of one yacht or another. In spite of the disappointment due to some bad weather, the cruise of 1889 must be set down as a very successful one, to be looked back on with pleasant memories in the future.

THE CORINTHIAN SWEEPSTAKES, NEWPORT, AUG. 19.

THE few yachtsmen who waited in Newport until Monday were treated to a race such as is very seldom seen, a contest only equalled in quality by those of the great sloops in the trial races of 1886 and '6. The number and excellence of the entries, the size of the stakes, and the number of designers interested were enough to make the race of special importance, and in addition the course and weather was such as to make a most exciting race, and a far fairer test than has yet been made of the merits of the new forties. Unfortunately the centerboard side of the question was allowed to go almost entirely by default, all but one of the eight boats starting being keels, and so no fair chance for comparison was afforded, but this is of little importance when it is considered that the winner has beaten the best of the centerboard boats, Chiquita, Verena and Nymph, as badly as she has the other keels. The race was arranged last June by the Corinthian Y. C. of New York, at the suggestion of Mr. August Belmont, Jr., the entrance being $100 per boat, 60 per cent. to go to the first boat, 18 per cent. to the second, 12 per cent. to the third, and 10 per cent. to the club. The date was set to follow the New York Y. C. cruise, the course to be 25 knots triangular, starting from Brenton's Reef Lightship. Nine entries were received, all but Chiquita starting:

	L.W.L.	Sail Area.	Corrected Length.	Allowance.
Liris, C. W. Wetmore, et al	39.70	3,603	49.86	Allows.
Tomahawk, E. D. Morgan	39.65	3,532	48.68	1 18
Gorilla, R. P. Carroll	39.92	3,257	48.50	1 32
Maraquita, A. Belmont, Jr.	39.92	3,173	48.12	1 58
Alice, P. D. Wheatland	39.90	....	46.35	3 56
Helen, C. D. Prince	39.90	....	46.35	5 56
Minerva, C. H. Tweed	39.96	2,754	46.07	4 17
Pappoose, Bayard Thayer	39.90	2,332	42.60	8 45

Of the above boats Liris was designed by Mr. William Gardner, Tomahawk, Maraquita and Pappoose by Mr. Burgess, Gorilla by Mr. A. Cary Smith, Alice and Helen by Mr. A. G. McVey, of the Boston *Herald*, and Minerva by Will Fife, Jr. The race has naturally been looked to as the most important of the year, and everything was done to put the yachts in the best possible form. Alice and Helen were docked at New Bedford, Liris hauled out at Fall River, Tomahawk had hauled out at Newport just as the cruise began, not being used since, and Gorilla and Pappoose also hauled out at Newport at the last moment, only Maraquita being unfortunate enough not to be able to haul out at all. The great draft of some of these boats, upward of 11ft., has made it a matter of difficulty to find docking facilities in a hurry, only the larger railways being capable of hauling them. Tomahawk was hauled at Newport with great difficulty, the same ways refusing to attempt to haul Liris, while Maraquita was unable to get out on account of a moderate tide only.

All were stripped for the race, every spare bit of wood and furniture being taken ashore, while the best skippers and crew were picked for them. Liris had Capt. George Pittuck, of Bedouin, at the stick, with Mr. Gardner and a picked crew of Corinthians and professionals; Tomahawk had Mr. Morgan at the stick, with Mr. Burgess beside him and a picked crew; Maraquita had Capt. Haff of Titania at the wheel, with young Capt. Haff as mate and part of Titania's crew, Mr. Belmont being on board; Gorilla was sailed by her skipper, Capt. Smith; Pappoose was sailed by Capt. Nat Watson; Helen had Capt. Crocker, of Puritan and Shadow fame, at the wheel, with Mr. John Bryant, owner of Shadow; Alice was sailed by Capt. James T. Smith, the talented designer being on board, while Minerva was steered by young Capt. Charles Barr, her skipper, Capt. John Barr with some of Clara's crew being on board.

The tug Assistance, with the regatta committee, Messrs. Eben B. Clark and W. H. Plummer, and Mr. W. Lloyd Jeffries, of the Beverly Y. C., as judge, ran out of the harbor about 9:30, there being then a nice S.W. air stirring. The start was not hurried, as more wind was needed and the breeze was freshening, but when Brenton's Reef Lightship was reached there was quite a breeze. The eight boats had worked out with clubtopsails set, and carried them for a time, but about 10:30 Pappoose started to douse hers, showing only a jibheader. One by one the others followed, Minerva setting a small clubtopsail, until only Liris was swinging a club.

The course for the first leg was laid out S.W., 8¼ knots, being nearly parallel with the trend of the shore from Narragansett Pier to Point Judith. The preparatory whistle was blown at 10:48, but owing to the wording of the sailing directions there was some doubt as to whether the interval was 10 or 15 minutes. Tomahawk, closely followed by Minerva, came for the line at 10 minutes, beautifully timed for the start, but both were obliged to return, Gorilla, crossing the other way, was also sent back. When the start was finally given, at 11:03, the fleet was to the west of the Lightship, the line being on the east side. Tomahawk again came first for the line, but Liris was lapping her, though unable to force her way between Tomahawk and the ship. Minerva was close after them and stuck her nosepole in between Liris and the ship, coming on the weather of Tomahawk as the three cleared the line. Gorilla was next, the first four crossing within a minute, but the rest were a little later, crossing in processson, with Helen last. Strange to say none were handicapped, something seldom seen. The times were:

Tomahawk	11 03 59	Alice	11 05 28
Liris	11 04 04	Maraquita	11 05 39
Minerva	11 04 11	Pappoose	11 05 49
Gorilla	11 04 52	Helen	11 06 48

All crossed on starboard tack, but Pappoose was hardly clear of the line before she went on port tack, heading in for Narragansett Pier. As there was every chance for more wind inshore, the move seemed a good one, and later events proved it so. Tomahawk was now a little ahead of Minerva, but the latter was climbing out to windward at a great pace. Liris was not holding either, being the leeward boat. Gorilla, Helen and Alice followed Pappoose at once, but the leaders held their first tack, followed by Maraquita. At 11:19 Minerva went on port tack inshore, the others following. She had now a decided lead, with Tomahawk second, and Liris and Maraquita dropping astern. Gorilla was leading the inshore division, with Helen next. Minerva was holding the best wind, outpointing and footing Tomahawk. Liris was well out to windward, but astern, while Maraquita, to leeward of Tomahawk, was abeam of her but not holding to windward. At 11:27 Liris lowered her clubtopsail, getting it on deck before setting her jibheader. The second division was now working short tacks close under the beach, Gorilla leading. As Pappoose and Alice closed in at 1:40, Alice crossed Pappoose's bow. Maraquita and Helen were now the last, and both set small jibtopsails.

The two divisions were approaching rapidly, Minerva on port tack leading one, and Gorilla on starboard the other. They met at 11:50, Gorilla being close enough to cause Minerva to tack. It was a curious sight as the two fleets, separated for three-quarters of an hour, came together again. Minerva, leading the first division, was ahead of Gorilla, leading the second, while Alice, Pappoose and Helen, of the second division, dropped into line respectively ahead of Tomahawk, Liris and Maraquita, of the first division. Evidently the inshore work of the smaller and presumably slower boats had been better than the offshore tacks of Minerva, Liris and Tomahawk. That this was the case is proved by the work of the next hour, with the fleet now in the same wind and water and sailing on even terms, as Tomahawk and Liris pulled up several places before the turn was reached. At 12:20 Minerva was off Point Judith, with the mark about two miles away. The others were coming up astern in the order in which they afterward turned, Tomahawk having now headed Gorilla, while Liris was next to the latter. Minerva set her balloon jibtopsail as she came for the mark, and then dropped her spinaker boom to starboard, running up and sheeting out the sail at once. The times at the first turn were:

Minerva	12 41 45	Helen	12 48 59
Tomahawk	12 44 46	Alice	12 49 43
Gorilla	12 46 24	Pappoose	12 50 28
Liris	12 46 41	Maraquita	12 51 42

Elapsed time, first leg to windward:

Minerva	1 37 34	Liris	1 42 21
Tomahawk	1 40 41	Alice	1 43 47
Gorilla	1 41 23	Pappoose	1 44 23
Helen	1 41 57	Maraquita	1 45 46

Minerva thus beats Tomahawk by 3m. 7s. in 8 knots to windward, and Gorilla and Helen about 4m. The conditions of the windward work were unusually fair, the only advantage being that gained by the early tack inshore by four of the boats.

Going down wind there was a marked difference of opinion among the fleet as to the best canvas to carry. Minerva set her spinaker at once, making it draw, but the rest were very slow. Liris carried hers in stops 10 minutes after turning, while Tomahawk ran the whole 8 miles under balloon jibtopsail. As Minerva continued to gain and Tomahawk lost most on this leg, the former must have been nearly right. All carried balloon jibtopsails, and clubtopsails were sent up, Liris lowering her jibheader to set the ballooner at 1 o'clock, Minerva at the same time shifting her small for the large club. At 1:33 Minerva lowered spinaker and hauled up a little for the tug, carrying balloon jibtopsail, balloon foresail and clubtopsail. She made a serious blunder in not dousing the balloon jibtopsail before coming on the wind for a close reach, the wind being now nearer west, as she had a safe lead on elapsed time, without her allowance, and risked the race on the chances of losing her topmast. She staggered along a short distance, after making a very pretty turn, and after running up off her course a little she was obliged to lower the balloon jibtopsail. Liris had run Tomahawk over the second leg and was very close to her at the mark, when Tomahawk swung off for a wide sweep, giving Liris a fine chance to cut her out. Capt. Pittuck made a handsome turn, close aboard the tug, and was off and away before Tomahawk. The most amusing bit of work in the entire race was the clinch at this mark between the two McVey boats. Capt. Crocker had brought Helen close to the tug for a neat turn when her white sister, Alice, with Designer McVey on board, rushed down on her, forcing a passage between her and the mark at the imminent risk of a foul. Helen was forced to give room. Maraquita had set her balloon jib on the run, and held to it all the way home. The turn was timed:

Minerva	1 43 20	Alice	1 52 19
Liris	1 49 30	Helen	1 52 17
Tomahawk	1 49 49	Pappoose	1 54 00
Gorilla	1 50 07	Maraquita	1 56 05

Elapsed time, second leg, free reach:

Minerva	1 01 35	Pappoose	1 03 48
Alice	1 02 34	Gorilla	1 03 52
Liris	1 03 05	Maraquita	1 04 40
Helen	1 03 32	Tomahawk	1 05 09

Minerva had also gained on this leg, Alice doing good work, while Liris had run Tomahawk considerably. The wind was now well aft and dead strong enough to swing clubtopsails to. Minerva was hopelessly ahead of the fleet, but there was still a number of scores to be settled, and all did their best. Liris had shaken Tomahawk at the turn, while Gorilla collared the latter, and was now to windward of her. On this leg Liris traveled very fast and none of the rest could catch her. Gorilla worked out on Tomahawk, thereby hurting her, and at 2:15 was hanging to Tomahawk's weather quarter. She then set a baby jibtopsail and began to walk by Tomahawk to windward, soon passing her and leading her over the line. The finish was a fine one, the boats traveling very fast under a good press of canvas. Alice, Helen, Pappoose and Maraquita crossed in a bunch. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Minerva	11 04 11	2 27 20	3 23 09	3 18 52
Pappoose	11 05 49	2 40 15	3 34 26	3 25 41
Gorilla	11 04 52	2 35 20	3 30 28	3 23 38
Liris	11 04 04	2 33 25	3 29 21	3 23 21
Helen	11 06 48	2 40 20	3 33 32	3 29 36
Alice	11 05 28	2 39 20	3 33 52	3 29 56
Tomahawk	11 03 56	2 35 50	3 31 51	3 30 33
Maraquita	11 05 39	2 40 10	3 34 31	3 32 33

Elapsed time, third leg, close reach:

Liris	43 55	Tomahawk	46 01
Minerva	44 90	Pappoose	46 15
Maraquita	44 08	Alice	47 01
Gorilla	45 13	Helen	48 03

Minerva wins $540, Pappoose $162, and Gorilla $108, the money to be put into cups.

As the day was clear and the legs short, the intermediate times were taken with more accuracy than common, and are correct to a quarter of a minute or less. They show a clear gain for Minerva in the windward work and off the wind, while Liris, Minerva and Maraquita were practically equal on the reach. Tomahawk was second boat in the windward work, but slow in running and reaching. The little Pappoose did good work all day, and takes second money on corrected time, while Gorilla takes third money. The elapsed times are instructive, as Minerva beats Pappoose over 11m. on even sailing, she beats Gorilla over 7m. and Liris over 6m. The two McVey boats did very good work, beating both the Burgess boats, Tomahawk and Maraquita.

In view of what Minerva has done before this season, there is no escape from the conclusion that she is a good deal too fast for the rest of her class, and that they have no business with her. As to the rest, the present race, though a perfectly fair one, cannot be taken as a conclusive test of the merits of all, as its results have been contradicted, or only partly supported by the previous races of the year. It is to be regretted that such centerboards as Nymph and Verena were not in it, as their performance with the keels would have been very instructive. Gorilla did fairly well, though a part of her gain was made by the early tack in shore, but taken all through she has made a very creditable showing in the late races. There are a number of races yet to be sailed before the season closes, and from them all it may be possible to tell which is really the second best forty, but as to the fastest of the class there can no longer be any doubt. Minerva has settled that. She will be in the Corinthian races at Marblehead this and next week, where she will meet Gorilla, Helen, Verena, Maraquita, Chiquita, Pappoose and probably Alice. Liris is not likely to go round, as her owners have no time and wish to use her for cruising about the Sound within reach of business. The Nymph is out of racing for the present, and will not go round the Cape, but she will be in the fall races about Larchmont and the Lower Bay.

ATALA AND MABEL.—These two boats have matched for a series of three races, for a silver cup, the first being sailed on Aug. 17, over course No. 7 of the Hull Y. C., 6 miles. Mabel, owned by F. L. Dunne, Hull Y. C., is 21ft. 6½in. sailing length, and Atala, owned by E. F. Linton, of Weymouth, is 22ft. 3½in.; both centerboards. The wind was from light to moderate during the race, which was started at 11:20 A. M. The times were:

	Elapsed.	Corrected.
Atala, E. F. Linton	1 52 44	1 31 32
Mabel, F. L. Dunne	1 56 50	1 36 03

Atala wins by 8m. 31s.

QUINCY MOSQUITO BOATS.—The first race of the Quincy mosquito boats was sailed on Aug. 17, off Hough's Neck, the times being:

	Length.	Elapsed.	Corrected.
Teaser, Fred Estes	15.04	1 43 30	1 10 53
City Point, Frank Pray	15.02	1 44 15	1 11 43
Coot, White and Nicol	15.03	1 45 00	1 12 15

Eva, Edith, Dart and Cosett withdrew.

BEVERLY Y. C.

150TH REGATTA, THIRD CHAMPIONSHIP, AUG. 17.

THE pennant in the second class having been twice won by Swordfish, there was no race in that class, and no one seemed anxious to tackle Saracen, who had a walkover.

In third class an excellent entry appeared and a close race was the result, separate prizes with allowance being raced for by the cats and sloops, but the whole class sailing for one championship on actual time, Mosca and Kiowa each having won a leg.

In fourth class Nonpareil and Dolphin, who each had a leg to their credit, sailed a close race. It is to be regretted that Psyche, who was entered, did not put in an appearance.

Before the start Mosca tried the experiment of setting up her jibstay till her hollow mast was bent well forward; the mast could not stand it and was sprung a little during the windward work. Kiowa had just come from the shops, where she had had the rail on her mast taken off and hoops substituted; this required that throat halliard fastenings be removed from mast and replaced. The workmen improved on owner's orders and replaced fastenings with a patent eyebolt, in place of a band round mast as ordered; the result was that when she left her moorings, ten minutes before start, the eyebolt drew out at once, and sail came down with a run; the block was lashed onto mast again in time to start, but rope lashings stretched badly, leaving sail very slack and bothering her on the windward work.

There was a nice westerly topsail breeze blowing at the start with occasional puffs of some force, which died out somewhat toward the finish.

Wraith was handicapped by a bad start; Kathleen was off first with Kiowa just astern, then Hoiden, Mosca and Edith close together, Wraith bringing up the rear.

Kathleen and Kiowa began to drop the others on the run to Bowditch, Kathleen luffing as far as obstructions near course would allow, to prevent Kiowa getting by her; the result was they sailed a longer distance than the others. In every puff Kiowa gained; between puffs Kathleen drew ahead; finally Kiowa got by, rounding Bowditch Ledge about 30s. ahead; Mosca was third, then Hoiden, Edith and Wraith.

It was a beat to Curtis Point, the boats standing in to the shore with the wind very light. Kathleen could not point with Kiowa, but outfooted her, so when she came out on the starboard tack the Cape cat had to give way to avoid a foul. Mosca at this time was closing well.

After the wind grew stronger and when boats next met, Kiowa was ahead, rounding windward mark about 30s. ahead of Kathleen, Mosca third. At this time the others were close together some distance astern, Edith having a trifling lead, when she broke her rudder and was forced out of the race. Running back to buoy 3 Kiowa held her own on Kathleen, but from 3 to the finish, with wind forward of abeam and dying out, Kathleen gained, and Mosca gained on both, but they were not able to catch her.

In the fourth class Nonpareil made a bad start, and never caught her competitor. Result as follows:

First class course, 10 miles round Half-Way Rock, S. E. Pig Breaker and return. Third and fourth classes, round Bowditch Ledge Beacon and stakeboat off Curtis Point, returning outside of 7, 5 and 3 and Selman's Berth, 7½ miles. Wind, west; fair topsail breeze:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Saracen, W. P. Fowle	38.05½	2 01 00	2 06 00
THIRD CLASS—CATS.			
Kiowa, W. A. & W. L. Jeffries	22.01	1 29 38	1 18 06
Hoiden, Gordon Dexter	22.02	1 35 25	1 24 08
Edith, F. H. Wood	20.05	Disabled.	
SLOOPS.			
Kathleen; R. S. Peabody	25.07	1 29 47	1 21 39
Mosca, C. H. W. Foster	24.06	1 30 35	1 21 14
Wraith, H. P. Benson	22.03	1 34 44	1 24 21
FOURTH CLASS.			
Dolphin, Royal Robbins	18.00	1 41 35	1 25 31
Nonpariel, W. O. Taylor	18.09	1 42 16	1 27 08

Saracen wins in first class, Kiowa in third class cats, Mosca in sloops, Dolphin in fourth class. Championship for first class won and held by Saracen, championship for third class won and held by Kiowa, championship in fourth class won and held by Dolphin. Judge, Patrick Grant, Jr.

THAT NAPHTHA LAUNCH EXPLOSION.

A TERRIBLE casualty occurred at Buffalo, N. Y., Aug. 7, when a quantity of naphtha gas exploded, burning a boat house and the hull of a naphtha launch, and killing three children and a man and seriously injuring a woman and another child. The newspapers reported that the accident was caused by the "explosion of the yacht's boiler." The launch was one of those manufactured by the Gas Engine and Power Co., of this city, who have advertised in our columns that hundreds of their launches were in use without a single accident. The naphtha launch is rapidly winning its way in popular favor, and it is recognized as a distinct advance in navigation. The craft are in use by so many readers of FOREST AND STREAM that we have been at some pains to gain accurate information about the facts of the Buffalo affair, and to learn whether the accident should be charged to the launch or to sheer culpable carelessness in handling naphtha independently of the working of the launch. The facts are given in the subjoined letters, sent to us by the manufacturers. From this examination by Buffalo parties, it appears that the yacht's "boiler" did not "explode;" the explosion was caused by naphtha gas, formed by a large quantity of naphtha spilled in the boat and thrown overboard, where it floated on the surface. This naphtha uniting with the atmosphere formed explosive gas, and it was this gas that was ignited, not in the "yacht's boiler," but outside, and independently of any legitimate handling of naphtha in connection with the yacht. An analogous case would be that of loading a shotgun, scattering the powder about on the floor, and then touching a match to it. Gun and powder and yacht and naphtha are perfectly safe engines so long as handled right. The Buffalo casualty, we are satisfied, cannot be regarded as in the slightest degree damaging to the safety of the naphtha launch, but it should impress upon all who use the craft the importance of extreme care in handling the naphtha itself, when by uniting with the atmosphere it may form an explosive gas. The letters are as follows:

BUFFALO, Aug. 16.—*Gas Engine & Power Co., Morris Dock, New York City.*—GENTLEMEN: After having quite thoroughly investigated the cause of the recent explosion of gas in Mr. Crocker's boat house, I am fully satisfied that it occurred as the result of gross carelessness in the handling of naphtha, and that it was entirely independent and in no way connected with the machinery or apparatus of the naphtha launch which was in the boat house at the time. In fact, although the hull of the launch was almost consumed by fire, communicated to it by the burning naphtha spilled on the water and in the boat which ignited from the explosion of gas generated therefrom, yet the naphtha tank, the retort or coil, and every part of the machinery of the boat, is to-day whole and unimpaired, except in so far as it may have been affected by the intense heat of the fire to which it was subjected.

Of course, every intelligent person (and none others have any business to handle such an agent) understands that naphtha, when poured, slopped or spilled about over a large surface, exposed to the atmosphere, will evaporate rapidly, and mixing with the atmosphere, will form an explosive gas. By pumping a large quantity of naphtha into the bottom of the boat, with nothing to prevent its flowing freely under its floors, then dipping out the naphtha, or such part of it as was easily accessible, pouring considerable quantities of this overboard on the surface of the water, leaving the bottom of the boat well saturated with the naphtha and then lighting a match in the midst of all this immense exposure of naphtha-saturated, gas-generating surface, is it any wonder that a disastrous explosion occurred? If one had gone deliberately at work to manufacture just the conditions necessary to produce a powerful explosion of naphtha gas, he could hardly improve upon these methods. As an owner of a naphtha launch which I have now run for two seasons with the greatest satisfaction, and as I believe, with great safety, I was much pleased to find, upon getting at the bottom facts, that the recent explosion was due to no fault of construction or defect in the naphtha launch, but was entirely dependent upon gross thoughtlessness in the handling of naphtha, contrary to all proper usage in dealing with an agent which requires a little care and prudence wherever it may be handled.—Yours truly, R. V. PIERCE, M. D.

BUFFALO, N. Y., Aug. 15.—*Gas Engine & Power Co., Morris Dock, N.Y. City.*—GENTLEMEN: In reply to your recent inquiry as to the cause of the burning of the naphtha launch and boat house, would say I learned of the accident about two hours after its occurrence, and just as my sons and self were leaving our boat house in the naphtha launch Louisa, purchased of you some two years since. As we were going to the yacht club house to take my family for an evening sail, I determined to visit the scene of the disaster before doing so, to learn if possible the cause. I examined the wreck, and became satisfied that neither the coil, or retort, as you choose to call it, nor the tank had been injured,

both being intact. Having satisfied myself that the boat and its appliances were not at fault, I resumed my journey, taking my wife and children aboard, and spending the evening on the lake. I mention this fact to show you my confidence in the safety of the naphtha launch. I have since learned, in an interview with the owner, that at the time the accident occurred the parties in charge, in order to find out what was the matter with their strainer, or to see if there was dirt in the naphtha, had pumped the naphtha from the tank into the compartment about the engine, disconnecting some of the valves near the pump for that purpose, and using the hand naphtha pump to do it. That they then transferred this naphtha from the compartment in the rear to the tank, then cleaned out the back compartment, throwing over the refuse naphtha, which of course floated on the surface of the water, and shortly after this the explosion occurred. Knowing as I do that the rear compartment is neither naphtha nor watertight, and from this fact realizing that the naphtha must have gone from that through the entire length of the boat, I can readily see how the burning of the boat occurred. I am of the opinion that in their efforts to start the boat, and in their manipulation of pumping the naphtha into the compartments, then carrying it back to the tank and turning it in, they had filled the boat house with gas from the naphtha, and that communication was made between the lighted match at the coil and the boat house, either through the naphtha left in the boat or that on the surface of the water, and that the gas in the boat house exploded and set it on fire instantly. Since the accident occurred I was present at the raising of the hull, and upon close examination of the coil, tank, pipes, and machinery of every description, I am confirmed in my belief that none of them had given away, and that the accident was caused by the use or handling of naphtha, and not at all owing to any fault of the boat. In fact, the examination proved a great surprise, as it showed that although the entire boat, sides and top, were completely burned to the waterline, the tank was but slightly bulged and one stay pulled through. There was naphtha still inside of it. Yours truly, GEO. B. HAYES.

HULL Y. C.—The second championship race of the Hull Y. C. was sailed on Aug. 17 in a moderate W. wind, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Magic, E. C. Neal	31.03	2 35 16	2 06 54
Albatross, J. J. Henry	34.02	2 38 26	2 12 50
SECOND CLASS.			
Harbinger, J. R. Hooper	28.01	2 30 16	1 58 15
Erin, J. Cavanagh	26.08	2 37 50	2 04 28
THIRD CLASS.			
Posy, R. G. Hunt	22.02	2 00 02	1 24 36
Undine, E. B. Holmes	23.04	2 06 20	1 32 21
Secret, E. F. Linton	22.06	2 03 49	1 28 48
Echo, Burwell & Isham	24.05	2 01 13	1 28 43
Thelga, H. J. Johnson	22.01	2 02 37	1 27 05
FOURTH CLASS.			
Eureka, E. B. Rogers	20.06	1 34 46	1 12 04
IXL., Skinner & Smith	16.02	1 51 49	1 24 52
FIFTH CLASS.			
Mabel, F. L. Dunne & Brown	19.10	1 43 16	1 20 04
Myrtle, C. R. Poor	19.02	1 42 42	1 18 54
Atala, F. L. Linton	19.10	1 39 28	1 16 16
Tartar, J. B. Forsythe	19.11	1 55 18	1 32 10
SIXTH CLASS.			
Rocket, H. M. Faxon	16.02	1 49 38	1 22 41
Wildfire, H. A. Keith	17.03	1 53 23	1 27 39

Magic and Atala win each a championship leg, and Harbinger, Posy, Thelga and Eureka win full championships. The judges were Benjamin W. Rowell, Wm. E. Sherriffs, John R. Chadwick and James B. Forsythe.

DUXBURY REGATTA.—The third subscription race at Duxbury was sailed on Aug. 17, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Pet, H. T. Hayden	17.03	Not taken.	
Mary, J. W. Seaver, Jr.	16.06	2 01 34	1 17 18
Marion, James W. Watson	19.02	1 45 30	1 05 50
Dux, William Adams	17.07	1 40 33	1 04 10
White Swallow, E. W. Watson	18.09	1 43 50	1 06 30
Pearl, F. H. Palmer	17 06	1 57 30	1 15 09

First White Swallow, second Dux, third Marion.

SECOND CLASS—CENTERBOARD SPRITSAILS.

Solitaire, Sanford C. Winsor	17.01	1 36 48	1 02 16
Henrietta, A. M. Watson, Jr.	16.01	2 00 10	1 34 58
Carrie B., John C. Dawes	16.02	Not taken.	
Kittie, L. H. Delano	15.03	2 10 20	1 32 55
Myra, S. C. Cheney	16 03	1 44 32	1 08 44
Fred and Emma, Fred Wadsworth	15.09	1 51 40	1 15 00
Mayflower, Bache & Snow	16.00	1 41 10	1 04 58
Katherine, Everett Ewell	16.00	1 48 42	1 12 30
Ben Harrison, S. S. Rychards	17.00	1 33 16	1 03 36
Rooster, Percy B. Fowle	16.06	1 46 56	1 11 32
Florence, Geo. B. Cushing	15.00	Not taken.	
Unknown, Ernest Sweetser	15.07	2 11 50	1 36 08
Fair Play, Geo. D. Bartlett	16.07	1 37 36	1 02 20
Eaton, E. R. Eaton	16.00	Not taken.	

First Solitaire, second Fair Play, third Ben Harrison.

THIRD CLASS—KEEL SPRITSAILS

Sadie W., William J. Turner	15.01	2 12 37	1 34 55
Osiris, John M. Watson	15.01	1 19 30	1 41 48
Paul Revere, Clarence Smith	16.00	2 10 45	1 34 33
Clear the Track, Oscar Hunt	15.05	1 49 38	1 12 30
Jessie, J. Morton	15.07	1 50 45	1 14 03

First Clear the Track, second Jessie, third, Paul Revere.

The judges were John A. Irwin, Sidney M. Hedges and Lewis K. Keith, and the committee of Arrangements Charles M. Cook, Sanford C. Winsor, Alfred D. Green, Lewis H. Delano and Capt. Joshua M. Cushing.

COTTAGE CITY RACES.—The Citizens' race for Cape catboats was sailed off Cottage City on Aug. 15, the wind being N.E. The times were:

FIRST CLASS—21FT. SAILING LENGTH.

	Elapsed.	Corrected.
Climax	1 48 55	1 17 45
Wildcat	2 03 24	1 28 14
Mollie	2 06 23	1 32 13
Defiance	2 09 26	1 34 56
Tramp	2 06 12	1 35 02
Mary	2 08 01	1 36 01
Edna	Did not finish.	

SECOND CLASS—18FT. TO 21FT.

Daisy	2 03 54	1 23 34
Hero	2 06 10	1 26 30
Algonquin	2 07 10	1 26 50
Elna	2 07 55	1 29 15
Mascot	2 14 07	1 33 17
Marion	2 20 29	1 41 59
Sachem	2 24 42	1 47 02
Drift	Did not finish.	

THIRD CLASS.

Edith	1 38 48	1 03 28
Reba	1 49 33	1 11 01
Psyche	1 47 24	1 12 44
Rena	1 54 43	1 16 27
Shawnee	Did not finish.	

FOURTH CLASS.

Mary E	1 21 55	0 50 25
Annie	1 21 47	0 56 29
Marion	1 38 50	1 07 38
No Name	Did not finish.	

FIFTH CLASS.

Otter	1 38 48	1 05 54
Messer	1 41 00	1 09 41
Sanford	1 49 50	1 17 44
Jones	1 55 53	1 24 21
J. Arthur Beebe	Did not finish.	

SIXTH CLASS.

E. Donnelly	1 48 55	1 15 49
Capt. Ireland	1 50 20	1 19 14
J. D. Hoxie	1 55 58	1 24 46
Olga	Did not finish.	

MAHOPAC Y. C.—Third pennant regatta, Aug. 17. Regular club course, sailed twice; time limit, 2 hours; distance, 10 miles. Weather fair. Wind W.N.W., moderate:

JIB AND MAINSAIL—CLASS 2.

	Length.	Elapsed.	Corrected
Flora, E. S. Ponvert	21.17	1 38 28	1 37 32
Vixen, F. H. Patteson	22.05	1 42 20	1 42 01
Vida, David Hunt	22.10	1 43 30	1 43 30
CATBOATS—CLASS 4.			
Dart, Ad. Engler, Jr.	15.00	1 55 15	1 55 15
Mist, D. N. B. Sturgis	20.02	1 52 03	1 50 00
Susie S., E. Sturgis	15 00	Did not finish.	

Flora won in Class 2 and Dart in Class 4. Vixen broke her jibboom square in the middle just after the start, and sailed half of first round and all of second without a jibboom. Regatta Committee and Judges—Herbert A. Levy, J. S. Cooley and Edwin C. Dusenbury.

GREAT HEAD Y. C. SECOND CHAMPIONSHIP.—The second championship race of the Great Head Y. C. was sailed on Aug 16 in a light S.W. wind, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Owl, J. S. Cushing	25.00	1 27 10	1 03 07
Hustler, J. C. Miller		Time not taken.	
SECOND CLASS.			
Nellie May, T. J. Young	21.00	1 29 00	1 01 16
E. A. C., Geo. H. Worcester	20.04	1 44 50	1 16 24
THIRD CLASS.			
Modoc, D. W. Belcher	15.02	1 04 28	0 41 00
I. X. L., C. L. Smith	16.01	1 04 55	0 42 43
Rocket, W. H. Faxon	16.02	1 06 34	0 44 07
Evelyn, L. W. Harrington	18.03	1 07 12	0 46 37
Thera, George Bryden	15.09	1 06 00	0 51 28

The sail-off will take place on Aug. 31.

QUINCY Y. C. SECOND CHAMPIONSHIP.—The Quincy Y. C. was unlucky on Aug. 15 in having no wind for its second championship race, the yachts drifting over the course, and being timed as follows:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Posy, R. G. Hunt	22 02	2 39 29	2 11 99
Erin, John Cavanagh	26.00	2 45 07	2 20 19
Adolph, Secret and Mooadyne withdrawn.			
SECOND CLASS.			
Pet, J. McFarland	19.08	3 25 34	2 58 21
Mabel, F. L. Dunne	20.00	3 28 26	3 01 36
Atala, E. F. Linton	Withdrawn.		
JIB AND MAINSAIL.			
Diadem, L. A Hayward	18.02	3 19 23	2 50 29
Nereid, C. F. Colby	20.09	3 24 28	2 58 20
THIRD CLASS.			
Rocket, H. M. Faxon	16.02	3 14 41	2 43 15
Mirage, John Dearborn	17.03	3 17 28	2 47 40

Wildfire, Elise, Flora and Guenn withdrawn. The judges were John A. Sanborn and C. A. French.

CAPE CATS AND CUTTERS.—*Editor Forest and Stream:* It will be very hard to give "Inquirer" all the information he desires about Cape cats and cutters, but I can give him some of the facts, which to my mind in one trial prove nothing. Saracen, Kathleen and Harbinger crossed the starting line but a few seconds apart, so the start may be considered even. The first leg was a reach of something over 11 miles with the wind on the port quarter. Saracen rounded the buoy first, with Harbinger one-half and Kathleen four and a half minutes later. Harbinger would probably have rounded first or at least with Saracen if she had not carried away her spinaker boom, which she had swung well forward. Neither of the others carried spinakers. From the buoy to Tinker's Island, a stretch of about 8 miles, Kathleen caught Harbinger and both passed Saracen. Harbinger only tacked on this stretch, which she did twice to break Kathleen's wind, who was weathering on both boats nicely. Beyond Tinker's Island the contest is of no value, as the catboat ran into smooth water. The honors were, reaching, Saracen, Harbinger, Kathleen; and on the wind, Kathleen, Harbinger, Saracen. I will not attempt to explain the cutter's defeat, but after witnessing the catboat's victory I would willingly back the Kathleen if matched against her with any time allowance which taxed each equally and where shifting ballast is not allowed.—EYE-WITNESS.

14. Ianthe, Annual, Newark.

AMERICAN CANOE ASSOCIATION MEET.

TENTH ANNUAL.

Stave Island on the St. Lawrence.

AUGUST 18.—It is now three years since a meet has been held on the St. Lawrence, and naturally many new faces are seen in camp. Delaney Point, where the camp was held for three successive seasons, is in plain view from the present camp on the upper or western end of Stave Island. To reach the camp from Clayton one passes through Eel Bay and past the old camp ground which now seems bare indeed. The steamboat course from Clayton to Gananoque passes just to the westward of Stave Island marked by a lighthouse on a little point across the narrow channel from the camp. There are many small islands near with narrow straits between them forming a regular fringe all about the camp and affording protection from storms. The arrangement of the camp is almost identical with that at Lake George last year—on three sides of the narrow end of an island, with a little strait between it and the next island. The shore is well adapted to the building of landing stages for canoes, and easily reached by paths from the higher land where the tents are pitched on somewhat rocky ground in a pine grove with little or no undergrowth. The steamboat wharf is to the east of the camp in a fine little harbor, and very near the dining shed where the campers take their meals—three tickets for one dollar. E. J. Searle, of Gananoque, is running the mess department—in a very much better way than that of last year. The dining shed is in an orchard on the Dickson place—it can hardly be called a farm.

Near the mess shed is a large three-pole circus tent, put up for holding meetings and for the use of members. It was converted into a ball room last Thursday evening by the campers, an imported Canadian band furnishing the music and Paradise Point, the ladies' camp this year, the partners. Squaw Point, as it was called in the earlier days, is on the north side of the island on the main Canadian channel of the river.

A few over 200 names have been registered on the secretary's books up to to-night as regular campers and 146 canoes. Over 50 have entered for the races and 47 for the chief sailing event, so the contests that begin at 9:30 to-morrow promise to be specially interesting. The clubs represented are: Peterboro (9), Deowainsta (Rome, 4), Whitby (4), Toronto (20), Lindsay (9), Vesper (Lowell, 6), Bayonne (2), Brooklyn (7), Amsterdam (2), Kingston (4), Knickerbocker (N. Y. city, 7), Pittsburgh (2), Montreal (3), Ubique (4), Watertown (3), Jabberwock (2), Cincinnati (1) Brockville (7), Gananoque (8), Philadelphia (2), Corinthian Mosquito Fleet (New Rochelle, 1), Ianthe (Newark, 3), Hartford (1), Galt (3), Yonkers (4), Arlington (6), Ottawa (4), Lake St. Louis (2), Puritan (4), Bobcaygeon (4), New York (2), Marine and Field (Bath, L. I., 6), Kwo-ne-she (Trenton, 1), Rochester (2), Oswegatchie (Ogdensburg, 1), Lakefield (4), Monican (Albany, 3), Buffalo (1), Deseronto (1), Quebec (1), 40 in all. There are also other A. C. A. members unattached to any club.

Mr. B. W. Wood, of the Tippy C. C., Chicago, winner of the Western Canoe Association trophy at Ballast Island in July, is here with his canoe Wood, as a guest, and will take part in the races, having been invited by the regatta committee. Hyde D. Murphy, a correspondent of the Boston *Herald*, is reporting the meet for his paper and sending sketches for publication of camp scenes and the crack canoes. The far-famed, around-the-world-since-the-last-meet Jabber is also here—but without a canoe and with a camera. Mrs. Dean, of Lindsay, is chaperoning a party of young ladies, who enliven the camp-fires with songs, including Miss MacGachen, of Littlebourne, Eng., and Miss Herriman, of Grand Forks, Dak. Mr. Mrs. and Miss Seavey, of New York, are camping at Paradise Point, as they have been yearly for some time, and Mrs. L. J. Edwards, of Seattle, W. T., is also there.

Commodore Rogers was on hand early with Secretary Hatton, of Peterboro, and camp was formally opened on the 9th. Canoeists have been coming in daily ever since. Ex-Commodore Edwards, chairman of the regatta committee, is not here, owing to the recent death of his wife, Mr. French, of Buffalo, of the committee taking his place. Messrs. Whitlock and Bailey, acting for the committee, laid out the courses the middle of the week, and successfully located them to the westward of the camp in the Canadian channel, where the prevailing wind (S.W.) gets a clear sweep across. The current is not strong here and need hardly be calculated on in the sailing. Three ex-commodores have registered—Rathbone, Gibson and Wilkin—and many division officers are present, except from the East.

The Vesper men arrived early and have been sailing steadily all the week. They mean business and are cut out for winners, with Paul Butler as their captain.

Many skiffs keep coming and going to and from Gananoque, Clayton, the summer resorts and the camp. One, with most brilliant turkey red sails, is regularly at the camp, and presents a very peculiar appearance sailing about the island.

Yesterday, when a party of three were paddling to camp from Gananoque, they were passed by one of the river steamers and upset by the swell, losing all their traps. The steamer did not even stop to help the paddlers, and they spent a most uncomfortable half hour—not to say dangerous—in the water before they were rescued by a skiff party.

There is a camp circus billed for Tuesday night in the large tent. The rehearsals already held have developed plenty of talent, and the show promises to be a howling success.

The Toronto club are here in force, thirty members with a big canoe, holding fourteen paddlers and two end men, called Unk-ta-hee. When the full complement of the crew is on board the ship is an imposing sight. The other extreme is illustrated by a small Peterboro canoe weighing just 12lbs.

The weather up to to-day has been most discouraging—rain every day, and sometimes all day, accompanied by high winds. To-day and yesterday were fine, and the promise is for good weather for several days to come. The Northern Division trophy was posted to be raced for on Friday, but the weather effectually put a stop to even starting it.

There is an extra race put on the programme, a sailing race, 6 miles, for a large vase presented to the Association by Mr. E. H. Barney of Springfield, Mass. The idea originated with his son George, who died last May, and Mr. Barney has followed out the ideas of his son to the letter. The regatta committee have decided—as the conditions of the race were left to them—that the cup should be sailed for annually until won twice by one man, when it should become his property. The race is to follow the trophy race, and the trophy winner is barred out. Mr. Barney is in Clayton, and will be at the camp to witness the races. The vase is of copper, egg-shaped, on four supports, and is a really beautiful prize.

The programme of the races to be contested Monday, Tuesday and Wednesday is as follows:

RECORD EVENTS.

1. Paddling, classes 2 and 3, decked; ½ mile.
2. Paddling, class 4, decked; ½ mile.
3. Paddling, classes 2 and 3, open; ½ mile.
4. Paddling, class 4, open; ½ mile.
5. Combined paddling and sailing, ½ mile alternately; total, 3 miles, A and B.
6. Sailing, classes A and B, 4½ miles.

OTHER EVENTS.

7. Trophy, sailing, 7 miles.
8. Paddling, class es 2, 3 and 4, open or decked; 1 mile.
9. Paddling, tandem, class 4; ½ mile
10. Club fours, any canoe not over 16ft.; ½ mile.
11. Paddling, upset (open canoes entering to have ½ minute start on condition of being emptied after turning over); 150yds.
12. Hurry-scurry—run, swim, paddle.
13. Sailing, upset.
14. Sailing, cruising race; 6 miles.
15. Gymnastics and tournament.

The order of the races will depend upon the weather—sailing events first, if the wind answer.

The Northern Division cup will be raced for at the meet by members of the division, and there will doubtless be other special races, including race for unclassed canoes, if present.

Canoes noted as "decked" entering events Nos. 1, 2 and 3, must be decked at least one-half their length, have effective keel or centreboard and two water-tight tanks or bulkheads; in other words be properly equipped sailing canoes. In No. 14, in addition, canoes must have a well not less than 16in. wide for a length of 4ft., with a sleeping space of at least 6ft., of which at least 5ft. must be clear; there must be no projecting centerboard when housed, and no sliding seats or standing sails, start to be made with sails down, and sails to be lowered on deck once during the race. Open canoes in events 3, 4, 8, 9 10 and 11 must use single-blade paddles; in all other cases any paddle may be used.

Classes A and B will sail together on equal terms, all distinctions between them being abolished, and no separate record kept either for prizes or record points.

The novice prize, open only to members who never sailed a canoe before September, 1888, will be awarded on the result of the first round of race No. 6.

The camp was assembled at 11 o'clock this morning to hold divine service. As no minister was present Commodore Rogers offered a prayer and hymns were sung. About the camp-fire in the evening singing also was the order of exercise. A bugler from the Royal Military College at Kingston sounds the call for colors morning and evening, and the flags go up and come down at gun fire, 7:30 A. M. and 9 P. M.

Monday, Aug. 19.—Members of the Rochester, Knickerbocker, Brockville, Oswego, Lakefield, Red Dragon, Philadelphia and Washington C. C. turned up this morning, the first day of the races. The weather was anything but promising, as during breakfast it rained and the wind seemed to promise plenty of power in an hour or two. The sailing race was put on the bulletin as the first one to be called, at 9:30, No. 6 on programme. At the start it looked very threatening, but later cleared off and a fine day has resulted, with plenty of wind, but no gale. The start was made at 10:12 A.M., 38 canoes crossing the line on a reach to first buoy, Elida, Brazer of Lowell, getting off first. Wind strong from south-west down river. There was much less confusion in getting off than might have been expected and no serious fouls. At the first buoy, however, several canoes got bunched about one that upset and the following boats cleared the scramble by giving it a wide berth. Dr. J. A. Gage, canoe Owl, of Lowell, the winner of the novice race last year, got the lead on the windward leg and held it to the finish. Ford Jones of Brockville in Canauck came in second. The course was sailed over three times and the large fleet presented a glorious sight. Combined with this race was the race for novices, once around. The first 10 boats in—the ones that will race for the trophy—were as follows:

1. Owl, Dr. Gage, Lowell	11 13 00
2. Canauck, Ford Jones, Brockville	11 14 00
3. Elida, Brazer, Lowell	11 16 00
4. Mac, McKeudrick, Toronto	11 16½
5. Fly, Paul Buler, Lowell	11 16¾
6. Wood, B. W. Wood, Chicago	11 18 00
7. Notus, Bailey, Pittsburgh	11 18 01
8. Wasp, Walsh, Lowell	11 18 30
9. Cyrus, Whitlock, Brooklyn	11 19 30
10. Atom, Vaux, New York	11 19 53
11. Dimple, Forrest, Hartford	11 19 54
12. Horner, Andrews, Rochester	11 20 00
13. Una, Frazer, Toronto	11 21 00
14. Nenemoucha, Douglas, New York	11 21 45
15. Given, Morse, Toronto	11 22 00

G. C. Dempsey, canoe Drift, of Lowell, won the novice race. First boat did the course in 1h. 1m., fifteenth boat 1h. 10m.

Event 3 was next called, four entries, half-mile, paddle, single blades, J. F. Smiley, P. W. Strickland, Darcey Strickland, A. Torrence, all Canadians.

Very close race, down the wind straightaway, won by Torrence, Sm ley second. Time 5m. 58s. and 5m. 58½s. Three finished. This ended the morning's racing.

PEQUOT MEET.

THE annual meet of the Pequot Canoe Association was held from July 31 to Aug. 12, and in many features was the most successful in the history of the Association. The weather previous to the opening day was very unpleasant, but the racing week was marked by fair weather. The disappointing feature of the meet was the inability of small boats at distant points to reach camp in time, owing to the prevailing rough water and heavy rain. Among the visiting clubs were the Corinthian Mosquito Fleet, represented by Com. T. H. Smith; the Newburgh C. C., by Com. Van Dalfsen and Nate S. Smith, and the Springfield C. C., by Emil C. Knappe, in the Agawam.

The honors all went to Mr. Knappe in the canoe class, and to the Legrand B. in the cruiser class.

The register shows over 150 names for the week. The last night of the racing week was marked by a hop, over one hundred guests being present from neighboring islands and the main shore. The "barracks," as they are termed, were converted into a most picturesque dancing pavilion by the ladies in camp, and the general effect was most attractive.

The Association will in all probability offer a trophy challenge cup next season, to be raced for by canoes only.

The membership has increased to 92, and is rapidly reaching high water mark. A club house, to contain 42 rooms, with quarters for boats, etc., is being discussed, and will probably begin to materialize before next season. F. P. LEWIS, Sec'y-Treas.

A. C. A. MEMBERSHIP.—Northern Division: T. M. Budgett, Montreal, Que.; F. H. Dumble, Rev. H. Auston, W. J. Gibson, Gananoque, Ont.; John Wilson, Bobcaygeon, Ont. Atlantic Division: Wm. Lawrence Dudley, Wasnington, D. C. Central Division: S. Gilbert Averell, Ogdensburgh, N. Y.; Mr. Benj. W. Wood, Chicago, Ill.; Charles Russell, Ogdensburgh, N. Y.

New Publications.

THE EXPLORATIONS OF JONATHAN OLDBUCK, F.G.S.Q., IN EASTERN LATITUDES. Canadian History, Legends, Scenery, Sport. By J. M. LeMoine, Quebec, 1889. Paper, 265 pages.

This volume is just what the author professes it was his aim to give his readers, a familiar itinerary of travel by sea and land, covering a score of years and over the most picturesque portion of the Province of Quebec. And if one were privileged, in truth, to choose a traveling companion in Canada, what a rare satisfaction it would be to go in company with this historian, antiquary, botanist, ornithologist, sportsman, angler, wit and story teller, whose erudition, versatility and broad sympathies are shown in the noble list of volumes already given to Canadian literature, and now newly demonstrated in this volume just from the press. Wild flowers of the woods and fields and the dust of musty historical manuscripts, one might think, would not appeal to the same tastes; yet the LeMoine who has written a book on the "Wild Flowers of Quebec" is the same LeMoine whose antiquarian note book has supplied the material for volumes of history.

And very much as an ardent botanist searches out and brings to the notice of the world rare plants and blossoms, has the author in this book collected the flowers of historical and legendary lore. One is surprised, too, in turning over the pages, to notice how on every hand the sportsman tourist, guided by such a friendly companion, would find associations of interest to him, because touching on his favorite pursuits. Even the geographical names become in Le Moine's hands keys to stores of anecdotes and reminiscences of Canadian hunters and fishermen. Thus of Rousseau de l'Ours he writes: "What gave it its sporting name? I have a faint rememoran e of a bear story, more than two hundred years old, in which the local nimrod, Seigneur Giffard, while lying *perdu* for wild geese—one spring—on the sedgy banks of this river, is stated to have spied a huge bear roaming in the neighborhood, mayhap in quest of the seigniorial mutton. Gaunt, tired, possibly unconscious of evil intent, ruin was lapping the crystal draught of the Ruisseau. To substitute in his long duck gun slugs for goose shot was the affair of an instant for this sporting Laird, and, lo! brum's brave spirit was wafted to where all good bears go!"

Again, of Hunter River the story is told that it received its name in commemoration of the fate of an English officer, who, having become lost in the woods while hunting, did not appear when his appointed wedding day came, and returning at last, to find another favored suitor in his place, betook himself again to the woods, where he was found on the banks of this river dead.

The "Explorations" is a book to dip into; and open it where one may, there is incident and story. Thus, in describing the shrine of La Bonne Ste. Anne, with its votive offerings of crutches and staves left behind by the cripples cured by resort hither. "Over the side door, a small painting portrays roughly a forest and a man crushed under a tree; in the foreground is seen a small dog, which looks as if he was carrying something away. An old legend relates that a Canadian named Dorval, while at work, alone in the woods near Tadoussac, was crushed under a tree he had hewn down, and had his leg broken. Pinioned under the fallen trunk, and without hopes of help in this wilderness, he uttered a prayer to Saint Anne, who immediately inspired a means of deliverance. He took a piece of bark, soaked it in his blood and gave it to his dog, telling him to go and seek help at the neighboring dwellings. The faithful animal, divining the thoughts of his master, ran to Tadoussac, his restless movements and the piece of bloody bark, which he placed at the feet of those he met, awakening attention. Some followed the animal, who brought them to his imprisoned master. Thus delivered, Dorval hastened to accomplish his vow and to deposit an ex-voto, as a token of his gratitude."

The chapter on the Magdalen Islands contains a description of Canadian salmon rivers with a review of the angling works relating to them. This was published in the FOREST AND STREAM some time ago; our readers will be glad to have it in this convenient form for a new reading, and with it "The Cruise of the Hirondelle," with its account of Seal and Crane Islands, Montmagny's game preserve, and a store of sporting lore connected with the lower St. Lawrence. Not the least entertaining chapter is the concluding one "On Some Historical Dogs." The mastiff Pilot, "described by Father Lalemant, in 1647, as leading each morning to the woods her litter of savage pups taking with them a ramble round the Fort, at Montreal; scouring the undergrush and scanning carefully every bush to discover a skulking Mohawk. Woe betide the unlucky whelp who shirked his work! Pilot would worry, snap at him—baying fiercely if a lurking foe was in the neighborhood."

The list includes many a noble animal worthy of being remembered, down to the author's own St. Bernard Wolfe: "A noble fellow and a reliable friend. He proved a most efficient guardian of the grounds. His stature, strength, majestic demeanor and deep, loud baying attracted wide attention, and inspired visitors with respect not unmixed with awe; such was the opinion entertained of him by the urchins of Bergerville, that, with the aid of a few legends about his ferocity adroitly dropped by the gardner, none had the hardihood to cross the frontier after nightfall; and though Wolfe has some time ago joined the great majority, the terror of his name still lasts; he is supposed still to stand sentinel at night." No tourist in the Dominion can afford to omit giving this book a place in his satchel, where it will be at hand for constant reference.

COLE'S COMBINED SYSTEM OF DRAINAGE AND IRRIGATION: By A. P. Cole, Wellsville, N. Y. This is a practical manual of the new system of agriculture originated by Hon. Asahel N. Cole, whose death occurred in July last, and is printed by the author. It is a system of sub-irrigation, by which the rainfall, being first gathered into lateral trenches, instead of running to waste in superficial streamlets, is gradually released by slow percolation, whereby plants find abundant moisture for their nourishment at all seasons. This system is perfectly and naturally illustrated in the fertile plains of the Northwest, where the soil freezes 8ft. deep in the long severe winters, and gradually melting in spring and summer, enables the farmers to produce great crops of wheat, even though no drop of rain should fall during the entire growing season. Mr. Cole was no theorist, and the practicability of his system has been demonstrated always wherever it has been tried. The results of his individual efforts at Wellsville astonish all who investigate them.

A CHAPTER OF ACCIDENTS.

IT is a thousand pities that the man who had the knack of shooting to hit if it was a deer and miss if it was a calf did not transmit his convenient skill to the present generation, for the good of the human race. It would have averted much suffering, sorrow and woe.

The deer hunting season in the Adirondacks opened on Aug. 15. Before sunset of that day the customary fatality had occurred; and a sportsman, a New York business man, who was hunting for deer, was himself taken for a deer by another hunter, shot at and killed.

This recalls the case of the Ronkonkoma, Long Island, hotel proprietor who went out deer hunting one Sunday, a year or two ago, and shooting at what he took to be a deer, brought down his human victim. The count of men who have been seriously wounded or killed outright by blundering hunters would be an extensive one. We do not recall a more deplorable case than that of two members of deer hunting parties in the Ozark region of Missouri. One of these parties had gone into the woods from Nevada, Mo., and the other from Wyandotte, Kan. They camped near to each other, but neither knew of the proximity of the other. One morning the two parties left their camps, all clad in the hunter's garb, made of ducking, which, at a distance, strongly resembles the hair of a deer. About 9 o'clock that morning Will Requa of the Nevada party fired at what he supposed to be a deer moving through the woods, but the object proved to be W. H. Gunter, one of the Wyandotte hunters. Requa at once started forward to recover his game. Gunter, who had been fatally wounded, and supposing Requa, who was an entire stranger to him, was intending to kill him, raised his gun and discharged both barrels at Requa, killing him instantly.

A deer hunter near Center Tremont, Maine, took his comrade for a deer and lodged a buckshot in his leg; a Parkersburg, West Virginia, man shot his comrade dead under the same delusion; a Cowichin, British Columbia, man killed a man for a deer, not knowing that any hunter but himself was in the woods.

The "man-target" has done duty for almost every species of game, and for some objects not game, as witness the hard experience of Mr. F. M. Nixon, of Marshview, Pa. Last winter this gentleman and a Mr. Palmer were riding in a sleigh, when Palmer mistook Nixon's leg, which was outside the robe and inclosed in a gray legging, for a dog trying to get into the sleigh; drew his revolver and promptly put a bullet where it would have killed the dog.

We reported some time ago a case of a man who was hunting wild turkeys in Kentucky, and out of season at that, and fired at a rustling in the leaves. The noise had been made by another turkey hunter, who was seriously wounded. Very similar to this was the case of John Gurley, of St. Francis county, Ark., last spring. Gurley was hidden in a patch of tall grass and was imitating the cry of the wild turkey when his neighbor, who knew nothing of his presence, shot into the grass, hoping to kill a turkey. The ball, which was fired from a Winchester rifle, entered the victim's shoulder; and his crippled condition will all his life bear mute testimony to his skill in imitating the turkey's call.

A West Virginia farmer, who had been greatly annoyed by groundhogs, one day took his gun and went up the hill to a point from which he had frequently seen and shot numbers of his tormentors, and lay in wait. In a short time he saw a rustling in the weeds and grass below him. He fired, and then ran down to the spot, and to his horror found that he had shot a small boy, who had been out digging ginseng.

A Maryland gunner, having killed a squirrel, slung it over his back. Another gunner caught sight of it through the brush, thought it was a live squirrel running up a tree trunk, and blazed away. There was no question after this that the squirrel was thoroughly dead, and at last accounts the man with the peppered back was expected to live. A party of Pennsylvania bear hunters had been dispersed during the day in the woods. The first man who returned to camp climbed up into a tree to break off browse for his bunk. Another hunter returning just then thought the man up in the tree was a bear. He fired and the man tumbled out of the tree dead.

Gen. Wade Hampton was once while deer hunting mistaken for a bear, but there was nothing serious about the incident as narrated by Fitzhugh Lee, one of his companions on the hunt.

"We were all dressed," said he, "in the rough fantastic hunting costumes of the period. No deer was seen, but by the stand occupied by one of the party there passed eighteen beautiful barefooted mountain girls picking whortleberries. The hunter saw them, and was about to invite them to take a seat on his stand when they caught sight of him. Whereupon the leading beauty exclaimed, 'Great jiminy, gals, there's a bear,' and throwing down their buckets they broke through the bushes down the mountains like deer, and just about as wild."

A Florida paper, the Clearwater *Times*, relates an extraordinary experience by which Capt. James Meredith, of DeSoto, nearly lost his life. One night, just after dark, Capt. Meredith fixed a hunting lantern on his head and came ashore to shoot raccoons, alligators, or any such game as he might find along the beach. His light was seen from Mr. John Blanton's house and was construed to be something unaccountable, no one being able to account for the peculiar light, which would be suddenly very brilliant, and then as suddenly gone, the result of Meredith turning his head in different directions. Mr. William Harn, determined to capture that jack-o'-lantern, set out with a .32cal. revolver, accompanied by Andrew O'Quinn. They hastened along the beach in the direction it had been last seen, hoping to be in its neighborhood when it should again show itself. It appears that Meredith had seen them coming, but they didn't see him. When they walked up within about fifteen feet, Meredith turned his face toward them, when the lantern startled them by blazing in their eyes. They had seen nothing, and this sudden flash so excited them that before Meredith had time to speak Harn fired. The ball entered the cheek an inch or so below the right eye and now lies buried about three inches deep in Meredith's head. Dr. Edgar was sent for, but could not get the bullet, but we understand that the patient is on the road to a rapid recovery. Of course great regret is felt over the affair, but Meredith appears to be the most cheerful and least concerned.

It is reasonable to assume that not one in five is reported of the casualties where human beings are maimed or killed by shooters who mistake them for wild animals, and go off half-cocked before knowing what they are shooting at. The moral is contained in the injunction which a sable philosopher once gave a Detroit policeman, as related in this veracious little tale from the *Free Press* of that city:

A woman on Lafayette street east rushed out the other day and informed a policeman that she had seen a big dog crawl under her barn, and she believed the animal mad. The officer went around by way of the alley, accompanied by the usual crowd, and, after peeking and peering for some time, he shot three bullets under the barn to scare the dog out. After the third shot a movement was heard, and presently the long end of a colored man crawled into view. After backing out and brushing the dirt out of his eyes he added: "Was it me you were shooting at?" "I supposed it was a dog under there," replied the officer. "Well, sah, doan' you nebber 'spose no mo'! It's dangerous." And he showed a bullet hole in his cap, and another in his coat, as proofs of the accuracy of the officer's aim. He had crawled under after a rabbit which had escaped from a neighbor. "It's all right," he said as the officer apologized, "but doan' you 'spose no mo'! You jist keep right down to cole facts. Dis 'sposin' around ar' what gits pussons into ser'us truble."

BITS OF TALK.

V.—THE TEARS-AND-SOBS STORY.

"BLESS the boys. I like to come across them when I am fishing. There is a satisfaction in talking to them. Some of the dearest recollections of my angling days are of the healthy, clear-skinned, clear-eyed, clear-souled, innocent, ingenuous, unsophisticated, natural country boys I have met," said the Fisherman.

"Here's to the small boy, the brown-cheeked boy, the bare-footed boy, the boy with the yellow dog and the letter in the post-office," responded the Major, as he parted the grass from the spring and quaffed a double hollowed handful of the pure water. "To meet him and talk with him is as refreshing as this cool spring on a hot August day."

"Noble sentiment," echoed the Famous Shot, "and here's to the healthy, clear-complexioned, clear-skinned, clear-eyed, clean-souled, unsophisticated, bare-footed string of trout he will sell you for a quarter if he is truly unsophisticated, but will charge you two dollars and a half for if he is up to snuff. Of course you like to run across him; and no doubt he likes to run across you, too, when you have no fish, and he has a string to sell."

"Don't be a cross-grained old cynic," retorted the Fisherman, rising from his prone position, with the spring water dripping from his chin. "As for the boy's trout, I would rather have stored away in my memory that little picture given by Mr. Starbuck, in the FOREST AND STREAM the other day, of the boy and girl he met on the Boardman, than of the biggest basket of biggest trout ever caught. You were a bare-footed country boy once yourself, though according to your own tell, if you were ever unsophisticated it must have been in early infancy. Don't forget that you snared partridges on the old farm, and set figure-4s for rabbits, and owned a yellow cur dog, too, or were owned by him, just as the Major here was."

"Yes, I have heard of the Major's Carlo, the dog of sentiment; how was it, Major?"

"He had been owned by Rev. B. C. Phelps, a Methodist preacher, stationed at Danielsonville, Conn.," responded the Major, who does not hesitate having told a story twenty times to tell it twenty-one times. "When Mr. Phelps was removed to another charge he made me a present of him. The dog took kindly enough to me, as yellow dogs always do to small boys, and we struck up a great friendship, and had glorious old times hunting woodchucks and rabbits. It was 'hunting without a gun,' but with Carlo's help I captured lots of game, such as it was. The dog had not appeared to mind parting from his former owner, and as time went by I took it for granted that he had forgotten that he ever owned any other master than myself. One day, it must have been a year afterward, we had been out on a hard campaign against the woodchucks, and I reached home just at sundown. As I went into the house by one door Mr. Phelps entered by another; he had been an intimate friend of my father's, and now walked right in without any ceremony. After greetings by my father and mother, and just as Phelps was seating himself, Carlo came running in, without noticing that he was there. 'Why, Carlo!' said Mr. Phelps. The dog stopped, looked, and with a bound was in his old master's lap, and lay across his knees motionless, with his head hanging down, while tears rolled down from his eyes and dropped on the floor. Well, sir, at seeing the dog weep Phelps himself choked, and the tears came into his eyes. Father he followed suit, and I heard something that sounded like a sob from mother."

"Do you mean to say that the dog actually wept?"

"It was as I tell you; I saw the tears; and I quite agreed with Phelps when he said, 'This is the most affecting scene of its kind I ever witnessed.' There was not a dry eye in the house."

"I'll warrant you boo-hooed too."

"I don't remember about that, but if I did not I should be ashamed to own it."

"Did any dog ever make *you* cry?" asked the Fisherman of the Famous Shot.

"Yes, but I was very sick and weak at the time; and it was years and years ago. When I was a boy I did not joy in the possession of a cur, the Fisherman to the contrary notwithstanding; but I owned a red Irish setter, pedigree unknown, named Trim. In the next yard to us was a tree of early red apples. We children could not get over there for them, for the old woman who lived there could see us; but one summer, by throwing two or three apples over there and sending Trim through a hole in the fence to retrieve them, we taught him the trick, and he brought us every apple that dropped from that tree. He must have carted over bushels to us, first and last, and the old woman was never the wiser."

"The clear-souled, ingenuous, unsophisticated country boy," remarked the Fisherman to himself under his breath.

"Well, the next summer when red apple time came, it happened that I was not sending dogs to steal fruit. A dive in a swimming hole, where I had miscalculated and bumped the bottom, had given me brain fever. And Trim was not playing thief for anybody else. He just kept himself in my room, staying mostly under the bed, and for the two or three days before the crisis in my illness refusing to eat anything. They tried to get him out, but he was not to be fooled with, and kept his post, especially as it was a sort of comfort to me to have him there. At last one evening the doctor said that that night would decide it. Of course, every one was full of anxiety and nervous suspense, and, to judge from appearances, no one was more concerned than the dog, who was holding the fort under the bed. It was a long, long night, but when the doctor came early the next morning he found me alive, and in a cheery tone he said to my mother and sister, 'The boy is all right now; he will get well!' The words were no sooner out of his mouth than Trim, gaunt and dishevelled, his eyes sunken and hair standing seven ways for Sunday, came out from under the bed, with his ears pricked up, tail wagging and body squirming, and darted through the half-open door and scrambled down stairs and outdoors. In less than a minute he came rushing back again, and running up to my bed leaped up on to it and dropped into my hand an old shrivelled up red apple. I don't know anything about the others, but in my part of the house there was not a dry eye that time. 'Let him cry,' said the doctor, 'it will do the boy good.' And it did, for it did not take me long after that to pick up and get out again. If there had been any way of keeping that apple you bet I'd have it now."

Buffalo Jones, of Kansas, has sold a portion of his buffalo herd, and announces that a syndicate has been formed in Ogden, Utah, to establish a "zoölogical farm," with these buffalo as a basis.

The Sportsman Tourist.

OUTDOORS.

THE golden haze of a calm October day was in the air and lay on lake and forest, mellowing the sombre hues of the hemlock trees, and shading upward in a mellow glow along the great maple wood that clothed in softened splendor the slopes and summits of the rounded hills.

The wagon drove away and left us—the Kelpie and me—on the margin of a small woodland stream which issues from the bear-haunted fastnesses of the great Intermediate swamps.

There was just water enough to float us and our belongings, though the brook was scarcely wide enough to enable me to turn the boat at need.

The belongings aforesaid seemed somewhat numerous and bulky for an old campaigner to take along on a week's cruise, but it was all right nevertheless. I was not in the best of health, having suffered from too close attention to business and from the effects of the recurrence of an old strain. I had not, up to that time, found it convenient to take during the season an extended outing, and decided that while I was about it I might as well make myself as comfortable as possible.

As I was saying, the wagon drove away and left me sitting on a log by the side of a brook, serenely surveying the scattered camping tools with a delicious sense of freedom from cares, past, present and future; listening to the sharp rat-tat of a red-headed woodpecker on a bough overhead, the cheery *chir-r-r* of a red squirrel across the stream, the call of a loon upon the distant lake; and smoking the while the pipe of peace and good will to all mankind.

"A gentleman," says D'Orsay, "may sometimes be in haste, never in a hurry." I was in neither haste nor hurry, for was I not at home as oft before? In that forest are no signs to stare the traveler in the face while warning him "Beware." Wherever I chose I might pitch my tent, and though morasses compassed me about I yet could trust myself to find a "dry chance" for a camp ground before night.

The forest was damp from recent rains, but the inside of an old stump furnished material for the foundation of a fire, which shortly blazed against its root, and a small tin teakettle, dinted and blackened through long service, soon simmered above the blaze, suspended from the free end of a long stick.

Things began to look cheerful and homelike, to me at least, however they might have appeared to a man who cared naught for camping for its own sake, but sought to learn the art because he heard somebody say that he had read somewhere that "camping out is getting to be quite the fashion."

The fire was builded mainly as a matter of form, since I had not as yet "come to my appetite;" so, for the sake of appearance and to pass away the time, I roasted in the ashes *à la* Gellatley a couple of eggs, made tea, set the table and dined.

Some of you young fellows may think it odd that a single camper with a one-man boat should speak of setting the table, but it isn't—not a bit. I can camp, when necessary, with no outfit save a tin cup and a rifle; but seldom do so from choice. I have seen people who, possibly because they wished to load themselves light, but more probably for other and less plausible reasons, did not when going into woods, burden themselves even with the commoner accessories of civilization, such as towels, soap, combs and toothbrushes. I do not remember that, when in camp, I have ever failed in the performance of my regular ablutions, or in making myself as decent as possible, excepting when in a waterless region or where the springs were frozen.

It is my habit on an excursion of this kind to take with me two pails with covers. On this occasion these were the common wooden buckets used in packing candy, which, having served their commercial uses, may be purchased cheaply from any confectioner. The pails, like the boat, were painted a dull September green, and were attached by a 4-inch strap hinge to the covers, which being provided with a common hinged hasp with staple, could at need be secured by a stick or padlock.

One of these pails contained ammunition, fishing tackle and sundries; this being placed at the root of a friendly tree, and covered with a small pillow (a capital thing in camp), served me as a seat, while the lid of the other, turned back and supported by a stick set upright in the ground, made a small but convenient table.

The top of the pail was occupied by a tin pan, provided with wire handles for convenience in lifting it out, and containing a knife, fork and spoon, besides various small cans with butter, sugar, pepper, salt, etc. Beneath this was a similar pan; below this the cellarage. The reader may in imagination stow this with any edibles he most may fancy. The other pail was similarly arranged, though with due reference to the difference in its contents and to convenience in coming at the various articles of a sportsman's outfit without causing confusion among them.

These pails are easily handled, carried or stowed in a boat or camp. I fitted them up to suit myself, and they serve well their purposes. Their cost, complete, was somewhat less than one dollar.

Dinner over, I began to realize that while there was no haste, the afternoon was yet wearing away, and that I had not as yet determined where I should put up for the night. I therefore leisurely placed my possibles in the boat, extinguished my fire, laid the old 10-bore on the top of the blankets, seated myself in the stern, took up the single-bladed maple paddle, of many years' good service, pushed off from the landing, and floated down stream through the silent forest.

The alder bushes which bordered the stream sometimes bent low toward the surface, and it was while stooping to clear an obstruction of this sort that the first duck started just ahead of the boat, so that I failed to tender him the compliments of the season. With an exclamation of surprise at my negligence, he put on steam and soon disappered from view. Aha, my friend, well pleased am I to see you yet once more, and I trust that you but herald the coming of your relatives in force. It minds me well of other days, and makes me young again, to hear the sudden splash, and the whistling rush, as the swift pinions cleave the calm, still air.

We paddle onward, soon to reach a little woodland lake. The water deepens, wider grows the stream. As we round a bend, in the dense cedar swamp, the waters flash to the rising of a second duck, that darts away through the dense tangle of evergreen branches; but at the first beat of wing the paddle drops from my hand; as it strikes the waters the gun is leveled. This time "Aunt Hannah" takes part in the conversation, and leaves and twigs, shattered by the heavy charge, float downward through the air. Then comes another and a heavier plash, and the gray bird once more floats upon the stream. Recovering the paddle by means of a line which attached it to the boat, I retrieved the game in passing, and now saw in advance the broadening shimmer of rippling waves, and soon had reached the lake. Coasting leisurely along, I prospected for a camping ground, but none offering sufficient inducements presenting itself in this neighborhood, I paddled on, and soon entered another stream, whose presiding genius appeared to be a large owl, which gazed fixedly upon me from the boughs of a hemlock, as with noiseless paddle and motionless head I silently glided past.

Perhaps it felt that there was sympathy and peace between us, as did the muskrat which crossed the watery trail, for instead of suddenly disappearing beneath the wave, after the manner of his kind, he held his course until he reached the open portal of his habitation in the southern bank. Amid the gloom of the towering hemlocks in advance, another lake gleams forth, and shortly we are floating on its waves.

It was about five o'clock when the Kelpie poked her nose into the rushes which fringed the margin of a small secluded cove, and stepping ashore, I surveyed the surroundings and pronounced them good. A suitable site for the tent, such as would shed the water in case of rain, was selected a few rods from the shore, and soon the boat was made fast and her lading transferred to the spot which for the next four days and nights was to be my home.

The first thing in order was to start a fire, and this accomplished, I unrolled my tent, and met with a disappointment. Instead of the tight and serviceable canvas roof which has well protected me in many storms, I had by mistake brought another, which through long years of faithful service has for some time past been invalided, and done duty mainly as protection against frost for grapes or tender vegetables.

Of short duration, however, was my chagrin. Though the rents of this ancient pavilion yawn like the crack of doom, shall they be suffered to daunt the soul of an old-timer who erst for months did face the moon with never the semblance of roof between him and the sky? Perish the thought! I grasped my axe, and in twenty minutes had the thing arranged as best I might. Despite the rents, it did shed rain that very night, for rain there was, as I expected. When I am on a campaign, it commonly does rain before I get home again.

In this connection I may remark that I have always used preferably the A tent, and that, generally speaking, a rope serves well the purpose of a ridge-pole. In the woods it may be fastened between two trees, while in the open you can pass it over two upright poles (I have for this use sometimes employed my oars), and make fast to a stake, thus dispensing with the necessity of procuring a long pole, which cannot always be found. This method is, however, open to objection where violent winds prevail.

If it is desired that the fire shall warm and brighten the interior of the tent, the flaps, or if properly constructed the whole front, may be turned back; or if preferred, it is easy to convert this shelter into a one-sided camp. I can say but little of the shanty tents, never having used one. They are doubtless good, but from what I have heard and read, I question whether I should be willing to go to the trouble of putting one up, unless for a long stay. I am content to spend whatever time is requisite in making things shipshape and comfortable, but no more; and when I make camp, I choose to be bothered with as few details as possible. The cost of a common A tent made from drilling, heavy sheeting, or canvas even, is but small, and with a little ingenuity anybody can get one up at short notice.

Perhaps it may be thought by experts, if such should chance to read this paper, that I am unnecessarily diffuse in speaking of my camping conclusions, but certain letters and inquiries which have reached me from time to time lead me to think there is a large and increasing body of young persons who, having a touch of the Robinson Crusoe fever, would like to try camping out, if only they knew how to do it without going beyond their means. Having at hand no mentor, and believing that in order to enjoy camp life it is necessary first to procure a complete and expensive outfit, they are deterred from trying the experiment. For these, if for any class in particular, I have penned these notes. As I wrote not long ago in answer to a young correspondent, "With the exception, perhaps, of firearms and fishing tackle, my camping outfits have ordinarily been of the simplest and most inexpensive description, and I suppose that I have had as much enjoyment of them as most campers, whatever the amount of their investment."

Neither is it necessary to buy the highest priced reels, rods or guns to get good service and value for your money; yet nevertheless it may be said that the better the gun and the finer the tackle the greater will be the satisfaction of their owner, when once he has learned to distinguish between the methods of the lone sportsman and those of the pot-hunting clown.

I filled the teakettle, set it above the fire and made my simple preparations for supper—very simple they were, for as yet the long sought appetite had not come.

First, I whittled me a fork and toasted bread. I often do this when in camp, and prefer for that purpose a trident having its tines divergent like the legs of a camera. This dodge commonly saves the toast from falling into the fire. A beech twig makes on occasion a very fair dining fork, but is less serviceable as a toaster. It is usually too flat.

Supper over, I washed the tea things, secured in a dry place a good supply of kindlings against the morning's need, and as it was yet too early to turn in I decided to devote a portion of the evening to the contemplation of my surroundings. I had brought with me a piece of canvas, about 4x6½ft., with a broad hem at each border. Cutting two stout poles of suitable length I pushed them through these hems, and a stretcher being placed between the ends of the poles, which were supported by small logs (the largest at the head), a mattress was completed, which, though not as good as a properly constructed "bough berth" of hemlock or fir tips, made yet a very comfortable couch. The timber was for the most part hard wood where I had camped, and to collect and properly arrange a bed of boughs would have taken more time and energy than I had at command.

Well, I up-ended the poles of my mattress against a large tree, placed at its foot a bucket duly cushioned, and leaning the while luxuriously back against the canvas couch, lighted my pipe and looked out upon the water of the little lake.

The camp-fire, freshly fed with logs and topped with crackling cedar boughs, silvered the mossy bolls of the beechen trees, and cast strange shadows on the drifting mists which floated over the paths of light that streamed along the wave. Dreamily I listened to the voices of the night—the cry of fox or coon, the laugh of the loon on the distant lake, the call of the owl to his lonely mate, and, faint and far, her welcome in response. *Hoo-hoo-o-o.* Plump! What's that? Wafted shoreward, there floats upon the evening breeze a fragrance not of frankincense or myrrh, but like unto that which since her occupancy no one has as yet been able to eliminate from the apartments of the Empress Josephine at Malmaison. Nothing but a muskrat, but I believe I was asleep.

How did I occupy myself during the four days passed in that camp? 'Twere long to tell; yet I did as near nothing as a live man well may do. I was in no condition for hard service, and I read, strolled, sketched, paddled or dreamed, as best suited existent conditions.

It occurred to me one afternoon that I would like a grouse, and, taking up my gun, I set forth to procure the game. There were many of these birds in the woods, but the leaves as yet were pretty thick, and I had no dog. I bent my steps accordingly to the log cabin of one John Smith, of whom you have read in the history of Virginia. He had a dog and a pig pen; and was, as I approached, engaged in roofing the latter. The pup sat near, and greeted me after the manner of the common "yaller dog" of America.

In answer to my inquiries, John stated that he had no gun; "but," said he, regretfully, "'f I hed, I'd a hed more pat'ges 'n I'd a-knowed what ter dew with. The's lots on 'em jes' t'other side o' thet corn patch—thet is, the' was, but ther boys hes ben a-shewtin' on 'em these here las' rainy days, 'n' I don't s'pose the's so many 's the' was. But we'll go see."

I intimated that one bird would serve my turn; and, laying down his hammer, John called the dog, and we soon had crossed the corn patch, passing on the way a grove of maple sprouts, from which came the whirr of a startled grouse as the dog dashed into the covert.

"Thar's one, anyway, but ther bresh 's so thick 't yer carn't see 'em. Yeou gwup the hill, 'n' I'll cross over t' ther swamp, apast thet slashin'."

Up the hill I climbed accordingly, but soon was recalled by the voices of the dog and his owner. "Here's one."

Clambering painfully over logs and through the bushes, I reached at length the spot where stood the historic mossback, pointing with a cornstalk upward into a tall tree.

"Where is he?"

"Yender he is, jest right thar he lit, anyway, 'n thet bunch o' leaves. I carn't fa'rly see him m'self, but I know he's thar."

No grouse could I see; but, horrible to tell, I aimed deliberately at the broadside of the cluster of leaves, and sure enough down dropped a fine cock grouse. This answered my purpose, and declining John's friendly offer to seek for more, I bagged the bird and leisurely sought my camp. On the way I perceived another grouse sitting upon the top rail of a snake fence, where he remained until I had approached within a few yards, then taking wing, he crossed the road and disappeared in the thicket. I did not move the gun from my shoulder but moved on, wondering meanwhile what sort of a shot Bogardus would have made at my grouse, had he thrown a stick to scare the bird and fired when it darted downward.

On one occasion while at this camp I went fishing—not precisely because I wanted fish, but that I chose to try if the bass would bite. After looking over the artificial flies, minnows, spoons and other baits in my kit, I turned to the mess pail, and taking therefrom a piece of salt pork, I severed a portion of the rind and proceeded with the point of my hunting knife to carve it into the rude semblance of a frog. I next jointed my light lancewood rod and attached the reel, which is of the Henshall-Van Antwerp pattern, and runs with remarkable freedom. These were made by Thomas H. Chubb, and have served me well in the capture of many heavy fish. Placing the queer-looking image on the hook, I put forth into the lake and slowly drifted along the shore before the breeze, casting as I did so, over the likeliest spots for black bass.

Soon there was a tug, and I shortly drew to the side of the boat a pickerel of moderate size, which I did not want. I therefore permitted him to disengage himself from the hook, and moving onward, I neared the head of the river which leads to the lake below.

Here was a likely spot for bass, but would they bite? To solve the problem I cast the bait as far as the rod would send it over the black waters of a little cove which lay behind a projecting point of land, and straight there was business at the other end of the line, while the water broke to the leap of a lordly bass, some 60ft. away.

I thought of the classifications of Mr. Henry Guy Carleton, and murmured as the fish leaped, "Mycropterus buster!" Some writers seem possessed with a belief that the big-mouthed bass is inferior to the small-mouth in game qualities. Had one of these gentlemen been at the butt of my eight-ounce rod, I think that he would have had no occasion for the next fifteen minutes to charge the fish with an undue lack of activity; but wearied at length, the bass floated near the surface, the net passed under his gleaming side, and with scarce a struggle he was duly transferred to the bottom of the boat.

The contest ended, I returned to camp, satisfied that the fish would bite. I did not weigh the bass, but any angler can arrange that part of the performance to suit himself. KELPIE.

CENTRAL LAKE, Michigan.

[CONCLUDED NEXT WEEK.]

SHOOTING ON MOUNT OLYMPUS.—III.

(Continued from Page 62.)

BEFORE retiring for the night, I gave instructions to Timayanes that the venison and other game was to be divided in accordance with the custom of the country, and that I would arrange for the rations for the beaters in the morning. I instructed him further to secure a man to take off the bear and wolf skins.

The sun was half an hour above the horizon the following morning when Timayanes aroused me from my slumbers, and reported breakfast ready. I felt disposed to turn over and indulge in half an hour's sleep on the other side, when he added that the village headmen had already put in an appearance, presumably for their several village snares of the rations.

On hearing this I jumped out of bed, made my toilet with all diligence, and knowing that there was no possibility of disposing of the matter with promptitude, American fashion, I decided that the village elders must wait until I had taken breakfast.

However, time is of little importance with these people, and as there had been but little leisure for gossip the day before, I had no doubt they would be glad of the opportunity of discussing me before I made my appearance.

The lives of these people, thought I, are so uneventful, that years hence they will probably date events from the period when the Frank came and did a day's hunting with them. So I ate my venison and sipped my coffee leisurely; then, lighting my pipe, I went out and joined them in their confab.

Their clothes were coarse; Ahmed Khan wore a long robe of unbleached muslin that reached nearly to his feet, and the others all wore robes of similar material, but dyed blue. The cloth was evidently of home manufacture; and, indeed, from where I was seated I caught occasional glimpses of a woman weaving, as she periodically reached the end of the web exposed to my view. The men wore turbans to match the tunic.

All rose at my approach and salaamed courteously, and being again seated, Timayanes had first to put numerous questions to me concerning how I had slept and how I felt this morning; and having given satisfactory replies and propounded similar questions through my interpreter, and re-echoed their pious expressions that it was all through the goodness of God, etc., the conversation gradually slipped round to the events of yesterday, which were discussed in detail, and numerous congratulations and compliments poured upon me for my success and skill as a marksman.

In return I complimented the slayers of the boars and the one who had laid my stag low for me, and then made inquiries as to what each of the others had slain. As all this had to be done through an interpreter, it took time; but I had the satisfaction of knowing that it was all being done regularly and in order, and that I had my breakfast inside of me.

"And now, Ahmed Khan and gentlemen," I said, by way of plunging boldly into business, "if you will say in a lump what the ration and its cost amounts to, it shall be adjusted."

"The regular ration," said Ahmed Khan, in reply, "is an oki of meal with a quarter oki of olives and half an oki of dried dates, but what is that," continued he, "between us and thee? We and our people and belongings are all at your disposal. Let that pass."

Of course I didn't let it pass until I had made him say how many beaters there were there—a matter which involved discussion, enumeration of names, and some calculation—and the local market price of meal. There were sixty-two beaters, then I counted a triple ration for each of the village headmen, calculated the price of the eighty rations in sequins, produced the coin, amounting to about eight dollars of our money, laid it before Ahmed Khan, and asked him to be good enough to see to its proper distribution.

But I had made other and more liberal provision for hunting on Mount Olympus. There were a dozen bowie knives in my bag, fresh from Sheffield, and instructing Timayanes, a glittering blade was laid before each of the headmen, with a request that he keep it in remembrance of my visit. This was unexpected, and my hosts made no attempt to conceal their pleased surprise.

The conversation now turned to guns, but more especially to my Winchester. A repeating rifle was something new to them, and although no direct request was made, I knew they were all very anxious to be made acquainted with its mechanism and workings.

Timayanes was accordingly sent to fetch it, a mark was set up at a hundred and fifty paces, and after I had fired two shots, Ahmed Khan and each of the villagers fired one in turn, and appeared lost in admiration and desire for its possession.

Returning to our seats, they asked what good the rifle would be to them without the cartridges, how many cartridges I had brought with me, etc., and Ahmed Khan appeared so disappointed when I told him it would be necessary to send to America for renewals, that it struck me as a passing thought, that he expected me to give it him, or wanted to make a trade for it.

I next diverted conversation to a new channel, by inquiring about the game in the higher ranges, and was told that there were chamois and mountain sheep above the timber, and bears also, and that they would be down now on their summer feeding grounds, but that the country was rugged and difficult, and that it would be a long and fatiguing day's march to reach the timber limit from the village.

I told them that I had come resolved to reach the upper mountains and engage in a chamois hunt, and, if possible, secure a mountain sheep, that I was willing to spend two days there, and asked what arrangements were necessary, and whether I could get a good guide.

After some conversation which appeared to me somewhat constrained, Ahmed Khan suggested that if I would stay three days at the village, they would send up and get down some heads of both sheep and chamois, which would come much cheaper than if I were to organize an expedition, and go for them myself.

I endeavored to convey to him through the interpreter that, although the climbing of mountain heights involve some hardship, it is pleasant to look back upon the labor performed, when sitting at home at ease, and that in years to come, when my hand shall perhaps be palsied by age, it would be satisfaction to point out the trophies of the chase to my sons and grandsons, and say: "I too was once young and vigorous, my feet pressed the mountainside, my hand was steady, and my aim sure. These trophies are my witnesses."

"God is great!" exclaimed they all. "The Frank has come from a far country to kill game in Mount Olympus, and what was there to hinder him? The country and the people were at his command, and he was free to come and go at pleasure. The Frank was doubtless a great man in his own country? (this inquiringly) and was perhaps prepared with letters of introduction to Futteh Ali Shah?" I had to confess that I had nothing of the sort that in point of fact I had never heard of Futteh Ali Shah. "Who is he?" I asked: "the headman of some village in the mountains?"

"Well, no," was the response after some consultation among themselves; "there isn't any village, at least no village like this with women and children. Futteh Ali's followers do not take their wives to the mountains, at least not as a rule, and they are rather unsettled in the matter of habitation. Caves are plentiful in the mountains, and they dwell in them mostly."

"They are not robbers, are they?" I asked.

"Now Allah forbid that I should speak of the mountain chief in these terms," said he. "Futteh Ali Shah is a good neighbor who never despoiled one of the value of a kid, but pays honestly and in full for all the supplies he gets from us, but he is chief of the mountain ranges, and it might be as well to ask his permission before entering his territory. At least people who go to visit him generally communicate with his agents at Broussa or Stamboul. If the Effendi had any suitable present with him, and would send it by the hands of a villager, he would return on the third day, and if the present was accepted, the Effendi might go with confidence."

I explained that I was unwilling to force myself so long upon his hospitality, to which he replied that he and his village were mine as long as I liked to remain, and that they felt my presence an honor; but I passed this over, and asked him what he thought of my going directly to Futteh Ali's camp, and asking his permission to shoot in the mountains. On this point the villagers were unwilling to express an opinion. They gave verbal approval, but it was so much qualified by their manner that it was evident that they did not wholly recommend the procedure; and thinking that they would discuss the matter more freely in my own and Timayane's absence, I asked them to consider the matter and let me know their conclusion later in the day. Meantime I begged that they would have a guide and some men to carry the pack if the journey were decided on.

"What do you think of their making so much fuss about it?" I asked Timayanes.

"Simply that Futteh Ali Shah is a bandit," he replied, "who will bargain through his agents for safekeeping at a moderate price while you are outside his net, but who is apt to name his own price, and put it high, too, if you enter his precincts without stipulation."

"But Ahmed Khan," I inquired, "and the other villagers. Are they in league with him?"

"No," said Timayanes, "they fear him, and would not actually step between him and his quarry; but they would not betray you nor take part in the spoils. Ahmed Khan was so much interested in your repeating rifle, because he was sorry that it should fall into the hands of Futteh Ali Shah."

"Then would it not be the best course to pack up our traps and go down to Broussa at once, before the bandit gets news of our presence or our contemplated trip upward?"

"It is now too late," said Timayanes; "Futteh Ali Shah's agent in Broussa had news of your Highness's intended trip, and sent word to the bandit, along with a full account of your pedigree, as far as it could be gathered in Stamboul. One of his men was in the village last night, and it is as dangerous to go down as to go on to the mountains. We are trapped!"

"And what hand have you had in this?" I asked, eyeing him scrutinizingly.

"You wrong me, Effendi," he answered; "I have heard of Futteh Ali Shah as a noted bandit, who goes shares with the authorities, or sets them at defiance, as it suits him, and who, when hard pressed, takes to the mountains; but I had no idea he was in this neighborhood until last night, when I discoursed with one of his men, and learned that your every movement was known to Futteh Ali Shah since you reached Stamboul, together with the exact amount of your letter of credit, drawn nine months ago for about two thousand sequins, and now reduced to a balance of five hundred."

I eyed the wily Greek keenly, but he showed no disturbance. Was it possible that he had got hold of my letter of credit, or made inquiries at the banks? Possible; but then it was just as possible that the bandit's agents, hearing of my meditated trip up the mountains, had instituted prompt inquiries through channels familiar to them

And they had got the figures down to a fine point. I had left home with $3,500, and had now something less than a thousand, designed to defray the costs of a trip to the land of the Pyramids and return to the United States. And now how would this matter turn out? Fighting was out of the question, and escape perhaps impossible, even with the aid of Ahmed Khan, who would be willing to aid me at a price if he dared, but who dared not incur the animosity of his troublesome neighbor, who held court for the avenge of his own wrongs.

I had a very uncomfortable time of it, left to my own reflections. It was possible that he might hold me for a big ransom, which there was none to pay, in which case he would be certain to have my head taken off as a point of honor. More likely that knowing the amount of my resources he would demand a check for the sum, hold me captive while it was being collected, then act the good fellow and give me five sequins and a letter of recommendation to the authorities, begging them to see me on my way to America, or to commend my case to the consideration of the U. S. Minister at Constantinople. But grave as was my dilemma, and foreseeing clearly as I did that my holiday would be brought to an abrupt termination, I could not help being anxious as to whether I should get a few days of chamois and mountain sheep hunting, while the messenger was absent securing my ransom.

Gradually it dawned upon me that the wisest course I could adopt was to put the best possible face on the matter, and recognizing the inevitable, endeavor to mollify matters by submitting with graceful resignation and endeavoring to preserve a show of *bon camaraderie* toward my captors. I intended to spend the money in travel, and the worst would but cut my holiday short, and so, before the day was far advanced I sent Timayanes to Ahmed Khan to announce my determination to go up the mountain the following morning, to ask him to get me a good guide for the chamois hunt and necessary packmen, and to intimate that they would all be pid before starting. A.

OYSTERS ON TREES.

BUSINESS recently called me to Honduras, and I have just now returned well pleased with my trip. My friend Bliff, accompanying me part of the way, served to add to the enjoyment, for Bliff is a cheerful companion at all times, and takes the rough and the smooth without complaining. We have been boon companions many a day through flood and field, and when I broached the hope of his accompanying me, he jumped at the chance. We were duly installed as passengers on board the steamship Wanderer. This steamer is subsidized to carry Queen Victoria's mail that comes from England via New York and New Orleans to her little colony down in Honduras.

On the fifth day we arrived at Belize, in British Honduras. On entering the pretty harbor of Belize evergreen islands could be seen on every hand. My companion and I had laid out a programme of trips to be made here and there in the interest of business and pleasure, and the town of Belize was to be our base of operations. Mine host of the Union Hotel was quite accommodating, and whenever we chose to take a trip to the neighboring country or adjacent islands, he procured us horses, boats and attendants, and supplied a substantial lunch. After our arrival at Belize, Bliff and I would sally out with our samples and drum up the town for a few days, and then we would change the programme by taking a ride into the country or making a trip to some of the islands or cayes in the vicinity.

I had often heard of oysters growing on the trunks and branches of trees—groves of living green umbrageous trees, with oysters growing upon them—and my friend and I set aside one day to investigate the fact. We hired the services of a young negro boatman called Lightfinger. His boat resembled most of the small boats used on this coast. It was thirty feet long by six feet beam, and with a depth of hold of about three and a half feet amidships, and a slight rising sheer at bow and stern. It was hewn out of a solid log of wood, of the tree called "toobroos." The forward and after ends were decked over, and waterways extended along the sides of the cockpit. A platform of boards covered the floor, and beneath it rested iron ballast, of which there was about a ton. Three or four removable thwarts were arranged along the cockpit for seats, and upon them were placed pigs of iron of about one hundred weight each, for shifting ballast. Hooks were attached by pieces of rope to the pigs, and by these hooks they were held jam up to the weather coaming, and in coming about they could be easily detached and slid over to the other side. Sharp as a knife

at bow and stern, and with a keel of at least ten inches below the garboards, these craft would please the eye of the extreme cutter men, for their lines are extremely graceful and they sail well. The rig of this particular craft consisted of a single large jib hanked to a wire stay, a leg-of mutton mainsail bent to a parrel yard, and an ordinary leg-of mutton dandy. The luffs of the two latter sails were laced to the mast, and the halliards rove through a sheave in the masthead, just below the truck. The jibstay and main shrouds collared over a shoulder in the mast. The main halliard was bent to the middle of the parrel yard, and when the yard was hauled chock up to the sheave it extended about half way down the mast, leaving only about one-third of the sail luff to be laced to the mast. It is a simple and snug rig for any kind of a boat, and I intend to use it on my next canoe.

Another feature was the booms, the main one overlapping the dandy mast by at least 3ft., and in coming about in a strong breeze it required a smart hand to shift ballast and lift the boom over in time. The natives here do it very easily, and work the jib sheets at the same time, for these long boats do not come round quickly. I soon acquired the knack of doing it myself. The booms were of native bamboo of about 5in. diameter at the butt, making a light and strong spar, and I have been told that a great many of them are carried to England, and highly prized there for the use of small yachts.

This canoe, or dory, as it is called in Honduras, awaited our pleasure one clear and beautiful morning, and away we went. The wind was fresh and cool, the water green and clear, and the sea had just enough roll and tumble in it to impart an agreeable motion. Bliff and I lay back at our ease taking in the panorama of the rapidly passing town, with its pretty white houses and cocoanut groves. The ships in the harbor made a very pleasing picture, and on the right hand could be seen many islands large and small scattered around the harbor. We felt exhilarated taking it all in so free and easy, but I suppose this is a sensation we all experience once in a while. Our dory cut the water like a knife and slipped along rapidly and easily, with hardly a ripple in her wake, and in about half an hour we had left the sight of the town with its convent and shipping and soldiers' barracks away behind us. We were then nearly abreast of an island called Moho Caye. The front of it is embowered in graceful cocoanut trees, and the back part trends off into swamp, and is covered with a dense growth of the red mangrove. This mangrove tree grows in either fresh or salt water swamps, and even in water three or four feet deep. The limbs of the trees send shoots or roots down into the water, and thus a thicket of mangroves is a matted mass of trunks and limbs and roots. On these limbs and trunks and roots, deep down under the surface of the water, cling bunches and single oysters, and thus are formed the oyster groves I had heard of. The leaves of these trees are of a beautiful dark green, and the swamp islands from a distance look like fairy bowers.

We poled our dory around to the south of the island, but could not get very near, as we were scraping bottom all the time. We passed over numerous oyster beds while doing so, and with an ordinary rake which had been provided we hauled aboard a lot of the oysters. They were small and flat, and the shell looked more like a flat clam than an oyster. But the inside tasted all right, and our boatman swallowed that down with a relish. I did not care much for them myself, except as curiosities, for the mud that stuck to them did not smell appetizing. Bliff turned his nose up and would not touch them. I was anxious to get some of the specimens growing on the green limbs, with leaves attached, but we could not get near enough to the trees, for our cutter-canoe drew no less than three feet. Our boatman would not go overboard after them, as he said sharks were too plentiful, so after spending an hour or two pottering around, we pulled up stakes and shoved out into deep water and anchored.

It was now about twelve o'clock, and being hungry we made preparations for a breakfast. We triced up the main boom and spread an awning over the cockpit, and by shifting the thwarts around had a large free space to sit or lounge in and prepare our meal. The baskets and boxes provided by our jovial landlord were duly inspected and pitched into with a relish, and it was fully two o'clock before we got through our midday rest and set sail to return. By this time quite a sea had got up, the wind freshened and had drawn more to the south, so that it was a beat nearly all the way to town. Our canoe heeled to it gracefully, and with all hands and the three pigs hanging out to windward, we waltzed through that rough water like an express train. The whitecaps rolled in toward us fast and furious, the spray dashed over the bows in sparkling showers, but our good boat kept on her way as steady as a ten-tonner, and with a weather helm as light and tender as a horse's mouth. We were soon abreast of the town, but about three miles out in the harbor, and in tacking in toward shore we gave free sheet and passed to the south of the town and around a point called Tela's Folly. Here we passed over more oyster beds, and in approaching the shore found good hard bottom. There were some mangrove trees in the water, isolated from those on the banks, and by taking in all sail and by working around with a push-pole, we managed to get near them. With cutlass in hand our boatman stripped and jumped overboard, and in a little while he brought us some fair specimens of limbs with oysters attached, but he had hardly returned on board when two shark fins were seen cutting the water over the spot where he had been chopping. Fully satisfied with our day's outing, we soon upped sails, and after clearing the point chased the wind on the home run. L.

New Orleans.

The Woodcock's Whistle.—Cookstown, Ont., Aug. 23.—*Editor Forest and Stream:*—A short time ago you were kind enough to print a few lines from me stating that it was my belief that the whistling sound which the woodcock makes when flying is made by the wings, the three narrow primary quills producing the whistle. Yesterday afternoon I went out after the woodcock for the first time this season. The dogs raised eight birds. Not one of the eight birds made the slightest whistling sound. I shot two (quite enough for my purpose); on my examining them I found that they had lost by moult the three primary feathers of each wing, which feathers are just commencing to grow again. The rest of the wing is perfect. I take the liberty of inclosing the wings to you, and would be pleased if you would kindly examine them. —H. B. N. [We find the wings to be as described.]

Natural History.

MY CHICKENS.

I HAVE been rearing a brood of young chickens lately —bringing them up by hand as it were; and have been much interested in watching their development. Their mother died the day after they were hatched, in fact before some of them had chipped the shell, so that all their actions have been prompted by what man calls instinct, and nothing can be ascribed to education.

The first promptings of instinct which I noticed was on the third day, when they began to scratch in true chicken style the board on which I fed them their corn meal. On the fifth day I noticed them running feebly after insects, some of which they caught and devoured. One of them captured a "stink bug," and the very face which he made, as he disgustedly dropped him, would have made a sick man laugh. Up to the eleventh day they huddled together on the ground at night, but at that date began to show a tendency to fly up to the perch.

It was not till the thirteenth day that they showed any fear of the buzzards which were perpetually flying over them; and this fear seemed to develop very suddenly. They had been watching a buzzard for several minutes, without any symptoms of alarm, when suddenly one gave a squawk of alarm, and all rushed panic-stricken under the house. And yet their instinct seems to have curious limitations. They show no fear at sight of a dog, but let a rabbit come loping along, and they seem to go wild with fright. Thunder and lightning scare them, but beating on the head of an empty hogshead, or the flash of a dark lantern in their faces at night, seems to only stupefy and benumb them. Sometimes I throw a live mouse into their coop, and they tackle him valiantly and soon peck him to death, but the introduction of a dragon fly sent them, at first, screaming to the darkest corners, though now they look on him placidly, but make no effort to attack him. They will not touch corn when I throw it to them, but will try persistently to swallow lima beans, which are too large for them to manage.

They seem to possess some slight reasoning power. For instance, I feed them twice a day—morning and evening—and always at the same place, in front of their coop, some fifty yards from the kitchen door. As soon as they hear the rattle of the spoon against the tin pan they set off as fast as their legs can carry them, to the coop, around which they are huddled, open-mouthed, when I arrive. But they do this only toward sunset; at no other time of the day do they pay any attention to it. They did at first, but finding it no good, they have evidently reasoned it out that only at a certain time, and at a certain place, are they to be fed. They evidently, therefore, have evolved conceptions of time and space.

I notice almost as great an individuality among them as though they were human beings. Although they are all the same breed—pure Plymouth Rocks—and have all been handled alike, some are so tame I can put my hands upon them at any time, while others will not allow me within ten feet of them, except at feeding time. Some of the tamer ones, too, seem to be of an affectionate disposition, and when I pick them up cuddle down in my lap like pet kittens, while others seem to simply endure my handling, but without any return of feeling. One likes to have his head and back stroked, and will remain quiet for a long time under the operation; another stands upon his dignity, and though he allows me to hold him in my lap without protest, yet squawks and struggles indignantly if I attempt to smooth down his feathers. Some are bullies and are constantly pecking and worrying the others; some are as meek as Moses, and accept all kicks and cuffs uncomplainingly. One I have named the Philosopher, from his habit of mounting a hillock, and remaining there in meditative contemplation till he evolves some course of action, which he proceeds to deliberately carry out. He never seems to be in a hurry, except at meal time, when he is as active as the rest. Another one I call the Jew, from his Hebraic propensities "to keep all he has and get all he can." Some are avaricious and greedy, some sulky and brooding; in fact, I find a wonderful resemblance in them to the human species.

There is quite a difference, too, in their physical conditions. Though they are all of the same hatching, and have received precisely the same care and attention, yet some are now fully three times as large as some of the others. Some, too, are fully feathered, while some are still running around scandalously naked. The size does not depend upon sex, for the large ones are indiscriminately cockerels or hens, nor does the accession of feathers depend upon size, for some of the largest are the worst off in this respect. Though the eggs all came from one hen and were all impregnated by the same cock, both pedigreed fowls, yet some of the chicks are bare-shanked, some feathered down to the toes, some heavy-bodied and long-legged. Can these differences be attributed to reversion back to different primal types?

Later.—Since the above was written a dire misfortune has overtaken me. A thieving possum found his way to the coop and in one night slaughtered nine of my pets. But, *Laus Deo!* Vengeance overtook him, for in endeavoring to get out at the same hole between the slats by which he entered, his foot slipped, and I found him in the morning choked to death, his murderous career ended. So at one fell swoop over half of my pets are gone, and with the usual one-sidedness of fate, they were the best of the lot. The murderer was a connoisseur and picked out the largest and plumpest of the flock. The Philosopher's early life is over, but the Jew is spared to continue his career of petty thievery. Since the tragedy the survivors appear benumbed with horror. During the day they skulk furtively around or sit fearfully brooding under the shadow of the house, and at night, instead of trooping noisily to the accustomed place to roost, they huddle around me as I sit on the back porch enjoying my pipe, and seem anxious to claim my protection during the dreaded watches of the coming night. Their nervous systems seem to have received such a shock that I fear idiocy, or at the best melancholia, may result. Think what a strain it must have been to fearfully crouch all night, while a bloody assassin was piling the floor with the mangled corpses of their brothers and sisters! To fear that each moment their turn might come next! To hear the piteous cry as each new victim breathed his last, to be followed by a moment of silent agony, as the gore-stained murderer paused before selecting a new sacrifice! No wonder that the long drawn out agony of those hours of darkness and terror has left an impress upon their sensitive minds, which time alone can remove. H. P. U.

Louisiana.

THE GROUSE OF UTAH.

IT has always seemed remarkable to me that the men of science could find so many different species of grouse in the regions that they have passed over once perhaps, and I have hunted over for years and with the single purpose of learning just how many species of birds and animals could be found.

Now, it is well known that food and climate differing will produce a difference in the same species of animals or birds. The early years of my observations of the grouse family were spent in northern New York, where the ruffed grouse, commonly known as the partridge, was abundant. This bird further south is called pheasant. But whether in the Adirondacks, Pennsylvania, Maryland or Ohio, with slight differences caused by differences of food and climate, it is the same variety of the grouse family. And precisely the same bird is very common in northern Utah. The same general color, the marks on the fan-shaped tail, the drumming propensity, and every motion are all precisely those of the Eastern partridge, pheasant or ruffed grouse. Nor in my judgment are there two species, one differing from the above, in the Northern States and Canada, generally called the spruce grouse. The ruffed grouse eats spruce buds in winter, when he can't get the buds of the birch, which he likes much better; but in summer berries, beech nuts in fall, and buds in winter are his common food. After filling their crop with buds, I have seen them pitch from their tree into the snow in a thick cedar swamp, and there they remain, if not molested, until a thaw occurs, when they come out for another feed. When in this condition the snow prevents freezing, and if the fox or lynx (wildcat) does not happen to discover them, they can and do remain a month or more in a torpid state, without food and apparently without inconvenience.

In Utah this grouse is found in the thick covers along the creek bottoms and from seven to ten thousand feet above the level of the sea. The blue grouse or pine hen is a larger bird than the ruffed grouse. In summer it ranges the more open hillsides in search of berries, and at the beginning of the winter they get into large flocks and betake themselves to the pine groves where they manage to live on the buds of the spruce pine.

A third species of grouse found here is a handsome bird, reddish brown with white specks, and should be looked for in summer in the willows of the streams, high up in the hills and in the high grass of small damp prairies. When flushed he rises quick and flies very fast. After the first hundred yards of flight he commences to sail and begins to cackle something like the domestic hen at times. This species is known to Western sportsmen as the specked grouse, or the cackler, and is often referred to as the willow grouse.

The fourth species is the sage cock, whose habitat and habits are tolerably well known. This bird likes high hillsides as well as the other three varieties, and as he has a stomach in place of a gizzard, he is generally put down by writers as not being a grain eater. The sage cock will eat the leaves from sage brush when it cannot get berries or grain, but it will go further for a morning feed from a wheat field than any bird I know except a wild goose. I have killed sage hens with stomachs filled with ripe wheat picked up the same morning, in places where no wheat was to be had nearer than eight miles, and in fact with no cultivation of any kind nearer in any direction. They fly long distances in search of food but return to roost in the same place at night, generally on some steep sidehill and free from shrubs or high grass. This I conclude is to prevent surprise from cat, fox or coyote, always found in the country of the sage cock.

There is no unpleasant flavor to the flesh of any of these varieties of grouse in summer and fall, where they range in the hills; and in my judgment the flesh of a sage chicken, two-thirds grown, has the finest flavor of any. I have killed the four species of grouse in a walk of half a mile after seeing the first one in Parley's Park, east of Salt Lake.

The sage cock goes to some spring to drink, and visits its watering place about sundown in the summer. The chicks, until full-fledged, depend for safety on squatting down when overtaken by the hunter, and it does not matter whether there is grass or bare ground, the bird is rarely discovered, except with a dog, or unless the sportsman is actually about to step on it. A chick, half-grown, when separated from the rest of the brood, sets up and keeps up a plaintive note, which no one could doubt was the note of a bird lost and very sorry to be in that condition. I have no doubt that this fowl can be profitably domesticated. It is larger than the domestic hen, and in my judgment the flesh is greatly preferable. In southern Utah the sage cock is found only on the high mountains. Indeed, it is only there that grass and berries can be found. In the extreme southern part of Utah partridges or quail are plenty. They do not go north on to the higher tablelands, but are confined to that part of our Territory known as Dixie. Geo. H. Wyman.

Utah.

National Museum Notes.—Professor Ridgway has completed and handed in his report upon the steamer Albatross birds. This report includes descriptions of a number of new species from the Straits of Magellan and the Galapagos Islands; the collections from the latter locality being especially interesting and important, since it includes birds from islands not previously visited by any naturalist. The National Museum has received from Mr. W. Knudsen a collection of birds from Kanai, Sandwich Islands, which is of much interest. These are being worked up by Dr. Stejneger. A valuable collection of birds from Caucasia has been received from the Tiflis Museum of Natural History—a region previously entirely unrepresented in the bird collections of the National Museum. The bird collection of the National Museum having outgrown the capacity of the old cabinets to such an extent as to prevent satisfactory arrangement of the study series, some new cabinets, constructed on a different principle and embodying all of the latest improvements, are now being made, and the collection will soon be rearranged in such a manner as to render every specimen easily accessible.

Game Bag and Gun.

OPEN GAME SEASONS.

Dakota.

Buffalo, elk, deer, antelope, mountain sheep, Sept. 1 to Jan. 1. Prairie chicken, pinnated grouse, sharp-tailed grouse, ruffed grouse, Sept. 1 to Jan. 1. Wild duck, snipe, goose, brant, curlew, plover, Sept. 1 to May 15. Exportation forbidden.

Delaware.

Partridge, grouse, quail, rabbit, hare, Nov. 15 to Jan. 1 in New Castle county; in Kent and Sussex counties, Nov. 15 to Feb. 1. Reed bird, ortolan, rail, Sept. 1 to Feb. 1. Wildfowl, Oct. 1 to April 15. Woodcock, July 1 to Sept. 15, and in New Castle county, Nov. 15 to Jan. 1, and in Kent and Sussex counties, Nov. 15 to Feb. 1. Non-residents must procure license (fee $25) from the Delaware Game Protective Association. Exportation restricted.

District of Columbia.

Partridge, quail, Nov. 1 to Feb. 1. Pheasant, ruffed grouse, Aug. 1 to Feb. 1. Woodcock, July 1 to Feb. 1. Prairie chicken, pinnated grouse, Sept. 1 to Feb. 1. Snipe, plover, Sept. 1 to May 1. Wildfowl, Sept. 1 to April 1. Reed bird, ortolan, Sept. 1 to Feb. 1. Venison in possession, Aug. 15 to Jan. 1.

Indiana.

Deer, Oct. 1 to Jan. 1. Quail, pheasant, Oct. 15 to Dec. 20. Wild turkey, Nov. 1 to Feb. 1. Prairie hen, prairie chicken, Sept. 1 to Feb. 1. Woodcock, July 1 to Feb. 1. Wildfowl, Sept. 1 to April 15.

Iowa.

Pinnated grouse, prairie chicken, Sept. 1 to Dec. 1. Woodcock, July 10 to Jan. 1. Ruffed grouse, pheasant, quail, wild turkey, Oct. 1 to Jan. 1. Wildfowl, Aug. 15 to May 1. Deer, Sept. 1 to Jan. 1. Beaver, mink, otter, muskrat, Nov. 1 to April 1. Exportation forbidden.

Kentucky.

Quail, partridge, pheasant, Oct. 1 to March 1. Wildfowl, Sept. 15 to May 1. Woodcock, June 1 to Jan. 1. Deer (male) at any time; female deer, Sept. 1 to March 1. County laws prescribe other seasons.

Louisiana.

Deer, Oct. 1 to March 1. Wild turkey, Oct. 1 to April 15. Quail, pheasant, partridge, Oct. 1 to April 1.

Manitoba.

Deer, cabri, antelope, elk, wapiti, moose, reindeer, caribou, Oct. 1 to Jan. 1. Grouse (all varieties), Sept. 1 to Dec. 1. Woodcock, plover, Aug. 1 to Jan. 1. Wildfowl, Aug. 15 to May 1. Otter, fisher, pekan, beaver, muskrat, sable, Oct. 1 to May 15. Marten, Nov. 1 to April 15. Exportation forbidden. Non-residents must procure annual license from Minister or Deputy Minister (fee $25).

Missouri.

Deer, Sept. 1 to Jan. 15. Wild turkey, Sept. 15 to March 1. Pinnated grouse, prairie chicken, ruffed grouse, pheasant, partridge, quail, Virginia partridge, Oct. 15 to Feb. 1. Woodcock, July 1 to Jan. 10. Turtle dove, mourning dove, meadow lark, starling, plover, Aug. 1. to Feb. 1.

Nebraska.

Buffalo, elk, mountain sheep, deer, antelope, Oct. 1 to Jan. 1. Grouse, Sept. 1 to Jan. 1. Quail, wild turkey, Oct. 1 to Jan. 1.

A DUCKING.

A COLD east wind was blowing,
And in the distant west
His last red rays were glowing.
As the day god sank to rest.
The rushes brown were bending low,
The yellow rice stalks swayed,
The water lily's wax-like blow
Had withered and decayed.
High curling waves with foaming crests
The lake's broad bosom flurried,
And southward from deserted nests
The noisy blackbirds hurried.
The busy muskrat's sheltering roof
With roots and rushes mended,
Added its mute convincing proof
That summer joys were ended.
Pintails their airy circles drew,
Low swung the mallard duck,
And I, on a capsized canoe,
Was "cussing" at my luck.

CHICAGO, Illinois. HOODOO.

THE GAYLORD CLUB OF CHICAGO.

CHICAGO, ILL., Aug. 23.—In many respects the little organization known as the Gaylord Club presents more of interest to sportsmen readers than any club yet found whose clientage belongs to this city. Its club house is situated just three hundred miles distant from Chicago, in the heart of a wilderness whose general view, at least, offers no sign of human occupancy. Its domain is, or will soon be, larger than that of any other sportsmen's club in this city. Its possessions include lake, forest and stream, in a country where the wild trout and the wild deer are yet native and fairly abundant; and, above all, it is extending over its domain a protecting hand which will keep its wild creatures and make them yet more abundant, and which will preserve unmarred and unchanged a generous portion of a country where nature has been generous but abused.

The president and founder of the Gaylord Club is Mr. M. M. Gaylord, and the notion of starting the club came to him last year, the club being now only in its second season, and in the first year of its actual organization Mr. Gaylord's health was not very good, and to benefit it in a logical and sensible way he struck north into the pine forests of Wisconsin, joined a party of "timber cruisers" (scouts sent out by the lumber companies to find available logging grounds), shouldered his pack like the rest of them and so sallied forth on a journey which might or might not end almost anywhere. During this journey the party stopped on the shores of Coleman Lake, named after a noted lumberman and known to but few except loggers and hunters of that region. The beautiful little lake, perhaps five or six miles in circumference, rimmed in like a shining jewel by the dark band of the pine forest, appealed too strongly to his eye, and the oftener he gazed the stronger grew the fascination. There were deer about the lake; the north branch of the Pike—as glorious a trout stream as ever preached a sermon—rolled by distant but a few miles, the south branch of the Pike, an equally beautiful and equally prolific stream, headed right out of the lake itself, the inlet at the upper end of the lake held trout, and so did the lakes into which it widened out; there were big trout and big bass, too, in the main lake itself, and a little way further up lay a lake then known as Moon Lake, where bass fairly swarmed; not far from there lay the moss-edged Five Lakes, where the deer came down at evening; and every way, further than any man could think or listen, stretched the great, quiet, restful pine woods, wherein no man can long be tired or ailing, and where, if one must one day die of sheer old age, his soul could simply join the whisper of the woods, and so talk on of peace and rest to the other mortals in the ages yet to come. It needed but little thought to see the beauty and the advantages of the country, and Mr. Gaylord unslung his pack and said he would go no further. The idea of the club and its subsequent rapid organization were born of the pity felt in the discoverer's heart that so noble a country should be perpetually outraged by men who could not appreciate it. The process of the organization was a very speedy one, and eminently characteristic of an energetic man and the most energetic city in the world. The thirty-five shares—for it was thought best to limit the membership pretty closely—were rapidly taken up, and to-day a share is worth five times what it cost, and none are for sale. The annual dues of $20 are light, and the whole conduct of the club is one which offers rare privileges to its select membership at a cost more reasonable than might naturally be expected. There is not really very much expense attached to running a club of this kind, after the buildings are put up, beyond the very moderate salary of the club keeper. It is customary for each member to pay a nominal rate for board during the time of his actual stay at the club, and this adjusts the question of relative use of the club's privileges by those who may or may not go up often to visit it.

Gaylord club house is situated at the edge of the forest and at the edge of the lake, on a bold point of the shore from which a delightful panorama of land and water is visible. The building is about 90x40 feet in extent, and is made from lumber hauled in from the nearest railway station—Dunbar—some fifteen miles away, at which

GAYLORD CLUB HOUSE.

point a flourishing sawmill is whittling away at the big forest. Dunbar is on the "Soo Line" railway, and is the nearest telegraph and mail point. The point of disembarkation for the club house is Kirton, about six miles further west than Dunbar, on the same line. There is a good litle station house at Kirton, but there is no regular station agent there, and trains only stop there upon flag or to let off the occasional traveler bound for the club house on the lake. The club road leaves the railway something over a mile west of Kirton station house, and it is hoped by the club that, as it grows older and brings more business over the road, the "Soo" people will move the station house down to their road, put in a station for them, and make things generally a good deal more comfortable and convenient for the club than they ever have been yet. There is only one passenger train each way, daily, over the "Soo" road on this division, but the freight trains—semi-occasional as all freight trains are—will carry the club visitor from Pembine, on the Milwaukee & Northern road, over the thirteen miles to Kirton on the "Soo." The total time from Chicago is about twenty-four hours, or a trifle more. Still, the club members ought not to expect all the conveniences of perfected railway travel in a country which they pride themselves is still a wilderness, and through whose dense forest the railway winds, like a thread, for miles and miles, unstrung by any human habitations except those of the infrequent little sawmill towns, whose traffic is not yet worth a fortune to any railway.

The interior of Gaylord club house is very spacious, convenient and inviting. There is an ideal great fireplace in the main room, and in this room, which answers as the general club room, there are the racks for guns and rods and the lockers for the storing of garments and odds and ends of personal property. The dining hall, kitchen and keeper's rooms lie to the left of the main room, and to the right are something like a dozen sleeping apartments, all furnished with democratic equality. A broad gallery fronts the lake, and is a delightful spot in the evening, as the sun sinks on the opposite side of the lake. There is an ample ice house, well furnished, and there are also barns and kennels for the dumb members of the *ménage*. A good team is kept all the time at the club house. There are, I should think, fifteen or twenty boats of different sorts in and about the lake, and on the last day of my visit a big sailboat was brought in by Mr. O. R. Glover, a friend of Mr. Gaylord's, who with his brother is putting up a big log camp for a pleasure resort on a bluff further up the lake. This is the only other habitation about the lake.

I met Mr. Glover on the freight train going over from Pembine, and as there was no team over from the club house, we started out to walk the six or seven miles over to the lake. There had been a heavy rain that day, and the deep woods were moist almost to unpleasantness; indeed, our feet and legs were wet as if we had waded deliberately in water. We were, however, well fortified by a dinner obtained at the table of the "bridge gang," who were boarding in a box car side-tracked at Kirton. We did not mind wet feet, when at length we topped the last hill between us and the lake, and looked out over the little mirror lying in the woods. Mr. Gaylord was out trying for a bass, and we met him at the boat landing, and were soon well fed and comfortable before the big fireplace.

On the following day Mr. Gaylord inaugurated a trip over a part of the club territory, it being incidental to the programme that we should try for a little trout fishing on the way. Mr. Gaylord has been up at the club house all summer, and will remain there until the close of the deer season, preferring the woods to the city. He should, therefore, be fairly posted on the whereabouts and condition of the fishing on the club premises. He said:

"These fish puzzle me. Sometimes we catch very large trout here in the main lake, but they are not biting now. Earlier in the season one boat has taken forty-four black bass in little over an hour, but now you can hardly expect half a dozen in a morning's fishing, and they will not bite at all in the middle of the day. In June I have caught sixty trout below the Brock dam, as fast as I could cast the fly to them, yet now you cannot catch a thing there but chubs. Last week I caught a half dozen good trout in the stream below there, but a while ago I could easily have filled a basket in the same time. I don't know where the trout have gone. Of course many of them have worked up into the smaller and colder streams, but my firm belief is that our fish have been skinned out. There have been two fellows fishing for the market all the season; their camp is at the bridge on the North Pike. A lot of "Soo Line" railway officials came in on the North Pike this summer, and took out nearly 3,000 trout. Every party that has gone in below here has killed its similar numbers, and every little stream around here is visited continually by men fishing for the market. These streams are too small to stand such a drain. I know we have plenty of bass left, but as to the trout, I simply believe we are fished out."

"What do you propose to do about it?" I asked.

"Come with me to the outlet of this lake, and I will show you. We have as fine a natural breeding stream for trout as you ever saw. We intend, with the assistance of the authorities at Madison, to put in a fish hatchery right here. There are three logging dams below here, one a 'rolling dam,' or dam built high enough to insure a heavy enough volume of water to enable the men to roll the logs over the wide shallows below it. This dam is so high that no trout can get over it. Above this dam and the others there are wide pools which hold no fish but chubs and trout. We will stretch strong wire nets below to keep our trout from going down stream. They can have these pools to grow in, and the lake and streams above here to run up into if they like. We do not care how much they run up above the lake, for we are watching the inlet now, so that we do not fear trespassing to any serious amount. If the young trout go into the lake, they will work out one way or another, and so we will always have good fishing above or below the lake. The water lies so that it is a natural preserve. We are going to stock it, and in five years we will show you better fishing than there is now, you may depend on that."
